The Independent

FOR SIXTY-SIX YEARS THE FORWARD-LOOKING WEEKLY OF AMERICA

THE CHAUTAUQUAN

Merged with The Independent June 1, 1914

MONDAY, JULY 5, 1915

OWNED AND PUBLISHED BY THE INDEPENDENT CORPORATION, AT 119 WEST FORTIETH STREET, NEW YORK
WILLIAM B. HOWLAND, PRESIDENT
FREDERIC E. DICKINSON, TREASURER

WILLIAM HAYES WARD
HONORARY EDITOR

EDITOR: HAMILTON HOLT
ASSOCIATE EDITOR: HAROLD J. HOWLAND
LITERARY EDITOR: EDWIN E. SLOSSON
PUBLISHER: KARL V. S. HOWLAND

ONE YEAR, THREE DOLLARS

SINGLE COPIES, TEN CENTS

Postage to foreign countries in Universal Postal Union, $1.75 a year extra; to Canada, $1 extra. Instructions for renewal, discontinuance or change of address should be sent two weeks before the date they are to go into effect. Both the old and the new address must be given.

We welcome contributions, but writers who wish their articles returned, if not accepted, should send a stamped and addrest envelope. No responsibility is assumed by The Independent for the loss or non-return of manuscripts, tho all due care will be exercized.

PERSONALITIES

Samuel Hale Pearson, chairman of the Argentine delegation to the Pan-American Financial Conference, suggests an all-American ship line, to be owned jointly by the several governments whose people it would serve.

Miss Harriet A. Graham has been retired on a pension by the Pittsburgh Board of Education after having taught for fifty-three years in the local schools. It is estimated that nearly 3000 pupils have been under her tutelage.

Alexander Graham Bell, inventor of the telephone, thinks the day may come when we shall see and think by electricity. "I can imagine men," he says, "with great coils of wire over their heads, transmitting thoughts by induction."

Virginia C. Gildersleeve, Ph.D., dean of Barnard College, expresses the belief that the present low birth rate, accompanied by its more than correspondingly low death rate, is preferable to the old practise under which both these rates were much higher.

Dr. James M. Taylor, president emeritus of Vassar College, says: "Our real world is largely our own creation—not so much an aggregate of external conditions as an attitude of mind." He therefore decries the tendency to harp on the evils of our time.

Thomas A. Edison's announcement of his invention for recording telephone conversations carries with it a prediction that such records will be admitted as evidence in court cases where ordinary communications by telephone would be deemed inadmissible.

Judge William L. Putnam, presiding judge of the First District, United States Circuit Court, which includes Maine, Massachusetts, New Hampshire and Rhode Island, celebrated the eightieth anniversary of his birth on May 26. He holds court regularly, and his knowledge of law and memory of cases is described as wonderful, regardless of his years.

For more than ten years the Rev. T. A. Waterman of St. Louis has carried on, without pay and without acquaintance with any of the persons directly interested, a campaign to get at the truth concerning the Goebel murder in Kentucky. He believes that both Caleb Powers, now in prison as an accomplice, and former Governor Taylor, an exile from his state, are guiltless, and expects yet to prove it.

PEBBLES

The *Evening Telegram* runs an ad that begins "Refined Lady or College Girl desired."—*F. P. A. in New York Tribune.*

The Pessimist—The best luck any man can have is never to have been born; but that seldom happens to any one.—*Boston Transcript.*

Landlord—Well, Mr. Casey, I think I'll have to raise your rent.

Casey—Begorra, I guess you'll have to; I can't.—*Type Tattle.*

Cassidy (visiting warship)—Ivry time that big gun is fired, Dinny, sivin hundred dollars goes up in smoke.

Conley—Glory be! Why don't they use smokeless powder?—*Puck.*

"You have had seven appropriations for that river," complained the chairman of the committee. "What does it drain, anyhow?" "The treasury," answered Congressman Graball.—*Judge.*

Jim—John, why is it that all you fat fellows are so good natured? ?

John—We have to be good natured. You see we can't either fight or run.—*Type Tattle.*

Pat—Sure and I'd give a thousand dollars, Moike, if I knew th' place where I was goin' t' die.

Mike—Faith, Pat, and phwat good would thot do yez?

Pat—Begorra, I'd niver go near th' place at all, at all.—*Type Tattle.*

William's thoughts were on the vacation days, not the arithmetic lesson. The teacher often called her dreamy pupils to attention by asking them a sharp, simple question.

"William, what are two and four?"

"Prepositions, ma'am," was the unexpected answer.—*Life.*

Young Barnes had married contrary to his father's wishes. Meeting his parents soon afterward, the father said angrily:

"Well, young man, I have made my will and cut you off with a dollar."

"I am very sorry, father," said the youth, contritely; and then added, "But you don't happen to have the dollar with you?"—*Ladies' Home Journal.*

"Dat wasn't a bad epigram of de judge's," said Plodding Pete.

"What did he say?"

"Thoity days."

"Dat ain't no epigram, is it?"

"Sure it is. I asked a fellow what an epigram is, and' he says it's a short sentence dat sounds light, but gives you considerable to think about."—*The Ingleside.*

In a certain village down South there was a physician noted for his reckless automobile driving. One day when he answered the telephone a woman's voice asked him if he were going out driving that afternoon.

"No; I hardly think I will have time this afternoon," replied the doctor. "But why do you ask?"

"Well," replied his anonymous questioner, "I want to send my little daughter down town for some thread, if you are not."—*Everybody's.*

Mary had a little lamb—
'Twas Persian—on her coat;
She also had a mink or two
About her dainty throat;
A bird of Paradise, a tern,
And ermine made the hat
That perched at jaunty angle
On her coiffure, largely, "rat."
Her tiny boots were sable topped,
Her gloves were muskrat, too,
Her muff had heads and tails of half
The "critters" in the Zoo.
And when she walked abroad, I ween,
She feared no wintry wind;
At keeping warm, 'twas plain to see,
She had all Nature "skinned."

VOLUME 83 MONDAY, JULY 5, 1915 NUMBER 3474

ORCUS AND ADES AND THE DREADED NAME OF DEMOGORGON

A YEAR ago in the sweet peace of summer time Death and Hell broke forth from the pit upon this sad, bad world with a new train of all that can be conceived most dreaded and dreadful, with newly invented horrors noxious and monstrous, to make the front of War more ghastly and terrible. Our earth has gone back to chaos; civilization has collapsed; the sense of right and wrong has vanished; Christianity has fled affrighted. Peace—there is no peace; only war, brutal war, that knows no limit, that scorns The Hague, and scouts all its pretty pettinesses with which the other day it amused the sensitive statesmen who dreamed that rules could be set for war. War has broken them like the new cords and withes with which the Philistines bound Samson. In war we are learning that there is no law and no right. All wrong is right, no matter what bounds had been there set. We begin to understand how hellish war is and what a chaos it makes of all the conventions and rules and rights and treaties which we have so laboriously and vainly been building up since Grotius.

With mid-spring, we had been warned, the war would take on a new energy. It has taken on a new atrocity. It was bad enough in the winter; but now the Tyrolean snows and the Galician floods are gone, and under smiling skies the roadways can bear the weight of the heaviest mortars and withstand the tramp of rushing armies. So with tenfold fury, on the ground and under the flood and in the air above, the very elements are mutinously conspired to ravage all of use and beauty that the ages of toil and skill have wrought. Essen has overspread all Germany, and Kitchener bids all British industry bend to the creation of munitions of war, and American factories are flooded with orders for the implements of death. Where has civilization escaped, or culture or the gospel of peace, when all the energy of skill, all the science of laboratory and workshop, all the labor of furnace and mill, are strained to drive men by the millions to slay each other with splintering bombs and poisonous fumes? Has not Chaos brought back the rule of ancient Night?

But Right beaten down is not and never can be overwhelmed. It is all black now, but Wrong ever overreaches herself. When in supreme effort she attempts final sway she exhausts her strength. War, vastly more malicious and ruinous than ever before, has overshot her own mark. The world will have no more of her. After the blackest night the new morn will rise to clear the storm and repair the wreckage, and unending Peace will heal the wounds and breaches of hate; and the losses and the cost of war will add force to the elder rule of human love, and the song of hate and the lust of revenge and the curse of lawless ambition will be quenched, if not by the spirit of Christ, yet by the necessity of prudence which has learned that the omnipotence of science has made the method of war henceforth impossible. That will be a blest world for the near approaching age when this last and worst effort of Death and Hell shall have exhausted itself. Thus farewell to "Orcus and Ades and the dreaded name of Demogorgon."

A WRONG RIGHTED AT LAST

DURING the Civil War Abraham Lincoln abolished slavery in the United States. The end of the war found the freedmen and all negroes full citizens in their own right, and no longer, under the Constitution, each three-fifths of a citizen, with that three-fifths' right to vote possest by white citizens, who thus voted in their own right and in the right of the negroes also. Had the white citizens after the war accepted its results they might easily have guided the ignorant negroes and there would have been peace. Indeed, in one or two states this was in a measure the case; but generally the white people resented the equal right of the negroes to vote, or even to exercise the common rights of freemen. They passed state laws requiring every negro to have a guardian, and forbade them to go beyond certain local limits. Indeed, they reëstablished the state of slavery under another name. Congress was indignant, and the Fourteenth and Fifteenth Amendments were enacted. But these amendments and consequent legislation by Congress could be and were nullified by force, threatening death to negroes who tried to vote. When after some years such violence became undesirable means were invented to get around the Federal amendments by provisions in state constitutions which should not in words deny the suffrage to negroes, but should just the same exclude most of them from the polls. The shrewdest and meanest of them was adopted by the states which put the "grandfather" clause into their constitutions, requiring that voters must be able to read the constitution, but that illiterate citizens might vote provided that their fathers or grandfathers were voters at or before the end of the Civil War. But only the white men were voters then in those states. That let in all ignorant white people, and

excluded all ignorant negroes, but said not a word about "race, color or previous condition of servitude."

For years the attempt has been made to test these "grandfather" provisions, and now the Supreme Court of the United States, by a unanimous decision, has declared that these state constitutions violate the Constitution of the United States. The scheme is a plain evasion. Everybody knew it was. In the conventions which created these constitutions it was again and again boldly declared that the purpose was to exclude from suffrage black citizens who, the United States Constitution declared, should not be excluded. It is not constitutional to evade the Constitution.

This is a great victory for justice, and it is pleasant to note that Chief Justice White, who read the decision, is a citizen of Louisiana and was a Conferedate soldier. The Independent has denounced these evasions from the first and it rejoices in their condemnation. The excuse for them, that negro domination must be somehow and anyhow prevented out of self defense, was another pretense. There was never any danger of negro domination in the states in which white men were in a full majority, and in the two states in which they were not a majority, superior white intelligence, with kindly consideration, might easily have controlled the situation. It was human nature to be unwilling to give equal civil rights to the despised slave race. It is a slow task to eradicate contempt on the one side, and on the other to create intelligence. This much must be put to the credit of the period so much maligned, that the years when negroes actually had the privilege of voting gave those states the public school.

THE RIGHTS OF PROFESSORS AND STUDENTS

THE question of academic freedom has recently become acute thru the reports of arbitrary dismissals from institutions in various parts of the country. From the universities of Utah, Pennsylvania, Colorado and Minnesota and Dartmouth College we hear complaints of interference with personal rights by the ruling powers. In all such cases it is well for the public to make sure of the circumstances before pronouncing judgment, for they are usually more complicated than they seem and the cry of "free speech" is sometimes raised to cover other and more justifiable causes for dismissal. But it is the duty of the public to insist that every such case be thoroly explained, for it involves not merely the right of an instructor to the expression of his opinions but, what is of even greater importance, the right of the student to know that he is getting the frank and sincere convictions of his instructor and that he is not debarred from hearing views contrary to those held by the university authorities.

In the Utah case the public has before it the evidence in the case as determined by a disinterested and competent body of men. For a professor is no longer a helpless individual whose livelihood depends upon his keeping quiet and accepting his dismissal. He is now almost as strong as a workingman, for he can appeal to his "national union" which, if it cannot afford him protection against tyrannical treatment, may at least make known to the profession and the public the condition of affairs in the institution. The American Association of University Professors appointed a committee to investigate the Utah case, composed of Professors Seligman of Columbia, Dewey of Columbia, Fetter of Princeton, Lichtenberger of Pennsylvania, Lovejoy of Johns Hopkins and Warren of Princeton, and their report is to be found in full in *School and Society* and *The Nation* of recent date and in part in *Science* of June 11. They found that the board of regents of the University of Utah regards it as proper grounds for dismissal that a university professor in private conversation with a colleague uttered an unfavorable opinion of the chairman of the board. Seventeen of the Utah faculty are out, some of them forced out and the others resigning out of protest. In spite of this the board refuses to consider any criticism of its action. Under these circumstances the committee of inquiry seem justified in coming to the conclusion that

> the board fails to understand, or at least to act upon, three fundamental facts: namely, that every institution of public education, and especially a state university, requires for its success the confidence and respect of the public; that there can be no sure hold upon public confidence without an unflinching readiness to face publicity in regard to all official acts and policies; and that the only effective way in which any public body can meet serious charges brought by responsible persons is by not merely permitting, but demanding a searching and open inquiry into its methods. The committee gathers that the attitude taken by the board has aroused on the part of a large section of the local public, including a majority of the alumni and of the students, a degree of suspicion, and even hostility, which must be a continuing detriment to the university's efficiency as an instrument of public education, and must affect disadvantageously the position and the work of teachers in the institution.

We quote in full this well considered and moderately worded opinion because it applies directly to another case of even greater public importance, the dismissal of Dr. Scott Nearing from the University of Pennsylvania. Dr. Nearing is an excellent teacher and a brilliant writer. He is the author of half a dozen books on the condition of the working classes and has been for nine years an instructor in economics in the university. Protests against his dismissal have come from alumni, students and professors of the Pennsylvania faculty and from teachers of economics elsewhere, and it is alleged that the action of the board is due to Dr. Nearing's agitation for a child labor law and his outspoken denunciation of political and financial corruption.

The case is aggravated by the fact that the department in which Dr. Nearing was teaching was the Wharton School of Commerce and Finance. Now the founder of the School, Joseph Wharton, specified very definitely in 1881 what sort of lessons he wanted taught by those employed with his money. Among these were:

> The immorality and practical inexpediency of seeking to acquire wealth by winning it from another rather than by earning it thru some sort of service to one's fellow men.
>
> The necessity of vigorously punishing by legal penalties and by social exclusion those persons who commit frauds, betray trusts, or steal public funds, directly or indirectly. The fatal consequences to a community of any weak toleration of such offenses must be most distinctly pointed out and enforced.
>
> The fundamental fact that the United States is a nation, composed of populations wedded together for life, with full power to enforce internal obedience, and not a loose bundle of incoherent communities living together temporarily, without other bond than the humor of the moment.

Now Dr. Nearing has been distinguished especially by his forceful attacks upon dishonest wealth and his advocacy of the extension of federal control, and if he is discharged because of thus following the desires of the founder it looks as tho the trustees were to be

classed among those who "betray trusts." We recognize the fact that a testator cannot restrict for all time the use made of his bequest and also that a man occupying the authoritative position of a university instructor must be careful to avoid rash and irresponsible utterances. But it does not appear that Mr. Wharton's stipulations as to the character of instruction to be given in the School are antiquated or unreasonable or that Dr. Nearing had exceeded the bounds of propriety and decency in his writings and lectures.

Mr. J. Levering Jones, one of the Pennsylvania trustees, is quoted as saying:

> The University of Pennsylvania is not a public institution. It is only quasi-public. We are answerable only to our own sense of duty and responsibility. No one has the right to question us.

This is the position of the trustees of the University of Utah and it is not the proper attitude for even a "quasi-public" institution to take. We hope that the American Association of University Professors and the American Economic Association will take the matter in hand and make a thoro investigation of the action of the Pennsylvania authorities.

RAILROADS MUST STICK TO RAILROADING

TEN years ago, in the Hepburn act, Congress laid down the principle that railroads shall act only as common carriers and shall not engage in other businesses as well. It did so by prohibiting them from carrying commodities which they themselves owned or in which they had an interest. The Supreme Court has just rendered a decision which will do much to render this prohibition effective.

The chief violation of the principle and the one at which the provision of the act was primarily aimed was in the case of the coal carrying railroads of the Eastern states. Many of them—the Lackawanna, the Pennsylvania, the Erie, the Lehigh, the Delaware and Hudson, the Reading—owned or controlled coal mines. The output of these mines was in each case transported to market over the lines of the parent railroad. This condition, it was a matter of common conviction, gave to the coal roads a monopolistic power over the coal supply, full of potential—and sometimes of actual—menace to the consuming public. It was this menace which Congress sought to remove by the so-called commodities clause of the Hepburn act.

The constitutionality of the clause was promptly attacked in the courts and fully sustained by the Supreme Court. A loophole was left, however, by the court's assertion that the clause would not be violated by a mere ownership by the railroad of stock in a coal producing corporation.

This aperture, which threatened to destroy the whole effectiveness of the commodities clause, has now been stopped up. The Lackawanna had speedily organized a new corporation of which the railroad company owned all the stock and to which it transferred all its coal mines and coal lands. The two corporations had common officers. Exclusive contracts were made between the two companies which made the coal company no more a free agent than if it had been merely a department of the parent corporation. It looked like a successfully adroit use of the court's opinion to thwart the will of Congress.

But the Supreme Court would have none of it. The court looked thru the form of the thing at the reality behind it. It declared that the arrangement violated the commodities clause, and, as a restraint of trade, offended against the Sherman anti-trust act as well. The Lackawanna is enjoined from continuing its ownership by such a device of the coal mines whose product is carried to market over its lines.

The decision is a welcome one. It strikes another blow at the monopolization of the necessaries of life at the expense of that much maligned and ridiculed but humanly ubiquitous individual, the ultimate consumer. It emphasizes once more the essential principle that the artificial person, the corporation, is not to be used with legal cunning and unfair purpose to avoid the prohibitions imposed by law upon the natural person and to evade the natural person's responsibilities.

A COURAGEOUS GOVERNOR

THE state of Georgia should be proud of its Governor. In commuting to life imprisonment the death sentence of Leo Frank he did the unpopular thing—always the hard thing for a public official to do. A great mass of vociferous public opinion in his state demanded Frank's death. Bitter threats of all kinds of summary vengeance were hurled at him. Mobs howled execrations when his decision was made known.

Unmoved by the menace of public clamor and undismayed by his own bodily danger he did the act of justice which courts had been unable to perform. He refused to send to death the man of whose guilt the best opinion of the country had the gravest doubts.

Governor Slaton has exprest the expectation that his act will relegate him to obscurity for the rest of his days. It is unbelievable. No civilized community in its sober moments of second thought could fail to be grateful to a man who had saved it from committing a crime in the name of justice. But, whatever his own state may do, there are those the country over who will not forget that here was a man who preferred justice to popular acclaim.

HUERTA A-FILIBUSTERING

VICTORIANO HUERTA, late despot of Mexico and more recently country gentleman of Long Island, appears in a new role. He would a-filibustering go.

Midway of a sight-seeing trip to the expositions in California, he found himself at El Paso, Texas. There he met, to his surprise and pleasure, several of his former military officers, including General Orozco. Much more to his surprize, probably, tho hardly so much to his pleasure, he met there as well officials of the Department of Justice, escorted by a troop of United States cavalry.

It appeared that the United States Government had reason to believe that the country squire of Long Island contemplated a military expedition into his native land. Now such a procedure is illegal. So the erstwhile dictator promptly found himself under heavy bail and awaiting examination on the charge of filibustering.

If the United States Government will let him, Señor Huerta would better come back to mowing his lawn on Long Island. He will not be allowed to set out from American soil to cut another bloody swath in Mexico.

SUMMER DRINKS

THE chief means we have of keeping cool in hot weather is by evaporation, and evaporation requires a constant supply of water. But plain water soon palls. Man craves variety and ever strives to turn his necessities into pleasures. So to avoid tepidity and monotony he takes his liquid hot or cold and adds flavors and pungencies of all sorts.

It is in America, where the summers are hot and dry and the people temperate and ingenious, that the art of mixing beverages cold and soft has reached its hight. The American soda fountain has transformed the drug store, which used to be as unattractive as a dentist's room and sought only by the sick, into a palace of delight, the haunt of the healthy.

The walls and mirrors back of a soda fountain are filled with the names of new drinks or the new names of drinks, and still the patrons call for original combinations. But in spite of the variety in appearance and taste the composition of the summer beverages can be easily comprehended if we classify their ingredients according to their purpose instead of their origin. If we attempt such a classification we find that the qualities in demand are sourness, sweetness, flavor, effervescence, color and stimulation. Representatives of most or all of these groups are to be found in any of the popular drinks, but their sources are various.

For the sourness we have a choice of many organic acids, chiefly the citric of the lemon, the tartaric of the grape, the acetic of vinegar, and the lactic of milk. The inorganic acids are not used, as they are too strong and not assimilable, with the possible exception of phosphoric. But the "phosphates" served to us are apt to be made of citric instead.

For sweetness we have the sugars of many kinds, but the most important are sucrose (cane sugar), glucose and fructose, all of which occur in ripe fruits.

The flavors are, chemically speaking, mostly the esters or etherial salts of the alcohols and fatty or aromatic acids. These give savor and perfume to all the fruits and flowers, and from these we extract them, altho as soon as the chemist finds out what they are he can make them in the laboratory.

For effervescence the old reliable carbon dioxide is universally used for the non-alcoholic as it is for the alcoholic beverages. Here indeed extremes meet, for what the brewer does is merely to split sugar into two parts, carbon dioxid and alcohol, and sell the former to the teetotaler and the latter to the beer-drinker. Carbon dioxid is a weak and volatile acid, serving to stimulate the palate and stomach and quickly passing off. It is this gas that gives the effervescence to all mineral waters, and if one does not want to clog his system with a lot of salts such as happen to occur in some European *bain* or *bad*, he can take "plain soda," which does not contain any soda but is merely distilled or tap water charged with carbon dioxid.

An attractive color is itself an appetizer and excites the flow of the digestive secretions. The red circus lemonade of our childhood's days was the first crude attempt at enhancing the charms of nature in the way of tinting beverages. Now we can satisfy all tastes, since the dispenser has at his command a palatable palette that includes all the colors found in fruit, flower and leaf, and any number of harmless aniline dyes beside.

Those who eschew alcohol but still demand some stimulant usually make use of caffein, which is the essential principle of tea and coffee and is now used in certain popular summer drinks. The still milder alkaloid of cocoa, theobromin, does not seem to have been yet employed in this way. In the temperance campaign now being carried on in England medical authorities recommend, besides caffein, the use of aromatic ammonia in beverages as a substitute for alcohol.

It is with the unconscious aim of getting in some or all of these six kinds of ingredients that human ingenuity has developed the art of mixing summer drinks. An old-fashioned refreshment of the harvest field was "switchel," wherein the sourness was given by vinegar, the flavor and pungency by ginger and the sweetness by molasses or maple sugar. We are also indebted to our grandfathers or grandmothers for the discovery of root or birch beer. The aromatics for this were mostly obtained by gathering such roots, barks, leaves and seeds as grew in the neighborhood and had been discovered—doubtless by those enterprising experimenters, the children—to be tasty and non-poisonous. With the aid of sugar, hops and yeast, the necessary carbonic acid was developed together with a trace—or more—of alcohol.

That old favorite, iced tea, is appearing in new forms of late by adding to its caffein other popular ingredients. When a slice of lemon was dropt in it became *à la russe*, but what to call it now with strawberry, raspberry or pineapple in it would puzzle a French culinary dictionary. Fruit punches also have become indescribably complicated since the fruits of all lands and all seasons are at our disposal. Hawaii is sending us canned pineapple juice which is said to have digestive powers, and anyhow makes a palatable drink alone or an agreeable addition to any other. The lemon we have long known, but the lime is not yet so familiar as it is in England. If grape-juice continues to grow in popularity as it has of late, even California can go dry without fear of ruin to the vineyards. Our paternal Government has recently introduced us to a new summer drink, that is, grapefruit juice, which, according to instructions sent out by the Department of Agriculture, can be easily preserved, provided it be boiled out of contact with iron and bottled out of contact with air.

Ginger ale, deservedly one of the most popular of summer drinks, may be regarded as a descendant of the farm "switchel" with the substitution of citric in the place of acetic acid—doubtless an improvement—and the addition of such aromatics as the taste and generosity of the manufacturer allow. "Sarsaparilla" also has changed its nature without changing its name, for wintergreen and sassafras now supply its flavor. This, however, is no great loss, since sarsaparilla has lost in medical circles its reputation as a "blood purifier."

On the whole, then, we have reason to be proud of the progress that has been made in the production of summer drinks. Ingredients actually harmful or even deleterious have been mostly eliminated. The chief danger that besets the *habitués* of the soda fountain is lack of cleanliness on the part of the dispenser, especially in the rinsing of the glasses. With due regard for this and for the temperature and condition of his stomach the thirsty one may face the fountain without fear and pick out from the fancy names upon the mirror whatever seems most enticing at the time.

THE STORY OF THE WEEK

Lemberg Recaptured

After having been for forty-three weeks in the possession of the invaders the capital of Galicia has been recovered by the Austrians. The Russians crost the border into Galicia on the twenty third of last August, and after defeating the Austrians on the Dniester to the south and at Kawaruska to the north entered the city without opposition on September 3. They adopted the Polish name of Lvov or Lwow instead of the German Lemberg, but otherwise made no concessions to local patriotism. There are few Russians in Lemberg or in Galicia generally. The Slavic portion of the population is Polish and Ruthenian, therefore alien to the Russians in religion, language and letters. But the Petrograd government regarded Lemberg as permanently annexed and began at once a process of Russification as rigorous as has been carried out in Poland and Finland. The Russian language was made obligatory in the schools and the use of Ruthenian in print and correspondence prohibited. All men of military age were taken into custody by the Russian authorities. The Czar paid a visit to the city shortly after it came under his rule.

Lemberg had about two hundred thousand population. It was not, like Przemysl, a fortress or "entrenched camp," but is of great strategic importance as the railroad center of eastern Galicia. It has not suffered from bombardment, for it was evacuated without a struggle by the Austrians and by the Russians when the defending armies had been defeated.

The Russians attempted to defend the city by making a stand at Grodek about ten miles of Lemberg. Here there is a chain of lakes and marshes connected by the Merezyca River. This was backed on the eastern side by hills on which the Russians constructed several lines of strong entrenchments extending a distance of twenty-four miles. The attack on this gigantic moat and rampart was begun on the morning of June 19 by the German Field Marshal, Von Arz, in command of the left wing, and the Austrian General, Boehm-Ermolli, on the right. Both broke thru and the Russians fell back on Lemberg from which the Russian authorities had already departed.

In the meantime the Austro-German forces pushing eastward along the Polish-Galician border, had overcome the Russian opposition in the neighborhood of Rawaruska, about thirty miles northwest of Lemberg, so the Russians had to continue their retreat as rapidly as possible toward Brody near the frontier.

At four o'clock on the afternoon of June 22 General Boehm-Ermolli made his triumphal entry into the Galician capital.

What Next?

While the Russian right was being driven back at Rawaruska and Grodek the Russian left on the Dniester River to the southeast of Lemberg has held its own. General Lesitzky has made many attempts to cross the river to the northern side, but has been thrown back every time with heavy losses. It is hardly probable that the Russians can long maintain their stand here since they are outflanked on both the north and the south, but their most

THE BAD BARGAIN IN THE DARDANELLES—ANOTHER BRITISH TRAGEDY

The sinking "Majestic" photographed three minutes after she was struck. A French soldier, who saw the disaster, writes that as soon as she was torpedoed by a German submarine she heeled over in an alarming fashion till she had a list of about 45 degrees to port. "Everything we could hold or slid with a tremendous din and whatever was not attached was thrown into the sea. But there was not a panic-instant of panic. Four minutes after the explosion the 'Majestic' abandoned her inclined position and turned completely over and went down. It was a terrible moment. But it was also sublime, when six hundred men, facing death, mute and strong, were thrown into the sea, wounded and naught in the torpedo nets which ensnared them like an immense cast-net among the gigantic eddies and the profound subs of their dear and beloved ship. I shall never forget that infernal instant when submarines, aeroplanes, cannons and quick-firing guns dealt death around me. And yet this vision only lasted the space of a flash of lightning, as we, too, looked death in the face, and in our ship's boats we took part in the finest rescue that the talents of an artist ever represented."

resistance will serve at least to enable the bulk of the Russian army to withdraw from Galicia and establish themselves on some line of defense within their own country.

The efforts of the Russians to minimize the extent of their defeat make the Petrograd despatches to London more absurd than usual. This is the way the loss of Lemberg is reported:

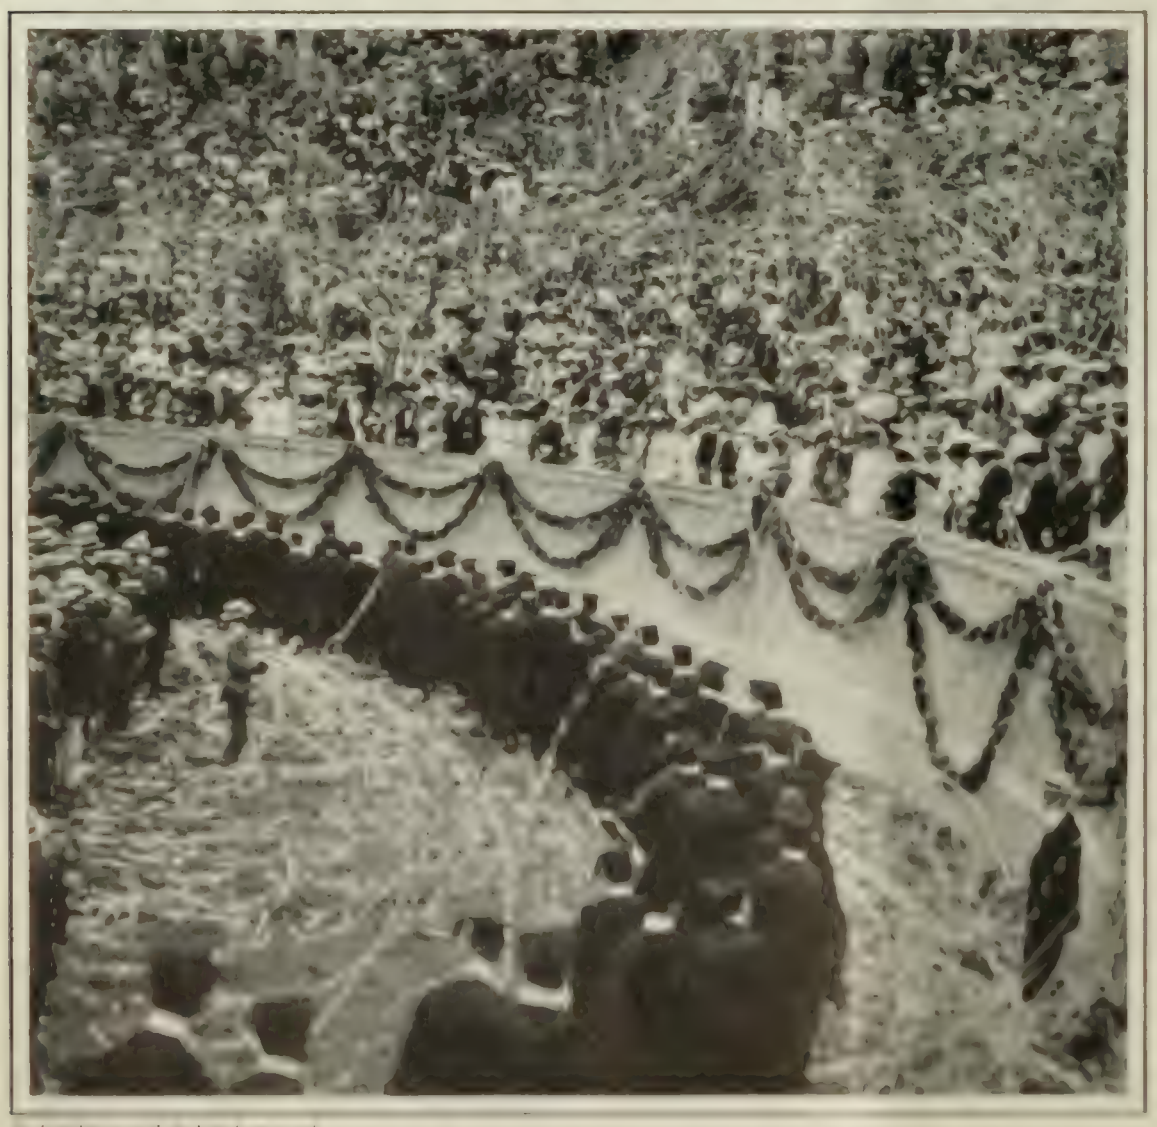
> The Germans entered Lemberg as they entered Przemysl, with unbelieving caution hours after the Russians had left. The Germans have covered a couple of hundred miles and lost at least half a million men in an endeavor to bring the Russian main armies to decisive battle. Time is of the very essence of victory in this war, and the Germans have lost two of the best months of the year in vain efforts.

We are also informed by Petrograd that the Russians have captured during the last few weeks 130,000 men, nearly 300 machine guns and sixty cannon, which is quite incredible seeing that they have all this time been on the retreat. The Germans would hardly agree that they had lost their time "in vain efforts" since they have regained practically all the territory taken by the Russians since August and have established their lines from twenty to a hundred miles inside the Russian frontier at almost every point. The Germans and Austrians have sacrificed men freely in their rapid advance, but to say that their loss is over half a million, a quarter of their force, is an obvious exaggeration.

It is, however, true that the Russian army in Galicia has been withdrawn, not destroyed, and that as soon as it can be provided with guns and ammunition it would be ready to advance again with as great a numerical preponderance as before. Whether it can be made ready to reassume the offensive before the summer is over is doubtful. The munitions which have been manufactured in the United States for Russia will have to be transported across the American and Asiatic continents and the Pacific Ocean. The Trans-Siberian railroad was hardly adequate to supply the Russian army in Manchuria during the war with Japan and the expenditure of ammunition in the present war is vastly greater. Consequently the American and Japanese supplies are piling up at Vladisvostok and the Russian Government has ordered engines and cars in large numbers from the United States to transport these goods from the Pacific to the seat of war.

On the assumption that the Russians are for the present incapable of energetic action there has been much speculation as to where the Germans will next turn their attention. One theory is that they will assist the Austrians in an invasion of Italy, but this reminds us of the curious circumstance that Germany is not yet officially at war with Italy. It is said that there are German officers and men among the Austrian forces on the frontier, but if so they are there incognito, as it were. Another theory is that the German troops no longer needed in the east will be shipped to the western side. But the German lines in France and Flanders are still holding and there seems to be no serious need for more men unless another drive is to be made toward Paris or Calais.

It is, however, more commonly assumed that the Germans will next try to capture Warsaw, and certainly their present position is more favorable to such an attempt than ever before if they are able to take advantage of it. They now are on the Russian side of the Vistula both north and south of Warsaw and they have still possession of the Bzura River, only thirty miles west of Warsaw.



But whatever strategic use the Germans may make of their new position the regaining of Galicia will relieve two of their most distressing needs, the shortage of gasoline and copper. It is reported that the Galician oil wells and copper mines are already being got ready for working.

Fighting in the Labyrinth

The Souchez sugar factory still marks the middle of the fiercest conflict in the French theater. North of it the Germans seem to have the advantage and south of it the French. In both cases it appears that during the week the French first carried the German entrenchments and afterwards were forced to abandon them, at least in part. The reports are confusing but it is at least evident that neither side can yet claim undisputed possession of this sector of the line.

But even if the victory of the French south of Souchez was not as complete

and permanent as they supposed the capture of the German fortifications known as the "Labyrinth" was a notable achievement and has done much to encourage the Allies because it proved that even the strongest positions can be carried if persistently attacked. The Labyrinth, altho built up since the Germans established themselves on their present lines, was probably stronger than any of the permanent fortresses constructed by Brialmont and the French military engineers. The approaches to the entrenchments were commanded by batteries of 3-inch, 6-inch, 8-inch, 11-inch and 12-inch guns. From May 9 to the end of the month the French attacked this position without making any progress. Then the French determined to get into the trenches and drive the Germans out inch by inch. The French regiments marching out from different points assaulted the first line and established themselves there. The conflict that ensued is described as follows by the official French observer:

Without a stop from May 30 to June 17 they fought on this ground, full of big holes and filled with dead. The combat never ceased either day or night. The attacking elements, constantly renewed, crushed the Germans with hand grenades and demolished their earth barricades. There was not an hour of truce nor an instant of repose. The men were under a sun so hot in the trenches that they fought bareheaded and in their shirtsleeves.

From three sides at a time we made way where the Germans had dug formidable shelters, ten meters under ground. The enemy artillery continued firing on our line without interruption.

Our reserves suffered, for in this upturned earth, where every blow from the pickax would disinter a body, one can prepare but slowly the deep shelters which the situation demands.

They were hard days, and it was necessary constantly to carry to the fighting men munitions and food, and especially water. Little by little our progress, indicated by a cloud of dust, resulting from the combat of the grenades, brought us to an extremity north of the Labyrinth. The fighting continued in the Eulenburg and other trenches daily, and ultimately the Labyrinth belonged to us.

The Germans lost an entire regiment. We took a thousand prisoners. The rest were killed. A Bavarian regiment also was cut to pieces. Our losses were 2000 men, among whom many were slightly wounded.

The Germans have been making vigorous and in part successful efforts to recover the trenches they had lost on the hights along the Meuse River southeast of Verdun.

The Austro-Italian War

No progress of importance on the part of Italy has been reported during the week. The Italians have admittedly found the Austrian defenses on the frontier stronger than they expected and they have in the first five weeks of their campaign made little headway against them. At Monfalcone and at Monte Nero the Italians have penetrated about ten miles into Austrian territory. Elsewhere they have not got more than three or five miles.

The Austrian lines have received considerable reinforcements, possibly from the forces which have been employed against the Russians in Galicia. At several points they are reported to have assumed the offensive against positions taken by the Italians, apparently without success. Most of the fighting seems to be artillery duels, altho the Italians have carried by assault several of the hights along the Isonzo River. They have continued the bombardment of the forts of Malborghetto on the Fella River on the northern frontier. Near the Swiss border the Italians are trying to gain Stelvio Pass, which is 9042 feet above the sea and now contains two feet of snow. The copper hosts on the peaks in this part of the Tyrol are being demolished at long range by the Italian shells.

The interview which the Pope granted to M. Latapie, editor of *La Liberté*, has aroused considerable indignation in France. And Italy because it is believed there an intimation that the Pope is under Austrian influences. In the interview he is represented as saying that it would be neither kingly nor manly for him to engage in the moral disarmament of the belligerents, but pardoned the infamies committed on all sides. He said attention to his proposal for a truce at Christmas and declared his intention to send a cyclone to the conduct of the war after peace is declared. With the violation of Belgian neutrality he says he has nothing to do since that took place during the pontificate of his predecessor. Asked about the sinking of the "Lusitania" he said, "I know of no more frightful crime. But do you think a blockade

German Socialists Demand Peace

Vorwärts, the official organ of the Social Democrats of Germany, was suspended on June 26 for publishing an article advocating the opening of peace negotiations. The article calls attention to the efforts of the Socialists to prevent the impending war and their loyalty to the Government when war became inevitable. The representatives of the party in the Reichstag on August 4 voiced the demand that peace and friendship be reestablished "as soon as safety has been secured and our opponents are inclined to peace." This time has now come, in the opinion of the Socialist leaders. The appeal concludes:

> The Socialists in the Reichstag and the official leaders of the Socialist Party have constantly and unitedly fought against a policy of conquests and annexation. We protest again with all possible emphasis against all efforts looking to the annexation of foreign territory and the oppression of other peoples—measures now demanded by the great business organizations and influential political leaders. The mere fact that such efforts are being made tends to postpone the day of peace, which the whole public is now so earnestly awaiting.
>
> The people want no conquest of land, they want peace. If the war is not to go on indefinitely until all the nations are completely exhausted, some of the powers involved must stretch out the hand of peace. Upon Germany, which has successfully defended itself against superior forces, and which has frustrated the plan to bring it to starvation, rests the duty of taking the first steps toward peace. In the name of humanity and civilization, and recognizing the favorable military position which our brave troops have won, we urge the Government to try to end the struggle. We expect of our fellow Socialists in other belligerent countries that they will make the same demand upon their own governments.

The Cost to England

The Coalition Cabinet will probably hold office during the war, for it has been decided to continue the present Parliament for another year altho its legal term expires next fall. The House of Commons has voted to suspend the act of Queen Anne, which would require those members taking office or assuming a different office in the new government to be reelected.

Premier Asquith announced to the House on June 15 that the daily expenditure of the Government since the first of April had been $13,300,000 and that for the next three months it would be not less than $15,000,000 a day. At his request the House then appropriated a billion and a quarter dollars. This brings up the total appropriations since the war began to $4,310,000,000. The French Parliament has appropriated $1,120,000,000 more; this brings the French total up to $4,800,000,000.

The British losses during the last two months have averaged two thousand a day. Up to the end of May the total of the casualties among the land forces was 258,069. These were distributed as follows: Killed, officers, 3327; men, 47,015; total, 50,342; wounded, officers, 5498; men, 147,462; total, 153,980; missing, officers, 1150; men, 52,617; total, 53,747. In the navy the total losses are 13,547 officers and men, of whom 8,245 were killed.

Lloyd George, in his new office of Minister of Munitions, has prepared a bill which goes beyond anything hitherto attempted anywhere in government control of both labor and capital. Local munitions courts are to be established composed of equal numbers of representatives of employers and employees with a president nominated by the Minister of Munitions. These courts will have power to impose small fines for slack work and breaches of discipline. Strikes and lockouts shall be illegal, and all wage disputes between em-

ployers and men shall be referred compulsorily to arbitration. All trade union rules calculated to hamper production, such as those barring the introduction of female and unskilled labor, shall be abandoned.

Employers in munition factories will have their profits limited according to the following scale: An average is to be taken by the auditors of their profits for three years previous to the war. For war contracts they are then to be allowed this average plus (a) an amount up to one-fourth of the average; (b) allowance for depreciation of machinery. Any surplus will then be taken by the Treasury. For example, if the pre-war average is shown to be 5 per cent, their war profits will be limited to 6 per cent, together with a fair allowance for depreciation of the machinery. The trade unions are to recruit from among their members a voluntary army of workmen, who will sign an agreement pledging themselves to go to work in any State-controlled factory where their labor is required. A traveling and subsistence allowance will be made for men with families who have to move to another town.

The New Secretary of State

President Wilson has appointed Robert Lansing, of Watertown, New York, to succeed Mr. Bryan as Secretary of State. Mr. Lansing, who succeeded John Bassett Moore as Counsellor for the department in March, 1914, had been acting as Secretary since the resignation of Mr. Bryan. Among the letters of congratulation received by him was one from the latter. The new Secretary assisted Mr. Wilson in the preparation of notes relating to the war. He is fifty-one years old, a graduate of Amherst, and a lawyer by profession. Beginning in 1892, he represented the United States in connection with several international questions, including the Alaskan boundary, Bering Sea and Atlantic fisheries arbitrations, and became known as an authority with respect to international law. He married a daughter of John W. Foster, who was Secretary of State under President Benjamin Harrison.

Indiana Election Frauds

The conviction and punishment of the Mayor of Terre Haute and twenty-six other prominent residents of the city, two judges included, in April last, because they had broken the election laws in many ways, has now been followed by the indictment, at Indianapolis, of Thomas Taggart, Indiana's member of the Democratic National Committee; Joseph E. Bell, Mayor of the city; Samuel V. Parrott, chief of police; Street Commissioner Bush; Dr. Sluss, formerly superintendent of the City Hospital; Herman Adams, city sealer of weights and measures; Robert W. Metzger, Republican member of the Board of Public Safety, and 121 other men, a majority of them city officers or employees. There are forty-eight counts in the indictment, which covers 228 typewritten pages. The defendants are accused of violating the election laws at last year's primary and general election, by false registration, repeating, stuffing ballot boxes, bribery, blackmail, the destruction of ballots, etc. The charges are almost a repetition of those in the indictment at Terre Haute, and one of the men indicted at Indianapolis is Donn M. Roberts, the convicted Mayor of Terre Haute, now serving a six years sentence in the Federal prison at Leavenworth. It is alleged that Roberts sent repeaters from Terre Haute to vote at Indianapolis.

The indictment was expected by Taggart and his associates, and nearly all of the accused men were ready to give bail. They say they are innocent. At Terre Haute the accusation was made by a Federal grand jury and the Federal prosecutor. At the capital the work has been done by the county and State authorities. It is predicted that the prosecution of these defendants, among whom are Republicans and Progressives as well as Democrats, will lead to similar proceedings in two other cities of Indiana.

Arrest of General Huerta

General Victoriano Huerta, formerly president or dictator of Mexico, who recently became a resident of New York City, was arrested on the morning of the 27th at Newman, N. M., a small station fifteen miles north of El Paso, by United States marshals, who charged him with violating the neutrality laws by planning in this country a military movement in Mexico. The officers also arrested General Pascual Orozco, who had come to the station in an automobile, intending to carry Huerta in it to El Paso. Both were released on bonds. Huerta asserted that he was on his way to the

Brown Brothers

A SECRETARY ON WHOM THE COUNTRY WILL RELY

Robert Lansing, counsellor to the Department of State during Mr. Bryan's incumbency, secretary of state *ad interim* when Mr. Bryan resigned, and now, by President Wilson's appointment, secretary of state. He is an Amherst graduate and has had long experience in foreign affairs, having served repeatedly in international arbitrations

exposition at San Francisco and had planned a short visit to his daughter in El Paso. But he had been carefully watched for some time. The authorities ascertained, it is said, that he was about to cross the Rio Grande with Orozco; that the garrison at Juarez, on the other side of the river, was to revolt in his favor; that General Salazar, with 2000 men, was to join him and to capture Ojinaga, and that from Juarez and Ojinaga the Huerta forces were to move southward. A large supply of ammunition for their use had been discovered in El Paso. Orozco had been gathering recruits along the border.

But little change had taken place in the condition of the opposing armies. There was a report, denied by Villa, that Obregon had captured Aguascalientes and that Villa had retreated to Torreon. Gonzales, with one of Carranza's armies, attempted to take possession of the capital, and was repulsed by Zapata. Admiral Howard, arriving at a point near Guaymas with 600 marines, was assured by the Villa generals there that they would protect the American colonists who have been menaced by the Yaqui Indians. One of their expeditions was unsuccessful, the Indians killing forty of a party of 150 men, but another detachment reached the colony. The generals told the Admiral that the colonists ought to seek a place of safety, and that the landing of marines might be misinterpreted by the masses and cause complications. Several of the colonists have been killed and their bodies were mutilated.

Carranza declared that under no circumstances would he treat with Villa. The latter, on the other hand, has been accept arbitration by the United States, if Carranza would abide by the decision and, with himself, give up all claims to the presidency. This is Villa's attitude, as reported by his friend, General Angeles, now in this country, who says that the contest may go on for years because there is now so even a division of forces. Zapata, in his reply to President Wilson's warning, defies the United States and says he can never be "intimidated by Yankee braggadocio." Men who were formerly soldiers of Huerta entered the city of Chihuahua last week and destroyed by fire several prominent buildings, including one used by Villa as his base hospital. Three hundred wounded men were burned to death.

Santo Domingo and Hayti

Senator Phelan, of California, who was commissioned by the President to make an investigation concerning the charges against James M. Sullivan, Minister to Santo Domingo, has submitted a report which says that while Sullivan's acts did not involve moral turpitude he is temperamentally unfitted for a diplomatic office. It is said that the Senator recommends that Sullivan be removed. The latter recently obtained leave of absence on account of ill health, and is on his way from Santo Domingo to Washington. The charges against him related to the transfer of customs funds collected by Receiver Walter W. Vick from one bank to another, and to contracts procured from the Dominican Government by a relative of the Minister. Owing to the quarrel or disagreement, Mr. Vick resigned. The investigation brought to light Secretary Bryan's letter in which he asked Vick to find places for "deserving Democrats" in Santo Domingo's customs service.

In Hayti, where there have been eight presidents in the last seven years, the revolutionists led by Dr. Rosalro Bobo are still striving to overthrow President Guillaume Sam. A few days ago, when there was a battle at Cape Haytien, a French cruiser landed marines at that port for the protection of foreigners. Our Government at once ordered Admiral Caperton to go with his flagship, the armored cruiser "Washington," from Vera Cruz to Cape Haytien, and it was expected that his marines would displace those of France in a peaceful and diplomatic way. Secretary Bryan could not induce President Sam to accept a fiscal protectorate, but France recognized his Government and loaned to it $1,000,000. Germany and Italy also recognized it, altho we had refused to do so. Hayti is in a deplorable condition. Of the eight presidents six were forced out of office and two were assassinated.

OUR BILLION DOLLAR TRADE BALANCE

In the early weeks of the war there was anxiety in this country because we owed so much money to Europe. The Stock Exchange closed lest a great selling movement of American securities held in Europe should vastly increase our indebtedness to "abroad," and drain our gold supply to the danger point. Now the pendulum has swung forward the other way and Europe owes us more and more each day. Our exports in the year ending with the present month at June have exceeded our imports by more than $1,000,000,000. The excess up to June 22 was $970,000,000. In other words, by more than a billion of dollars our sales to foreign countries have exceeded our purchases from them. For a long time there has been an annual excess on this side of the account, but the past year's has been greater by about $350,000,000 than the largest (1908) in the past. The increase is due mainly to the purchases here of war supplies by the Allies in Europe. These supplies include grain. In ten months our exports of foodstuffs increased from $267,000,000 in the corresponding months of the preceding year to $395,000,000; value of horses and mules rose from $12,921,000 to $56,473,000; that of motor cars, automobile trucks and other things used on battlefields have been very large. The past includes two months—July and August last—when the scene was on the other side. In these months our exports were greater than our imports by $25,000,000. But the export excess grew from $17,000,000 in September, and $50,000,000 in October, until the record, $173,000,000, was reached in February. Since the beginning of March it has been in the neighborhood of $140,000,000 a month. While the great balance in our favor is due chiefly to the sales already mentioned, there must also be taken into account a decrease of more than $200,000,000, or about 12½ per cent, in our imports. The question what this great trade balance in our favor means and how Europe's corresponding debt to us is to be liquidated is here discussed by three authorities on financial problems.—THE EDITOR.

WHAT WE SACRIFICE

BY ALVIN S. JOHNSON

PROFESSOR OF ECONOMICS IN CORNELL UNIVERSITY

THERE is scarcely any one who does not realize that the European war has exerted a baleful influence upon our economic life. Except in shipbuilding and in the production of war supplies, industry is marking time. No important new enterprises have been launched in the course of the year; building operations are almost at a standstill; real estate is dead; unemployment, if not so general as a few months ago, is still a serious problem. But we have an unprecedented balance of trade. In twelve months of war, our exports will have exceeded imports by a billion dollars or more. The balance will continue heavily in our favor so long as the war lasts, and doubtless for a considerable time thereafter. And in this fact many find ground for optimistic forecasts of our business future.

We are no longer ridden by the vulgar illusion that the favorable balance of trade will bring gold into the country and thus produce good times. We already have all the gold we need, and still fall far short of prosperity. What the billion dollar balance means is that we are paying off our debts. At the outbreak of the war we owed six billions, net; soon we shall have reduced the figure to five billions. When normal conditions return to Europe, we shall probably still be a debtor nation, but our burden of debt will be light as compared with what it was last August. And this appears at first glance a gain to compensate considerable immediate hardships.

But here again we labor under an illusion. We did not become indebted to Europe thru thriftless loans for consumption, but in consequence of the fact that our vast natural resources needed for their exploitation more capital than we possess. When we built a railway with British capital we did not impoverish ourselves. The British held the railway bonds, but we held the railway—something ordinarily of far greater value to us, directly and indirectly, than the price we paid for it. We enriched ourselves by borrowing, as does every country better endowed with natural resources than with capital. We took the proceeds of our foreign loans not in gold, but in imported goods for which we gave no corresponding exports. In so far we let the balance run against us, to our business advantage.

We still have natural resources needing for their exploitation more capital than we can raise at home. But Europe has no capital to lend; instead, the European nations must secure for themselves whatever capital we can be forced to yield up. And this is the meaning of our favorable balance of trade. England and France are taking our goods and paying for them with our own securities. Sound values; but there is no way in which they can be set to work to build railways and hydro-electric plants, business blocks and homes. We are in the position of a private borrower who is forced to repay a loan when he has profitable use for the funds and would much rather renew it. Our billion dollar excess of exports gives the measure in which we are forced to starve our own industry of needed capital. And our consequent industrial depression represents the cost imposed upon us, without our consent, by the nations at war.

Ithaca, New York

HOW WILL EUROPE PAY?

BY CHARLES A. CONANT

AUTHOR OF "A HISTORY OF MODERN BANKS OF ISSUE"

THE big trade balance which is being built up in favor of the United States, partly by our abstention from the purchase of European goods and partly by our large sales of war supplies, will probably be settled ultimately by the transfer of credits. There are, speaking broadly, but three methods of settling such a balance—by goods, by gold or by credit.

It is probable that as soon as the war is over, the mills, factories and shops of Great Britain, France and Germany will resume work with their full equipment and that America will be in a position to take freely again the luxuries which have been withheld either from inadequate supply or by economies at home during the progress of the war. While this factor will not come directly into operation at once, it will aid the European countries materially in settling obligations upon which they may have been granted credit for short periods.

Additional supplies of gold are becoming of about as much use to this country, under the present strong organization of the financial system, as Midas found the yellow metal when everything he touched turned to gold. With the gold stock of the United States computed by the Treasury on June 1 at only $86,000,000 less than two thousand million dollars, and with surplus reserves in national banks amounting to over $700,000,000 and in the Federal Reserve system to $250,000,000, the banking community is showing a high degree of self-restraint in refusing firmly to be lured into speculative movements or unwise loans.

No doubt gold will be accepted in payment of obligations from Europe if it is sent, but it would be infinitely better to adjust the matter upon the basis of credit if it can be done.

Ultimately it would seem that the logic of events must call for the adjustment of the balance by some form of credit. The obstacle to such a settlement is, at the moment, that the American public are not accustomed to the government securities of Europe, and the holders of sound American securities in Europe are not disposed to let them go. Practically, however, the situation reduces itself to the legal principle of *compensation,* or set-off. If American corporations are under obligations of $3,000,000,000 or more to European holders of their bonds and stocks, and Europe owes us $1,000,000,000, more or less, for war supplies. a way must be found to clear the one obligation against the other. This way is not necessarily along the road of final liquidation, but perhaps of the deposit of American securities with trustees in London and Paris, as a guarantee of credits extended to European governments and corporations here, until those credits can be liquidated by a turn in the balance of trade, or by the distribution among the investing public of Europe of the great amounts of securities which will be issued to pay the cost of the war. It is a practical problem, to be settled by the banker, according to his own banking and credit relationships abroad, and the mere looker-on can only suggest that the usual common sense and enterprise of the American banker be employed in working it out.

New York City

OUR GAIN AND OUR DANGER

BY JACOB H. HOLLANDER

PROFESSOR OF ECONOMICS IN JOHNS HOPKINS UNIVERSITY

AN international balance such as the United States is now accumulating would be an impossible development in ordinary times. There would be no such imperative demand from abroad for goods of which the United States has become the only available producer. And, on the other hand, the United States would be making its accustomed heavy purchases in foreign markets from which it is now excluded. Thus by selling relatively less and by buying relatively more, our trade would approximate its normal state. Any chronic excess of exports would be checked by the influx of gold, the rise of prices, and a stimulus to imports. Any chronic excess of imports would be corrected by the efflux of gold, the fall of prices and a stimulus to imports. These adjustments would be effected thru the ordinary mechanism of foreign exchange and international investment.

But these are not ordinary times. Driven by military necessity, Europe is buying of us, almost at our own terms, vast supplies of munitions and great stocks of food. For these exports we are able to take only part payment in commodities, in consequence of the widespread derangements in the markets from which we are in the habit of buying, due to military occupation and maritime blockade. Nor can the debt be extinguished by payment in gold, since every debtor country is hoarding its stock of the precious metal or permitting only small and necessary amounts to trickle thru.

Finally, our usual practise of applying a favorable balance to the reduction of foreign indebtedness is restricted by the public control of the world's stock exchanges thru the fixture of minimum prices, and by the reluctance of foreign investors to sacrifice their holdings.

The only course left open to the United States has been to finance its colossal foreign sales by credit accounts—and this is what we are now doing. I can see no prospect of early change in this direction. The warring countries will continue to buy the supplies upon which they deem national existence to depend; they will be unable to make payment either in goods or in gold or by cancellation of existing debts; and in order to continue to sell our wares to them we must accept future promises to pay.

The immediate effect upon the United States should be great economic gain. We are selling enormous quantities of goods, at exceptionally profitable prices, upon credit terms that involve less risk than do ordinary commercial transactions. The ultimate menace to the United States seems to lie in the warped and feverish quality of war demand. This involves, first, the over-stimulation of a limited group of industries and the relative depression of all others; and, second and more important, a trade expansion based upon the borrowing capacity and not upon the productive efficiency of the European countries.

HARVARD UNIVERSITY'S NEW LIBRARY—A MEMORIAL TO HARRY ELKINS WIDENER

THE FARMER'S CREDIT

BY RALPH W. MOSS AND MYRON T. HERRICK

*The subject of rural credits, which is still on the Democratic calendar of prospective legislation, altho the Moss-Fletcher bill establishing a system of farm land banks was crowded out in the last days of the Sixty third Congress, was left in the hands of Congress late in 1913 by the United States Commission on Rural Credits, which had investigated European systems in the summer of that year. Except for such state action as Dr. Herrick mentions the matter is still quite unsettled. Congressman Moss, the author with Senator Fletcher, who headed the United States Commission, for the Moss-Fletcher bill, is an Indiana farmer and a member of the House Committee on Agriculture. Dr. Herrick, who has been Governor of Ohio and Ambassador to France, as well as president of the American Bankers' Association, made the subject his own in his book on "Rural Credits," published in 1914.—*THE EDITOR.

WHAT THE FARMERS NEED

BY RALPH W. MOSS

IN the wide discussion which has been given to rural credits there has developed no disagreement as to the necessity for additional legislation or as to the large measure of benefits which will inure to American agriculture from the enactment of rural-credit legislation. So much progress have we made that altho the rural credits bill did not come to enactment at the last session of Congress, it will certainly become a law at the next session. Public sentiment is undoubtedly in favor of this legislation, not because the farmers of the United States are seeking special privilege, but because in the end better farming means better living.

The farmers of the nation are not asking to be given the use of public moneys at special rates of interest. I deny that the Government has any moral right to advance public money to finance the industrial operations of any class of its citizens. If such a law were enacted in the favor of farmers, then citizens engaged in other occupations would have a right to ask similar favors; and in the end we would have the Government performing many of the functions which pertain solely to the life of a private citizen.

THE FARMER'S OPPORTUNITY

But while the farmers are not asking for any special privilege, and do not expect the Government of the United States to put public funds at their disposal, yet they are asking that the laws of this country shall be so framed that they can organize and use their collective credit where they wish to use it, and be thus enabled to obtain money on as good terms as can an organized community where such community is borrowing money.

The nation which has the most highly developed system of farm credits is making the most rapid advances in agriculture among all the nations of the world, while in our country only those branches of farming which can give the farmer a constant cash turnover are expanding in proportion to meet a rapidly growing demand. The conclusion is self-evident. We must give our farmers the advantage of cheap and readily available farm credits. For fifty years we have been depending on a high tariff to stimulate agriculture; during this period we have charged farmers a high interest rate, and today we are face to face with a deficiency in our domestic food supply. Let us give our farmers the necessary tools of trade —credit without usury—and American industry and intelligence will soon make us the foremost agricultural nation of the world. Every branch of our farming will then keep pace with dairy farming, and thus thru all the years to come our farms will feed and clothe under American standards of living our growing population.

TWO KINDS OF CREDIT

Agricultural credit naturally divides itself into two classes: short time, or personal, credit, and land mortgage, or long time, credit. Both classes are required in order to meet the credit necessities of farmers; but long-time credit is of the greatest value to the nation. This kind of credit has been first developed in other countries, and will doubtless precede personal credit in the United States.

The two classes of credit, however, are separate and distinct from a banker's standpoint. The Moss-Fletcher bill, framed by the United States Commission on Rural Credits, seeks to organize a system of pure mortgage banks, limited to loans on rural real estate for productive purposes and within certain limitations as to amounts which can be loaned to any one person. The essential feature of mortgage credit as proposed by rural credits and as differentiated from other investment banking is a guaranty fund maintained by the bank issuing the land bonds to insure the prompt payment when due of both principal and interest on the bonds. The principal security for the ultimate repayment of all liabilities is the land values pledged under mortgage; but to guard against temporary default in payment by the real borrower, the mortgagor, and thereby insure the prompt redemption of every promise to pay to the real lender, the bondholder, the banks issuing these land bonds are required to collect and to maintain a security fund pledged for this particular purpose, which cannot be diverted to any other purpose. This surety fund is required to bear a certain fixed proportion to the volume of bonds issued.

Personal credit, however, as used to promote productive agricultural operations differs essentially from commercial credit, and it is this point which many persons do not understand, nor the fact that it requires a different organization in order to administer it efficiently. A banker recently defined the average commercial bank as an institution whose business is to gather together the current deposits of the people and amass them into a body of liquid capital that can be loaned out to people engaged in a commercial business. They should be loaned out on short-time paper, three or four months' notes preferably, that represent the great tide of commercial transactions of the people.

THE FARMER'S PECULIAR NEED

But this system of banking, I wish to point out, adapts itself perfectly to the necessities of the merchant and the manufacturer, but cannot serve the needs of the farmer. The

merchant can restock his shelves several times a year and the manufacturer can increase at will the capacity of his shops. The latter's total output is a question of operating his shops eight, sixteen or twenty-four hours per day. In comparison, the farmer's harvest period is fixed by nature and cannot be hastened. With grains, fruits, swine and sheep it is a question of months, while with important classes of live stock—for instance cattle and horses—the period lengthens into years. Thus while the merchant may use his capital but sixty or ninety days until it is released by a turnover the minimum period with the farmer is six months, and this period may be extended to two or three years. Therefore the period of discount must be longer in agricultural credit than it is in commercial credit. This is conceded by bankers, but it is insisted that a solvent loan can be renewed. If the period of time were the only distinction between rural and commercial credit, the renewal privilege would partly solve the question, but there are other vital distinctions, such as the character of the security offered and the purpose for which the loan is granted.

Briefly, a commercial banker loans money only on property values which can be realized upon under the terms of the law; a solvent loan to him is one which is legally good or which can be collected by execution. In contradistinction to this kind of banking, agricultural credit is based upon the divine promise of a seed time and harvest. It undertakes to promote agricultural operations by financing them and waiting until the maturity of the crop for repayment of the loan.

IS THE SECURITY HAZARDOUS?

The prudent commercial banker, to cite the instance more clearly, at once says that farm crops depend on the elements; that these elements are beyond man's control and therefore it is hazardous to advance funds on growing crops as security. No man, of course, can determine in advance that his harvest will be a good one, but we know that the total gross value of one year's products of American farms is computed to be about $10,000,000,000, estimated at farm values, and thus human experience proves that general results in agriculture are dependable.

I come from one of the great agricultural states—Indiana. As a state, we have made large use of our collective credit to develop and improve our communities. We have improved our roads and drained our marshes with money secured by the sale of bonds which are being repaid by the earning capacity of our people. We may thus safely attribute the advanced position of Indiana as being in a large measure due to the advantages of cheap credit; but while the advantage of collective credit has been extended by law to citizens in their organized capacity, it has been denied to the citizen in his individual capacity. The result has been that while our communities and our cities have made large growth and splendid improvement, the individual farmer has failed to keep pace with the progress of the times. Does any sane person refuse to believe that cheap credit would have gone as far to improve the situation of the individual as it has done for the community?

Today the citizens of my state are borrowing millions of dollars to be placed on public improvements at 4½ per cent interest. So the farmers are asking that they shall have the same opportunity as the community, that they may join and borrow money in their own private interest as cheaply as we are now borrowing it for public purposes.

I concede that the farmers have been getting, and are getting, credit indirectly. But farmers know that this indirect credit is costing them a high rate of interest, that they are paying more under this method than if they were securing credit direct. It robs them of the independence which the farmers of this country have a right to enjoy.

In seeking to change these conditions, therefore, by appropriate legislation, farmers are not asking for special rights as a class but for their just rights as citizens. They are willing to pay what money is worth in the markets of the world, but they do not wish to be driven to the pawnbrokers for credit.

Center Point, Indiana

COÖPERATION—NOT STATE AID

BY MYRON T. HERRICK

IN many European countries farm mortgages run from ten to seventy-five years and are extinguished by half-yearly instalments called annuities. In the United States three and five year mortgages prevail, and the payment is in lump at the end of the period. In Germany the farmers have created great systems of local, regional and national associations bound together by unions and federations, and supported by their coöperative banks. In the United States the farmers are poorly organized, while there is no rural cooperative banking.

The object of the rural credits movement at its start in 1910 was to introduce these European methods for long-term and short-term borrowing. They were entirely free from politics and the idea of general social reforms. President Taft and President Wilson officially indorsed them, and the movement began with bright prospects of success. But it has gone wild. Enthusiasts have used it as a vehicle for experiments; worst of all, for state aid and special privilege for farmers, and thereby precipitated a situation so fraught with grave consequences that public opinion now is divided.

WHAT HAS BEEN DONE?

The United States Senate passed a bill to establish a bureau for lending $10,000,000 to farmers and issuing Government bonds for mortgages after that appropriation became exhausted. The House passed a bill to establish public land banks to issue bonds, backed by the Government, for raising money for farm mortgages. The Secretary of the Treasury was required to buy $50,000,000 a year of the bonds. These bills failed to become laws because Congress could not agree as to details.

In some of the states, however, the enthusiasts have accomplished their wishes. In New York the state comptroller is obliged to act as trustee for mortgages used as collateral for the bonds of a monopolistic and highly-privileged land bank. In Indiana the state auditor must discharge the same duty for rural mortgage associations and also appoint inspectors for property offered on mortgages. In Wisconsin the state treasurer must discharge this duty for similar concerns, while the assessor of incomes must examine such properties. A similar law has been enacted in Utah. In Missouri a public land bank has been created with power to issue state bonds. In Kansas the state, to all intents and purposes, may guarantee the title and value of mortgages pledged to the state treasurer as security for bonds. All these states lift taxes from the bonds, and make them lawful investment for fiduciary funds.

It is appalling to think how far the craze for needless class legislation already has gone without arousing the common sense of the people against it. Unless public attention is awakened before the next session of Congress and the state legislatures, there is danger that Government credit will be so badly involved that taxpayers will have to stand heavy losses on defaulted mortgages in years of bad crops and financial depressions. There are nearly two billion dollars of farm mortgages. If these all were absorbed by government and interest and tax reduced, the effect would be felt in many directions; yet nothing less seems to be the ultimate hope of the enthusiasts.

THE DANGER IN STATE AID

State aid is easy to suggest. It does not require a high degree of intellect or much mental exertion to devise measures for solving the rural credits problem by use of government cash or guaranty. But, while the easiest to suggest, it is the very worst remedy to adopt, because state aid would not be distributed impartially, nor could it be accorded without harm in the long run to its intended beneficiaries, or without exciting ill will and indignation in those who did not need or care to receive it.

The simple and only practical solution of the land-credit problem is thru private bond and mortgage companies operating under federal or state charters, and so regulated by law that their management would be honest and efficient, and their stocks and bonds safe and attractive securities for investors. This was the solution which the originators of the movement had in mind, and they hoped that the companies would be supplemented by associations composed of the borrowers themselves. These in Germany are called *landschafts*. A *landschaft* is a subdivision of a state, in which landowners, enrolled as members, may be associated with the right to issue bonds against their amassed mortgages—thus substituting collective for individual credit.

CO-OPERATIVE CREDIT

The craze for state aid for land credit has caused the enthusiasts to overlook the more important branch of the movement, coöperative credit. They have procured, it is true, the enactment in Massachusetts, New York, Wisconsin and Texas of laws for so-called credit unions; but these are merely savings and loan societies intended for poor people. They have no other banking powers whatever; they are too restricted for the individual needs of American farmers and are barred from utilizing resources for creating and supporting the systems of cooperative associations, which agriculture requires for its full development.

An association, as distinguished from a corporation, has no fixed capital. The only permanent fund it has is the reserve accumulated from profits; its working funds are variable, and consist of deposits and payments by members on shares, which they may withdraw on due notice. Members vote per head and not per share, and the equality and personal responsibility of members are always preserved. The associational form is absolutely indispensable for coöperation. The grand purpose of the movement was to make it lawful for an association to do whatever now may be done by joint stock companies, whether it be in commerce, industry or finance.

There is more coöperation in the United States than in any other country, but its development has been along special lines, as life insurance, savings banks and building and loan associations. Among farmers it is confined largely to granaries, creameries and fruit marketing associations, while no efforts have been made to form systems or use coöperative banking. This absence of system and banks is the chief defects in American rural cooperation.

FINANCIAL COÖPERATION IN GERMANY

In Germany, where, of all nations, agriculture is the farthest advanced, the farmers have bound themselves together in systems, embracing three degrees of organization, thru which they conduct not only their commercial, industrial and financial affairs, but also their social relations. The first is the local group, consisting either of one bank with trading features, or of a bank and affiliated societies. The second is the provincial organization, consisting of adhering local groups, a central bank and central associations held together by a union. The third is the imperial organization, consisting of adhering central banks and associations and unions, and a national bank and national associations held together by a federation.

This structure rests upon the local banks, which all are of the associational form. That is, they depend upon the collective liability, limited or unlimited, of members for obtaining resources and as a guaranty for [illegible] unless he has taxable property, or at least a character of standing vouched for ourselves. The result of this selective membership is that the credit of a Savoyard local bank is so high that it attracts from its neighborhood a volume of deposits sufficient for its daily transactions and as much more besides as is necessary to invest in the stocks and bonds of the associations higher up. For this latter purpose some of the local associations raise funds by issuing and selling shares in the nature of certificates of long time deposits, payable either at once or in installments.

But the growing tendency of the local bank is to eliminate capital stock, whether fixed or variable, so as to avoid dividends and maintain their true character as neighborhood clubs of one hundred or more mutual acquaintances or friends. The profits all go to the reserve. This is their only permanent fund. It is indivisible. It does not belong absolutely either to the members or the bank. In event of dissolution it reverts to the province, to be held for a new bank in the same locality. Some of these funds now are very large. Their presence as foundations scattered thruout the country has contributed greatly to stabilizing the rural population. Since the reserve serves not only as a guaranty, but also for a working fund, it takes the place of a capital stock. When its size becomes sufficient for these purposes, the bank reduces its profit-takings. The aim of a bank is not gain, but to save members costs and expenses of obtaining loans and supplies.

In a country as great as the United States there is room for a number of agricultural systems, and each would embrace five degrees—local, regional, state, departmental organizations. Such systematization of agriculture, based upon local cooperative banks, would enable farmers to utilize all their stupendous collective wealth and credit as a mobilized resource for the benefit of themselves individually and agriculture generally. Mutual self-help, organized in this way, would do away with the necessity for state aid, paternalism and socialism. It would even diminish the necessity of farm mortgaging and borrowing from the investing public. So rural coöperative organization is more important than the establishment of land-banks or bond and mortgage companies, and its encouragement is the chief purpose of this movement.

MR. BOK

WHO, AS EDITOR OF THE LADIES' HOME JOURNAL, HAS ONE OF THE LARGEST AUDIENCES OF ULTIMATE CONSUMERS AND PRIMARY BUYERS AND SOLICITORS AMONG ADVERTISERS AND GENERAL MANAGERS IN EXISTENCE

MR. BOK

BY MARVIN FERREE

THE first thing that impresses you upon meeting this man is the difference between the Edward W. Bok of the endless newspaper paragraph and the Edward W. Bok of real life. Few men have been more paragraphed, made fun of and ridiculed.

Your preconceived notion is quickly shattered the first moment you meet the man. Tall and spare, he radiates virility. He is masculine to his finger tips. He has the lean look of the man in whom mentality dominates appetite. He has, too, a suggestion of the great out-of-doors about him, for there is a dash of ruddy color in his cheeks, and a little swing in his movements that hints of long country walks and intimate acquaintance with out-door sports. He is, as a matter of fact, inordinately fond of golf and tennis.

Mr. Bok is fifty-odd years of age, and looks younger despite the touches of gray in his hair. The dominant note in his facial harmony is power. There is no consciousness of self. He lives out a phrase of his own: "A man should take his work seriously, but never himself." Seldom is the person of exceeding earnestness agreeable. Still less often is the exceedingly agreeable person a thoroly earnest one. Mr. Bok presents that anomaly in character.

"I am not an American," he said, when he began to talk of himself. "I was born in the Netherlands. My father was a man of wealth in the old country, but he lost his fortune and we came here. I was six years of age. My father's struggle to establish himself in a strange country was too much for his health, and he soon passed away, leaving my mother, my brother and myself. We lived in Brooklyn, in a tenement house of three stories. My father adopted strenuous measures with my brother and myself. As soon as we arrived here he placed us in a public school. Neither of us knew a word of the English language. It was hard, of course, but I see now that it was right.

"The first money I ever earned was by selling water to passengers on the horse cars bound to Coney Island, at a cent a glass. I noticed that at a point near our home, where they changed horses, the passengers used to get out and run for a drink of water on hot days. I thought I could save them the walk and earn a little money by carrying the water to the car. I filled a pail with cold water, jumped on the cars and sold it.

"The other boys in the neighborhood took it up, and I had my first taste of competition. Then I got some sugar and lemons and sold what I called lemonade at two cents a glass. This was my first lesson in one of the basic facts of success. To be successful one must do the common thing in an uncommon way.

As the year Fourth comes round and four or five thousand young citizens who would have been killed or maimed by the insane Fourth toss up coin and stand on July fifth, it is interesting to look at one of the many plans for public opinion to make the change. For the influence of the "I. H. I." (Independence Day Improvement Association, as it is called) is a substantial force in keeping families from one of those hundreds of thousands who read "The Ladies' Home Journal" comparatively few know who makes it. What is the secret of the editor's success? Here Mr. Bok tells his own story.—THE EDITOR.

"My father left us very poor. My mother, who had been accustomed to luxury and servants in the Netherlands, had to do her own housework. My brother and I tried to help her. Every afternoon when we came home from school we helped her in every way we could. We used to scrub the floors of our rooms and the flight of stairs leading to our floor once a week, and every three weeks the whole three flights. I washed the dishes for her. I learned to cook and used to relieve her of that as much as I could. In this way I learned what I have never forgotten—the fearful, interminable routine of a housewife's life."

A smile here lit up Mr. Bok's face as he said:

"It always makes me smile when some woman, a reader of our magazine, writes me and asks: 'What do you know about the needs, the life or the struggles of poor people—you, who were born with a silver spoon in your mouth?' Bless her heart, she little knows that I have been thru it all, and know it, hoof and heel. I know what it is to live on practically nothing; to leave the house stealthily at night, go thru the streets and pick up old pieces of wood because we had not the four cents to buy a bundle of kindling; to pick up odd bits of coal; to sift the ashes until my fingers bled; to get up before dawn and make the fire; to have a horror of passing a grocery store because we owed the man and couldn't pay it; to go around afraid to stop because of the patches in my clothes. Know it? Oh, yes, I know what it is to be poor; knew it not for a six-month, either, but for a number of years.

"And it was that, I tell you," said this man, emphatically.

"Then" You must prove!" I asked.

"I do," he said emphatically. "The finest thing that ever happened to me, the finest thing that ever happened to any young fellow is to be poor. There is no greater misfortune than poverty—not as a condition in which to start, but as a condition to work out of."

"About this time," continued Mr. Bok, "I conceived the idea of securing the autographs of celebrities. I have now the second largest collection of autographs in this country. Every evening I would read about famous people and then write to them, but not directly for their autographs. They have little value. I wanted characteristic letters. I wrote to General Grant, for example, asking him the exact spot where Lee surrendered to him. He wrote me a four-page letter in reply. So I secured interesting letters by first familiarizing myself with the lives of the people I wanted to write to and then asking each some question about the pivotal point in his or her career.

"At thirteen I left school. I was then in the grammar grade. I never went to school again. I have hustled from that time until now.

"I went to work as an office boy in the Western Union Telegraph Company. Clarence Cary, a friend of my father, said to me: 'If you learn stenography you will find your advancement will be more rapid wherever you work.' I took up stenography at once in a night school and in a few weeks I could take dictation. Meanwhile, I was, of course, doing an office boy's work, running errands, copying letters—all valuable to any man, no matter how high he rises, because going thru these positions he knows the possibility of every position below him. He has been there.

"While working in the Western Union and studying at the night school it occurred to me that the theater programs could be made larger with profit. At that time they were single sheets printed on one side, like those used in the upper galleries of a theater now. Frederic Colver and my brother joined me in the venture of enlarging the programs to four sheets and filling them with advertisements. We did this for four theaters in Brooklyn and soon cleared a good thing out of it every week."

The inventor of the modern theater program! That, in itself, is a bit of fame which any business man would be proud to own.

"While doing this we also got out

The Brooklyn Magazine, which we made out of a little sheet that had been the organ of the Philomathean Society. We published in it the sermons of Dr. T. De Witt Talmage and Henry Ward Beecher. So in the monthly we published eight sermons besides other matter. I got some of the most notable men to write for us for nothing. It was cheek. I was a Plymouth Church boy and Mr. Beecher helped me as much as he could. We ran the magazine for two years and sold it at a profit.

"I was not seventeen and my friend, Clarence Cary, asked me what I thought I would like to do since I had learned stenography. I said I should like to be in some work that would throw me among books. He introduced me to Henry Holt, the publisher, and I became his stenographer. I remained there for a year. Then an opportunity came for me to go with *Scribners'* as stenographer. After four years I was promoted to do advertising writing, something I always liked. I prefer writing an advertisement today to an editorial. Business always appeals to me. I remained with Scribners' for seven years. During this time my brother and I started the Bok Syndicate Press.

"In the development of the Bok Syndicate Press I did that of which I am not proud. I conceived the idea of getting forty celebrated women to write a letter apiece for the service. I wrote to editors thruout the country telling them of my plan, saying that if they published these letters women would read the paper and that would bring advertising, and added that I must have good rates to get good service, for these women must be well paid. It was a heavy contract.

"The editors liked the plan, and were liberal enough to justify me in securing articles from almost every famous woman living at that time. I secured a weekly New York letter from a writer called 'Bab', who was very popular at that time. Then the editors began writing me: 'Your own letter, the weekly letter from celebrated women, and Bab's give us half a page a week. Can't you give us three columns more, so that we can make a whole page devoted to women?' I wrote that I could not. I would furnish the three and they must provide any further material. They did, and that was the beginning of the present woman's page that all newspapers now conduct—a product of which I confess I am not very proud. But it familiarized me with women's needs, and was preparatory, again, for my future work.

"The weekly literary letter of the Bok Syndicate Press I signed by my brother's name, William Bok, to prevent any embarrassment to my employer, the Scribners. Mr. Cyrus Curtis, the publisher of *The Ladies' Home Journal,* was a reader of this letter of mine in the newspapers, and he found out who wrote it.

"Mr. Curtis called upon me and said that his magazine was being edited by his wife, but that, as they had a little daughter, who was growing up and needed more of her mother's care, she had no longer the time necessary to be given to the magazine. He asked me if I knew any young man whom I could get for the position.

"I said I did not. He smiled.

" 'How about you?' he said.

"I asked for a few days to consider. I asked my friends what they thought. Every one of them said that I would be buried alive in Philadelphia. Not a friend encouraged me. But that is all nonsense, you know, about a man burying himself anywhere. If he's got it in him, it'll come out in Phildelphia as well as in New York. I decided to go. That was twenty-four years ago.

"And that," said Mr. Bok, with a smile, "is all."

I asked him to tell me of the development of the magazine.

"You know," he said earnestly, "folks have a very complimentary way of saying that I 'made *The Ladies' Home Journal.*' And I have heard some of Mr. Curtis' best friends say this. They forget that in such an erroneous statement they do an injustice to Mr. Curtis. The basis of the present success of the magazine was laid when I came to it. It already had a circulation of 450,000 copies. It was for me to build it up from that point. And that," Mr. Bok said it so simply that one would think it had been the mere turning over of a hand, "is what I have tried to do. Mr. Curtis put the job up to me, and it was for me to make good."

"It is said that every man who writes does so with his eye on one woman who shall read what he writes. Do you edit the magazine in that way, with one woman in view?" I asked.

"Yes. For twenty-one years I have edited the magazine with one woman in view. I have never met her, but a year or two after I became editor Mr. Curtis and I made a tour of the smaller cities to study the needs of the American people. In one city, a small city—I will not mention the name because some one might know—I saw a woman who seemed to me by her dress and manners, and in every way, to be typical of the best American womanhood. I saw her at church and at a concert with her husband and children. I passed her home and saw about it the same air of typical 'homeness' and refinement I had noted in her. 'That woman,' I said to myself, 'is the woman I shall have in view in editing the magazine.'

"I made inquiries and found she did not read the magazine. Two years later I saw her name on the subscription list. A few years later I received a letter from her telling me how the magazine had helped her in her home and with her family. That woman will never know how gratifying was her letter, for I merely wrote her an ordinary letter of thanks."

Of his life apart from his work Mr. Bok is absolutely close-mouthed.

"I am married," he replied, "have been married for seventeen years. We have two children—boys. That's all."

"Mrs. Bok is the little girl that was growing up so fast that she needed more of her mother's attention when you took charge of the magazine," I said. "In other words, you married Miss Curtis, didn't you?"

He smiled assent.

This was the story of the man who, as editor of a magazine which extends its influence into three million homes, is practically a lay preacher to the largest congregation in the United States. It is impossible to estimate this one man's power in American home life, or the tremendous range of his appeal. What of his character? What of his philosophy of life?

He thumped his big-knuckled fist:

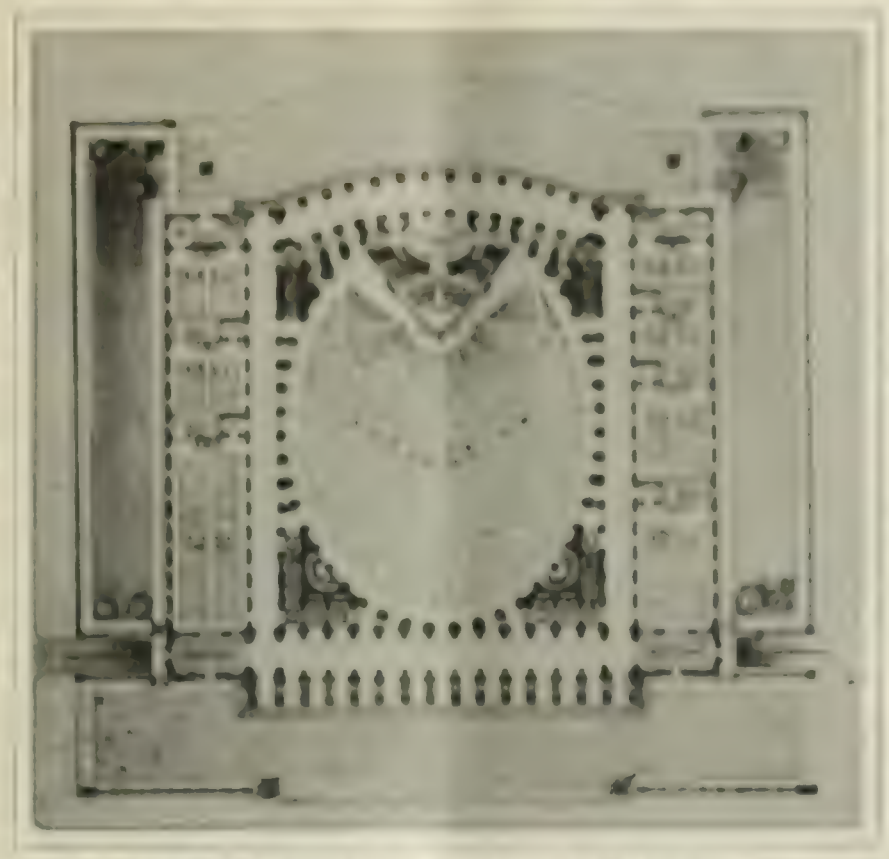
"Behind every story of success is a story of hard work and self denial," he said.

And Edward Bok works. He has worked—worked since he was thirteen, and he works today. But he loves his work, and there is the secret of his success. He lives his own favorite maxim: "Work for work's sake, and the rest, the money part, will take care of itself."

"How can the average man succeed?" I asked further.

"If he lacks initiative, if he is not a leader among men—and few are—then let him do the common thing in an uncommon way."

Here is his final statement. It came like a thunderbolt. His face almost flushed with anger as he spoke:



"Once and for all, let me make it clear that I don't understand women. No man does or can. The man who claims to understand them is an idiot. It is not given to man to understand woman any more than woman understands man. The sexes will always be a mystery to each other. It was so ordained."

New York City

A NEW MEMORIAL TO WASHINGTON

BY ROBERT H. MOULTON

IN the acceptance recently in Washington by the jury of award of the George Washington Memorial Association of a design by a firm of New York architects, the culmination of an effort which began four years ago has practically been reached. It will not be fully accomplished until the building is erected, but with the acceptance of the design and the fact that Congress has already made a grant of the site for the structure, the future looks bright for the early completion of the great work.

THE ELLIPTICAL AUDITORIUM SEATING [illegible]

The site selected is that part of Washington Mall known as Armory Square, and is valued at half a million dollars. It was formerly occupied by the Pennsylvania Station, and is about midway between the Capitol and the Washington Monument. At one end of the Mall facing the Capitol will be the Lincoln Memorial, for which the foundations are now being laid.

The George Washington Memorial will add another great building to the national capital, which has witnessed the erection of so many architecturally magnificent structures within the last few years. This new building will cost, it is estimated, about $2,000,000. It will be 300 feet in length by 350 feet deep, and the most characteristic feature of the facade will be the sixteen lofty Ionic columns. These columns will be forty-eight feet high and they will probably be of white marble or granite. Over the columns inscribed in large letters will be these two sentences: "Let us raise a standard to which the wise and honest can repair. The event is in the hands of God."

The architect's drawings depict a fine Colonial building, with pillared front, and square ground plan. The main interior feature will be the great auditorium, seating 6000 people, artistically arranged in the form of an ellipse, with the stage at one end, and a deep balcony encircling the whole.

The architects state that, with the possible exception of the Mormon Temple in Salt Lake City, this Washington Memorial will be the first big building in the country in which the audience will be seated in accordance with the modern theory of acoustics.

It was the fear that another great meeting place would be constructed in which there would be "deaf spots," or in which the speaker's voice would not be heard by a large part of the audience, that led the architects to call in the services of Professor Wallace C. Sabine of Harvard, regarded as an authority on the subject of acoustics. As a result, the elliptical plan for the auditorium was adopted.

The theory, as Professor Sabine explains it, is that there is a "line of equal length" extending from the speaker's platform around the room, and that this line is an ellipse. A man sitting in the last row and directly facing the speaker hears just as well, he says, as one who sits nearer but off to one side. The ellipse by permitting more people to sit facing the speaker within a given area is therefore regarded as the most economical arrangement for a large auditorium.

The auditorium will have a flat-domed roof, which will be constructed of porous tile especially adapted to absorb sound. Another feature will be eight wide stairways leading to the gallery. The gallery will seat 2000 and the stairways will be wide enough to accommodate the entire seating capacity of the gallery at one time. Around the sides will be seven smaller auditoriums, accommodating from 250 to 1000 persons, each one separate and distinct from the main auditorium, so that several conventions may be in progress at the same time. A dining room on the second floor will accommodate 600. The main auditorium will be 270 feet in length by 200 feet wide.

The memorial is intended to be the headquarters for all the large conventions in Washington, and the auditorium will be large enough for the inaugural ball, if that is held again.

The original purpose of the association in planning the building was to make it, not only a fitting memorial to the first President and his interest in higher education in America, but also to establish it as a national headquarters for patriotic, scientific, educational, literary, art, medical and similar organizations in the United States.

A CONVENTION HALL FOR WASHINGTON "TO WHICH THE WISE AND HONEST CAN REPAIR"

THE WORLD OVER

Correspondence Courses for Convicts

In the California State Prison at San Quentin it is now possible for the convicts to receive instruction by mail, thru correspondence courses conducted by the extension division of the University of California. Just what it means to prisoners to have this opportunity can hardly be realized by those who have not studied penitentiary conditions in less advanced states; but its results are twofold: it affords a welcome relief to the awful monotony of prison routine; it enables men who enter the prison as ignorant and incompetent ne'er-do-wells to emerge with an education that will fit them for a respected position in life.

This reform was instituted recently under the direction of Warden J. A. Johnston, a young man for the responsible position he holds, and a man of humane instincts and enlightened views.

"To talk about our educational work in the prison is to run the risk now and then of a sneer from those who think that all men sent to the penitentiary are smart rascals and that no time should be wasted making them any smarter," says Warden Johnston. "Of course there are a great many smart men in prison —some of them too smart —men clever but not wise. But it is also a fact that that there are a great many men in prison who are ignorant, untaught and without any moral training.

"It is a crime against the criminal to put one of the latter class into this state institution and let him stay here for years under the state's charge, and then leave as he entered—ignorant and illiterate. We cannot believe that we are doing our full duty to the inmates of the institution if we allow them to stagnate. We are trying to lift them up and, next to bodily health, mental stimulus is the best agency to raise moral standards."

Upon entering the penitentiary the prisoner is examined as to his physical condition by a dentist, an oculist and a physician. After this, the director of education and the chaplain examine him quite as carefully to ascertain his mental and moral status. It is for the benefit of those who have the ordinary grammar school or high school education that the State University, coöperates by correspondence courses. Agriculture is taught by no less than thirty-two courses, which deal with the scientific methods of raising such staples as beans, potatoes, onions and fruit, and such western products as alfalfa, olives, figs, dates and other semi-tropical fruits. Dairying, poultry raising and swine husbandry are particularly popular courses. Classes in shop arithmetic, commercial arithmetic, stenography, English and Spanish appeal to the various types of prisoners, and may lead to their obtaining good positions directly after their release.

Every third Saturday the correspondence work is supplemented by a lecture delivered by one of the professors of the University of California. The energy and enthusiasm shown by the men even tho they have worked hard all day in the prison shops and are presumably tired, indicate that they appreciate the chance to "make good," and the results from a moral as well as a mental standpoint are excellent.

WARDEN JOHNSTON OF THE CALIFORNIA STATE PRISON
To raise the moral standards of the convicts by increasing their bodily health and mental equipment, is his aim

Soft Pedal Week

"Soft Pedal" week is an innovation which followed "Clean-Up" week in Toledo. Its object is the suppression of unnecessary noises. The Civic Club is responsible for this observance and hopes as a result to secure the enactment of local ordinances which shall permanently do away with those noises which the club deems unnecessary.

Leading the list is the blowing of factory whistles for two or three minutes early in the morning. There was a time when this practise might have been desirable, for employees lived near the factories and the whistle called them to work. But now conditions have entirely changed. Next on the proscribed list come church bells. People no longer depend upon them, but consult their own clocks and watches.

Following these two most unnecessary noises are the frequent and ofttimes unneeded squawks of auto horns, the yells of the street hawkers, the shrill shouts of the newsboys, clatter of milkmen, loud and unnecessary conversation between ashmen, delivery men, icemen and street loungers; barking dogs, yowling cats, squeaking trolley wheels, the steam piano, the wheezy hand-organ and several dozen other forms of unnecessary noises, all of which have come under the ban temporarily and, Toledo hopes, permanently.

The Polymuriel

A man can wear a suit 700 times. If a woman can wear a dress 100 times she is unusually lucky. Why the difference? Over this question Mrs. Mildred Johnston Landone, a New York woman who evidently has ideas, has been pondering many years until she is finally in a position to offer to women as a satisfactory solution of the problem—the Polymuriel.

Just what the polymuriel is no one is yet privileged to know. "A standardization of dress, a gown suitable for every function, the best of a woman's wardrobe, and an idea, not a style," these are some of the terms by which its originator describes it. Or, to be more exact, it is a one-piece dress, with bifurcated skirt, loose full sleeves, a normal waistline, pockets and easily accessible buttons. Its sleeves may be long or short, its neck high or low, as the occasion de-

mands. Its wearer may choose her own materials and even make it herself. And always it is esthetically correct, truly feminine, and thereby comfortable. It lends grace and dignity to even the fat lady running for a street car, and it is becoming to every one. Polly or Muriel, big or little, old or young, fat or thin, beautiful or ugly, chicken or hen.

One of its strongest claims to popularity is that the polymuriel, like the Japanese costume, can be worn season after season. Not that it pretends to meet the changing whims of fashion—not even its boasted adaptability could stand that strain—but it intends to set the fashion and grow from a temporary fad into an established style.

Mrs. Landone's method of finding the one design best suited to the practical demands of her dream and to the needs of the most women was exhaustive. She offered a $150 cash prize for the best design and threw the contest open to any one who cared to compete. Three thousand women did. And these contestants represented all classes and all degrees of professional skill. Nearly half of them came from New York state, about a quarter from the middle West, and ten per cent from New England. "In one mail I got designs from Hawaii and Monte Carlo," said Mrs. Landone. "And we've seriously tried—that is, the committee of award and I—to choose as the polymuriel a design that meets the needs suggested by all these others."

Miss Jessie Rosefield, a young New York artist, won the prize for creating the successful polymuriel. "It's just an idea of a general one-piece dress, which every one can modify to suit her own uses," said she. "No, it's not at all a nurse's uniform idea—no more than men's suits are uniforms. It's simply a standard of dress. And it goes way ahead of the men's, too, because it is so much more adaptable. Wait till you see it."

And that indeed is the beginning and end of all discussion of the polymuriel. Women all over the country are waiting to see it, restraining their proverbial curiosity as best they may, and planning to wear the polymuriel for shopping or dances next fall, for tennis this summer perhaps, and certainly for housework the year round.

Mrs. Landone's plans for it includes a reformation in manufacture as well as in dress. To have the polymuriel made coöperatively by groups of women, who join forces for the work because they want to do it, is her ideal. "I should like to see the work given to those who are in need of it and to whom it would do the most good," she says. "I should like to see the work executed under conditions compatible with the needs of the workers"; and ultimately "I should like to see the profits accruing from such an undertaking used primarily to abolish child labor."

IS THIS THE POLYMURIEL?

Can you imagine this dress adapted to all occasions? Suppose the various guimpes, sleeves and pockets were taken off and put on as custom or convenience suggested, would your dress always be suitable? The polymuriel claims to meet this test. What do you think?

A POWER HOUSE AND THE SOURCE OF ITS POWER

"The Water That Has Passed"

The old refrain, "You Can Never Turn the Wheels With the Water That Has Passed," is put out of commission by many hydro-electric developments, especially in the Intermountain region, where in a number of canyons the water which has turned wheels at some power house on the canyon torrent, perhaps up near the divide, is again turning wheels at other power houses farther down. Two, three or four such succeeding developments of power by the same stream are not uncommon, often within a few miles.

A typical case is shown in Mill Creek Canyon in the Wasatch Mountains in Utah. Four miles up that canyon the stream, small enough at any point to be easily jumped over, but coming in a furious rush with a broken headway of 800 feet, is turning out 600 horsepower at a secluded power house. Two miles below that it is captured by a thirty-inch flume, conducted out of the steeply descending canyon bed and worked across gulches and round the sides of stupendous mountains, arriving—a mile farther—on the summit of an almost perpendicular cliff 1200 feet above another house where it develops 2600 horse-power.

That is one of the smallest streams harnessed to work in the region. On the Bear River, running from Utah into Idaho and doubling back into Utah again, a rushing headlong torrent, are five great power plants within a few miles and two others are planned and will be built at once. The total horsepower developed is 132,000.

It is such utilization of water power as this that has made practicable and temptingly economical an electrification of great trunk railroads such as has never yet been considered feasible in any other part of the country. The Chicago, Milwaukee & St. Paul Railroad, now extended to Puget Sound, is stringing electric wires along the 450 miles of its tracks between the Rockies and the Sierras, and giant electric locomotives are ready to haul passengers and freight across the wicked grades of that country.

The Denver & Rio Grande Railroad has appropriated eight and a half million dollars for the electrical equipment of its road from Salt Lake City over Soldier's Summit and Tennessee Pass into Colorado—460 miles.

Both of these introductions of electric current for heavy traction are over country that has taxed the efforts of the steam locomotive to its highest capacity. The C., M. & St. P. R. R. track crosses the Belt Mountains at an elevation of 5768 feet; the Rockies at 6350 feet; the Bitter Root Mountains at 4200 feet; and the Cascades at 3010 feet. On the D. & R. G. R. R. it has always required four of the heaviest mountain locomotives to haul the thru passenger trains over Soldier's Summit

OUR SOUTHERN NEIGHBORS

It is unfortunate that at a time when South America offers the one solution for certain distressing commercial conditions so little accurate information is available regarding the great continent.

What really amounts to a Baedeker of the South American republics has recently been compiled by W. A. Hirst and published under the name of *A Guide to South America*. This work is concise and unlike Baedeker in that it gives little that will interest the sightseers and much of service to the traveler and business man. The author provides a historical outline of each country, gives its chief products, cities and lines of transportation with a brief word for art and letters. There is a map of each republic with the lines of communication outlined and in this connection it must be remarked that at least one of these maps shows a direct error. On the map of Venezuela there is a railroad shown from Encontrados to Cucuta in Colombia. As a matter of fact this road extends only from Encontrados to La Uraca, a distance of about eighty-five miles, and some one hundred and fifty miles short of Cucuta.

In writing of *The Plateau Peoples of South America*, Alexander A. Adams falls into a deplorable and common error. He speaks of "the negro republics of San Domingo and Haiti," apparently wholly unaware that while Haiti is indeed a "negro republic" of the blackest and most terrible order, San Domingo shows in her people no negro blood at all, but simply that mixture of Indian and Spanish that obtains from Mexico to the Straits. Otherwise the book is mildly interesting and superficially informative.

1 *Guide to South America* by W. A. Hirst. The Macmillan Co. $3.25. The Plateau Peoples of South America, by Alexander A. Adams. E. P. Dutton & Co. $1.25.

A PATHOLOGY OF TEUTONISM

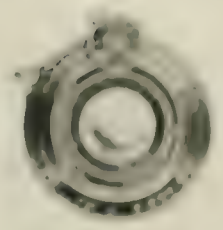
The curious German cult of the State, which seems to be generally considered "accessory before the fact" in respect to the recent events in Europe has been traced during the last few months to many sources. By various writers it is ascribed to Bernhardi, Treitschke, Nietzsche, the Kaiser, the Navy League, Bismarck, Houston Chamberlain, Frederick the Great, Hegel and Mephistopheles. Professor Dewey in his recent thoughtful study of German Philosophy and Politics, is inclined to lay much of the blame upon the doubters of Immanuel Kant. While French and English philosophers were basing their practical ethics upon the principle of individual "rights" attainable in the

world of action and experience, Kant separated the material universe governed by inflexible natural law from the "real" or subjective world where alone the personality might expand in freedom. This spiritual freedom was only attainable thru absolute devotion to the ideal of duty, duty for its own sake and with no reference to any one's happiness. Unfortunately, Kant's failure to connect abstract "duty" with any more concrete aim permitted his patriotic successor Fichte to turn the full current of devotion to the moral law to the realization of Teutonism, which he considered its highest earthly expression. Hegel completed the mischief by identifying Teutonism with the political arrangements of the Prussian state. Thus we find the real Pan-Germanists, such as von Bernhardi, turning a cold shoulder to Nietzsche and piously quoting Kant on every other page of their books.

What interests Professor Dewey most in his analysis of the philosophical background of modern German imperialism is the demonstration it affords that even the most arid and abstract forms of speculation have an important influence upon practical life. He seems to take the position that Pragmatism is not only desirable but inescapable; that philosophy could not if it would withdraw from its responsibilities to the world we live in. "I believe," he says, "that there are no such things as *pure* ideas or *pure* reason. Every living thought represents a gesture made toward the world, an attitude taken to some practical situation in which we are implicated." In other words, the Pragmatist is simply the responsible philosopher who cannot plead the old excuse, when his theory does damage to himself or his neighbors, "I didn't know it was loaded!"

German Philosophy and Politics, by John Dewey. New York: Henry Holt & Co. $1.25.

TAMING THE WILD



The latest advance in the development of popular interest in birds is the cultivation of wild birds on a large scale. In a book containing fewer than 270 pages of text, Herbert K. Job manages to give a remarkable amount of interesting information about the history of the movement for the *Propagation of Wild Birds*, about their habits and value and about methods to be followed. Some hundred pages are given to the wild birds of the hen family, the same to waterfowl, and the rest to various smaller land birds. The detail instructions for the control of vermin and natural enemies, for feeding and protecting, care during breeding, etc., and the information about attracting and holding the small birds should be of interest to many who would not undertake these operations on a commercial scale. There are over a hundred beautiful illustrations from photographs, mostly by the author.

A practical handbook for the care of many kinds of pets, by A. Hyatt Verrill, will appeal especially to boys. In *Pets for Pleasure and Profit*, the author supplies a large variety of infor-

Girls Health

Is your daughter fragile and delicate? Would you like to see her grow robust and strong? Girls develop into strong, splendid, vigorous womanhood through following Camp Fire Ideals. They learn to look upon the common, every-day duties of life as opportunities for service full of romance and beauty. They learn to live—and love—naturally, joyfully and with increasing appreciation of what true womanhood may be made to mean. All this is told in the new Camp Fire Girls book—a charming story with more than 50 wonderful pictures of girls at work and play. The frontispiece is a portrait of the Camp Fire founder Mrs. Charlotte Vetter Gulick. There is also a portrait of Mrs. Gulick in ceremonial costume. The book tells how Mrs. Gulick, working first for her own family and children, has carried the spirit of home and mother love into a great national community movement which is sweeping over this country and the whole civilized world. The book is a joy and delight to every girl—and to every mother of girls. An exquisite gift book. Price $1.25 postpaid in the U. S. mation about many of the animals discussed, in addition to the instructions for the care and feeding of the pets. There are also useful suggestions in regard to the selection of pets, "true" animal stories and illustrations from photographs and drawings. The book may be commended in every way, even if the author, who knows better, aids in perpetuating the vulgar confusion of mind that contrasts birds with animals and confounds animals with mammals.

The Propagation of Wild Birds, by Herbert K. Job. Doubleday, Page & Co. $2. *Pets for Pleasure and Profit*, by A. Hyatt Verrill. Chas. Scribner's Sons. $1.50.

SOLITAIRE

Ernest Borgholt has a *New Book of Patience Games*. None of these were included in his former book and several of the games are entirely original, here published for the first time.

Dutton. 50 cents.

AN OBLIGING TWIST OF FATE

Much that might have been amusing in the situation in Helen R. Martin's new story of the Pennsylvania Dutch merely makes the incognito principals unnecessarily dense—all because the author takes the reader so completely into her confidence in the first chapters. Despite the artificially stimulated complication there is an undeniable quaintness and charm in the romance of a famous novelist and *Martha of the Mennonite Country*.

Doubleday, Page. $1.35.

RELIGION OCCIDENTAL AND ORIENTAL

For thirty years Dr. J. P. Jones has studied *India, Its Life and Thought*. He gives what is not easy to find, of so complicated and subtle a subject, a clear account of the various religions and philosophies both ancient and very modern as they appear in the life of the people. The final chapters on the appeal of Christianity to the oriental mind and the changes in form that it will undergo as it is accepted by the Hindoos are especially suggestive.

Macmillan. $1.50

A SECOND JULES VERNE

Arthur B. Reeve's stories in *The War Terror* are too packed with exciting events to permit digressions of description. He says his say in the simplest manner, for which the reader is grateful, being fully occupied in following mystery after mystery. Craig Kennedy, the professorial detective, is a novel figure and the author puts various marvels of invention to his use, for the most part succeeding in making them seem quite within the realm of possibility. Stranger things have happened.

Hearst. $1.

PLATITUDES FOR BIOGRAPHY

"Among our poets Alfred Lord Tennyson occupies a conspicuous place"—such is the first sentence of Arthur Tuckwell's *Life and Writings of Alfred Lord Tennyson*, one of the Great Writers series. With a thesis to prove—that Tennyson is cultural-poet par excellence—and proving it by a weld of uninteresting comments, facts and theories of other writers, it is a work as lacking thereof in distinction as is its first sentence. It does, however, aid us "to re-assess our indebtedness" to Tennyson.

Scribner. $1

FORM VS. SPIRIT

Some people will hastily and mistakenly call sacrilegious Mrs. Nina Wilcox Putnam's one-act play *Orthodoxy*. It is however a satire on all those who say one thing when we mean something other. The extreme of contrast exists when sacred themes are treated conventionally while the mind wanders to the trivial and incongruous. The means of such confusions and contradictions are naturally to be found in church worship, and Mrs. Putnam has chosen such a scene and cleverly wrought out the cast and action.

Kennerley. 25 cents

Independent Opinions

ANTI SUFFRAGE

It has been said by some one—doubtless not a campaign speaker—the woman suffrage was not a good question for debate because there was little to be said in favor of it and nothing at all against it. But not everybody agrees with this, as we found when in our issue of June 14 we quoted Mrs. Catt's summary of the suffrage case and asked "What have those opposed to the voting of women to say to this?" In reply to this challenge we have received four letters, and we quote from all of them:

The women of our country have already as much power in government as the men. Indeed, we do not feel we are stretching the truth when we say they have more. If, instead of making themselves obnoxious to all thinking men and women by parading in public with waving yellow banners and unladylike and immodest demonstrations, they would remain at home and take advantage of their great, God-given privileges of bringing up their children in the way they should go, these women would be wielding one of the mightiest powers ever entrusted by the Almighty to human kind. These malcontents who continually cry for women suffrage do not stop to think long enough to realize that "the hand that rocks the cradle is the hand that rules the world." It is as one good old mother said when her five stalwart sons returned from the polls on election day, "I have just cast five votes against the saloon."

HARRY D. ANDREWS
Colgate Univ., Hamilton, New York

Not every good mother has such tractable sons. Nor do we believe that it would be wise to give every woman five proxy ballots. We believe she should have one of her own and not deprive her husband or son of his inalienable right to vote as he pleases.

Those who do not belong to Mrs. Catt's party hold that men and women are the complement one of the other, each with the duties suitable to each, and they believe political life and duties belong to men because for many reasons they have neither the taste nor adaptability for them. They do not agree with Mrs. Catt that women in general "desire liberty in governmental matters," but that they already have full liberty to develop in all the directions in which their tastes lead them, as for instance Miss Boardman's large authority at the head of the Red Cross and General Eva Booth's position. HELEN KENT
New York

Men and women are not complementary in all respects, otherwise they should eat different food and talk a different language. So they do in savage tribes, but as both sexes become more civilized they recognize that they have more in common as human beings, and among these common needs is that of self-government.

Mrs. Catt says, "A conviction that our claim of a government of the people is a mere travesty when half are denied expression of their political desires." But the female half is not so denied. They have not asked the ballot. The fact seems to be that these few equal suffragists are per-

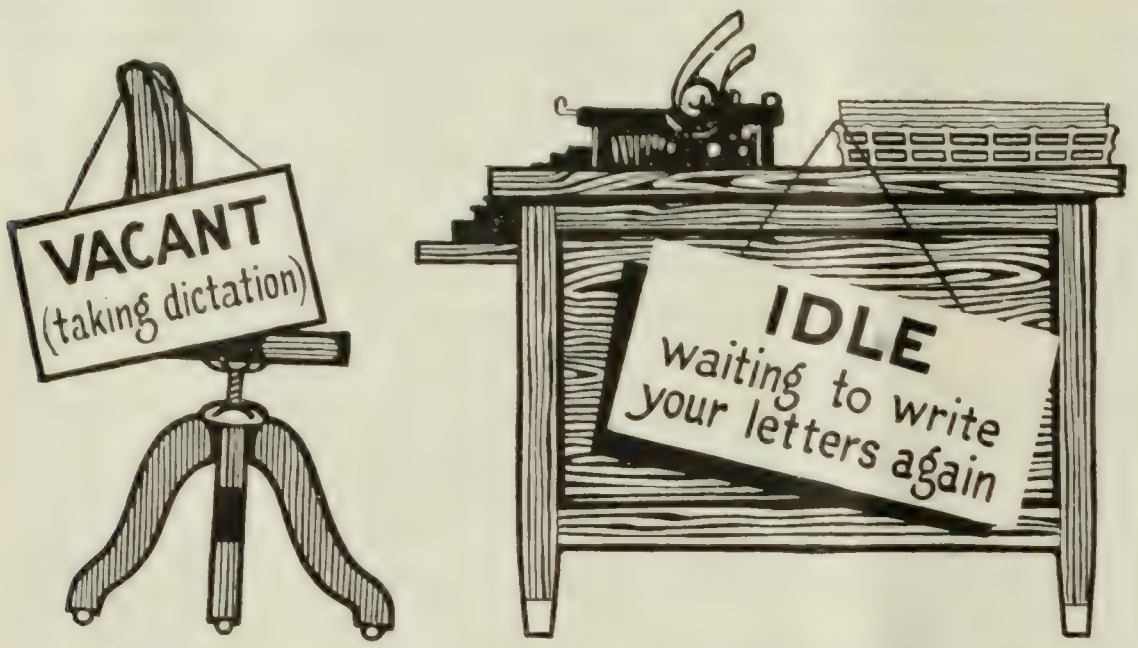
A NOVEL IN VERSE

SPOON RIVER ANTHOLOGY



By Edgar Lee Masters

"It is the first successful novel in verse we have had in American literature. . . . An American 'Comedie Humaine.' . . . Brings more characters into its pages than have ever been brought into an American novel before. . . . It at once takes its place among those masterpieces which are not of a time or a locality."—*Boston Transcript.*

This never happens in an office where there is a Dictaphone

You can't point your finger at the other man, because we mean you—if you are still relaying your correspondence via the stenographer's note-book and pencil.

Every one of your employes who is dictating to a stenographer is wasting just that much of her time and therefore just that much of your money.

Don't have your stenographer write your letters twice—once in shorthand, again on the typewriter. Dictate to the Dictaphone. Get in line with genuine business efficiency. Small office or large office—one stenographer or fifty—it fits in perfectly.

Let us demonstrate the Dictaphone on your work in your own office. Reach for your telephone and call up the "Dictaphone" and make the appointment. If you don't find that name in the 'phone book, write to the

My Facial Beauty Exercises

Will soon make you look younger and more beautiful.

Why have a flabby, or slightly double chin when you can remove the grateful cause with proof of this in 1 or 2? Why have all the [illegible] when you can health cure by building up the tissues and smoothing the skin relief. Nothing can [illegible] your face can do this.

Why have lifeless eyes when the right exercises will make your complexion as rich as it should be?

As the way to [illegible] WAY [illegible] and [illegible] lasting.

None too old to benefit

[illegible]

KATHRYN MURRAY, Dept. 35, 109 N. Wabash Ave. Chicago

feetly aware they do not represent the thought of women generally and they are determined to obtain the vote regardless of the wishes of those of their own sex. A more absurd, unjust and outrageous demand was never made on the electorate of any community than this of the woman suffragists who would impose their will regardless of the wishes of those most interested.

I do not believe men generally would oppose women voting only they see their mothers, wives and daughters do not want to vote and therefore they do not want to force on them something they do not want. This matter of woman suffrage has been agitated for sixty-five years. The women have had it before them all that time. They have given it the consideration due to its importance. They have decided they do not want it. They are the best judges of what is best for themselves and the state. Should they change their minds and by majority ask for the vote they will meet no opposition from men. WILLIAM A. LANDERS

Rochester, New York

The women of a dozen states and half a dozen foreign countries have the vote and like it. As soon as the women in less favored localities realize how satisfactorily it works they will also demand it and no doubt get it.

Their claim is that women are so infinitely superior to men that their entrance into politics will purify politics. Their claim, however, is not founded on fact, since for every bad man (and we all know how many of them there are) one can find a bad woman; and for the sake of giving the vote to one in ten of the women who are honest, logical, patriotic and intelligent, we should give it to the other nine-tenths who may be lacking in one or more of those qualities. What the state needs is fewer voters, not more. If the women could point to purer politics and great advantages to the state in the states where woman suffrage has obtained for years, they would score a point, but the testimony of facts is against them. The liquor interests have usually won out, not at first, but as soon as the liquor men found a double volume of votes to be purchased.

E. A. C.

It is, fortunately, not necessary in arguing for equal suffrage to prove that all women are better and wiser than all men or that they are on the average better and wiser than men. If it can be shown that any one woman is more qualified for the ballot than any one male voter this is sufficient proof that discrimination on the ground of sex is illogical and unjust.

AUSTRALIAN OPINION

It was doubtless to be expected that an attempt to preserve neutrality would bring down upon us the wrath of both parties, but we were hardly prepared for the dislike and contempt now manifested on all sides. The Germans accuse us of wholesale murder because, as they say, most of the shells of at least most of those that will burst, are made in America. The British are also resentful at our inactivity in this crisis and our protests against their interference with freedom of commerce. The Australians, who formerly were more favorably disposed toward us than the English, are now the most bitter. At the Australian races the American flag had to be taken down from its place among the flags of other nations because it was likely to excite disorderly scenes. It appears that the Australians interpreted the visit of the American

fleet a few years ago as the visible sign of a virtual alliance and counted on the cooperation of our navy in the conflict which they then anticipated with Japan. This assumption was of course as unwarranted as their expectation that we should take sides with them and Japan in a conflict with Germany. But their disappointment has led the Australians to take a hostile attitude toward the United States, which is a great disappointment to those who looked for closer commercial and social relations between the two countries. As indicative of the Australian feeling, a Melbourne correspondent sends us samples of the sort of poetry which he says is now popular there. Since it is well to know what is thought of the United States in the antipodes, we publish an expurgated version of them:

THE MAN BEHIND THE DOOR

When I hear the name of Uncle Sam
  It fairly makes me sick
On this earth he's no more useful
  Than a monkey on a stick
He has proved it by his actions
  In this great world war,
And has dropt in estimation
  Since he hid behind the door

He has plainly shirked his duty,
  Has this "gallant" Uncle Sam
For the slaughter of the innocents
  He doesn't care a damn
Behind one little word he shirks,
  He hides, he even crawls,
Whilst all the time, in New York,
  For the dollars loudly bawls.

. . . . .

He has lost some ships by submarine
  Some good men's lives as well
Makes a "protest" to the Kaiser
  So the daily papers tell—
He receives no satisfaction,
  But just takes it "lying down"
(What's it matter to a Yankee
  While the dollars come to town).

U. S. A.

Let me give you my opinion
  Of the land of Stars and Stripes.
It's daily mongrel "Nation"
  Means some half a thousand types.
Whose "darler" notes and people
  Are as nasty as they smell:
All their bluffing, bragging bagmanship's
  A most consummate sell.
Whilst their cracked-up "New Yark" City
  Is the capital of Hell.

. . . . .

They prostitute our language,
  Use "Yep" instead of Yes;
Say "Nope" for No. Instead of think
  They substitute "I guess."
From simple words like programme
  They steal an M and E.
Though writing of a theatre
  The R's put after E;
Their baggy pants and hideous hats
  Expectoration free.
Disgust the whole world's populace
  Who civilized may be.

It has a long-nosed President
  Who's sitting on a fence;
Who's ruled by German blighters,
  Their "Darlers" and their "Cents";
For him no "Gard darned sentiment."
  His country's out for trade,
Whilst its ships and shoddy army
  Of a goat would be afraid.

Their graft, their greed, their grab, and vice,
  Plus all their bluff and bounce;
Their froth about their "Glorious Fourth"
  Don't weigh a single ounce
With those who know the blackmail ways
  Of Crooked Yankee Duns,
Who steal Australian business
  Under Bull's protecting guns.

STEINWAY

THE purchase of a Steinway for the home means the selection of the ideal piano, *tone* and workmanship being of first importance.

It is the price of the Steinway which makes possible its supreme musical qualities, but you will find that the Steinway costs only a trifle more than many so-called "good" pianos.

Style V, the new Upright, and Style M, the smallest Steinway Grand, offer a special advantage in price. They embody all the distinct Steinway features, but, being of reduced size to meet the requirements of the modern home or apartment, are offered at very moderate prices.

We shall be glad to send you, free, illustrated literature, with the name of the Steinway dealer nearest you.

The Chautauqua Idea

The Wichita, Kansas, public library is completing its file of Chautauqua Courses, both books and magazines, from the first year, 1878, to date.

The president of the famous single tax colony of Fairhope, Alabama, is a woman, Mrs. Lydia J. Commings, who is a Chautauqua Circle member.

The annual certificate of the Chautauqua Reading Course for the English year now closing appropriately reproduces a fine photograph of Wells Cathedral.

The Jersey Shore, Pennsylvania, Chautauqua Circle and the Seaside Circle of Belfast, Maine, are celebrating their thirtieth year of reading work this season.

Mrs. James A. Wheeler of Tacoma, Washington, is one of those Chautauquans who have read the course every year since the first one was offered in 1878, almost forty years. The Chautauqua Circle which meets in her home recently joined in the fiftieth wedding anniversary celebration of Mrs. Wheeler and her husband.

The graduating class of Chautauqua Course readers who finish the four years' reading this summer, calls itself the Jane Addams Class of 1915. A letter expressing appreciation of the honor and Miss Addams' continued interest in Chautauqua work, was keenly appreciated by the class. Her "Twenty Years at Hull House" was one of the Chautauqua Course books. The class motto is "Life more abundant." The class banner, designed by a member, Miss Corinne Blakeslee, of Bradford, Connecticut, carries a design of the mountain laurel adopted as the class flower. The officers are: President, Mr. W. H. Hamlin, Austin, Texas; secretary, Miss M. T. Nye, Brooklyn, New York; treasurer, Mr. A. E. Skinner, Westfield, New York.

Graduates of the four years' reading course of the Chautauqua Circles may receive their diplomas at various Chautauqua assemblies, as well as at Chautauqua, New York, or by mail. Recognition Day exercises for the graduates, wherever held, follow the ceremonials formulated by Chautauqua Institution. Prior to August 1, Recognition Days are announced for Pacific Grove, California; Forestville, Connecticut; Lithia Springs, Illinois; Winona, Indiana; Ottawa, Kansas; Winfield, Kansas; Northampton, Massachusetts; Caldwell,

HARRY P. HARRISON

President and general manager of the Redpath Chautauqua, Chicago, who is taking the lead in the elimination of Sunday assemblies on the Chautauqua circuit. He is changing the Chautauquas on Sunday in the southern and middle western parts at a large financial sacrifice.

Idaho; Des Moines, Iowa. August Recognition Days include those at Long Beach, California; Remington, Indiana; Ocean Park, Maine; Assembly Park, New York; Celina, Ohio; Litchfield, Illinois. Recognition Day at Chautauqua, New York, is fixed for August 18.

"Tennyson teas" have been a popular social form of Chautauqua Circle meetings during the English year of reading. The Warren, Ohio, Circle reproduced the interior of Tennyson's Aldworth home. The Chautauqua Union of Des Moines, Iowa, gave a costume program. Tennyson pantomimes were rendered by the Linden Heights, Ohio, Circle; the Shippenville, Pennsylvania, program included a lecture. There are Tennyson Circles at Omaha, Nebraska, and Camden, Alabama.

During the summer season the field secretaries of the Chautauqua Reading Circle will be on tour of Chautauqua Assemblies of the Pearson Circuit. They serve as platform managers, lecture, and confer with Chautauquans concerning the Reading Course work. Miss Meddie O. Hamilton will be a week in each of the following towns: Salisbury, Maryland; Newtown, Pennsylvania; Lykens, Pennsylvania; Glen Cove, Long Island, New York; Milford, Connecticut; Keene, New Hampshire; Whitehall, New York; Saugerties, New York; Lititz, Pennsylvania; Lewisburg, West Virginia; Roanoke, Virginia; Woodbury, New Jersey. Mrs. Ida B. Cole's towns are: Columbia, Pennsylvania; Washington, North Carolina; Emporia, Virginia; Statesville, North Carolina; Waynesboro, Pennsylvania; Bloomsburg, Pennsylvania; Canton, Pennsylvania; Penn Yan, New York; Tunkhannock, Pennsylvania; Phoenixville, Pennsylvania; Seaford, Delaware; Media, Pennsylvania.

Here's how

The man who does not patronize his beverages to contribute with his efficiency drinks Welch's.

Most folks like Welch's "straight." A taste of charged water adds variety and a "punch" that has helped make Welch's a favorite at club, restaurant and fountain.

Welch's

"The National Drink"

Welch Hi-Ball

Use a tumbler glass, or whatever glass you have on hand, and a lump of ice. Fill the glass with grape juice charged water.

Get the Welch Habit—it's one that won't get you!

If unable to obtain Welch's of your dealer, we will ship a trial dozen pints for $1, express prepaid east of Omaha. Sample individual bottle, by mail 10c. Booklet of recipes free.

THE MARKET PLACE

THE FRENCH LOAN

The appeal of leading credit houses in Paris, at the suggestion of the Government, to French holders of American securities was so successful that a quantity of these securities sufficient to warrant a loan of $30,000,000 has been sent to New York. The loan on this collateral—mainly Pennsylvania and St. Paul railroad bonds—is for one year, and the money is supplied by J. P. Morgan & Co. Other similar securities will be forwarded, and the credit, or loan, will thus be increased. There will be no public offering. Morgan & Co. hold the securities, and are assisted in the transaction by prominent banks and banking firms. There was no attempt to sell the securities here because a majority, if not all, of them were issued in Paris and the listing of them on the Paris Bourse was conditioned upon certain forms. That is to say, they were made payable in francs and were of denominations suited to the French market. Therefore they are not salable here. The French bought many American bonds in the years from 1906 to 1912, but such purchases were checked by the unfortunate investment in Frisco bonds just before the receivership.

Not long after the beginning of the war, France procured a credit here of $16,000,000. The proposed negotiation of a public loan of $100,000,000 came to nothing, because of disapproval at Washington. There was a credit of $10,000,000 in October last, and not long ago the placing of $50,000,000 of Treasury notes was checked when $30,000,000 had been sold. Probably the new loan on American securities will be increased to $50,000,000 or $75,000,000, but this will not be enough to pay for the supplies already bought. Great Britain is in greater need of a credit here, but the making of one is not expected while the Government is placing the enormous new home loan. English holders of American securities are not inclined to part with them, and therefore it is not probable that there will be a British loan in New York like the French one.

SHIPPING AND NEW LAWS

Additional evidence as to the unfortunate effect of recent national legislation upon our merchant marine is seen in the decision of the Robert Dollar Steamship Company to transfer its ships from the American to the British flag, and in the approaching withdrawal of many American ships from the Great Lakes. It is the new seamen's act that forces the Dollar Company to take this course, and the same law has caused the Pacific Mail Company to go out of business, so far as traffic on the route across the Pacific is concerned. As the Hill railroads are to withdraw the great freighter "Minnesota," the American flag will not be seen in the Pacific Ocean trade after the first week in November next. The headquarters of the Dollar Company will be moved from San Francisco to Vancouver. It may be that the coast line service between Portland and San Francisco, recently established by the Great Northern and Northern Pacific railroad companies, will be discontinued, in obedience to that part of the Panama Canal act enforcement of which has compelled the eastern railroad companies to get rid of their steamships on the Great Lakes. The decision of the Interstate Commerce Commission with respect to this line will soon be made known. These boats, from Portland southward, have been competing with the Southern Pacific Railroad, and their work has been well done.

By order of the commission, the railroad companies' steamships on the Great Lakes must be disposed of by December 1. Four of them were sold last week. They are to be cut in two, because they are too long for the locks on the Canadian canals, and then transferred to the port of New York by way of the St. Lawrence River. It is understood that thirty-one of the fifty-four steamships now owned and operated on the lakes by the railroad companies will be transferred in this way. Several of them will be used in the foreign trade. It appears, therefore, that enforcement of the law is not to cause a transfer of the lake steamship traffic from railroad control to private and competing ownership, but will deprive lake shippers and travelers of nearly all the good ships now in use. The lake steamship business is also affected by the new seamen's act. It is asserted by officers of companies that the requirements of this law are such that they cannot profitably compete with Canadian ships. It may be, therefore, that such American ships on the lakes as are not affected directly by the Panama act and the commission's order will be driven from American registry by the seamen's act. American shippers are complaining.

Results of a referendum conducted by the United States Chamber of Commerce indicate widespread disapproval of the projects and policy of the Administration and the majority in Congress relating to the merchant marine. The national chamber submitted certain questions to more than 700 chambers of commerce and boards of trade which are constituent members of it. Some of the votes were as follows: on Government ownership and operation of merchant vessels, 81 in favor and 698 against; Government ownership with private operation, 54 for and 711 against; subsidies authorized to offset the difference in cost of operation under the

Change of Address

If you are going away for the summer, you will want The Independent to follow you. Let us know your new address, if possible, three weeks ahead. Be sure to give us your old address also.

THE INDEPENDENT

American flag and under foreign flags in the deep-sea trade, 156 for and 190 against; establishment of regular mail and freight lines under the American flag to countries in which our commercial interests are important, and to American dependencies, 111 in favor and 48 in opposition.

There was a large majority in favor of the creation of a Federal Shipping Board which should investigate and report to Congress concerning the navigation laws, and have full jurisdiction, under the law, as to all matters pertaining to overseas transportation. The vote was 403 to 214 in favor of a Government subscription to the entire stock of a marine development company, with a capital of $30,000,000, authorized to make loans on the security of first mortgages on merchant vessels. The vote in favor of lowering the speed required by the ocean mail law, and making the pay high enough to permit the establishment of lines carrying both mail and freight, was more than 10 to 1. It will be seen that in this expression of the opinions of the commercial organizations of the whole country there is no support for the ship purchase bill, which, it is said, will be advocated again by the Treasury Department at the coming session of Congress. If these hundreds of chambers of commerce and trade boards had been asked for an opinion about the seamen's act, undoubtedly that opinion would have been distinctly unfavorable.

At the coming session of Congress there will be an attempt to repeal this statute. Some amendment of it, at least, may be expected. Mr. Wilson has asked the Department of Commerce to make an inquiry as to the effect of it, and Congress will probably receive from the department the results of the investigation. It does not appear that replies have been received from the twenty-one nations whose commercial treaties, as our Government has informed them, are at variance with the law, or that they will consent to abrogation of only the parts affected.

The following dividends are announced:

Bank of New York, semi-annual, 8 per cent, payable on and after July 1.

Irving Savings Institution, 4 per cent per annum, payable on and after July 19.

Merchants' Exchange National Bank, semi-annual, 3 per cent, free of tax, payable on and after July 1.

New York Central Railroad Company, 1¼ per cent, payable August 2.

American Telephone and Telegraph Company, $2 per share, payable July 15.

Bowery Savings Bank, 3½ per cent per annum, payable on and after July 19.

Brooklyn Savings Bank, 4 per cent per annum, payable on and after July 19.

German Savings Bank, 4 per cent per annum, payable on and after July 21.

Greenwich Savings Bank, 3½ and 4 per cent per annum, payable on and after July 19.

Otis Elevator Company, preferred, $1.50 per share; common, $1.25 per share, payable July 15.

South Brooklyn Savings Institution, 4 per cent per annum, payable on and after July 15.

Westinghouse Electric and Manufacturing Company, preferred, quarterly, 1¾ per cent, payable July 15; common, quarterly, 1 per cent, payable July 30.

La Rose Consolidated Mines Company, quarterly, 1 per cent, payable July 20.

MEETING

MERCHANTS EXCHANGE NATIONAL BANK

of the City of New York

June 22, 1915.

Notice is hereby given that a special meeting of the Shareholders of this bank will be held at the Banking House, No. 257 Broadway, in the City of New York, on the 13th day of July, 1915, between the hours of [illegible] o'clock noon and two o'clock p. m., for the purpose of voting upon a resolution to change the corporate name of this bank from "The Merchants Exchange National Bank of the City of New York" to "The Merchants National Bank of the City of New York," and to transact the general business of the bank.

The transfer books of the bank will be closed from the [illegible] day of July, 1915, to the [illegible] day of July, 1915, both inclusive.

[illegible]

THE

Merchants National Bank

Of the City of New York

42 Wall Street

FOUNDED 1803

Resources over $30,000,000

The experience gained by over One Hundred Years of successful banking, together with complete facilities and ample resources, assure depositors of this bank every care and attention to their business requirements.

Your inquiries are cordially invited.

BE CAREFUL AND CAREFREE

CAREFREE bonds must be carefully selected. This is the kind of security we offer you. Our list includes a choice of short and long term bonds—all possessing the desirable features demanded by the most conservative investors.

We are successfully handling a varied list of Corporation and Municipal Bonds with several large Banks and are now in a position to offer this same class of security direct to individual investors.

AN INCOME FOR LIFE

Of all the investment opportunities offered there are few that seem to criticism. Absolute safety is the first requisite and adequate and certain return is equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an [illegible] of the METROPOLITAN LIFE INSURANCE COMPANY, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of $5,000 to a man aged 67 would provide an annual income of $618.65 absolutely beyond question or doubt. The Actuary Department, METROPOLITAN LIFE INSURANCE COMPANY, New York, will give advice as to the return at any age, male or female.

If You Ever Expect

To invest a dollar it means something to you to know that in the twenty-four years that I have made and sold **North Dakota Farm Mortgages** I have never lost a dollar for any customer.

It means still more to you—if you have $1,000 or $2,000 lying idle or at low interest—to know that among my customers are many of the largest institutions, a type of investor which demands unusual safety in their investments.

You'll get safety and The attractive Yield of 6%

Write today stating your requirements, and we will send you a special list of mortgages.

W. E. UNDERWOOD

THE EQUITABLE

The announcement has recently been made that General T. Coleman du Pont had purchased from the Morgan estate the controlling interest in the capital stock of the Equitable Life Assurance Society. The entire capital of the Equitable consists of 1000 shares of a par value of $100 each. The block just acquired by General du Pont represents 502 shares, the remainder outstanding being in the possession of various individuals.

This is the third transfer of the stock since it descended to the heirs of Henry B. Hyde, the founder of the Equitable. His son, James H. Hyde, representing his father's estate, sold it to Thomas F. Ryan, who held it several years, parting with it finally to the late J. Pierpont Morgan.

In his statement announcing the purchase of the stock by General du Pont, President Day of the Equitable assures the public that the control passes into the hands of a staunch friend of the company, and that it is General du Pont's intention to coöperate with the officers in some feasible plan for its complete mutualization. It is plainly obvious that there are legal difficulties of no small proportions in attaining this object, not the least of them being the acquisition of the minority stock of 448 shares.

The policyholders of the Equitable should patiently await the formulation of General du Pont's plans. They need not be disturbed in the least over the matter, for their interests are securely guarded. The Insurance Department of New York will exercize rigid supervision at every stage of the developments.

POLICIES FOR YOUNG PEOPLE

Occasionally I receive inquiries from readers of this department of which the following is a fair representative:

"What is the best form of policy for a young person to take? Do you consider that any form of insurance is desirable from a mere investment viewpoint?"

I shall proceed to answer these questions on the assumption that in using the word "insurance," my correspondent refers to life insurance only. For the young person of small responsibilities and average earning ability, I regard the twenty-year endowment policy as the most serviceable up to age thirty-five. It combines savings with protection. The annual premiums will approximate $50 per $1000, in some companies a few dollars less. An unmarried person earning $1000 a year could easily

Good men, whether experienced in life insurance or not, may make direct contracts with this Company, for a limited territory if desired, and secure for themselves, in addition to first year's commission, a renewal interest insuring an income for the future. Address the Company at its Home Office, No. 277 Broadway, New York City.

GET THE SAVING HABIT

The habit of saving has been the salvation of many a man. It increases his self-respect and makes him a more useful member of society. If a man has no one but himself to provide for he may be concerned simply in accumulating a sufficient sum to support him in old age. This can best be effected by purchasing an annuity as issued by the Home Life Insurance Company of New York. This will yield a much larger income than can be obtained from any other absolutely secure investment. For a sample policy write to

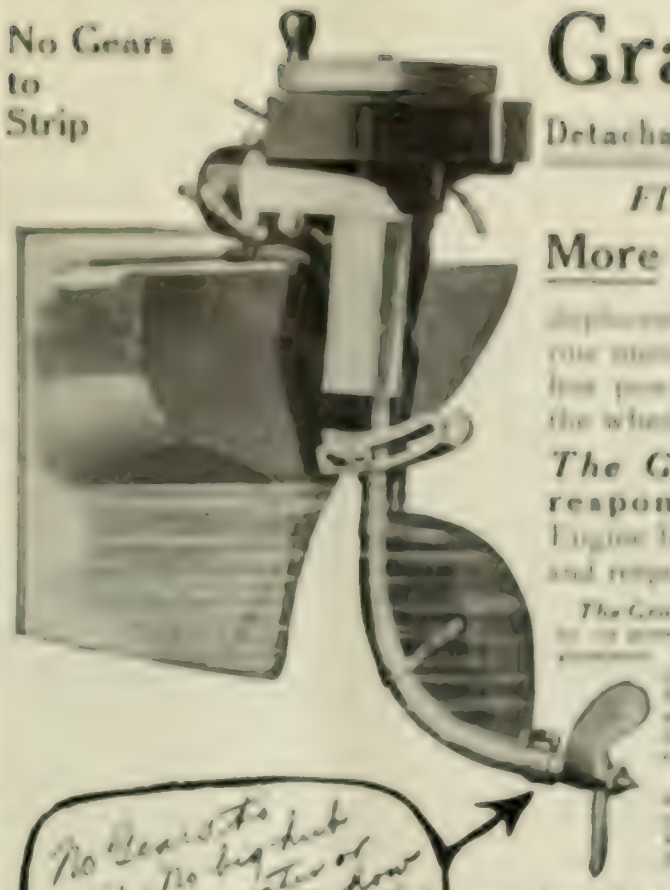
afford to put into such a policy $100 or $150 a year.

A young man of twenty-five who does this comes into a cash capital at forty-five of $2000 or $3000, plus such dividends as he may have received and saved. These should amount to $400 or $500.

Within that period he may have married, and his income should have increased. Both things generally happen to the careful, thrifty, ambitious man. He should have supplemented his line of endowment insurance with $2000 or $3000 of the ordinary life kind. If at thirty-five, say, he has succeeded financially and can afford to spend a larger sum on family protection, instead of taking ordinary life insurance for a lump sum, he would do well to buy a monthly income policy—$50 or $100 a month after his death to his wife or other beneficiary as long as she lives (twenty years' instalments certain to his estate if the beneficiary should die). Life insurance beneficiaries are not particularly good investors or conservers of money, and it is to meet that defect that the companies formulated the income policy.

Now as to the second question: A life insurance policy, properly considered, is a contract for life or a long term of years. For that reason a man should get the right kind of policy in the right company. It is a waste of time and money to change policies and companies. Strictly speaking, life insurance is not an investment. It involves an expense. One cannot contribute one's share of the death losses and management expenses of a company for twenty or thirty years and, because one eventually receives a sum of money approximating all he has paid in, or a little more, conclude that one is even or ahead. Interest earnings have been overlooked. So much from the "investment" side of the question.



I regard money spent on pure assessment insurance as so much money wasted - except by those who die. They, or rather their beneficiaries, are getting more than was paid for.

But, do I believe that money invested, so to speak, in scientific life insurance, whatever the form, undesirable? No. Be the premiums greater or smaller, the insured receives, in one way or another, an exact equivalent for it.

To sum up: "Is any form of insurance desirable from a mere investment viewpoint?" If by investment is meant to speculate and take the chance of making a big gain or a loss, no. If by it is meant a protection against loss by death, yes.

F. S. C., Centreville, Mich.—Comparatively small, financially, but sound; has had a healthy growth; expenses moderate; writes both participating and non-participating policies on the annual and deferred dividend plans; participating rates about five per cent higher than those of some well established mutuals, with smaller annual dividends and cash surrender values. Opinion is divided as to the effect of total abstinence on the death rate. Have not seen the claims for it you mention but hardly believe the difference would be as great as indicated. I discuss the other points you raise in an article, which see.

A SONG FOR JULY

Sweet June has gone with all her flowers train;
Her roses in the gardens droop and die,
And faint an echo—a parting strain
Of music sweet that tells where she passed by.

And lo! across the fields of rippling wheat
And o'er the hills with fragrant clover red
Whose hum of bees—drowsy and sweet
Sun-crowned July comes slow with silent tread!

The sovereign sun in splendor now looks down.
Upon the ripening fullness of the year,
With glowing beams of light and heat that crown
The earth's fruition with their plenteous cheer.

The city swelters; on its pavements hot
Glows down the sun with fierce ungodly rays;
In vain its panic millions pelt for
Sigh for the coolness of dim leafy ways!

On mountain, or on shore of sandy beach,
Or on the sea with sails of wingèd yacht,
The pleasure-seekers throng and strive to reach
Surcease of heat and care by Summer brought

But far in depths of inland country green,
The wild rose nods upon its drooping stem;
The heavy boughs of fruited orchards lean
And cooling dews at noon the meadows gem.

Forth to his labors goes the farmer blithe,
For ripened harvests wait the reaper's whirr,
And slow before the mower's whetted scythe
The long grass falls in swaths with soothing skirr.

At noon beneath the shade of leafy elm
The farmer rests in graceful, well earned ease;
For king is he of all the fruitful realm
Which far and wide in ripened wealth he sees.

For July's sun, which to the city brings
Discomfort on the busy, shadeless street,
O'er the green country its effulgence flings
And turns to gold the ripening fields of wheat.

And so, O Royal Month! from Julius named,
A sovereign largess to the earth you bring
As when of old on Ceres' altar flamed
Thy richest gifts to the All-Nourishing!

—*H. T. Sudduth in the New York Times.*

I AM THE NEWSPAPER

From the address of Lucius M. Boomer before the Associated Advertising Clubs of the World, in Chicago, June 21

BORN of the love, daily need of a nation—I am the Voice of Today—the Interpreter and Herald of the Times—Monarch of things that Are.

My "build type" leaves with the first blush of human action. I am fed by arteries of wire that girdle the world. I drink from the cup of every living joy and sorrow. I sing not—but say. I know but night, but day, but seasons. I know no death, yet I am born again with every morn—with every noon—with every twilight. I leap into front being with every new world's pulse.

Those who created me cease to be—the brains and hearts behind that perish me go the way of human clay—but I live on—and on.

I am Majestic in my Strength—Sublime in my Power—Terrible in my Potentialities—yet as democratic as the ragged boy who sells me for a penny.

I am the servant of Kings—the partner of capital—the brother of toil. The inspiration of the hopeless—the right arm of the needy—the champion of the oppressed—the executioner of the criminal. I am the epitome of the world's Comedy and Tragedy.

My *Responsibility is Infinite*. I speak and the world stops to listen. I say the word and battle flames the horizon. I counsel peace and the warlords obey. I am greater than any individual—more powerful than any group. I am the dynamic force of *Public Opinion*. Rightly directed, I am a *Creator of Confidence*. A builder of happiness in living. I am the Backbone of Commerce. The Trail-Blazer of Prosperity. I am the teacher of Patriotism.

I am the *hands of the clock of Time*—the *clarion voice of Civilization*.

I am the Newspaper.

JUST A WORD

Miss Jane Addams returns to the United States this week, after an experience hitherto vouchsafed to no woman in the world. She was present, and presided, at the first Peace Congress ever held in the hight of war and attended by delegations from both the neutral and warring countries. Since the Congress closed she has visited all the principal belligerent capitals to lay before the governments the suggestions of the Peace Conference. Before Miss Addams sailed from New York she promised The Independent to describe her experiences, and our readers may look forward to something from her in an early issue.

Dr. E. E. Slosson, our Literary Editor, leaves this week on a month's vacation in the Caribbean Sea. As he has the habit of picking up something wherever he goes, whether in Panama, Europe or Australia, our readers can expect before the summer is over several articles dealing with "The Fringe of the Continent."

VOLUME 83 JULY 12, 1915 NUMBER 1453

THE "MANIFEST DESTINY" OF THE STATES

A STUDY of the geography of the United States will convince any candid person that expansion is an imperative need of many of our commonwealths. Why, for example, should New York State rest content with its contracted boundaries when it might seek colonies in the boundless West? With nearly two hundred persons to the square mile according to the latest census, a floodtide of immigration swelling its already congested population, and an immense commercial and industrial development, why would it not be to the advantage of the Empire State to annex Nevada, which has less than one inhabitant to the square mile? It is true that Nevada would be a little inaccessible (tho no more so than other coveted colonies), but the same objection would not apply to the conquest of Florida. Here is a state with a genial climate, a fertile soil, an area larger than that of New York state, and a commanding position on the Gulf of Mexico. Yet it has not one-twelfth the population of its prospective conqueror and certainly could not oppose an army or navy of equal strength. The acquisition even of little Vermont would be of no inconsiderable advantage, since the state is thinly settled, contains good marble quarries, and would immensely strengthen the eastern frontier of New York because its hills could be converted into an unrivaled line of fortifications. Besides, it must be remembered that New York has an old "historic claim" to its Green Mountain neighbor dating from Colonial times.

Even without Vermont, New York has fairly good "natural frontiers," especially along the Great Lakes. But as much cannot be said for many of the western commonwealths, which follow parallels of latitude and longitude. Why should not Nebraska invade eastern Wyoming and move her western frontier to the Rockies? Nebraska would have the superior numbers necessary for the execution of this project, and its success would greatly simplify her problems of defense in the future. Michigan is cut into parts by the Great Lakes. Wisconsin must surely be tempted to seize the upper section and thus gain at once an ideal natural boundary and the rich copper mines of the Lake Superior region.

The next reason commonly alleged for expansion is the need for an outlet to the highways of the world. Most of our states are well placed on the ocean or on some large river. But do we not see what an immense advantage it would be for West Virginia to annex the District of Columbia and the western counties of Maryland and so gain an excellent frontage on Chesapeake Bay? And why should the great state of Texas permit a little state with less than half its population to hold the Mississippi delta? With this in its control the state of the Lone Star flag would dominate the entire Mississippi Valley and could expand northward at pleasure.

Lastly, the balance of power. From 1900 to 1910 Iowa decreased in population, while Washington increased by over *one hundred and twenty per cent*. Iowa is still the greater power (so far as this can be measured by populations), but it must strike soon or it will be too late. The balance of power is shifting. If the slowly growing states of northern New England do not overthrow the rapidly expanding powers of New York and New Jersey they will be conquered, no doubt of it, in the near future. The far western states at the present rate of increase will soon be strong enough to march to the Mississippi over the prostrate commonwealths of Nebraska, Kansas, Iowa and Missouri, where the population is comparatively stationary. These latter communities are undoubtedly wealthy, but wealth only provokes aggression unless the major part of it is devoted to the maintenance of armaments. But if the threatened communities will only adopt a three years' term of military service for all their able-bodied citizens they may be safe and even triumphant in the great struggles which are sure to come for the control of the upper Mississippi Valley, the granary of North America!

THESE are the arguments for expansion; the need of a densely peopled country for "room to grow," the necessity of "natural boundaries," the requirement of a seaport, and the preservation of the "balance of power," that are urged in all solemnity by those who dabble in *Weltpolitik*. It is assumed that no nation can prosper without colonies as a market for the goods and an outlet for the surplus population of the mother country. As a result the partition of Asia and Africa leads continually to war and rumors of war. France demands the Rhine as a "natural boundary" in spite of the German character of both banks from Holland to Lorraine. Germany wants Belgium and Holland because they control the mouth of the same much disputed river, and an adequate sea frontage is assumed to be "essential" to national development. As for the "balance of power," have we not heard that France could not tolerate the rapid increase of population in Germany, nor Germany the still more rapid growth of Russia without first striking a blow which would crush the military strength of the rival nation while there was yet time? No doubt if our states had never federated they, too, would be avid of conquest at each other's expense. But federation, whether national or international, destroys every incentive to conquest and makes it seem not so much wicked as too ridiculous even for jest. Why not the United States of Europe? Or of the World?

ACCORDING TO THE RULES OR IN SPITE OF THEM

IT is asserted that the steamer "Armenian" was fired upon by the German submarines only when she persisted in trying to escape. Under the usual rules of international law this action on the part of the merchantman justified the war-vessel in firing upon her.

But are there any usual rules left intact by the German naval program? The captain of the "Armenian," a British vessel carrying contraband, had no reason to expect anything but instant destruction for his ship as soon as the submarine could get within range.

Judging from the case of the "Lusitania" there were only two courses open to him. He could try to escape and run the risk of having his ship sunk if he did not succeed; or he could submit to having her sunk without attempting to evade her fate. It was human nature to take the one long chance.

In such a dilemma has the German assumption of superiority to law upon the high seas put merchant shipping: to be destroyed according to the rules—or in violation of them.

SPAIN AND ZION

IT is hardly time yet for the descendants of the Sephardic Jews, driven out of Spain by the persecutions of the Inquisition four centuries ago, to accept in any great numbers the invitation to return to the seat of their ancient pride and wealth and power. At last, prest to it by an American citizen, Louis Friedman, it is rumored that Jews will be welcomed to full citizenship in Spain. Belated but most welcome is the report, for Spain was, during the centuries of the Moorish rule, the happy home of Jewish wealth and learning and culture. The Inquisition scattered them east and west, and long they held to their Spanish speech and forms of worship, glorying in the fame of their great scholar, Maimonides of Toledo.

Spain now would invite the persecuted Jews of Russia and Rumania to seek the old home. But the Jews of Russia and Austria are not Sephardim but Ashkenazim. The descendants of the Spanish Jews here in New York pride themselves on their ancestral names and aristocracy, somewhat superior, they feel, to the ruder children of Ashkenaz. It will be another branch that are now invited back that they may restore, if possible, the lost pride of Spain as mercantile queen of the world. Oliver Cromwell nearly three centuries ago invited the Jews to England, greatly to England's advantage, and Mr. Friedman expects that the return of the Jews to Spain will bring a new era of prosperity to the mother country thru commerce with Latin-America and the United States.

Possibly, but not for half a century or more. The Zionist Jews who have gone to Palestine are still not much farther along than when thirty years ago their ninety-year-old patriarch, Montefiore, frightened all English Jewry by hurrying off to Palestine to find out what was the matter with the Jewish colonists. Last week ten thousand Jews met in Brooklyn to express their interest in the return of Russian Jews to their ancient land; Russian Jews, not American, for no Americans go except as visitors or givers of aid. America is good enough for them. Nehemiah counted forty thousand Jews who had gone up with Zerubbabel and himself from Babylon, but by the millions in these days they have swarmed in over New York and other cities. Hither they speed singing Psalms of Ascent. Hither they find the valleys filled and the hills leveled for their return from long captivity; citizenship and quick opportunity for themselves and schools for their children. Let those that will go to Carmel and the Plain of Esdraelon and beyond the Jordan of Jericho, or to the Spanish peninsula, but here is their Zion. After this great war is over Palestine may be more open to them, altho Islam has been usually more kind to them than Christendom. We shall not envy them the land of prophecy and psalm, flowing again with milk and honey; but here they find their happiest Jerusalem, and here they choose to bless Mordecai and curse Haman.

STANDARDIZING THE CHAMELEON

THE quest of the Polymuriel is a dashing adventure. None but a splendid imagination could have created the vision. Any but an indomitable spirit would have quailed before the enterprise. That an American woman, as set forth in "The World Over" last week, should have thus essayed the impossible is matter for patriotic pride. It is a masterly conception, staggering in its magnitude and monumental in its simplicity—to rescue American womanhood from the quagmire of extravagance, the fetters of fashion, the procrustean bed of a kaleidoscopic conventionality in dress, and to do it by a single stroke.

The Polymuriel is a single costume, simple in construction, sensible in design, inexpensive to make, attractive to wear, and changeable at will from morning dress to evening gown, from work frock to outing costume, from useful to ornamental, from grave to gay. The argument in its favor is ingenious: "Men wear one kind of clothes; why shouldn't women?"

The answer makes up in conclusiveness what it lacks in ingenuity. Men don't—and women won't.

There are too many forces operating to keep "the female of the species" from standardizing her plumage. Dressmaker, couturière, modiste, tailor, milliner, shoemaker, hosier, glover, draper, department store, silk mill, woolen mill, cotton mill—all wax fat on woman's chameleon taste. With what fury and what wiles would they not resist an assault upon their ancient prerogative of supplying the demands of woman's restlessly shifting tastes, and of helping to keep them restless in order to create ever fresh demands. Women buy new clothes and adopt new styles largely because new styles and new clothes are spread temptingly before them (and so do men, but the fact must not be whispered).

When the story of Eden is rewritten, in all frankness and honesty, it will appear that the first bite of the apple revealed to Eve that since she was not drest so becomingly as Lilith and at the same time wore a costume of an earlier vintage than did that lady of fashion she obviously had "not a thing to wear." And the serpent, it will be revealed, was a purveyor of women's fashions darkly disguised—or with all disguise brazenly cast aside, as you prefer.

Then, too, woman herself does not want to change the chameleon's motley for the catbird's drab monotony. With instinctive and charming illogicality she wants to combine in her single person the mutually destructive qualities of conformity and individuality. She will not dress differently from her sisters, but she would be very

different from them in attractiveness of apparel. If a single costume, as the proponents of the Polymuriel proudly assert, will be the case under the new dispensation, will last her season after season, how will anybody know that she is fashionable and chic? If every one is wearing the same standardized costume, to wit, the Polymuriel, how can she outshine her sisters?

No. The Polymuriel will not do. The providers of women's wear will not have it. The women will not have it.

And the men will not have it. Men want women to be charming. They want their own women to be more charming than other women. In woman's iridescent variety man finds a pleasing relief from his own dun uniformity. He would not make women like him if he could and least of all in outward seeming.

And man knows too well the galling fetters of a senseless monotony in dress to want woman set in the same stocks.

A FUNDAMENTAL PREPAREDNESS

DISCIPLINED armies and powerful navies are not the only equipment that a nation needs when compelled to wage war. By far the most important part of preparedness for war is preparedness for peace as well. The amazing strength that Germany has shown since the present war began is a revelation first of all of her fundamental preparedness for any achievement demanding organized and disciplined effort. The United States has been scandalously negligent in this matter of fundamental preparedness, and is negligent still. Our most important duty is to become acquainted with our remissness, and set about the big job which we must undertake and carry thru under penalty of grave peril, perhaps of disaster.

Germany has conserved her natural resources to the uttermost. We have wasted ours, and are still wasting them. Not only German forests and German mines are regarded and handled as important national assets, but so also is the soil, the most important asset of all. The German farmer is an agriculturist. Eighty per cent of American farmers—until a few years ago they were nearer one hundred per cent—have been caustically but accurately described as "miners," taking from the land a fertility that they never replace. Germany has developed her waterways. The Rhine is as important an artery of commerce as any trunk-line railway system. We have developed a river and harbor politics, and a precious lot of canal-digging and harbor-dredging contractors. Whether for peace or for war, we need a great number of canals of the Cape Cod Canal type. It should be possible to send either merchantmen or battleships from Boston to New Orleans by an inside route. It should be possible to send either grain-carrying barges or submarines or destroyers from New York to any port on the Great Lakes and thence down the Mississippi.

Germany has cleaned up her population. It is a population efficient in war, no less efficient in peace. It is educated, and its education is practical in a very wide meaning of the word. The American traveler who can speak no word of any language but English has never been seriously embarrassed on that account when making his way about Germany. Everywhere he has discovered that not only railroad officials and hotel clerks, but also tradesmen and mechanics in actualities can speak English. They have studied it in the schools, and, unlike American public school pupils, they have learned to do so to use that which they have gone thru the drudgery of studying.

And Germany has not only educated her population. She has made it self-supporting, self-respecting, thrifty. She has dealt vigorously, scientifically, and in a business-like way with the problems of peasantry and slums. Even poverty she has cut on a large scale prevented. With all these matters we dawdle and fool. We see crime increasing and do nothing about it. We talk sentimental nonsense about the poor, and resign ourselves to having them always with us. We get excited over the problem of unemployment, and think we have behaved wonderfully well when we have organized a few relief committees, collected a "fund," and published a number of statistical reports, carefully censored by trustworthy politicians to make them innocuous. In education we lavishly and expensively experiment, and congratulate ourselves that we are becoming an enlightened people.

Every decently informed citizen in the United States knows that this picture of contrasts is not exaggerated. He knows that we are drifting and foundering. He knows that in peace we waste our energies as we waste our resources, and fall short of a decent standard of achievement. He knows that if we were swept into war we should make a scandalous exhibition of inadequacy and worse. But he does nothing. Is this wretched inactivity to continue? Or shall we come to our senses, and begin, like grown-up and responsible men, to achieve a fundamental preparedness?

LENGTHENING THE SCHOOL DAYS

IN the olden times school vacations began the last Friday in July and ended the first Monday in September. Today the public schools are closed for nearly three months, and many private schools for four months or more. In the olden times the school was in session nearly all day, with two fifteen-minute recesses in the middle of the morning and the middle of the afternoon sessions, and a full noon hour, or hour and a half, for dinner and games. Today schools generally begin at nine and close between one and three p. m. Nearly all the period is devoted to continuous recitations, and the children come home with a strapped block of textbooks and tasks assigned in them sufficient to tax the faculties of a Chinese sage. Formerly the teachers taught. Now the parents do the teaching and the teachers hear the recitations.

We are glad to note, therefore, that a group of distinguished Americans have just started a nation-wide movement to rectify some of these modern school evils. It is high time to lengthen, as of yore, the school year and the school day, so that the child will not lose, as he does under present conditions, one and a quarter years in eight years of schooling. It is furthermore essential that he should have plenty of time for study and play within the school period without the midnight oil abomination.

At present we have the amazing spectacle of children being forced to do their hardest work at the very time when their elders find it necessary to get rest and recreation.

THE STORY OF THE WEEK

THE GREAT WAR

June 28—British gaining ground west of Krithia, Gallipoli. British steamer "Armenian" sunk by German submarine, killing twenty-one American muleteers.

June 29—Germans renew attacks in Argonne forest. Russians retire behind the Bug.

June 30—Russians repulse attack of German fleet on Baltic port of Windau. Russians driven back on Dniester.

July 1—Three British steamers sunk by German submarines. Austrians defeated near Görz.

July 2—Battle in Baltic between Russian and German squadrons. Serbs and Greeks invade Albania.

July 3—Germans advancing northward from Galicia into Poland. Turks lose 20,000 men in attacking British in Gallipoli.

July 4—Austrians capture 8000 Russians at Krasnik. British steamship "Anglo-Californian" escapes shell fire of German submarine.

The Russian Retreat from Galicia

The Russians have not been able to make a stand anywhere in Galicia since the German drive began and have now been driven back almost to the eastern frontier. On the south of Lemberg, General von Linsinger has dislodged the Russian left from its hold on the Dniester River and forced it to retreat from the Gnila Lipa to the Zlota Lipa, that is, over the same country thru which the Russians had achieved their first victories in August nearly a year ago. At the same time General von Mackensen pursued the Russian right as far as Kamionka on the Bug River, twenty-five miles northeast of Lemberg. The present Russian line is then behind the two rivers which have their origin close together in the highlands of eastern Galicia, the Bug, which flows north into the Vistula and thence to the Baltic Sea, and the Zlota Lipa, which flows south into the Dniester and thence to the Black Sea. To show what sort of fighting ground these rivers make we quote the account of a battle from the Berlin *Tagezeitung*.

On the night of June 25 the attack began along a broad front, executed under enormous difficulties by Württembergers and East and West Prussian troops. The country at this point offers unusual advantages for defense. The high wooded land along the south bank drops off abruptly to the various arms of the river, which is swift and deep.

The northern shore is composed of vertical clay banks several yards high, then come open meadows a mile broad, shut in by thickly wooded hights, from which the Russians operated machine guns and cannon with deadly accuracy.

One West Prussian regiment had to stand all day breast deep in water. A soldier in order to shoot had to be lifted out of the water by others. Even these difficulties were overcome, however, and notwithstanding a flanking fire this troop emerged and finally reached and stormed the Russians' chief position.

During the month of June, according to the official German statement, the Austro-German forces took 40,345 Russian prisoners and captured 87 cannon and 320 machine guns.

The German Invasion of Russia

The importance of the German and Austrian victories in Galicia lies in the fact that they lay Poland open to attack from the south as well as from the north and west. There would be no particular advantage in driving the Russians much further east than their present line of defense along the Bug and the Dniester, but clearing the northern frontier of Galicia has given the Teutonic forces command of both banks of the Vistula and they can now try again what the Austrians attempted at the beginning of the war, that is to advance down the Vistula toward Iwangorod and Warsaw. These are two of the fortresses composing the famous "Polish Quadrilateral," the others being Novo Georgievsk, further down the Vistula, and Brest Litovski, on the Bug to the west. This Quadrilateral, forming the chief defense of the Russian Empire, has so far remained intact. None of the four fortresses has yet been under bombardment, altho once the Austrians came within gunshot of Iwangorod and once the Germans within gunshot of Warsaw. In both cases, however, they were forced to retire before active operations for the reduction of the fortresses could be begun.

The withdrawal of the Russians from Galicia will, of course, necessitate their withdrawal also from their western positions in Poland. They have already retreated from the Nida River and we may anticipate a similar retreat from the Pilica River altho nothing is heard from that region. But even tho the Russian power of resistance is for the time paralyzed, owing chiefly to their lack of ammunition, it will not be easy for the Germans to advance further into the interior of Poland because railroads are few and the German successes have been attained thru quick movement and enormous supplies of artillery and ammunition. The total of the Austro-German forces on the Russian front is estimated by their opponents at over two million.

On the extreme north of the line where a German force has invaded the Russian Baltic provinces, the fleet has been brought into play. A squadron composed of a few light cruisers and many torpedo boats made an attack upon the Russian port of Windau, near the Gulf of Riga. According to the Petrograd account the Germans attempted a landing but were driven off by the Russian destroyers. One of the German vessels was blown up by a mine and others are reported damaged in a subsequent engagement with the Russian fleet in the Baltic.

THE GERMAN STEAM ROLLER

The advance of the Teutonic forces has driven the Russians back of the Bug and Zlota Lipa Rivers. An invasion of Poland has begun and three important fortresses of the Polish Quadrilateral—Zamosc and Tomaszow have been taken. This opens the way to an attack from the south on the fortress of Warsaw, Novo Georgievsk, located on the Vistula and Brest Litovski on the Bug. The shaded area is that still held by the Russians.

WHERE THE GROUND IS SOWN WITH BAYONETS

Only the points of steel and the officer's glasses give evidence of the presence of the hosts waiting in the trenches for the order to charge

On the Western Front

The Germans are showing increased activity at various points along the line between the North Sea and Switzerland and there are rumors of mighty movements developing behind the screen of trenches. But if the Germans are really preparing to take the offensive it is not yet apparent where they propose to strike. All traffic with Switzerland has been shut off on the German side and not even neutrals are allowed to pass the frontier. This has been interpreted as indicating that German troops are being massed close to the Swiss border for an invasion of France from this quarter.

The most vigorous attack so far reported is in the Argonne forest to the west of the fortress of Verdun. Here the Württemberg troops under the Prussian Crown Prince, after a violent bombardment, stormed one of the French outposts and, according to the German account, made an advance of nearly a mile on a front of more than three miles. The capture of 1735 men, eighteen machine guns and forty mine-throwers is claimed. The French report states that the attack was repulsed.

The Constantinople Campaign

The lack of progress in the Dardanelles campaign hitherto has aroused increasing dissatisfaction in Great Britain which has of late found open expression in press and Parliament. The London *Times* calls it "hopelessly mismanaged" and a "grievous muddle." In February, when a combined British and French fleet including the largest warships ever constructed, was sent to the Dardanelles, it was commonly expected that Constantinople would fall in a few weeks. But even the fifteen inch shells made little impression upon the Turkish fortifications and on the other hand the Allies lost six or more of their ships by submarines and mines. Now it appears that the larger vessels of the fleet have been withdrawn to some safer locality, probably Kefala Bay on Imbros Island, for we hear only of minor cruisers and destroyers.

When it was realized that the attempt to force the Dardanelles by sea alone was futile an army was collected and on April 25 succeeded in effecting a landing upon the Aegean side of the Gallipoli peninsula. They were not able, however, to cross the peninsula as they expected in order to attack the Dardanelles forts in the rear. On the contrary they found themselves confronted with superior forces and strong entrenchments and had all they could do to hold on to a strip of the coast about a mile broad and a few miles long. According to a statement of Premier Asquith the British naval and military losses at the Dardanelles up to the end of May amounted to 38,635, distributed as follows: killed, 7422; wounded, 24,676; missing, 6537.

The blame for the Dardanelles fiasco has been laid to Winston Churchill, who until lately was in charge of the Admiralty. But in a recent address he announced that momentous movements were about to begin on Gallipoli and success was nearer at hand than was supposed. The operations to which he referred have apparently begun.

British Gains in Gallipoli

From the shore where the British made their landing it is about three miles across the Gallipoli peninsula to the Dardanelles. The ridge which forms the backbone of the peninsula reaches its highest point at Achi Baba, 700 feet above the sea. The flat top of this hill has been converted into a fortress by the Turks under the direction of German engineers and dominates that part of the peninsula which lies between the permanent fortresses of Kaliá Bair to the northeast and Seddel Bahr at the tip. The ravines and hills around about were strongly protected with entrenchments and barbed wire entanglements.

Against this redoubt on Achi Baba the attack of the Allies is now being directed. On June 21 the French troops, mainly young fellows of the latest levy, were sent into action. The preliminary bombardment began at 1:30 a. m. and continued till noon, when the French charged. They took the first two lines of trenches, but were driven out by a counter attack. A second time they charged, but again failed to hold their gains. Then the British howitzers and guns were sent for and at 3:30 shelled the enemy's lines once more. After a heavy bombardment for half an hour a third assault was made, this time successfully, and six hundred yards of Turkish trenches were taken and held. It is estimated that the Turks lost over seven thousand that afternoon. One of their trenches, two hundred yards long and ten feet deep, was filled with corpses.

On June 27 a similar attack took

A CRACK REGIMENT OF RUSSIA'S RETREATING BUT UNBROKEN ARMY

place, but with the roles reversed. This time it was the British left instead of the French right which made the advance. The Royal and Lancashire Fusiliers and Royal Scots charged across the ravine of Saghir Dere and took two lines of trenches, while the Ghurkas, pushing forward along the shore under the cliffs, captured a knoll west of Krithia, making a clear gain of a thousand yards. Krithia, which lies between this point and Achi Baba, was once a village of four thousand people, but now is completely demolished by the bombardment.

Two days later the Turks made a strong effort to recover the positions taken by the French and English. Two mine galleries were exploded under their lines and the trenches subjected to heavy rifle and machine gun fire for two hours before the bayonet charge was made. The attack was repulsed with severe losses.

The Sinking of the "Armenian"

The steamer "Armenian," bound from Newport News, Virginia, to Avonmouth, England, was torpedoed by a German submarine on June 28, twenty miles off Trevose Head, Cornwall. The vessel belonged to the Leyland Line and carried on board 1422 mules and horses for the British army. There were no passengers or ammunition on board. The crew consisted of 160, of whom 87 were Americans, mostly negro muleteers. Twenty-one of the twenty-six lost were Americans. The news of the affair was suppressed by the British censor but Washington learned of it two days later from the American consul at Bristol. Since the "Armenian" was, according to a statement of the British Government, "engaged on Admiralty business" and since the submarine, according to the captain of the "Armenian," behaved fairly and courteously, the case is a very different one from that of the "Lusitania."

The submarine approached on the surface flying the flag of "U 39" and gave due warning by firing two shots across the bows of the "Armenian." But instead of obeying the command to stop Captain Trickey determined to make a run for it and save his ship if he could. So he put on full speed but the submarine pursued firing shells and shrapnel. One shell struck and disabled the steering gear. Another went down the funnel. The boats were swung out and loaded ready for lowering when the falls of one of them were cut by shrapnel and several of the men fell into the sea. The Marconi house was demolished by a shell so no more signals for help could be sent out.

It was only after an hour's run, when the ship was afire in three places and thirteen of the crew lay dead upon her deck, that Captain Trickey consented to surrender. As soon as he raised the white flag the submarine ceased firing and gave the crew ample time to take to the boats with the wounded. Three of the crew were rescued from drowning by the submarine and taken on board her. One of the negroes was so frightened by the explosion of the shell that he cut his throat with a razor. As soon as the crew had left the vessel two torpedoes were fired into her and she sank in half an hour.

A Battle in the Air

The anticipations of H. G. Wells and other romancers of futurity have hardly depicted a more thrilling fight than that which took place over a mile above Ghent early in the morning of June 7. Three British aviators in monoplanes set out at night to destroy the German hangar at Evere, north of Brussels. Two of them flew over it dropping bombs which set it on fire. The third aviator, Flight Sub-Lieutenant R. A. J. Warneford, told his story in an interview cabled to the New York *Times* as follows:

> I proceeded on my journey at an increased hight. It was just three o'clock in the morning when all of a sudden I perceived on the horizon, about midway between Ghent and Brussels, a Zeppelin flying fast at a hight of about 6000 feet. I immediately flew toward it, and when I was almost over the monster I descended about fifteen meters and flung six bombs at it. The sixth struck the envelope of the ship fair and square in the middle. There was instantly a terrible explosion. The displacement of the air round about me was so great that a tornado seemed to have been produced. My machine tossed upward, and then, flung absolutely upside down, I was forced to loop the loop in spite of myself. I thought for a moment that the end of everything had come. In the whirl I had the pleasure of seeing my victim falling to the earth in a cloud of flames and smoke. Then by some miracle my machine righted herself, and I came to earth in the enemy's country. I was not long on the ground, you may be sure. I speedily put myself and my machine into working order once again; then I set my engine going.

Lieutenant Warneford was only twenty-three and had made his first flight four months before. The English papers are enthusiastic in their praise of his exploit, which it is hoped will force the Germans to remove their aerial base further back. He received the cross of the Legion of Honor from the French Government and the Victoria Cross from the British.

A week later Warneford was killed by the fall of his aeroplane while taking up the American journalist, Henry Beach Needham, whose articles "The Zeppelin That Never Flew" and "Kitchener's Army in the Making," are still fresh in the minds of Independent readers. He was only three hundred feet in the air, but was trying some daring feats of diving when he fell out of the machine and Mr. Needham followed. Both were crushed by the fall.

The British Blockade

A memorandum from the British Government in regard to the Order in Council restricting neutral commerce was received June 24. In it the British Government explains the measures that have been taken to compensate the owners of the cargoes seized and the concessions made to avoid delay and injustice. It is alleged that in some cases the delay is due to shippers who have asked for postponement. The British Board of Trade has already paid out $2,250,000 to American claimants. There are now twenty-seven vessels from America bound for neutral ports detained in the United Kingdom, some on account of suspicious consignments, others awaiting appraisal by the Prize Court. The cotton whatever its destination, is seized and bought up by the British Government. The memorandum calls attention to the large increase of American shipments to neutral ports, many of which are believed to be destined to enemy countries.

The memorandum, the friendly in tone, will not satisfy the American shippers who have appealed to our Government to protect their right to ship

INTO THE JAWS OF DEATH

An Austrian shell bursting in the face of a Serbian attacking party. The Serbs are dropping to the ground for greater safety

to neutral ports. It is estimated that goods amounting to half a billion dollars had been ordered before March 1, the date of the British blockade. These cannot now be delivered nor can our importers get the goods which they bought before that date and which are still held at Rotterdam and other neutral ports.

War Supplies Ordered

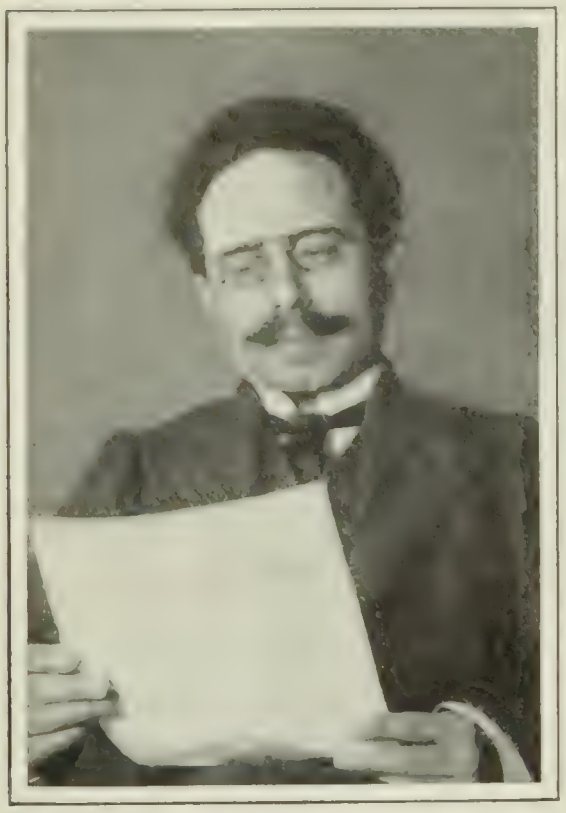
Many reports, not all of them trustworthy, have been published about new orders for war supplies. There is no room for doubt, however, as to the demand for shrapnel, and the orders for such ammunition exceed, it is believed, $400,000,000. They have been widely distributed, and shrapnel shells are being made in many factories and shops whose normal output is something of another kind. These orders have caused demand for machine tools and steel bars. The production of steel bars and other metal forms which ammunition manufacturers must use has been very noticeably stimulated in the Pittsburgh district. In Canada they are making shrapnel in shops as far west as Calgary. The Bethlehem Steel Company is to expend $12,000,000 upon extensions. It is admitted, according to press reports, that attempts to buy control of this company with German capital were made some months ago. Offers were also made, it is understood, for several well known companies which manufacture rifles or cartridges.

Russia needs not only ammunition but also railroad locomotives and cars. In addition to the 62,000 freight cars recently ordered she has placed contracts for locomotives enough to call for $30,000,000. She has also undertaken to purchase 50,000 car wheels. France ordered sixty-four locomotives last week, and 50,000 tons of steel rails. Belgium has agreed to take twenty locomotives. A company in eastern Connecticut is at work on an order for 400,000 rifles. Enlargements of powder plants are reported, and the stock of powder companies has risen rapidly in the New York "curb" market. A cartridge company is producing 3,500,000 cartridges a week on an order said to be for $30,000,000 worth. There were large exports of war material in May, but the quantity of ammunition shipped promises to increase from week to week.

Italy is buying locomotives. France and England made a new contract in Texas last week for 30,000 horses, and new orders for $10,000,000 worth of meat in Chicago are reported. A company that ordinarily makes typesetting machines is at work on a $1,000,000 order for sights to be used on large guns. Orders placed in Connecticut since the beginning of the war are said to exceed $150,000,000. They are for a great variety of products, including machine guns, buckles, auto trucks, rifle brushes, cartridges, engines and brass. There is a demand for American artificial legs and arms. England, France and Russia cannot supply more than 10 per cent of those that are needed. It is estimated that the number of soldiers to whom artificial limbs should be given is not less than 50,000.

League to Enforce Peace

The League to Enforce Peace, which was formed at the Independence Hall conference in Philadelphia, adopted a definite plan of action at a meeting, last week, of its executive committee. Ex-President Taft was made honorary chairman of this committee; President Lowell of Harvard, chairman; Theodore Marburg, of Baltimore, and Hamilton Holt, of New York, vice-chairmen; Herbert S. Houston, of New York, treasurer, and William H. Short, of New York, secretary. There is to be a propaganda in charge of a committee on home organization, with Alton B. Parker, chairman; one on foreign organization, led by Mr. Marburg, who was formerly Minister to Belgium; and one on information, of which Mr. Houston is the head. Darwin P. Kingsley, president of the New York Life Insurance Company, is chairman of the committee on finance. The officers, with the four committee chairmen, Oscar S. Straus and Professor John Bates Clark, of Columbia University, will be a committee of management.



There will be a campaign thruout this country, with similar work abroad, to inform public opinion as to the aims of the League to protect any misapprehension about its plan for the use of economic and military force against a signatory nation that violates the terms of the agreement, and to procure the cooperation of organizations that are in sympathy with the League's purpose.

The United States Chamber of Commerce has decided to conduct a referendum by asking more than 760 Chambers of Commerce or Boards of Trade to say whether they think the United States should promote or join a league of nations in which the signatories, having agreed to the submission of justiciable questions to an international tribunal, and all non-justiciable questions to a council of conciliation, would be bound to use their economic and military forces against any one of their number who makes war upon another without first having submitted the controversy to the tribunal or the council. This league would also hold conferences to formulate and codify rules of international law. It will be seen that the questions which the country's commercial associations are thus asked to vote upon simply set forth the principles and program of the new League to Enforce Peace.

Chicago Strike and Lockout

The controversy in Chicago between the builders and the groups of workmen—carpenters, lathers, painters, etc.—who have been on strike for some time and have rejected arbitration, promises now to deprive at least 200,000 men, and perhaps 500,000, of work. The associated contractors, employers and manufacturers decided on June 28 to close all the mills and supply shops under their control. By this decision forty-three lumber yards, sixty-five brickyards, and many sash and blind mills, cement plants and other sources of builders' supplies were affected. James Fryer, prominent among the manufacturers and builders, said that their action would make 200,000 men idle in Chicago, and about 300,000 men at the plants in Wisconsin, Indiana and Ohio which have furnished supplies for Chicago building projects.

Many horses used by the builders and manufacturers were sent to pas-

Bain

KARL LIEBKNECHT

One of the most outspoken and unyielding Socialist opponents of the war in the German *Reichstag*. The Social Democrats' agitation for peace continues: a full-page manifesto published in the Berlin *Vorwärts* on June 26 resulted in the suppression of the paper for the third time

ture, and several thousand teamsters had nothing to do. The employers said they had set out to force a settlement. There are nearly one hundred contractors, however, who have deserted the association and yielded to the carpenters' demands by increasing their pay to seventy cents an hour. It is expected that loss of work by 200,000 men will excite so much hostility against the carpenters that they will accept arbitration.

The Mexican Problem

After General Huerta and General Orozco had been released on bail they remained in El Paso, where they were carefully watched by agents of our Government. Huerta was warned that if he should make journeys without their consent he would be placed in jail. Colonel Morgan, commander at Fort Bliss, made Huerta his guest at a dinner and invited him to review the American troops. For this he was reprimanded by Secretary Garrison. Our Government arrested General Mercado, General Caraveo, Jose Zozaya, and two other residents of El Paso, on charges like those in Huerta's case. Zozaya is a merchant in whose house were found machine guns and several million rounds of ammunition. All the accused men were arraigned on the 1st, but, at the Government's request, the hearing was postponed until the 12th, because the evidence was not ready.

Huerta will not be permitted to enter Mexico. General Funston has been directed to prevent him from crossing the boundary. He may be indicted. Our Government may decide to deport him as an undesirable alien immigrant. Villa's Governor of Chihuahua has formally asked that he be extradited for the murder of President Madero. He could be surrendered in extradition proceedings, and in Villa's hands he would speedily be punished, but our Government will not allow him to cross the line. He and his friends insist that he is wrongfully accused and has no connection with any military project. Because of a story that he had provided for association with Eduardo Iturbide, the latter in a published statement denies any association and attacks him. General Angeles, suspected of disloyalty to Villa, has defended himself in Washington, saying that he is about to return to Villa's headquarters.

Jose Robles, formerly Minister of War in the Cabinet of Gutierrez, asserted a few days ago that Carranza had consented to discuss terms of peace with Villa, and that Obregon and Villa would hold a conference within two weeks. But Carranza has since denied this in an official statement, saying that "there never will be such negotiations."

Reports from the Mexican capital are of such a character that some think the situation there will compel intervention. The city has been cut off from the outside world, so far as communication by wire or rail is concerned. For twelve days there was no direct message. Carranza's army, under Gonzales, battling for eight days, failed to capture the town, but was repulsed by Zapata in the suburbs. The condition of the city, in which are 20,000 foreigners (2000 of them Americans) is frightful. Starving mobs have looted the shops and business is paralyzed. In many other parts of Mexico destitution and suffering are reported. A month has passed since Mr. Wilson published his warning in which some action was foreshadowed if there should be no improvement "within a very short time." Such change as has taken place has been in the wrong direction.

James M. Cox

A WAR FARMER

Myrel Molby is by long tradition expected to raise hay, but now that English men are fighting she has begun to pitch it as well

HERBERT S. HOUSTON

The vice-president of Doubleday, Page and Company, who was, at the recent great convention in Chicago, elected president of the Associated Advertising Clubs of the World. He was one of the founders of this young but most vigorous and progressive organization, whose influence in the direction of honest and productive advertising has already been very great, and promises to increase steadily. The next annual convention will be held in Philadelphia. Mr. Houston is also treasurer of the League to Enforce Peace

J. P. Morgan Shot

J. P. Morgan was shot on July 3 at his home near Glen Cove, Long Island, by a teacher of German who declared that his purpose was to persuade Mr. Morgan to use his influence to discontinue the export of war supplies. J. P. Morgan & Co. are the fiscal agents in this country of the Allies. Mr. Morgan was not seriously injured. Frank Holt, his assailant, has been teaching at Cornell for the last year, and is an American of French and German descent.

Holt stated at first that his purpose was to reason peaceably with Mr. Morgan and that the shooting was to compel his attention rather than to kill, later that he intended to imprison Mrs. Morgan and her younger children till he could bring Mr. Morgan to accept his view that it is criminal for the United States to aid in human slaughter by shipping munitions to Europe. He talked in an irrational manner after being arrested and it was suspected that he was crazed.

The day before the shooting a bomb was exploded in the public reception room of the Senate in the Capitol at Washington. Holt admitted that he was responsible for this act, which in letters to various Washington papers he called an "exclamation point" to his "appeal for peace." He earnestly denied that he had any bias in favor of Germany.

FROM STATE TO STATE

ALABAMA: The watchword is "Alabama must feed herself." To this end a movement is on foot to dethrone King Cotton and institute a diversity of diversified products of the soil. With cheap lands available, a long pasture season, good grazing without the necessity of expensive shelter, and with all kinds of feed easy to produce, it ought to be possible here to raise cattle, hogs, sheep and other livestock on the most large scale as before the Civil War. Nor is there any great reason why corn and other grains which then formed the chief crops of the state should not now be grown extensively. It is expertly estimated that the cotton growers of Alabama are losing one and one-half cents a pound on every bale produced. This may account for the fact that eighty-four per cent of all the cotton land in the South is under mortgage. Also it may account for the much greater values placed upon lands in sections where diversified crops are raised than upon those devoted to the single crop.

CALIFORNIA: Not only do expositions lure the vacation pleasure-seeker to California this summer, Los Angeles, in carrying out its elaborate plan of city beautifying for 1915, is offering the tourist a chance to see how truly decorative a city and its surroundings may be under normal conditions. Palms, the finest that the state could produce, are set out in cement pots all along the city streets. And by two hundred miles of county boulevards are rose trellises—3000 of them, each twenty feet long and five feet high—covered with climbing roses. Los Angeles is all dressed up for California's party.

COLORADO: The people of this state are already making extensive preparations for "the biggest celebration ever," to be held in connection with the International Dry Farm Congress and its allied organizations, the International Soil Products Congress and the International Congress of Farm Women, which are to be in session in Denver from September 29 to October 9 of this year. A mammoth "1915 prosperity celebration" is to continue thruout the sessions, reaching its climax in a parade of from 200 to 300 floats illustrating and typifying the resources of the West, especially of Colorado and the other intermountain states. Even the wonderful scenery is to be reproduced in miniature, and the wholesome climate represented by pictorial floats.

CONNECTICUT: A vigorous effort for church unity is being made thruout this state. As a means of breaking down the spirit of loyalty to individual churches and creating in its stead a broader loyalty to Christianity, the leaders of the movement advise that members of each denomination attend the services of others, and that clergymen of different denominations exchange pulpits more frequently. It is believed that this would tend to remove prejudices, establish better social relations, and result in that mutual understanding which is so likely to lead to unity.

DELAWARE: A feature of the Fourth of July celebration at Washington Heights, Wilmington, was a spirit band of 40 motorcycles in front of the automobiles and preceded 1000 citizens for about a thousand newly naturalized citizens who had been specially invited for the events of honor.

FLORIDA: Girls' canning clubs are organizing all over the state. Florida ships vast quantities of fruit and vegetables to Northern states for canning. It then buys back a considerable portion of the canned product, paying in freight and profits millions of dollars which it now proposes to save. The movement was started by the State Fair Association which is giving club prizes and otherwise aiding and encouraging the girls of the state in this industry. If the product of the clubs exceeds the home demand, as it bids fair to do, the association promises to find markets for the surplus in other states.

GEORGIA: A recent decision of the Supreme Court of Georgia holds that "The reserving of interest in advance by a bank at the highest legal rate of interest on a loan, whether it be a short or a long term loan, is usurious, and a deed to land given to secure a promissory note for the loan is void on account of the usury." The court added that, tho it may be the universal custom of banks to deduct interest in advance, custom cannot operate to change a law of the state whose provisions are clearly against it. The decision, it is said, will lead to no end of litigation before the banking interests can induce the Legislature to make the law conform to the custom.

ILLINOIS: The agricultural committee of thirty-nine banking associations of the United States meets in Chicago to form plans for bringing bankers and farmers together for the betterment of agriculture and country life. An advance circular, which describes Chicago as "the livest and most prosperous city in the United States because it is built up on agricultural progress," says: "This conference will be a wonderful marshalling of the strongest forces at work today for better agriculture and country life. It is to be unique in the comprehensive consideration it will give to the great problems to the solution of which the bankers of the United States are committed to lend their aid. . . . It will give a strong impetus to the banker-farmer movement. It will define authoritatively the lines on which the bankers of the United States should proceed in order to do the most good. It will be long on inspiration and short on mere routine subjects."

KANSAS: The State Board of Health has found a new reason for advocating good roads. It says that weeds and trash along neglected highways prevent the prompt evaporation of moisture. Dust making ideal breeding beds for mosquitoes, flies and foul germs of disease, and be[illegible] carriers of disease, and be[illegible] germs and other germs that [illegible] range; that weeds, by obstructing [illegible] favor the harboring of garbage and refuse which provide these insects with needed material for germ transmission; that open ditches, clear of brush and debris with scalloped surfaces and proper fall would rid much farm land of mosquito-breeding pools. Moreover, it points out, such roads would afford dry footing for pedestrians especially school children, whose power of resistance against colds, pneumonia, tuberculosis and other infectious disorders is frequently lowered by wet feet and chilled limbs.

KENTUCKY: The Good Roads Highway movement has stirred old Kentucky to action for road improvement. Civic bodies and automobile clubs from all the larger cities have been racing over the state, holding meetings and arousing interest in good roads, with the result that money has been appropriated and work begun in most of the counties. Boone County has given a majority of 1950 in favor of issuing $200,000 worth of bonds for the building of 100 miles of stone roads in that county, the largest bond issue ever voted in Kentucky under the new road law.

LOUISIANA: Louisiana has declared war on rats as a means of eradicating bubonic plague. Since the campaign began, last year, nearly 400,000 rats have been caught in New Orleans alone. These, the Public Health Service reports, have been identified as to species and sex, since only certain species carry the plague. The Supreme Court of the state recently handed down a decision that the law providing for the rat-proofing of all buildings is constitutional. As a result of that law more than half of the 70,000 [illegible] buildings in New Orleans have been rat-proofed, and work on the remainder is being vigorously pushed. What with the rat-catching and rat-proofing, there has not been a case of human bubonic plague in the city since the first week of last October.

MARYLAND: This state, with Baltimore as the center of its activities, is awaking to the large possibilities of trade with the Pacific coast offered by the Panama Canal. The Merchants and Manufacturers' Association contends that all freight originating east of the Mississippi River can be sent by rail to Baltimore and reshipped by water to any point on the Pacific coast for less cost than it can be sent directly west by rail. It also contends that, based on differences in the length of haul, Baltimore has a freight differential which, estimated on the hundred weight, is eight cents less than Boston's, three cents less than New York's, and one cent less than Philadelphia's on products shipped from the Mississippi River and intermediate points. The association has several guaranties of carriers that the rates will be made and maintained. [illegible] [illegible] [illegible]

THE JOB, THE WORKER AND THE GOVERNMENT

BY WILLIAM B. WILSON

UNITED STATES SECRETARY OF LABOR

AN employer who is in need of help and a wage earner who is in need of a job may now look to the Government of the United States for aid.

The Department of Labor has entered upon plans of work for improving the opportunities of the wage earners of the United States, whether citizens or aliens, for profitable employment. The step taken has been to put a national employment bureau in operation, where no fees will be required or charged.

The Post Office Department and the Department of Agriculture are coöperating to make the project a success, and to carry the facilities of the new employment organization to every point of the United States which is reached by the postal service or the agricultural field agents.

The next step to insure the proper development of this Federal Employment Bureau, as it is generally known, is one that involves the greatest possible publicity, so that every employer and every wage earner may know of the facilities which the Government now has at their disposal to bring them together. The Association of Foreign Language Newspapers has already advised the Department of Labor that it will aid in every way possible, and many newspapers are printing, free of charge, the lists which the Government furnishes to the press of employment opportunities.

As an instance of the invaluable help thus rendered, during the first six months of the operation of employment opportunities published by the *Staats-Zeitung*, 1174 Germans applied to the New York distribution branch for agricultural work, of whom 630—or more than half—were directed to definite employment on farms. These workers were distributed to twenty-three different states at an average monthly wage of $23.23, with board and lodging.

Perhaps one of the greatest inducements that can be offered a man who will accept labor on a farm is the hope that ultimately he can secure one of his own and establish a home. The immigrant who comes with sufficient funds to enable him to buy a farm usually brings with him enough information as to where he will locate and what he wants. In other words, the alien with $1000 or more which he possesses to invest in an equity or as an outright purchase is not the alien with whom the Department of Labor has to deal. It is rather with the alien who comes with the minimum amount which the law requires. Such an alien has no capital, therefore, other than his skill. How an expert alien agriculturist can save enough money to enable him to buy his own home is problematical, but it is obvious that he can do better in twenty years in the country than in a congested center while pursuing a "misfit" occupation.

The purpose of the Department of Labor, in this new venture, is to decrease as rapidly as possible, and perhaps eliminate entirely, the chances of misfit occupations. To put the right man in the right job is just as important as to bring the manless job and the jobless man together. Thus far the lack of a satisfactory and practical method of labor distribution has been the one obstacle in making both employers and employees satisfied. No man is satisfied when he does work out of his own line and no employer is satisfied with the product of a worker whose job is a misfit.

Other important obstacles to be surmounted are the inherent dread of the fake employment agency and of the confidence men who gamble upon the gullibility of unsophisticated immigrants. This has been an evil attendant upon our immigration that has caused the authorities no little trouble. The "dropt pocketbook" swindle is practised almost daily; the old game of selling "excursion boats" and "park privileges for fruit stands" less frequently but regularly. Protecting the landed immigrants from these rogues is not within the jurisdiction of the immigration authorities and the police are not always successful in looking after their welfare, so a preventive is obviously better than a cure. By directing the arriving alien to his final destination, which he will reach under the protective care of the Government, instead of to places where he can only seek work, he is safeguarded from dangers of swindling and fraud.

The fraudulent employment agency can be dealt with only by congressional action. We ought to have a law that will place all employment agencies and labor exchanges engaged in

TELLING THE FOREIGNER ABOUT THE JOB

In New York City eighteen foreign language newspapers receive weekly notices of such opportunities for employment as the Department of Labor wishes to publish. On the left the beginning of a list of farm jobs printed in the Jewish *Staats-Zeitung* (Herald), on the right part of an announcement from the Workers' (Yiddish)

interstate business under the supervision of the Department of Labor. At present no relief can be afforded to the injured parties and no punishment can be given to the offenders because the transaction is not completed in one state and the court of initial proceedings has no jurisdiction in the state to which the men are sent.

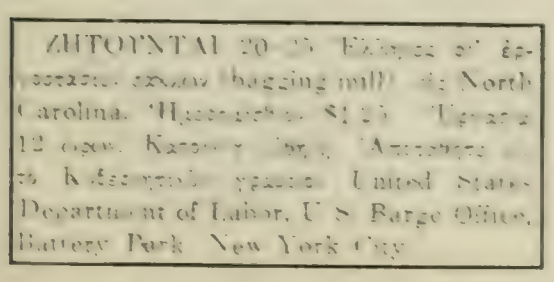
A great deal has been said about unemployment, but most of what has been said is either conjectural or palpably wrong. The most dependable statistics are approximate. All of the bulletins of the United States census dealing with this subject carefully warn against precision. The reliability of such figures must perforce be limited, because they depend upon circumstances which are not susceptible of statistical measurement.

What one may learn, with more or less correctness, is whether there are more unemployed persons in the United States today than there were ten years ago, and the same question will, naturally, come up again ten years hence. Is the number of unemployed persons in this country today greater than at any other period in our history?

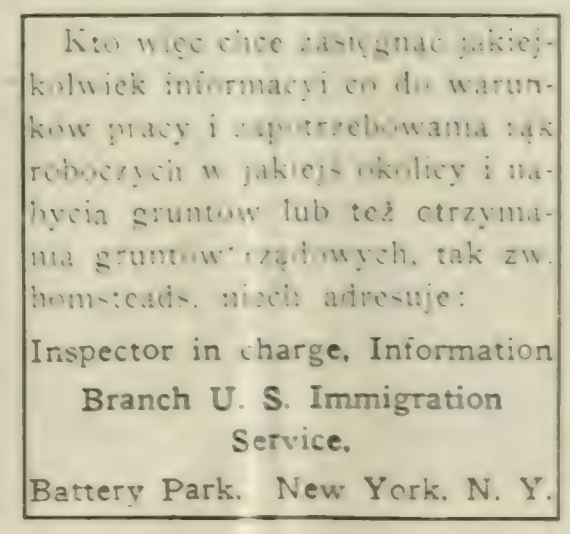
To this frequent question no other reply is possible than that statistics do not make possible any estimate of the number of unemployed persons in the United States at any time. But statistics fluctuate, and a period of very low unemployment is bound to precede and to follow, in the ordinary course of events, a period of high unemployment. In other words, it is clearly established that the amount of unemployment is by no means constant, but it varies from month to month, from season to season and from year to year. It depends upon that proportion of the population which is habitually out of work on account of incapacity, unwillingness to work or constant inability to find work.

Occasionally we read or hear about some dreamer who would have it that every worker in the world should have work; that is to say, that there ought to be no one unemployed who is not independently rich. This is not possible. The full working strength of any community is never exerted. If every worker of a community, whether this be a village or a nation, had his turn, a considerable proportion would nevertheless be idle for some part of the year. Illness, old age, recreation, a change of employers with interval between, and climatic conditions are a few of the causes which together result in a considerable proportion of persons who are without employment during some portion of the year for reasons wholly unconnected with inability to work, or to secure work. Another reason for idleness dissociated from industrial conditions affects those occupations which are known as intermittent, such as glass-working, inland lake service, and certain out-of-door callings. From these causes, and many others, it can be readily seen that fluctuations in the ranks of employment are not necessarily due to hard times.

No tabulation of the number of unemployed persons in the United States in 1910 has yet been completed, but it must be remembered that when this data has been made available it will be, like preceding returns, essentially approximate.



A comparison of preceding statistics shows that the increase of population in this country has been accompanied by a corresponding increase in the number of wage earners, and no doubt this ratio will continue in the future.



The unemployment statistics for 1900, which are the latest available, show that at that time there were 10,381,765 wage earners engaged in agricultural work, 7,085,309 engaged in manufacturing and mechanical work, 5,580,657 engaged in domestic service, 4,766,964 engaged in trade and transportation and 1,258,538 engaged in professional service. Of this total of 29,073,233 wage earners (persons ten years of age and over) 6,468,964, or 22.3 per cent, were unemployed at some time or other. This shows that many [illegible] persons may idle for a period of from one month to twelve months, but there is no means of knowing what per cent of these persons were idle from choice or inability to secure work.

Needless to say, the value of the new Federal Employment Bureau depends upon the intelligent use that will be made of it by employers and wage earners alike. Employment blanks have been sent to all post offices and to field agents of the Agricultural Department, where employers and persons out of work may secure them for their use. Employers will state upon the blank the number and kind of employees they desire. Wage earners will specify the kind of work they want, locality and wages desired. These blanks will be returned to the Department of Labor, where they will be classified, and then efforts will be made to place jobless men.

Last year upward of 150,000 men were thus placed by the department in the agricultural fields of the West. Places were found for the victims of the Salem fire, and similar local causes enforcing idleness have given the department much work to do, but the results have been satisfactory, considering that the Government employment bureau is yet in its experimental stages and awaiting the co-operation of Congress to provide for its development.

OLD FLOWERS TO LOVE

BY E. P. POWELL

This friendly discussion of your essays to make farm homes more beautiful and blessed—is Mr. Powell's special philosophy—to make people and even animals happier and better, came to The Independent after Mr. Powell's death.—THE EDITOR.

I REMEMBER that seventy-five years ago the Yankees, as they came out of Connecticut, and started on their westward pioneering, brought with them not only the family cow, and old nag, and two-wheeled shay, currant bushes and gooseberry bushes, and plum trees and cherry trees, but certain family characteristic flowers—chosen by the old grandmothers because they were easily cultivated and could be grown about the stoops of New England until they were a part of the family. Among these farm flowers I remember the hollyhock as, above all, the badge of the farmer. It was grown everywhere; and that was a poor family indeed that did not have them in the dooryard, or the backyard, and where the chickens scratched. Double yellows and double whites were a badge of horticultural aristocracy. The hollyhock of that day, however, was mostly possest of a single row of petals; and I wish those of this day were the same. It allowed of a finer grade of shading than we get in the doubles, and the flower stalks as a rule were not so stiff. There is a certain harshness about the hollyhock at the best, but if one studies the delicate shades and considers the gorgeous display of the tall stalks in full bloom, it is easy to see why the hollyhock should remain the farmers' delight.

It pleases the men as well as the women, partly because it takes to the fields, like mullein, and it can stand all sorts of treatment. That is one charm of it to the present day, that we do not have to fuss over the plants. There are very few enemies, or as we might say, critics of the hollyhocks. As for food it likes the commonest sort, and does not object to a crowd of neighbors.

One of my earliest recollections is of my father's planting hollyhocks clear around his corn field, in central New York. He laughingly said that it eased his homesickness for old Connecticut. We loved it all the more because it was liked by that particularly homely fellow, the bumble bee. After he had slept in one all night, we boys closed the petals over him, broke the stem, and used him for a harmless terror, striking it against the ears of each other or of our parents.

Another flower that followed our New England fathers westward, and almost as persistently as the hollyhock, was the phlox. Its colors were very tame, the petals rather limp, and the perfume had a sweetish and not agreeable flavor. All that passed away, and now there is hardly a flower to be found in everybody's garden to surpass for variety and charm and delicacy and perfume the phlox. It is worth the while to keep at it for several years, for the cross-breed phlox multiplies readily, and is in such a mood of improvement all the time that we are sure of getting more or less extra fine new sorts. In the course of twenty years I averaged one choice novelty every year. Of course the cross-breeder is not likely to have the field all to himself; but I take it a farm family always wants to be associated with the improving side of horticulture. If so, the housewife can spend her time very profitably over the phlox.

The phlox has more than trebled the size of its petals, and the colors vary from the most intense crimson and scarlet to purple with white or crimson eyes. In fact, this old-fashioned, commonest of flowers has become one of the most brilliant, while still most easily grown in any corner of the garden or farm. The number of named varieties runs up into the hundreds. It belongs naturally to the autumn months. However, if you wish to make it cover a longer season set out a new bed late in the fall for early spring blooming. Then move these plants, after they have faded, without special care to get all the roots, and you will get another set of blossoms late in the season. It will do just as well to take plants from an old bed. Then still later shoots will come up from where you took your plants, and will blossom till the snow covers them. So it is that with very little manipulation—nothing more than spade work—you will turn your phlox into an all-around season flower. Meanwhile it is of such vigorous habit and easy culture that he must be a dullard who feels troubled with phlox culture. It succeeds in any good soil, but likes to be manured and is especially fond of liquid manure. The plants give us the finest trusses of flowers when two years old, or three. I claim it to be one of the five best farm flowers that I have cultivated.

But as a farmer I am most proud of my tulips. Having a surplus, some forty years ago, I stuck them into my strawberry bed—about five inches deep and three inches apart—just pushed them in and left them to take care of themselves. It was the easy way of getting rid of them. That was in the fall, and in the spring they came and filled the whole ground, so that the strawberries netted hopelessly invested out. Not a bit of it. I had very soon corn baskets full of tulips to gather and plenty more to look at and smell. But under March and April they had all swung their cups full of fragrance, done their duty as flowers, and dropt their petals to make soil; nothing was left but dry stalks. So it happened that when the strawberries were ready to blossom it was difficult to discover a hint of the tulips that had been.

The strawberry crop was full as it could be; and that is the way I learned to plant and grow tulips—all I wanted. As strawberry beds have to be changed every second year or third I was always having plots of tulips, and these did not have to be changed—in fact would not permit change. The strawberry plants ran out and disappeared, but the tulips still looked out every April thru the grass or whatever followed the berries.

Of course the rose is a farmer's plant—why not? It is cousin of the apple and the pear and the strawberry; and has the honor of naming the whole family—Rosaceæ. My first knowledge of roses came from a big bush of the Cinnamon that stood by the cesspool of the old homestead. Under the Harvester pear tree also there was a bush of the Cinnamon rose that stood twelve feet high, as near as I can remember, and nearly that much in diameter. Somehow another bush had got itself rooted near the school house, where it looked over the fence and gave us a chance to pick bouquets for the schoolma'am. It was a delicious rose, and I do not know why it has gone out of cultivation—I have not seen one these twenty or thirty years back. When I began planting roses in beds they gave me lots of trouble, because roses are like folk, and no two of them like just the same treatment. I found some of them straggling in growth and satisfied with an altitude of two feet, while others went up over my head. I soon broke away from formal beds by planting a few roses in my currant fields, wherever a vacancy occurred.

I soon found that the two things I must be particular about, if I wanted roses in abundance, was to give them plenty to eat and plenty to drink. I gave them soil directly from the barnyard. In the bottom of each hole I did not hesitate to put a shovel-

ful of well decomposed manure. Underneath was a very retentive clay, which I was very glad to leave undisturbed. Barnyard manure is as good food as you can give your roses, and you want the water, not by spells, but applied as regularly as possible.

My northern collection of roses was made up mainly of hybrid Perpetuals and hybrid Teas. Then I had freely distributed the old Hermosa and Agrippina and Louis Philippe—these three wonderful bloomers are not yet to be overlooked. I was not trying to establish such a rose bed as I grow here in Florida, but just a get-at-able, pick-all-you-want, plenty-more-to-come, regular home lot of beautiful flowers. I felt that the flowers had just the same rights there as the potatoes or the strawberries. We hoed them when we hoed our beans, and everybody had something pleasant to say about our roses. For climbers we had the glorious old-fashioned Baltimore Belle, tied up to the barnyard fence—a rose not yet to be beaten for midsummer. It is not quite hardy enough for New York state, but here in Florida it is perfection.

Of course I had some of this company to bank up for the winter, that is, throw a few shovels of dirt around. My habit was to be a little friendly in this matter, and sod over a few of the finer sorts. In the spring I leveled down the dirt, cut away the frozen wood, and left artful rose growing to people who had plenty of time.

As far as possible I had all the grandmother roses that I could collect, and let me tell you they were fine. So far as I remember the choicest were the Cabbage, a really superb affair even yet; the Damask, a name that covers half a dozen sorts; the Scotch roses, which were the most wonderful bloomers of all; and the old Cinnamon, which I have already named. In a warm corner of the house I was successful with Gloire de Dijon, where I could lay it down and give it a thoro covering before winter.

It was not, however, until I had come to Florida and no longer feared the frost, that I allowed my fancy to roam freely and planted roses everywhere. I can now show them to you running all over my porches, covering outbuildings, and sharing generous space on my veranda with alamanda, bignonia venusta, Black Hamburg grapes and Passion fruit. All these crowd each other closely, but every one manages to work out a wonderful lot of flowers, and some of them fruit. At the North I think many of our choicest roses pay the best if grown so as to be movable into cellars during the winter. But the farmer cannot afford the time or labor.

I plant flowers around my barnyards and barns as freely as around my house. I am quite sure that animals like flowers, and they are made more valuable as well as happy by pleasant surroundings. I have noticed that cows lying down in a barnyard or pasture invariably face the moon and seem to be enjoying the night very much as we do. This matter is not taken into consideration as it should be. A neighbor of mine insists that his horses, when let out to drink, enjoy the view of the valley just ahead, so that they are twice as long at the trough. He has finally built a screen so that they will go on drinking at once, for he says, "I have no time to show the valley to twenty or thirty horses in succession."

There is very little added expense to this sort of country home life. Cut out the weeds more freely, and put the roses everywhere. You can grow all that you want from cuttings; or better yet, train your children to do and love this sort of work. Let them understand that the beautiful is essential to a fine home in the country as is the useful. If animals are improved, much more will young folk be the better for their surroundings. I notice that those who begin country life with the beautiful incorporated with the useful root their sentiments in home soil so strongly that they seldom go back contentedly to city life. At any rate, the principle is a good one from the standpoint of economy. We are not likely to intrude on our crops any more than we are with weeds, if we displace every large weed with a rose bush. Let them stand in the corners of the fences, and even border our corn fields.

IT IS EASY TO SEE WHY THIS REMAINS THE FARMER'S DELIGHT

WHAT MAKES A MODEL TOWN?

BY CHARLES MOREAU HARGER

EDITOR OF THE ABILENE "DAILY REFLECTOR"

THE small town is coming into its own. Public welfare work, so long a factor in the development of cities and conducted with elaborate machinery, is being simplified and adapted to the needs of the conditions of the smaller community.

The prosperity of the farms has sifted to the villages and with larger leisure has come definite planning for helpfulness. The forward-looking men and women are giving their time and money to betterment of conditions for the young. They have already gone far in material things. Pavements, electric lights, telephones in practically every home, waterworks, parks are common possessions. Fountains play, "white ways" are the fashion—it is as if the communities had enjoyed a haircut and a shave, not to mention a bath and massage.

But the real renovation has come in the community life; the other is merely a corollary. What is remaking the western town especially is the growth of direct interest in the social life and the broadening field devoted to education. This latter is exemplified in the school curriculum. To the usual college preparatory course offered a few years ago has been added a whole group of vocational teachings. Manual training, normal training, agricultural instruction and commercial education have become the usual range of a high school. The direct effect has been to increase the attendance in the high schools over 100 per cent in the past five years. This has called for new high school buildings commensurate with the increased needs and the communities have generally been liberal in their construction. These fully equipped buildings have become community centers in a large sense and are working wonders in giving a finer tone to the town life.

Along with this has come unselfish welfare work which has interested good men and women. Radiating from the clubs and churches and schools have gone influences helpful to the boys and girls in marked degree. In Kansas, for instance, is a keen rivalry as to which city shall be the model town of the state. This has been spurred by an offer of a cash prize of $1000 by former Governor W. R. Stubbs to the community that averages highest in the desirable things of community life. A second prize of $500 is offered by C. F. Horner of Kansas City.

What would you consider a model town? How would you judge communities to determine which should receive such a prize? The following is the basis of scoring the dozen cities selected after much correspondence in recital of their claims to the extension department of the University of Kansas under which the contest is conducted.

HOW DOES YOUR TOWN RANK IN THESE THINGS?

1. *Opportunity for play and athletics.*
2. *School work, including particularly industrial training.*
3. *Social and recreational activities.*
4. *Physical and moral safeguards.*
5. *Activities of child fostering clubs and societies.*
6. *Attendance at Sunday school and kindred organizations.*

Included in play and athletics are supervision of playgrounds at school and during vacation, public playgrounds, summer camps, excursions, general average of the town as regards playing at home. Many western towns now employ an athletic manager for the high school, retaining him for the entire year and putting him in charge of the playgrounds in summer.

Industrial training in the grades and high school count heavily in the scoring. Summer vacation work, such as gardening, school gardening, employment for older children during vacation and interest in some form of outdoor activity are essential.

Literary societies, Boy Scouts, Camp Fire Girls, Y. M. C. A. and Y. W. C. A. will be advantages; a high school fraternity will count against any town. Moving picture inspection, regulation of pool halls, skating rinks and similar places, observance of the state board of health rules and enforcement of the law against selling tobacco to minors come under this schedule. Parent-teachers' associations, civic leagues that work along child welfare lines, young people's societies and the W. C. T. U., together with religious activities, count in a town's favor. The town that makes a perfect score on all these things ought to be a good place in which to live. The street and alley activities of city youth ought to be curbed and the little folks have a good chance to grow up clean and earnest. This is the ambition of the welfare workers of the West, and their work is already telling in making better towns and in regulating the lives of the young.

It is easy to start organizations—the task that tests men and women is the keeping alive of the welfare spirit. Because the West has come to this new problem in the management of its cities with an open mind, because there are no established traditions to hamper, it ought to go far in its plans for betterment. To a degree it is over-organized thru the ambition to form a new movement for every fancied need. In many towns this has been realized and the consolidation of many organizations into one with departments is serving to bring greater efficiency. Too many officers, too many meetings, too many sets of resolutions weaken the energies.

No lack of generosity exists in financial matters. Subscription papers for band concerts, for "boosting" a convention, for helping the county fair, for good roads, for locating a college or helping one struggling for existence, for dozens of other purposes meet with ready response. It is not unusual for a moderate-sized city to raise from $5000 to $10,000 in a year for various purposes of this nature, all intended to help the community. To be sure, business advantage is usually at the bottom of the generous response to the solicitors' plea, but welfare movements meet with almost equal liberality.

In other words, the Middle West is entering on a new era, one in which the betterment of human existence is taking the place of mere material profit. The boys and girls are looked upon as the chief assets of the community and efforts to secure for them the best there is in life is taking the place of financial scheming. Along with the development of the farm from a place to raise crops and stock into a home is the changed attitude toward the town, which is becoming an experiment station for working out plans for happier and cleaner living. Automobiles and sleeping porches, bathrooms and furnaces are but the outward manifestations of the fullness of life toward which the dwellers in the prairie states are awaking. They are striving toward high standards and the next decade ought to see as great improvements in their accomplishments for public welfare as the last ten years have seen in the condition of their bank accounts.

Abilene, Kansas.

The Price of Progress

THE Panama Canal stands as one of the most marvelous achievements of the age. Into its construction went not only the highest engineering skill, but the best business brains of the nation, backed by hundreds of millions of dollars.

Suppose conditions not to be foreseen made it necessary to replace the present canal with a new and larger waterway of the sea-level type, to be built in the next ten years.

Also suppose that this new canal would be the means of a great saving in time and money to the canal-using public, because of the rapid progress in canal engineering.

This sounds improbable; yet it illustrates exactly what has happened in the development of the telephone, and what will certainly happen again.

Increasing demands upon the telephone system, calling for more extended and better service, forced removal of every part of the plant not equal to these demands. Switchboards, cables, wires and the telephone instrument itself were changed time and again, as fast as the advancing art of the telephone could improve them.

It was practical to do all this because it greatly increased the capacity of the plant, reduced service rates and added subscribers by the hundred thousand.

In ten years, the telephone plant of the Bell System has been rebuilt and renewed, piece by piece, at an expense exceeding the cost of the canal.

Thus the Bell System is kept at the highest point of efficiency, always apace with the telephone requirements of the public. And the usefulness of the telephone has been extended to all the people.

The New Books

STRANGER THAN FICTION

"Dr. Armgaard Karl Graves" has followed up his "Secrets of the German War Office" by another volume of the same sort, *The Secrets of the Hohenzollerns*, which the publishers claim contains things "stranger than fiction." They are right. It does. Few professed fictionists have such a fluent imagination as "Dr. Graves" and fewer still are so regardless of accuracy and probability when they touch upon matters of fact. Let us consider the opening scene on the rainy night of June 15, 1888, in the keep of the ancient castle of Ehrenkrug.

> Since the days of the accession of the first Markgraf of Brandenburg, the House of Ehrenkrug has been closely identified with the aims, ambitions and successes of their Liege Lords of Hohenzollern. Even prior to this time, they were Reichsgraven and Truchsesses in the old German Empire. They were kingmakers in the truest sense of the word.

It is fortunate that the author tells us so much about the Ehrenkrugs, past and present, for history and *Wer ist's?* the German *Who's Who*, know them not.

Among those present at this secret conclave was "the Minister Plenipotentiary of the Bavarian Court, Graf von P——." This use of the initial alone shows great discretion on the part of our German spy, otherwise his detailed description of P's looks might have led to the identification of "the Minister Plenipotentiary of the Bavarian Court" at that date.

> There in the flickering candlelight the six men gathered about a time-stained brass bound, cedar and sandalwood catafalque wrought with curious Sanscrit designs. Reverent and noiseless their movements. This was the catafalque in which was borne back to his home in 1040 the founder of the House of Ehrenkrug who had perished during the Crusades in a valiant attempt to save Wolfram of Heckingen, one of the noble ancestors of the Hohenzollerns. Ever since that day this coffin has been the repository for the most important documents of House and State.

This paragraph contains much novel information, for it shows that the ancestors of the Kaiser, with their usual enterprise, went crusading more than fifty years before Peter the Hermit preached the First Crusade. Since the authentic history of the House of Hohenzollern begins in 1061 we may expect to find Wolfram of Heckingen (Heckmeen, perhaps?) in that mythical extension of the family tree which carries it back to the siege of Troy. But who could doubt the existence of old Ehrenkrug, the Truchsess (Treuhand, maybe?), when we have so minute a description of his "Sanscrit" "catafalque"? Why didn't the author say

VALPARAISO UNIVERSITY

Accredited Founded 1873

VALPARAISO, INDIANA

Group of Valparaiso University Buildings, including the Departments of Medicine and Dentistry, Located in Chicago

One of the Largest Institutions of Learning in the United States

Thorough Instruction at Lowest Expense

Valparaiso University was founded with the idea of giving to every person, whether rich or poor, a chance to obtain a thorough, practical education at an expense within his reach. That it is performing this mission is indicated by the numbers who avail themselves of the advantages offered.

This Institution was founded with 3 departments, 4 instructors, and an annual enrollment of 219 different students. Now there are 21 departments, 218 instructors and an annual enrollment of more than 5000 different students.

The reason for this growth is in the fact that this University constantly increases its facilities, strengthens its courses of study, and offers additional advantages without making the expense to the student any greater.

Departments Preparatory, High School, Primary Methods, Kindergarten Methods, Commerce, Phonography and Typewriting, Review for Teachers, Education, Arts and Sciences, Engineering, Architecture, Manual Training, Agriculture, Expression and Public Speaking, Music, Fine Art, Domestic Science, Pharmacy, Law, Medicine and Dentistry.

While the expense in all of the Departments is exceedingly low, it has not been made at the sacrifice of a high grade of instruction, but by applying business principles to

"The Cost of Living" so that the most satisfactory accommodations [illegible] to $41 per quarter of twelve weeks. Tuition $[illegible] per quarter, or $[illegible] if paid in advance, for a year of forty-eight weeks. If the entire tuition is paid in advance for the year it includes all the departments, excepting Medical, Dental and private lessons in Music.

The total expense of board, tuition and furnished room for the regular school year (thirty six weeks), need not exceed $[illegible], or for forty eight weeks, $[illegible]. For free Catalog address

GLENDALE COLLEGE FOR WOMEN

Glendale, Ohio

"catacomb"? It would be more amusing and no more absurd.

Inserting a key into the ancient lock, Wolfgang von Ehrenkrug strove to throw the bolt. Years of idleness had stiffened the lock. But with oil and many manipulations the bolt was finally thrown. The lid turned back, there appeared a black hole. The old Freiherr took up the black ebony box. Carefully he touched the edges with oil and gently he placed it in the hole. It fitted perfectly. A perceptible glance of relief passed over the faces of the group.

A moment later there was (*sic*) handed into the room two buckets of water. Wolfgang von Ehrenkrug motioned to his companions to stand back. As they withdrew he poured the water over the box until the crevices were filled. Then taking a heavy wooden mallet, he struck the ebony box, now in position, a sharp blow. With a clicking noise a seam in the extreme right opened and disclosed a hollow compartment. Bending over, the old Freiherr abstracted a zinc cylinder containing closely written parchments yellow with age. These parchments were sealed with the great seal of Prussia.

Now isn't this as good as anything in Poe's "Gold Bug"? We do not see just why the old Freiherr had to grease the black box before he put it into the black hole and hit it a whack, but the reason for the buckets of water is explained in a footnote:

A powerful, deadly poison in the form of fine powder is sprinkled freely between the outer lid and the inner secret cubicle of the catafalque. The drenching eliminated the risk to those acquainted with the secret. Those unacquainted with the secret pay the price of their unwarranted trespass. On two distinct occasions attempts were made by unauthorized persons to delve into this chest. Both were found dead alongside it.

We are now among "those acquainted with the secret" and feel sure that with these careful directions we could delve into this chest, coffin, or catafalque any time we could get at it.

"Dr. Graves" describes in the same graphic detail other scenes where he also was not present, for instance the secret department of the Krupp works, where even the retinue of the Kaiser were not allowed to enter.

Nothing startling was seen in the interior, only some fifty or sixty large steel blocks, twenty feet long, five feet deep and five feet broad. These blocks were resting in troughs from which the acrid fumes of sulphuric acid arose. Half a dozen elderly, gray-haired workmen were continuously spraying the heavy pieces of steel till they shone like burnished silver.

The Kaiser and his Chief of Staff were walking up and down the long lane of [illegible] carefully tended shining masses of steel, the latter repeatedly whispering to his master, bringing a grimly satisfied smile to the Emperor's face. William II was [illegible] of Europe was smiling as he watched the [illegible]-looking inert masses of metal were the purest blocks of the mighty 42 centimeter guns, destined to prove such a destructive factor to the [illegible] fortifications.

There has been much speculation about these 42 centimeter guns, but "Dr. Graves" is the first to surmise that they are cast whole in square steel blocks, apparently to be afterward turned up and bored on a lathe. This novel method of making big guns should be brought to the attention of our Government. The casting of fifty or sixty such blocks all at one time is a noteworthy achievement even for Krupp.

But we cannot begin to mention all the astonishing things this volume [illegible]

tains. That "there is at present no enemy within eighty kilometers of any German territory," that Russia has "about the same amount of population" as the United States; that Crown Rothe von Wedel is so illiterate as not to know how to spell his own name; that it is customary to allude to the Kaiser as *Seine Majestät*; that the British did not know about the Diesel engine, such statements as this must occasion surprise. So also does the fact that a publisher should issue this as a serious and credible book in critical times like the present. Before the war it would have passed as an amusing hoax. Under the circumstances it is more than annoying.

The Secrets of the Defenses, by Dr. Arnegard Cornelius. New York: Methods, Nast & Co. $1.50.

MACAULAY

A sixth sumptuously illustrated volume of Macaulay's *History of England* just published completes the scholarly edition prepared by Professor Firth and reviewed in The Independent of August 3, 1914.

Macmillan. $3.25.

A LIFE OF CHRIST

The Man of Nazareth, by Frederick L. Anderson, is a welcome addition to the literature on the life of Christ. It is a serious and reverent treatment of the most important problems and aspects of Jesus' life and teaching.

Macmillan. $1.

POEMS OF THE EAST AND THE WEST

There is a broad range in Clinton Scollard's new book of poems, and variety in rhythm that shows his technical mastery of his art. It is because The Sphinx, The Christmas Rose, The Bells, his seven lines to The Cricket, and many more, are so good that one is annoyed by such verbal ineptitudes as "teary eyes" and "vastitude."

Houghton, Mifflin. $1.25.

BIBLE STORIES

For youthful Bible students, an effective compilation of Old Testament stories is the enlarged edition of *Bible Stories and Poems*. The book is illustrated by reproductions of Tissot's paintings and is a successful attempt to put Biblical literature into a popular literary and typographical form.

Washington: Illustrated Bible Selections Commission. 35 cents.

A GLORIFIED GUIDEBOOK

The romance of the *California Padres and Their Missions* is the theme of an attractive book by C. F. Saunders and J. S. Chase. Following the historical account of each mission is a story which, whether founded on fact or not, helps to make real the simple, devout life lived in these wilderness monasteries of the new world. A map, routes and glossary make the book practical for travelers in our Spanish Southwest.

Houghton, Mifflin. $2.50.

THE SPIRIT OF BELGIUM

With Flanders again devastated and under the heel of an invader, Victorien Sardou's *Patrie!* just published in the Drama League Series of plays, acquires a new spark and calls up an inevitable comparison of the Germans with the Spanish under Alva. Mr. Barrett Clark's translation is painstaking and an able refutation of the undervaluations which have been too much the fashion recently for Sardou and his master Scribe.

Doubleday, Page. 75 cents.

FOR THE CALIFORNIA TOURIST

Every visitor to the Exposition who wants to understand the country he passes thru, its mountains, its trees, its birds, its industries, its resources, its educational institutions and its history, should take along the attractive little guidebook prepared by

the local committee of the American Association for the Advancement of Science. It is entitled *Nature and Science on the Pacific Coast* and contains thirty-two articles by specialists.

San Francisco: Paul Elder. $1.50.

TRYING A FALL WITH FORTUNE

Another Dick Whittington going up to conquer London, with all the confidence of his Oxford popularity and the inexperience of twenty-one leisurely years, is the hero of *Merry Andrew*, by Keble Howard. All sorts of adventures and of disagreeable people have a share in his postgraduate education. That the story leaves him in Fleet Street, assistant editor of *The Studio*, and about to marry his rediscovered sweetheart, shows the value of high ambitions, hard work, a merry heart, and the further advantage of being a prime favorite with the author!

Lane. $1.35.

BEAUTY AT THE EXPOSITION

If San Francisco can provide a feast of beauty this year at the Exposition, why should she not enjoy the same fare all the time? That for San Franciscans is the message of Eugen Neuhaus' *The Art of the Exposition*. For those who are going to the Fair, or whose memory of the buildings, statues and mural paintings is lively and detailed, the conversational description will serve as a critical guide. For those who have seen this beauty too hastily to follow critical comment intelligently, or not at all, the delightful illustrations will be most useful and alluring.

San Francisco: Paul Elder. $1.50.

PICTURE GALLERIES AT HOME

Here is a novel guide book, *What Pictures to See in America*, by L. M. Bryant. As one turns the pages one understands the continental fear of the American buyer. It will surprize some readers to learn what pictures are to be seen at Fort Worth and Muskegon, for instance, even tho they knew of the Barbizon collection at San Francisco and the Primitives at New Haven. One suspects that there are in the larger cities unnoted small galleries, just as the Spanish Museum and the Public Library at New York might well have been mentioned beside the Metropolitan Museum.

Lane. $2.

FOLK WHO WRITE

To write real books, to divide one's year between London and the Cornish coast, with London folk and fisher folk and dogs for friends—well, we only hope Hugh Walpole has a gift for enjoyment equal to his opportunities!

Some neighboring Sunday schools in upper New York have a Christmas custom of decorating the grave of Clement C. Moore, the author of "'Twas the Night Before Christmas," and this year they inaugurated a spring march to do honor to the grave of Audubon.

A little rumor has reached us that the writer of *Mr.* [illegible], the mysterious novel now running in the Century, is a literal descendant of Defoe, author of "Moll Flanders." Of course we cannot say, but it would be strange should the heredity for extraordinary realism have descended thru so many generations!

It is good news indeed that the Yale University Press is to issue a book [illegible] to *Beowulf*, illustrated by wood cuts. Photo engraving, for all its effectiveness, lacks the delicacy, the individual quality of the wood engraving, and it has been a real happiness to watch this art crowded out of existence by the ubiquitous process picture.

Humor creeps even into [illegible] pages as those of King Albert's Book. In one remarkable collection of [illegible] by Belgium [illegible] Engwell tells of a young naval officer [illegible] the North Sea, watching for the death blow that was [illegible] from the sky and from the depths, who congratulates himself that [illegible] to read *Paradise Lost* [illegible] Dr. Johnson would like this anecdote [illegible] still lives.

Independent Opinions

We have received many letters criticising the article in our issue of April 19 on "When India Fights for England" by Basanta Koomar Roy. The points raised by our various correspondents are most succintly expressed in the following:

(1) He says no British soldiers have been taken from India to this war in Europe. In one of the larger military centers of north India a friend who is chaplain to the troops writes that *all* the British soldiers have been taken, but that their place has been taken by Australian volunteers.

(2) He says the quarters for native troops are unfit for habitation. In Dehra, a large military center, last winter, I drove thru the Gurkha quarters where thousands of troops live. The houses were models of neatness, covered with vines, surrounded with flowers as pretty as one could wish. I would not object to living in such places myself. The whole cantonment was kept more tidily by far than this Ohio college town in which I live. I do not know what pay a native soldier draws, but those men were living in comfort.

(3) He says the censor does not allow anything to be printed in English papers about the work of the Indian troops in France. All winter most interesting articles have been coming out in the London *Times*, about the Indian troops, how they live, how they are fed, how they fight, how they are cared for in hospitals.

E. M. PENDLETON

Wooster, Ohio

The Independent has been so often criticized for being too pacifistic that it is quite refreshing to receive a letter like the following. Mr. Bruce thinks our editorial of May 24 expressing confidence in the Bryce report "most inflammatory" and adds:

Suppose The Independent and other periodicals succeed in dragging the United States into the war, the penmen are not going to submit to the six months' training and discipline necessary to put them in condition to get to the place where they might fight and be shot. The little skeleton Regular Army could not put a well balanced force, a fighting team, of 40,000 men into the fight. The organized militia could not do as much. What would you do? Commit the cruelest wholesale murder by driving with your invectives the poor, ignorant untrained youths of this country into a combat against a modern well-trained army inspired beyond the fanaticism of the Crusaders? The Independent reaches a class of readers who when inflamed will stir our ignorant red-blooded men to war. For the love of our own people, preach preparedness against war before you inflame to war.

C. A. BRUCE

Dodge, Georgia

A protest against credence in the Bryce report is sent in by a man whose ancestors came from England in 1636:

Inasmuch as all the American war correspondents and investigators, who have tried to confirm these malicious stories by personal investigation in Belgium and France, have reported that they could find no evidence of any such brutal treatment of the civilian population as has been asserted by the Belgians, English and French, it seems to me decidedly unpatriotic as well as unneutral and unfair to

FREDERIC MARTIN TOWNSEND, Ph.D.
Director

take the word of any Englishman or commission of Englishmen, even if it were headed by King George himself, against the word of your own countrymen. I do not accuse Bryce of intentionally reporting false stories about the Germans, altho so many of his countrymen have printed all sorts of lies and slanders against their Teutonic enemies in this war that one wonders who in England is still immune from this terrible epidemic of mendacity, but I do claim that Bryce and his fellow "investigators" did what England expected them to do, and what it is human nature to do—collected all the charges made against the German troops by their treacherous foes, the Belgians, believed most of them because they wished to believe them, and published them to the world.

WILLIAM LELAND HOLT, M. D.

Maplewood, New Jersey

The word "spy," which in the American mind means Major André and his like, has unfortunately been carried over with its ignoble connations to apply to all who collect information, however accessible to the public, for the benefit of a military department. The exaggerated reports of the efficiency of the German intelligence service has caused the English spy scare to spread to the United States.

Is not the neutrality of our country seriously menaced by the system of spies the Germans maintain in this country? By what other means could the German marine officer know of the nature of the cargo of the "Lusitania" than by spies? And since the published warning as to danger of travel on the high seas in English boats was issued by authority of the representatives of the German Government accredited to the United States, does that not show conclusively that Germany is profiting by the information secured by its spies, and to the damage of the other warring nations?

Treason against the United States may consist of "giving aid and comfort" to its enemies. None of the warring nations is considered an enemy of the United States. Yet what can be called the act of a citizen of the United States who secures secret information concerning one of the warring nations and imparts that information to that nation's enemy? It would be breaking the neutrality of the United States for a Government official to disclose such information. Would it be less of an offense for a citizen to do so?

SIDNEY ECKLEY

Dayton, Ohio

No doubt there are plenty of German spies in this country, but it would be impossible to prevent information going to Germany from here since there are several million German-Americans who would be willing to do anything to help the Fatherland in this way. It would be of course impossible for us to intern or expel all who come from the belligerent countries or who sympathize with one side or the other and are disposed to give it such "aid or comfort."

As for the "Lusitania" there was no necessity of employing spies. The cargo of the "Lusitania" was necessarily made known before she sailed, because a declaration of cargo is required of every vessel leaving an American port in war or peace and the penalties of a false declaration are severe. The conditions of war on the "Lusitania" were duly declared in her manifest before she sailed. As for military secrets, such as plans of forts and supplies of munitions, all countries including our own employ spies for the purpose of getting such intelligence. We of course do

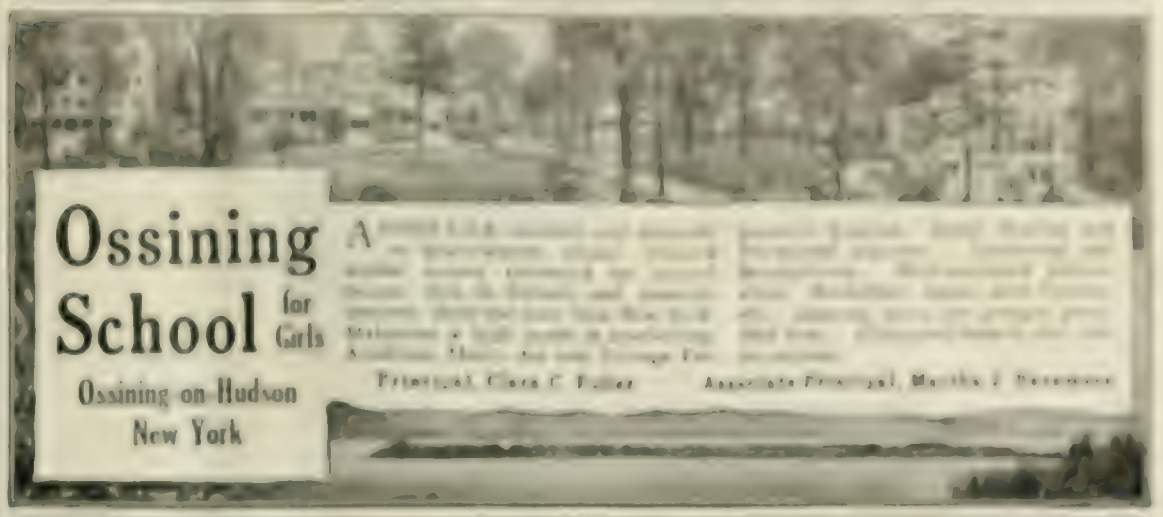
United States has no reason for carrying the agitation to any such extent as has always been done by European nations. During the last year or two before the war broke out there were numerous arrests of English spies in Germany, German spies in England, French spies in Germany and German spies in France. The celebrated Dreyfus case showed the extent of the system.

Several of our friends in China have written us to express regret that the Chinese republic did not receive more sympathy and support in the United States in its vain resistance to the demands of Japan. We publish one of them below:

Those periodicals which during the past few months seem to have been impressed with the altruism of Japan in her demands on China will now have an opportunity to test the correctness of their opinions. The negotiations have been closed by the acceptance of the ultimatum, which has now been published to the world together with the official statement of each nation concerned. There is no longer lack of reliable information as to the nature of the demands or the methods pursued by the aggressive power to enforce them.

A careful reading of these historical documents ought to convince any unprejudiced mind that China was absolutely right in her statement "that it was palpable that the whole of the demands were intended to extend the rights and interests of Japan without securing a *quid pro quo* of any kind for China." It would be difficult to imagine how a more one-sided and selfish series of demands could be made by one nation upon another except after a victorious war.

It is not necessary, nor is there any desire to question the sincerity of Count Okuma, but those familiar with the situation in the Far East know that the ruling power in Japan is the Military Party. In an interview, published months before it was known that these demands were brewing in the minds of Japanese statesmen, the Premier said, "So long as I remain in power there will be no war with China." And yet without any provocation on the part of China, war was only averted by China making one concession after another to a series of the most remarkable demands ever presented by one nation to another in time of peace. Japan closed the negotiations by an ultimatum. The demand was enforced by a strong military demonstration in Manchuria and Shantung. China yielded, accepted the humiliation, in order to avoid war, or in the language of her reply, "to preserve the Chinese people, as well as the large number of foreign residents in China, from unnecessary suffering, and also to prevent the interests of friendly powers from being imperiled."



H. H. LOWRY
Peking University

We are glad to publish a plea in behalf of the honest grocer, for he has been made to suffer unjustly because of the few black sheep in the flock:

I notice in many of the popular family magazines, occasionally, articles calling attention to the various ways in which grocers, butchers and other tradespeople are supposed to impose upon their customers, by giving short weight and measure and by other so-called tricks of trade. I notice in the May 31st issue of The Independent an article of this kind by Bishop Hathaway. It seems to me that these articles, as a rule, are unkind and unjust to a very necessary and very worthy class of people. Why should it be thought that the seller is not quite as honest and conscientious as the buyer? "It is naught it is naught, sayeth the buyer, but after he has gone he boasteth."

It is not contended that retail tradesmen

are more honest than other people, and it is conceded that some of them are not honest at all. If they were a criticizing and free-speaking class of people they might justly complain of the many ways they are imposed upon by many of those who are advised in the article referred to to watch the grocer lest he cheat them in weight and measure. The impression that the man behind the counter gets of the customer class is that it is selfish, exacting, inconsiderate and without much sympathy or regard for his feelings and with but little appreciation of his efforts to please and accommodate his patrons. There is a class of people who seem to think that their patronage carries with it the privilege to treat the shopkeeper as an inferior and a menial. They delay ordering supplies until after they go home from the places of amusement or social functions on Saturday night and then phone in an order for stuff to be delivered at an hour when storekeepers and every one else ought to be in bed. While very exacting as to kind and quality of goods they will have, they are correspondingly slow in paying for them. As a rule the best payers are the least exacting and the most considerate of the tradesman's convenience and feelings. In villages and small towns the retail merchant often sees some of his customers who owe him past due bills sending cash to mail order houses for goods of the same kind they already owe him for. But there are two sides to the question and it might be well for those writers who are telling people to watch the grocer and not let him cheat them, to take a view of it from the other side of the counter.

J. C. WATKINS

Kanawha Falls, West Virginia

"Americanization Day" has gone, but Americanization never stops. From a shoemaker, born in Sweden sixty years ago, who says he is busy but who is evidently not too busy to do a good deal of Americanizing on his own account, we have a letter which bubbles over with plenty of the right kind of enthusiasm:

With reference to the emigrants, a few thoughts as you say, help them to be **Americans and give them citizenship. First,** plant a great desire in them to know yet more of the greatest land and the greatest **flag under the sun. Make them understand** more fully that to be a citizen of the United States means, and is, an advantage.

Be one with the newcomers. Make them feel at home so they may take part in our **institutions, civic, commercial and religious.** Let us remember we have no better character now, than those who are to come. Make their hearts as big as ours. What institution should we introduce them to first, if possible? Should it not be our [illegible] tion and church institutions? Should we not inspire them to higher aims than money? Should we not build up our country more in agriculture and manufacturing? Should we not show them our sublime talent? Should we not show them that we [illegible] our children to higher thoughts? Should we show them reverence and style so [illegible] that we cannot mingle with them? Should we not consider that they may [illegible] than some of us? How quick some of them learn our language! Are we not surpassed? I leave them [illegible] No selfishness, but a great one, a great country, the great U. S. the great flag! And this flag, I [illegible] myself before it, almost it; now all persons of [illegible] Don't say that I go to extremes, for we love our adopted land! We are Americans! I know only one greater flag and that is the white flag in the center of [illegible] that is the new flag, the [illegible] [illegible] to our institutions, and [illegible] friend Eriksson. This is splendid. This is logic. This inspiration makes the best out of the worst. Follow that up, friend Eriksson, and I show you a much better lesson right here.

[illegible]

PEBBLES

"Who in thin paint the teeth of a chrysanthemum?"

"Ha! Ha! Ha! He's one fool picking the green out of the wood."—*Detroit Free Press.*

"Boy, have you forgotten that you are a dumbbell hungry?"

"No, but I've got the time."—*Philadelphia Public Ledger.*

Lady (engaging nurse)—Have you had any experience with children?

Applicant—Lor' bless you, ma'am, I used to be a child myself.—*Punch.*

"I see an Englishman who has been twenty years in the jungle has returned to civilization. And what an immense item amount to has entered."—*Louisville Courier-Journal.*

"Having a time Otis?"

"Bored to death."

"So am I. Let's sneak away somewhere."

"Can't. I'm the host."—*Illinois Siren.*

WHY CAN'T HE?

Mrs. Dentz (at the ball game excitedly): Isn't our pitcher perfectly grand, Tyrus? He hits the club nearly every time!—*Puck.*

"What is all this war about, anyhow?" asked Pat, laying down his pick and wiping the sweat from his brow.

"Well, Pat," said his Reverence, "you see the Germans want a place in the sun."

"Begorry, is that all?" cried Pat. "Sure, an' they can have mine. Phat Oi'm lookin' for is a place in th' shade."—*New York Times.*

An old Irish countrywoman, going to Dublin by train, stepped into a first class carriage with her basket and made herself comfortable. Just before the train started the guard passed along, and, noticing the woman and the basket, said gruffly:

"Are you first class, my good woman?"

"Sure I am, and thank you," she replied with a smile. "And how do you feel yourself?"—*Tyre Tattle.*

"Well, Father Brown, how did you like the sermon yesterday?" asked a young preacher. "Ye see, parson," was the reply, "I haven't a fair chance at them ere sermons o' yourn. There's old Miss Smithee, Widder Gaff, 'n Rylaud's darters, 'n Nabby Birt, 'n all the rest, a setting in front o' me with their mouths wide open, a swallerin' down all the best parts of the sermon, 'n what gets down to me is purty poor stuff, parson—purty poor stuff."—*The Grand Magazine.*

It was the polite Frenchman's first visit to a party in England, and he was very anxious to do the right thing, so when the hostess advanced to welcome him he gallantly saluted the astonished lady with a hearty kiss. Unfortunately her husband was a witness of the occurrence. "How dare you, sir, take the liberty of kissing my wife, and before me, too?" was his indignant exclamation. "One thousand pardons!" exclaimed the polite foreigner. "I do not know your English customs. Next time I kees you first."—*The Royal Magazine.*

A MINORITY REPORT

A small, meek country negro, who had always lived on one place near Frankfort, Kentucky, married a big domineering woman, and very soon afterward moved into town, where the keeper of the local bar met him on the street.

"Hello, Gabe," he said, "what made you move to town? I thought you liked country life."

"Well Mistah Franklin," explained Gabe, "I uster lak de country. But mah wife she didn't lak it—and I've done got so dat when she don't lak a thing I jest natchelly hates it."—*Saturday Evening Post.*

1915

Atlantic Mutual Insurance Co.

Atlantic Building, 51 Wall St., New York

Insures Against Marine and Inland Transportation Risk and Will Issue Policies Making Loss Payable in Europe and Oriental Countries

Chartered by the State of New York in 1842, was preceded by a stock company of a similar name. The latter company was liquidated and part of its capital, to the extent of $100,000, was used with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with a bonus and interest at the expiration of two years.

During its existence the company has insured property to the value of	$27,964,578,109.00
Received premiums thereon to the extent of	287,324,890.99
Paid losses during that period	143,820,874.99
Issued certificates of profits to holders	90,801,110.00
Of which there have been redeemed	83,811,450.00
Leaving outstanding at present time	6,989,660.00
Interest paid on certificates amounts to	23,020,225.85
On December 31, 1914, the assets of the company amounted to	14,101,674.46

The profits of the company revert to the assured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such dividends certificates are issued subject to dividends if and when declared to be redeemed in accordance with the charter.

A. A. RAVEN, Chairman of the Board
CORNELIUS ELDERT, Pres.
WALTER WOOD PARSONS, Vice-Pres.

THE INDEPENDENT

$3,100,000 [illegible] to $1,[illegible],000,000, and a market value less by about $500,000,000. No one knows how much should be deducted for sales during the war. The prevailing opinion in Wall Street is that allowance should be made for about $300,000,000. But a part of this sum had been withdrawn before Mr. Lucey's inquiry was begun.

Many of the railroad securities are held in such a way that no sudden or general sale of them may be expected. Among the owners of large quantities in England, for example, are life and fire insurance companies, other corporations, trustees and men of wealth. As a rule, nothing but absolute necessity will compel a marketing of these securities, whose home is in a country not afflicted by war or piling up enormous war debts.

END OF THE FISCAL YEAR

At the end of the Government's fiscal year, on June 30, the excess of exports over imports was more than $1,000,000,000. For the eleven months that ended with May the excess had been $983,111,473, and while the exact record for June was not available, it was known that the billion mark had been passed. In no month since November had the excess fallen below $130,000,000. Imports for the year showed a reduction of 12½ per cent, and exports an increase of 17½ per cent. The largest export excess in preceding years was $661,000,000, in 1908. This year's great gain was due partly to an import loss of more than $200,000,000, and not especially to an increase of the shipment of battlefield supplies, for a very large part of it was ascribed to breadstuffs.

Receipts from income and corporation taxes on the last day, $79,000,000, were unexpectedly large. It was estimated that the total would exceed $85,000,000. These payments and others cut down the deficit and gave the Treasury a net balance on hand of $82,000,000. To this at least $10,000,000 was to be added within two or three days. The deficit was caused in part by a reduction of $80,000,000 in duties on imports. No issue of bonds will be needed.

THE AMMUNITION METALS

Until recently the prices of metals used in the manufacture of ammunition had been rising rapidly, but there has been a reaction. The price of lead had advanced from 4¼ to 7½ cents a pound, the highest figures known in thirty years. On the 17th, however, the company making the largest sales reduced the price to 6¼ cents, and it declined afterward to 5¾. Within a short time the price of copper has advanced from 17 to 20½ cents a pound, and this rate remains substantially unchanged. Owing to their prosperity, twelve copper mining companies have so increased their dividends that the additions amount to $14,000,000 a year. Zinc ore has risen from $40 to $139 a ton, and spelter, or refined zinc, from about 5 to 29½ cents a pound. But this very high price for spelter

MERCHANTS & MINERS TRANS. CO.

W. P. Turnbull, G. P. A., Baltimore, Md.

"Ocean Voyages Rival Those of the World"

could not be sustained. There was a reduction last week to a price ranging from 18 to 20 cents. The price of aluminum is now 31 cents a pound, against 18 cents a short time ago.

The Steel Corporation, which uses much spelter in galvanizing, has decided to expend $3,000,000 upon a new plant, in the Pittsburgh district, for the production of spelter and sulphuric acid. It is suggested in England that the British Government should commandeer all available supplies of spelter. Before the war, Belgium produced large quantities, refining both native ores and the ores of Australia. Russia obtained spelter from Germany, which is said to have long-term contracts at Australian mines. This country is now almost the only source of supply for the Allies.

The demand for antimony has increased the price in China from $170 to $700 a ton. A combination of producers there has been formed, and 10,000 men are now employed in the industry.

Such price changes have affected the share market. Three weeks ago there were gains for copper, lead and smelting company stocks, but these have since been lost, in part, owing to the reaction in the value of products.

The effect of high prices and large profits in the zinc industry is seen in the condition of the New Jersey Zinc Company, the leading producer of spelter in this country. An extra cash dividend of thirty per cent was declared last week, and the company intends to make a stock dividend of 250 per cent in the near future, thus increasing its capital from $10,000,000 to $35,000,000. The accumulated surplus is said to be about $50,000,000. At the same time the effect of prosperity is shown in another way, for 2000 miners in the Joplin zinc district have gone on strike for higher wages, and mines producing half the output are closed.

Since December 1 the Industrial Finance Corporation has assisted local interests in organizing loan companies on the Morris plan at New Haven, New York, South Bend, Hartford, Worcester, Bridgeport and Salisbury, North Carolina. The Bridgeport company—the twentieth in the field—began business on April 19. Similar institutions are in process of organization in Columbus, Ohio, Waterbury, Connecticut and several other cities.

The New York, New Haven & Hartford Railroad Company has reduced its capital stock by cancelling 225,091 shares that have been carried in the treasury. At a recent special meeting President Elliott announced that the company had in the past year reduced its floating debt by $4,000,000, and that in the nine months ending with March it had earned $8,000,000 in excess of its expenses, taxes and fixed charges, against a shortage of $8,000,000 for the corresponding period a year ago.

The following dividends are announced:

Citizens' Savings Bank, 4% [illegible] payable on and after July 15.

Union Dime Savings Bank, 4% [illegible] payable on and after July 15.

United States Realty and Improvement Company, [illegible] Dividend [illegible] per cent bonds, payable July 1, [illegible].

Wells, Fargo & Co., 3 per cent, payable on July 15.

Insurance

Conducted by

W. E. UNDERWOOD

X. Y. Z., Burlington, Wis.—1. Yes, one of the best, if really honest, small companies, adequate reserves, increasing assets and amount of insurance in force, having each of good four years.

W. G. B., Hotel Los Angeles, Cal.—The question you assert is one of the greatest and smallest with its regard to value. It is not the strongest and best you can get, but it is solvent and seems to be fairly well managed. It may continue so, and eventually become all it should be. Time alone can determine. According to my idea the best a man can secure in the way of life insurance is not the best.

The London and Lancashire Indemnity Company of America, recently incorporated under the laws of New York to do a general casualty insurance business with a paid in capital and surplus of, respectively, $75,000 has been examined by the state insurance department and authorized to begin issuing policies. As this company qualifies for business in each state it will take over the outstanding risks of the London and Lancashire Guarantee and Accident Company of Canada.

W. H. A. H., Tallahassee, Fla.—1. Financially sound. 2. You fail to state the form of policy contemplated; the company issues a variety, including those for large annual premiums and those for small weekly premiums. Its policy dividends are "deferred," an objectionable system of life insurance. The company is in close alliance with a banking institution in its home town, and its large bank balances have been a point of criticism. It settles its claims satisfactorily. I prefer not to recommend it.

L. H. S., Crawfordsville, Ind.—There are a score or more of small stock companies, most of them in the West and South, writing accident and sickness insurance on the monthly payment plan. Some of them started as cooperative and associations. A few of the latter fell into the hands of men with more shrewdness than insurance ability or conscience, who converted them into stock companies and, by scaling claims under technical provisions in the policies, enriched themselves. Four years ago a committee of insurance commissioners of various states investigated some of these companies and exposed the nefarious practises of their managers. I preserved their reports and can refer you to the data in any particular case. The company you name is entirely reputable. It has never transacted any of the so-called industrial business.

J. D. G., Stanley, N. D.—The company in which you have a policy of $6000 is, from every viewpoint, among the best in the world. In minor particulars you may have secured from another company some advantages you do not possess, and would probably have lost some you now have; but on neither side would there have been any measurable loss or gain. You do right in resolving to keep it. As you will have observed by my article of June 14, the North Dakota jurisdiction of the A. O. U. W. maintains reserves on its certificates. The K. of C. have a five-year step rate and a fifteen-year level rate plan. By loading their net rate thirty per cent they accumulate a fund which is called a reserve, and which one authority states "is a good safeguard for the order, and, barring extravagant methods or abnormal losses, it may perhaps prove adequate." I should not describe their certificates as a guaranteed contract, to use your words.

THE MOVING WORLD

A REVIEW OF NEW AND IMPORTANT MOTION PICTURES

LADY MACKENZIE IN AFRICA

British East Africa is the happy hunting ground of the camera huntsman, or, as in this case, huntswoman. Here, where Hertzka once projected his communistic colony, the real estate agent is already starting land booms and Anglican bishops are squabbling over whether dissenters can partake of communion. But in spite of these evidences of the invasion of civilization, the big game and the negroes are not yet extinct. It seems to us—in the theater—no trouble at all to set up a blind at a water-hole and watch the animals come down to drink as promiscuously and amicably as they do in Kipling's *Jungle Book*. Doubtless Harold Sintzenich, Lady Mackenzie's photographer, would say it was not so easy as it looks, for he reports the climate the worst in the world for film making, with the thermometer running up to 110 and 140 degrees, and the humidity is as mean as it can be.

But whatever the difficulties, there is no question of his success. Seven elephants at a single shot, snapshot of course, is a good record. Here also we see herds of zeba, oryx, and baboon. The wildebeest and the rhinoceros stalk before us, and the giraffe looking as artificial and impossible in his native wild as he does stuffed in the museum. A lion charging toward the camera and stopped at ten paces makes a sensational climax to the series. The educational value of the *Lady Mackenzie Big Game Pictures* is much impaired by the failure to interpolate maps and reading slides. It is impossible to catch the unfamiliar name of a tribe or animal or locality from the lecturer's mouth. The film cannot be recommended to schools until this deficiency is remedied.

THE LION WHO DID NOT GET THE CAMERA MAN
From Lady Mackenzie's Big Game Pictures

INTRODUCING SOUTH AMERICA

Now that our commercial eyes are being directed more or less hopefully toward the south it is very useful to have South American pictures of the *Paramount Travel Series* shown thruout the country to hundreds of thousands who would have little opportunity or patience to study geography. These pictures take us by way of Cuba and Jamaica thru the Panama Canal and thence down the west coast to Chile and Peru, giving us glimpses of life in town and country. The fault of the old-fashioned illustrated book or stereopticon lecture was that it showed little but statuary, bare buildings, mountains and posed groups. The motion picture gives us people at work and play more or less in their everyday ways. A street scene in Valparaiso, for instance, shows us just what we would see there any day, minus of course colors, noises and smells.

MOTION PICTURE BOOKS

It has from the first been common to put popular books on the film. Now the process is being reversed and films that have proved successful are being later brought out in book form.

One of these books is *The Land of the Headhunters*, which we reviewed from the screen in The Moving World of January 11, 1915. Some twenty of Edward S. Curtis's fine photographs of the Indians of the North Pacific coast are reproduced in an attractive volume and the plot of the scenario is told in rhapsodical style of no particular literary value in itself tho it will serve as a pleasant souvenir for those who have seen this interesting and instructive film. (*World Book Company, Yonkers-on-Hudson, New York. $1.20.*)

The other book before us, *Thru Central Africa*, is of greater intrinsic value. In our issue of May 17 last we reproduced one of Cherry Kearton's photographs of native life. There are over a hundred of them in this volume and the text, by James Barnes, tells in an unpretentious and agreeable way how they were taken. The expedition was under the auspices of the American Museum of Natural History and the track traversed passed thru the borderland of British and German East Africa, where there is now fighting, and thru the Belgian Kongo. Those of us who read Stanley's *Dark Continent* when it first came out never imagined that we would live to go over the same route by the aid of motion photography. Mr. Barnes took pains to look up persons and places connected with Stanley's expedition. (*Appleton, New York. $4.*)

HOW TO GET FILMS FOR SCHOOLS

The chief difficulty in the way of using motion pictures for educational purposes is that producers are intent upon the more profitable business of catering to the theaters and have so far failed to provide means by which films can be obtained by teachers whenever they want them and at sufficiently low rates as to enable the schools to use them freely. This will eventually be arranged somehow, but in the meantime the schools will have to employ such expedients as the following plan suggested by Alfred H. Saunders, manager of the Educational Department of the Colonial Motion Picture Corporation, in his address before the National Education Association last July:

> Films could be purchased by the State Boards of Education and used in circulating library fashion, so that schools specially equipped who need the film in their classrooms will always be sure of securing them. These films will cost twelve cents per foot, or a reel of one thousand feet, $120. Arrangements may be made to rent the films (according to the present prices) at from $3 maximum down to $1 minimum per reel of one thousand feet, per exhibition.
>
> This may appear a large outlay to some, and as the appropriations of the school boards are not always sufficiently large to cover what may seem luxuries a way out of the difficulty may be devised by a little successful management. It is my opinion that the time is rapidly approaching when every school that is equipped with a projecting machine may cover the cost of the same by allowing the parents to attend exhibitions in the evening. Not exactly competing with the local exhibitor, one or two nights per week may be set aside to exhibit to the parents the films shown to the children during the day. If a small admittance is charged this could be put into a special fund to cover the cost of the machine and films, as well as provide for the purchase of other films in the future.
>
> Extension lectures require operators who have to be hired with the machine. This allowance could be made to the school equipped and the sum of $40 or $45 put into the general fund.

UNIVERSITY EXTENSION BY MOTION PICTURES

The University of Kansas has established a motion picture exchange by which films of educational value are sent to school principals in all parts of the state with no expense to them except for express charges. They are exhibited to pupils and public either in the school or the local theater. Among the films are demonstrations of industrial processes and new methods of agriculture.

JUST A WORD

Among the hundreds of prize winners who received the medal awarded by The Independent for essays on the Hundred Years of Peace none has more happily phrased her appreciation than the student at Anson Academy, North Anson, Maine, who writes: "I wish to express my sincere thanks to you for the beautiful medal awarded to me for my essay on 'The Hundred Years of Peace.' I took great pleasure in reading those eight articles in The Independent and the numerous references that I was able to find. I feel that it did me by far more good than my whole course in American and English History. Also it helped to interest me, as well as the other students, in your paper, The Independent, which will ever be very dear to me from now on. I hope that every student who received one of the beautiful medals feels as grateful to you as I do."

FIGHTING AT YPRES

From an American college man serving as lieutenant in the British army in Belgium the New York *Tribune* prints this letter picturing Ypres:

A lieutenant came out from England a few days ago to join his regiment. He found that it didn't exist [illegible] corporal and seventeen men were left. Yesterday I saw 150 men walking back from the trenches, having been relieved. They were all that was left of the Princess Patricia's Canadian Light Infantry, who, with drafts, over 2000 strong. Many of my friends have been "done in," and familiar names or faces turn up every day in the casualty lists, various reports, or in the never ceasing stream of wounded coming toward the rear.

More than 25,000 shells are estimated to have fallen in Ypres in less than the last month. Some are shrapnel, some high-explosive, and besides [illegible] have also been gifts [illegible] the civilians in their houses. [illegible] the night the French Africa troops broke and came pouring back in utter disorder with the Germans after them—when we thought all was lost and we were cut off and cut to pieces—the whole of the Canadians saved the situation. I might tell you how [illegible] motor ambulances and transports [illegible] nights when we should have appealing from church towers in a third-rate light from the German lines or searchlights, and got identifications of new German units on our front by reading the German mail between the [illegible] of their identity discs and pay books.

Ypres has been a revelation, sitting there in this dead, abandoned town, battered to bits by shells, burned over, pillaged and looted from end to end, engarbed, the home only of a few savage scavenger dogs and the occasional ghoul who visits [illegible] appeal about as the sunlight. The stench is most horrible—the typical smells of the war, but mingled with a few others peculiar and aggravated by the [illegible] stench of Ypres [illegible], rotting wood and brickwork, foul air, dead things, the characteristic smell of burnt houses of wood, brick and mortar, the stench of smoldering [illegible] long dead—these are spread all over and around the town, and the most appalling settles hanging over all like the ghost of the town of which it was once an integral part, and the smell made by the shells which never [illegible].

The streets, the [illegible] of air and the constant [illegible] splitting the [illegible] are quite bad enough, but the subsequent silences are ghostly and infinitely worse. The town is littered with wreckage and [illegible] to pavement, and the never ending [illegible] piles of [illegible] wooden [illegible] against.

I may catch a [illegible] ride [illegible] on the [illegible] and give him [illegible] something [illegible] much for [illegible]. One likes [illegible] that rests [illegible] the [illegible] lights of enthusiasm and [illegible] and [illegible] to the depths of depression. Tonight I am feeling a little [illegible]

THE MOTHER OF THE DEAD

THE WOMAN WHO MOURNS HER BOY AND THROWS HER BODY ACROSS HIS SYMBOLIZES ALL EGYPT'S WOMEN. THIS GROUP OF THE WOMAN OF [illegible] STANDS BEFORE THE PALACE OF FINE ARTS AT THE SAN FRANCISCO EXPOSITION

VOLUME 83 | JULY 12, 1915 | NUMBER 3476

AND STILL NO ANSWER

THE German reply to the second American note on the sinking of the "Lusitania" and the rights of American citizens on the high seas is an astounding document. It contains no hint of a willingness to meet the demand of the Government of the United States for "reparation, so far as reparation is possible, for injuries which are without measure." It reveals no readiness to admit the soundness of the principle laid down in the first American note, that "American citizens are quite within their indisputable rights in . . . traveling wherever their legitimate business calls them upon the high seas and exercize those rights in what should be the well-justified confidence that their lives will not be endangered by acts done in clear violation of universally acknowledged international obligations." It shows no intention so to modify the methods and practises of German submarine warfare that it will, as the United States has insisted that it shall, cease to "operate as in any degree an abbreviation of the rights . . . of American citizens bound on lawful errands as passengers on merchant ships of belligerent nationality."

On the case of the "Lusitania" Germany merely reiterates, in passing, as it were, a part of its previous defense. There is some small ground for gratification in the fact that the assertion is not repeated that the "Lusitania" was an armed vessel. But there is deep cause for regret and indignation that there is no acknowledgment of responsibility for the death of more than a hundred American travelers.

For the future Germany offers a set of conditions upon compliance with which German submarines will "permit"—the word is the German Government's—American ships and American citizens to sail the high seas unmolested.

All ships, in order to secure this immunity from attack on sight, must fly the American flag. They may be of three classes: bona fide American ships; a certain number of neutral ships, the number to be agreed upon with the German Government; four "enemy passenger ships for passenger traffic between North America and England." They shall be made recognizable by special markings. The German Government shall be notified of their sailing a reasonable time in advance. The American Government shall guarantee that these vessels carry no contraband of war.

The German Government assumes that in this manner adequate facilities for travel across the Atlantic can be afforded American citizens, and proceeds to declare its conviction that "there would, therefore, appear to be no compelling necessity for American citizens to travel to Europe in time of war on ships carrying an enemy flag."

Such a proposal, addrest by one great nation to the sovereign people of another with which it is at peace, is staggering. It sweeps aside as by a wave of the hand every principle of international law and every custom of civilized nations that interferes with the selfish purpose of a single combatant power. There is much that it ignores; there is more that it assumes.

It denies the prima facie right, undisputed until the entrance into maritime warfare of the German submarine, of the people of neutral nations to traverse the seas unmolested and in safety. It sends to the scrap heap the fundamental principle that, in the exercize of the unquestioned right of the belligerent to interfere with the enemy's trade and to cut off his supply of war materials, noncombatant lives are not to be deliberately sacrificed.

It assumes that the extreme vulnerability of the submarine absolves the submarine from the universally accepted responsibility of a ship of war to insure the safety of the passengers and crew of an enemy merchant vessel before sinking it. It assumes that the mere presence of contraband of war upon a merchant vessel justifies the sinking of the vessel without warning and the killing thereby of the noncombatants on board. It assumes that a single nation may change the rules of international law at will to suit the exigencies of its own case. And it makes the tremendous assumption that the Imperial German Government may prescribe the conditions upon which the citizens of the United States of America are to be "permitted" to travel upon the high seas.

The assumptions upon which Germany builds her case are false. The principles which she chooses to ignore are sound principles still.

For the second time in this momentous controversy Germany has sent a reply that does not answer. She must be told so again, courteously, briefly, and with unmistakable firmness. The American people are unshaken in their determination that the rights of American citizens on the sea shall be maintained and their free exercize and enjoyment safeguarded.

THE FURTHER EXTENSION OF SUFFRAGE

THE anti-suffragists of the Old Bay State are cheerfully frank about the basic facts in the case. The name of their organization is "The Massachusetts Association Opposed to the Further Extension of Suffrage to Women." A bit cumbersome for these short-cut days, perhaps, but Puritanically free from any hint of deception. The admission in the title is all the more to their credit since, to any but a trained "anti" intelligence, it seems like a fatal admission.

There are just sixteen states in the Union in which no women vote for anything whatever. There are twelve suffrage states. There are twenty states in which women have a partial right to vote—generally for members of school boards.

So in two-thirds of the United States the question is no longer, "Shall women vote?" It is rather, "Shall women who vote for this be allowed to vote for that as well?" And in one-quarter of the states even that searching question has been answered in the affirmative.

Let us face the issue squarely.

Since women may vote on child education, why not on child labor?

Since women may have a hand in the spending of public moneys for hiring school teachers, why not for employing food inspectors?

Since their votes may influence the building of a schoolhouse, why not of a post office?

If women are to vote at all, they should vote in all. If woman's place is in the home, it is as bad for her to take a place in a school board as in a health board.

For two thirds of the United States, the question of woman's voting is settled. The only open question is "the further extension of suffrage to women." To that question logic, good sense and fair play have but one answer.

A DEFINITION OF CHURCH UNITY

FOR the first time, we believe, the speaker chosen this year for the Lyman Beecher Lectures and Preaching at Yale Theological Seminary was a layman, the distinguished Dr. George Wharton Pepper, of Philadelphia. A layman's discussion of what is good preaching deserves quite as much attention as that of the preacher himself, and it might be well in future to have these lectures assigned to laymen and clergymen on alternate years.

Dr. Pepper offered a definition of church unity which gives us not a little satisfaction. He said: "Church unity may be defined as that measure of mutual understanding between disciples which will make it possible for them together to partake of the Lord's Supper without question regarding the authority of the celebrant, and without question respecting one another's apprehension of the significance of the rite."

Then there is, we are glad to say, general church unity among those of us who are Protestants. This definition admits Methodists, Presbyterians, Congregationalists, the Reformed Churches, German and Dutch, a very large part of the Northern Baptists—for one hears very little now of close communion—and the Low Church and the Broad Church Episcopalians and many other bodies. To these Christians—and they include three fourths of Protestant communicants in this country—it never occurs to raise the question whether the celebrant was validly ordained, or to question whether the next one to receive the elements has a correct idea of the nature of the rite. That is left to the other's conscience.

The definition is a better one than might at first appear, for it assumes that Christian unity will not stickle on rites, which are mere forms, while the worship of God is in spirit, not in ceremony, nor in any doctrine of ceremony. Christian unity means "fellowship in love and service," without question as to each other's formulas of belief or use or understanding even of the most solemn of ceremonies. A true Christian unity embraces all from Catholics to Quakers.

PRINTING BOTH SIDES

Is it quite right to allow in your paper such articles as appeared from the late President of Mexico, Huerta, and from Arturo Giovannitti, member of the I. W. W.? Would it not be better to ostracize such men, leading them thereby to feelings of shame thru some self-examination instead of according them room by providing them with an audience which will give them a feeling that there is a rightful place for them and their practises in this world? I, for one, was glad that President Wilson denied Huerta an interview, and I suppose he did it from the same feeling which I have in the matter. This is the most serious criticism I have to make of your paper. J. P.

North Yakima, Washington

ALMOST every week we receive a letter like this, tho usually they are less kindly in tone and apt to accuse us of betraying our principles by publishing something contrary to them. It is not surprizing that our policy should be misconstrued since The Independent differs decidedly from many periodicals in this respect. It is, however, our firm conviction that The Independent can be most useful to its readers by publishing articles on all sides of current issues. The more positive we are that our own opinion on any question is right the more pains we take to find some valiant defender of the opposition. Aside from the general obligation of fair play, there is a special reason for our adoption of this policy. The Independent is taken in many families where it is the only periodical, it is their one window on the outside world, and it should take as wide a survey as possible.

To consider the cases in point: We have called Señor Huerta some very hard names in the past. We see no reason yet to take them back. But a man who has been President or at least *de facto* ruler of Mexico, and still commands the sympathy of a large faction in that country, must have something to say about it which is important for us to know, in view of our probable intervention in its affairs.

We disapprove of the aims and still more of the methods of the I. W. W. But in spite of that disapproval, publicly exprest, the I. W. W. is still in existence and sufficiently powerful to make it necessary that every citizen should know something of its aims and methods. If we believed that by never mentioning the names of Huerta and Giovannitti these gentlemen would be led to those feelings of shame which we agree with our friend from North Yakima they should feel, then we might be tempted to post a notice in our editorial rooms to that effect. But somehow such attempts at suppression do not seem to accomplish their aim. One of the most popular of New York dailies made the rule some years

ago that the name of Theodore Roosevelt should never again appear in its pages. This involved awkward circumlocutions in recording the votes given to "the presidential candidate of the Progressive party" and quite failed of its object, for Mr. Roosevelt has never manifested any signs of contrition or of suffering under this cruel and unusual punishment and has since appeared upon the front page of the newspapers with his former frequency.

In admitting such an article as those objected to there is of course the risk—particularly great in the case of so skilful a writer as Mr. Giovannitti—that our readers may find it more convincing than our prophylactic editorial, but that risk must be run. The only alternative would be to do as many editors do, that is, to read the I. W. W. argument and then present to our readers in our own language such parts of it as seemed to us worthy of attention or most easily refuted. But it is always unsatisfactory to read thru the medium of another mind, particularly an antagonistic mind, however fair may be the intention to transmit the ideas correctly. An opponent in most cases, perhaps to some degree in all cases, fails to understand the position of his adversary and therefore is disqualified as an interpreter. It has always been felt a loss to history that all we know of Carthage comes from their Roman enemies and that the writings of the philosopher Celsus are only known in such fragments as Origen quotes in order to confute. Now it does not matter much whether we understand the Carthaginians or the Epicureans, but it does matter that we understand the I. W. W. and the Mexicans. Also the Germans, so these remarks may be taken as a reply to those of our readers who have protested against our giving space to articles by Ostwald, Eucken, Dernburg and Bernstorff. The worse the Germans behave the more important it is to know why they behave so. As Emerson said, you learn more by reading what you do not agree with, for nobody is so apt to see what you do not as he who does not see what you do.

LABOR'S ERROR

THE chief advocates and supporters of the bill which is now known as the Seamen's act were certain labor unions. Their purpose was, in part, to increase the number of American sailors employed on our ships. This was the aim of the provision that seventy-five per cent of those in service on board must be able to understand the orders (in English) given by the officers. It was intended that this should exclude nearly all of the Orientals now employed on American ships in the Pacific. The steamship companies, it was thought, would be compelled to use Americans in the places of these men.

But the effect of the statute has been to decrease the number of Americans employed. Companies are withdrawing their ships and going out of business because compliance with the law means much loss. And so it comes about that the Americans on these ships will soon be out of work. Incidentally, also, the American flag will cease to be seen on the routes which cross the Pacific. Something might be added about the violation of old commercial treaties with twenty-one nations, and the existence of an old law (overlooked) which exempts a majority of foreign ships visiting our ports from the burdensome requirements proposed for them, thus making [illegible] of the statute which was designed to increase the number of Americans employed, however [illegible] unions show that they need wise counsellors just as we have them.

EXOTIC NATIONALISTS

IN the current discussion of Pan-Germanism it has been noted as a curious paradox that the most extreme exponents of the movement were obviously not of pure Teutonic stock. Houston Chamberlain is an Englishman by birth. Treitschke was of Bohemian and Nietzsche of Polish descent.

But this is not so strange a circumstance as it is thought to be. In fact it is so common to find that the leaders of any country whether in action or in thought are of alien ancestry that it might be regarded as rather the rule and anything else the exception. O'Higgins, the national hero of Chile, bears anything but a Spanish name. Napoleon was from the island of Corsica and the empress Josephine from the island of Martinique. Kossuth, the leader of Hungarian nationalism, was not a Magyar but a Slav. Kosciusko, the Polish patriot, was born as every one knows in Mereczowszczyzna in Lithuania. Bernadotte, the founder of the reigning Swedish dynasty, was a Frenchman. Alexander Hamilton, the exponent of American nationalism, was born in the island of Nevis. Columbus, who gave a new world to Spain, was an Italian. Disraeli, who originated British imperialism, was a Jew. Venizelos, to whom the expansion of Greece is due, is a Cretan by birth. Parnell, the Irish home ruler, was part Scotch and part American. Gladstone, the most typical of Englishmen, was Scotch. Wellington was Irish, so is Kitchener. Lloyd George is a Welshman if ever there was one.

In the present war we see the British armies led by General French, the Russian by General François and the German by General Mackensen, whose names suggest alien origin. The kings fighting against Germany, except the Mikado, are largely of German blood. The French General Joffre is of Spanish descent. The Russian General Rennenkampff bears a German name. The most successful of the Russian generals in Galicia is Dimitrieff, a Bulgar. Russia has always drawn upon foreign talent for her generals. Alikhanoff, who planned the capture of Merv, was Ali Khan before he was christened. Melikoff, who took Kars, was a Georgian, no, not from the state of Georgia, a Caucasian Georgian—perhaps that is still ambiguous, let us say a Georgian from the Caucasus.

One cannot study the lives of the philosophers, scientists and authors of any country without being struck with the frequency with which one comes across alien ancestry. Kant, whom all the Germans swear by, was of Scotch descent. Ibsen, the leading light in Norwegian letters, was part Scotch and part German. Rousseau, who furnished the philosophy for the French Revolution, was a Swiss. Many of the most distinguished names in modern German literature are Jewish, among them Heine, Heyse, Sudermann, Hauptmann. Dumas, most popular of French writers, was part negro, so was Pushkin, the poet of Russian patriotism. Browning was German on his mother's side. Maeterlinck, who is the best known of living French authors, is a Flemish Bel-

gian. Bergson, the best known of living French philosophers, is of English and Polish Hebrew stock. Madame Curie, the French chemist who discovered radium, is a Pole. Metchnikoff, director of the Pasteur Institute at Paris, was born in Russia, so was Ostwald, one of the greatest of German chemists. Only two Nobel prizes in science have come to America; one in physics to Michelson, who was born in Germany, and the other in medicine to Carrel, who was born in France. Marconi, in whom Italy glories, is half English, Mayor Nathan of Rome, leader of the "Italy for Italians" movement, is an English Jew. D'Annunzio, who boasts that he brought Italy into the war—but we will not venture into the vext question of his origin.

These are merely names that happen to come to mind at the moment. Any reader can extend the list of exotic genius. To explain it is not so easy. If we say that it is due to Mendel's law that hybridization produces new varieties it does not explain the pronounced patriotism of immigrants of pure but alien blood for their adopted country. Is it that the mere transplanting to a new environment acts as a stimulus to human beings as it does to sugar beets and potatoes? Is it that those who emigrate have greater energy and initiative than those who live for generations in one place? Or is it that acquired tastes are strongest and one who voluntarily chooses a country thinks more of it than one who is bound into it by the accident of birth? At any rate this disposes of the superstition that there is some mysterious connection between race and national spirit.

A JOB FOR US

A PRINTER we know makes his own printing inks. In conversation the other day he declared casually that the dry color used in making a certain blue ink much in demand cost him now one dollar and fourteen cents a pound instead of the usual price of thirty-two cents. The basic material for a popular red ink cannot now be bought at all; a year ago it could be bought for eighteen cents a pound.

For these colors are "made in Germany."

A metropolitan haberdasher tells us that the black hose we are wont to wear are likely to become scarce.

For the dyes that make them black are "made in Germany."

Here is one lesson the war has to teach us. Here is a job ready made for our cherished Yankee ingenuity. Why should not American ingenuity make anything and everything that Americans need?

THE FOOD DRINKS

TWO weeks ago we discussed the summer drinks which flow so freely from the soda fountains at this season of the year. These are for the most part airy nothings of pleasant flavor, refreshing to the throat and cooling to the body, but not intended to contribute nutriment. They do, however, contain more or less sugar, which is a true food and easily assimilable. Sugar therefore acts as a quick restorative and energizer and as such is, with the wise, taking the place of alcohol. It is a matter of common observation that those who eschew alcoholic drinks from distaste or principle are apt to be fond of sweets and there is a saying in our cities that whenever a candy store comes into a locality a saloon moves out. The reason of this is apparent when we recall that alcohol is the first stage in the decomposition of sugar; so he who takes the sugar before its fermentation gets more energy and also avoids those toxic effects of alcohol which are so unpleasant—at least in other people. Shaw was quite right in holding up "the chocolate soldier" as the scientific fighting man. Candy and marmalade are being served in the trenches instead of the traditional rum even in the British army.

Since sugar contains no waste and no water it is a very concentrated form of food, and a little of it brings up the value of one's dietary more than is ordinarily realized. A couple of lumps of sugar will give some fifty calories, that is, about five per cent of the energy needed for a day's work. We must not infer from this, however, that forty lumps would make a satisfactory ration. Being a pure food sugar is not a perfect food in itself and needs to be associated with materials containing other elements than C, H, and O. But there is no difficulty about that. Nobody but a French orator takes sugared water straight. All the fruit juices contain some nourishment besides the sugar. A glass of grape juice is more than equal to a glass of milk, and an ice cream soda or sundae is a lunch in itself, as the shop girls have found out.

Two of the most popular ingredients of summer drinks, eggs and milk, obviously contain all that is essential for life since they supply the materials needed for the building of the chicken and the calf. An egg "phosphate" (usually a citrate) or an egg lemonade comes then decidedly within the class of the food drinks, tho the popular mind has an exaggerated idea of the nutritive value of eggs. Weight for weight a shelled egg is only about a third as nutritious as milk.

A quart of milk has almost as much food value as a pound of steak, so the milk drinks are among the most nutritious. The milk may be aerated by shaking and flavored to taste, or it may be fermented by yeast or soured by bacteria. Since Professor Metchnikoff of the Pasteur Institute announced that in sour milk he had found the elixir of long life it has become very popular as buttermilk, koumis, kefir, yogurt, and half a dozen trade names. Altho it is still doubtful whether the bacillus Bulgaricus or whatever Balkan bug may be imbibed will reach the grand canal and there colonize, yet these beverages are at any rate wholesome, nutritious and—to those who like them—pleasant-tasting.

King George, having sworn off for the war, has gone to drinking barley water and we may expect the Anglomaniacs of America to call for it at all the clubs. Hitherto it has been little known in this country. Its equivalent, oatmeal gruel, has long been known but never popular. It was only when a man was flat on his back in bed or stifled in a harvest field that he could be got to take it. All these grain drinks, barley water, oatmeal water, rice water and the like, have had too unpleasant associations with the sickroom. They are easily and cheaply made by long simmering of the grain in water and adding sugar and salt. If now they could be flavored with fruit syrups to suit the American taste and aerated and furnished with a fancy name and a letter of recommendation, they might make a great hit in the corner drug store and meet with a welcome from those who prefer during the summer months to give their teeth a rest and take their luncheon thru a straw.

THE STORY OF THE WEEK

The German Note

The German note in reply to the American note of June 9, regarding the sinking of the "Lusitania" and German methods of submarine warfare, was delivered to the American Ambassador at Berlin on July 8 and was published on July 10. The American note had "earnestly and solemnly" renewed the representations which had been made in the former note of May 15, to the effect that the United States Government confidently expected the Imperial German Government to disavow the "Lusitania" and other similar acts, to make such reparation for them as might be possible, and to take immediate steps to prevent the recurrence of anything so obviously subversive of the legal principles of warfare. The German note of July 8 fails to meet any of these representations and practically ignores them all. It does not disavow the acts complained of, but inferentially approves and upholds them; it offers no indemnity; and it makes no promise to prevent their recurrence or to conform German sea-warfare to the legal principles of visit and search. On the contrary, it expresses a determination to continue the same practise of submarine warfare, throwing all blame for the consequences upon the opposing belligerents, and proposing that Americans shall seek safe passage across the Atlantic by traveling on only such vessels and at such times as the German Government may prescribe. It refers to the enlightened ground which was taken by Prussia and the United States in their treaty of 1785 for the freedom of the seas and the security of peaceful trade and travel; it protests that Germany has ever adhered to the most humane principles and methods of warfare; it blames the Allies, and especially England, for all violations of international law; it professes much friendship for the United States and a desire

THE GREAT WAR

July 5—Italian aviators bombard Trieste. Allies repulse Turks on Gallipoli Peninsula. Turks and Arabs threaten Aden.

July 6—Germans toughest Arras Battle army pressing on Calais. Duke predicts blockade of Austro-Hungarian coast.

July 7—French capture trenches at Souchez and Lorette. Austrian submarine sinks Italian cruiser Amalfi.

July 8—Austrians repulsed with great loss at Krasnik and German-Austrian advance on Warsaw stopped. Steamer "Adriatic" evades German submarines and reaches port safely.

July 9—All German forces in German Southwest Africa surrender to British. Lord Kitchener organizes special recruiting campaign in London.

July 10—Italians advance to surround Gorz. British war loan of nearly five billion dollars completed.

July 11—Nieuport, Arras and Rheims bombarded. Prussian casualties to June 30 reported 1,504,623.

That its citizens may travel and conduct lawful trade in safety; but it holds the needs of Germany for self-preservation in the present struggle to be superior to the usual rights of contraband. Finally, as "the conclusion of the whole matter," it makes these propositions:

In order to exclude any submarine danger to American passenger steamers, notice is given that on the waters surrounding Great Britain and her allies, including the entire North Sea and the whole English Channel, all merchant vessels of the enemy are liable to destruction, and that neutral vessels cannot always escape the attacks directed against enemy vessels.

In addition to warning against taking passage on enemy vessels, the German Government regrets that it cannot assume responsibility for the safety of American vessels of peace which, despite the warning, enter the waters surrounding Great Britain.

In order to furnish adequate facilities for travel across the Atlantic for American citizens, the German Government submits for consideration a proposal to increase the number of available steamers by installing a passenger service, under a reasonable number of neutral steamers under the American flag, the exact number to be agreed upon, under the same conditions as the above-mentioned American steamers.

The Imperial Government believes it can assume that in this manner adequate facilities for travel across the Atlantic Ocean can be afforded American citizens. There would, therefore, appear to be no compelling necessity for American citizens to travel to Europe in time of war on ships carrying an enemy flag. In particular the Imperial Government is unable to admit that American citizens can protect an enemy ship thru the mere fact of their presence on board. . . .

If, however, it should not be possible for

WAR WORKERS IN A CHURCH VESTRY

The rector (at the left) and several of the members of St. James's Church of Scotland, in Dulwich, London, hard at work in an extemporized munitions factory. The ancient priest contented himself with blessing the warrior's weapons; this modern clergyman manufactures them

the American Government to acquire an adequate number of neutral passenger steamers, the Imperial Government is prepared to interpose no objection to the placing under the American flag by the American Government of four enemy passenger steamers for passenger traffic between North America and England. Assurances of "free and safe" passage for American passenger steamers would then extend to apply under the identical pro-conditions to these formerly hostile passenger steamers.

The President upon the receipt of this note at his summer home immediately entered into communication with the Secretary of State, to consider with him the action which should be taken upon it. The opinion most widely exprest by the newspaper press was that the note must be regarded as unsatisfactory and disappointing, and that it could not be accepted by this country as a final disposition of the "Lusitania" case.

Russia Resumes the Aggressive

After the Russian flight from Lemberg the Germans at the north moved steadily across Poland, while at the south the Austrians, having driven their foes out of all Galicia save a small district in the northeast, also invaded the former country. The plan apparently was to flank Warsaw at both north and south, while it was also being menaced at the west, and thus to close in upon it and crush it in the jaws of a mighty vise. The Germans penetrated with little opposition as far as Przasnysz, almost due north of Warsaw, and compelled the Russians to retire from a position on the Bug River. The use of poisonous gases gave the Germans great advantage, the Russians having as yet no efficient equipment with which to meet that form of attack. Meanwhile at the south the Austrians under the Archduke Joseph Ferdinand crost the Vistula and reached Krasnik, far east of the longitude of Warsaw. The special purpose of this extreme advance was to reach and cut or gain control of the great trunk railroad line which comes up from the south and east and runs from Lublin thru Ivanograd to Warsaw, connecting the Polish capital with Kieff, Odessa and southern Russia generally. At the beginning of the week a battle raged for several days between Krasnik and Lublin, and the Russian lines were said to have been pierced in several places.

The Germans were advancing upon Warsaw at the rate of five miles a day, and were expecting to make an assault upon the city with siege guns within a week. The Austrian seizure of the Lublin railroad was to be the signal for the closing of the jaws of the vise. But the Russians, having fallen back to the line of that road, found themselves at last resting upon a strong base. They were reinforced by reserves of fresh troops, and, what was most important of all, they received supplies of arms and ammunition, so that they could once more fight with loaded rifles instead of with clubs and stones. Wherefore on July 8 they halted their retreat and turned at bay, and for the first time in weeks assumed the aggressive.

The Austrian Archduke's army, which had been pursuing them so eagerly that it had got out of touch with Field Marshal Von Mackensen's army at the south, was surprized and defeated with a loss of 15,000 men, and the entire Austrian movement against Warsaw was abruptly stopped in disorder. This compelled a halt in the German advance at the north, while the Russians, heartened and strengthened, took the aggressive all along the line

WHERE THE ATTACK ON WARSAW WAS HALTED

for another westward swing of the pendulum of war.

The Italian Advance

The war between Italy and Austria, in which Germany is even yet not directly involved, continues in quadruple fashion—terrestrial, aerial, marine and submarine—the Italians making slow but persistant progress chiefly in the east, toward Görz and Trieste. In the direction of Trent the efforts are less strenuous, the Italians being apparently content for the present with an advanced position which protects them from a counter-attack by the Austrians by way of Lake Garda. The presence of the King on the firing line beyond the Isonzo River during the week, and his exhibition of the characteristic intrepidity of the Savoy princes, greatly inspired his troops and nerved them to extraordinary efforts in overcoming at once the rugged obstacles of nature and the resolute resistance of the Austrians. The Third Italian Army, four corps strong, on July 5 made a general advance against the whole Austrian line from Gorz to the sea, while on the Corso Plateau, beyond the Isonzo River, a material gain was effected. At one point the Italian mountaineers scaled a peak 9845 feet high, to surprize and capture an Austrian battery. The Austrian line was broken at Podgora and at Vermegliano, but no decisive victory was won. On July 10, however, it was reported that the Italians had finally won a complete triumph on the Corso Plateau, as a result of which they might cut off Görz from railroad communication with the rest of the Empire and thus open their way for an easy advance upon Trieste.

During the night of July 4-5 Italian aviators bombarded the cantonment and arsenal at Trieste, and inflicted considerable damage. Bombs were also dropt upon Doberdo, near Monfalcone, and upon the railroad station at Dornburg.

A most important step was taken by Italy on July 6, in proclaiming a blockade of the entire Austro-Hungarian coast. The line of the blockade was drawn across the Strait of Otranto, at the entrance to the Adriatic Sea, a passage less than fifty miles wide and thus affording great advantages for the maintenance of an effective barrier against commerce. This, of course, includes the Italian and Montenegrin frontages on the Adriatic Sea within the prohibited region, but vessels to and from their ports will be permitted to pass the line, under convoy and on giving satisfactory assurances of their character and destination.

An Austrian response to this decree was promptly delivered in the early morning of July 7. During the preceding night an Italian squadron had made a "reconnaissance in force" near the Austrian naval station of Pola. As it was retiring at daybreak it was intercepted by an Austrian submarine which set out from Pola, and the fine armored cruiser "Amalfi" was struck with a torpedo and sunk. The Captain and crew exhibited superb discipline and courage in their extremity, and nearly all of them were consequently saved. The "Amalfi" was one of the best Italian cruisers of her class. She was built in 1909, was of 9956 tons, and carried 678 men.

A little consolation for this loss was secured the next day, when an Italian cruiser caught a neutral steamer laden with naphtha, the captain of which confest that he was waiting to deliver his cargo to an Austrian submarine. The Italian commander thereupon manned the steamer with his own men disguised as ordinary seamen, kept the appointment with the submarine, and when the latter appeared made an easy capture of it and its entire company. Early in the war Italians destroyed three Austrian submarines, and it is believed that those which are now operating in the Adriatic are German vessels, nine of which are said to have been sent to those waters.

The Battle for the Straits

The struggle on the Gallipoli Peninsula increases in intensity. The Allies are seeking not only to drive the Turk out of Constantinople and out of Europe, but also, and still more urgently, to open the Straits so that military supplies can be sent to Russia by that route instead of by way of Archangel. The week's news was consequently a story of much fighting, with heavy losses on both sides, but with a general advantage for the Allies. Near Krithia the Turks took the offensive, under the personal direction of Enver Pasha, the Minister for War, and attacked the British with furious valor, with the purpose of driving them into the sea. But they were so near the coast that a British destroyer was able to use its guns with deadly effect, and the Turks were all but annihilated. On the land the Australians and New Zealanders and the Ghurkas especially distinguished themselves in close combat, the former with the bayonet and the latter with the kukri or long, heavy knife which is their national weapon. In the five days from June 28 to July 2 the Turks lost more than 5000 killed and 15,000 wounded. Reports from Constantinople are that the total Turkish losses to date have been about 180,000. There are persistent reports that the Turks are short of ammunition and are so discouraged that they would sue for peace if they were not held in line by the Germans.

The Russian attacks on the Caucasus and in the Black Sea were vigorously prest. In two engagements in the Caucasus, south of the Kara Dagh Range and west of Akhalzic, the Turks were defeated on July 7, and on July 8 Russian warships in the Black Sea sank five Turkish sailing vessels and four galleys laden with coal for Constantinople.

In the Yemen, however, the Turks are aggressive and apparently hopeful. That province has long been the trouble-spot of the Ottoman Empire, the Arabs being habitually insurgent against Turkish rule. Now, however, Turks and Arabs have cordially united in warring against the hated Giaours. The British territory at Aden has been

WHERE GERMANY EXCELS THE WORLD

The combined efforts of the Allies and United States manufacturers have not availed to overcome Germany's supremacy in munitions. Here are the employees of the Dynamite Company of Lübeck over a thousand men are working day and night supplying Germany her one patent feature of success, bayonets and shell production

attacked, and on July 5 the garrison had to be withdrawn from outlying posts and concentrated in the citadel of Aden, where it enjoys the aid of the warships in the harbor.

On the Western Battle Line Almost incessant fighting has prevailed along the entire line from Switzerland to the North Sea; with varying fortunes, and heavy losses, but no decisive results. Early in the week the Germans assumed the aggressive in the Argonne region; they regained ground east of Fey-en-Haye and west of the Moselle River; and on July 6 they bombarded and burned a part of Arras, including the cathedral. There was desperate fighting in the Labyrinth, a spot which is likely to become as notorious in this war as the Wilderness was in ours. The French on July 8 captured some trenches at Souchez, regained some at St. Mihiel, and made slight gains at Le Pretre. Fighting was resumed at Ypres and the destruction of that city was practically completed. North of Ypres the British made gains. The brave little Belgian army on the night of July 9 repulsed an attack at the House of the Ferryman, on the Yser; an important strategic point.

The war in the air comprised the German bombardment of Nancy and Dombasle, and of fortifications near Harwich, England; and the British bombardment of Bruges and a raid upon the German coast. None of these exploits had important results.

Chief interest centered in anticipations. It was plausibly intimated that German troops, released from need at the east by the victories there, were being transferred to France or Belgium for another tremendous drive. Ten army corps were said to be on their way.

But the Allies suffered from much uncertainty as to where the blow was to fall. Reports came simultaneously from Zurich, Brussels, Amsterdam and Paris that Calais was the objective, and that the Kaiser would stake all on one final desperate attempt to reach the shore of the British Channel. Other equally confident and plausible reports were that the German forces were concentrating upon Metz, and that the purpose was to drive the French out of Alsace as the Russians had been driven out of Galicia. The Germans kept their counsel well, and the Allies and the rest of the world remained in ignorance of it; tho it seemed certain that some great stroke was being prepared. By July 11, however, the impression began to prevail that the change of affairs in the east would compel its abandonment of this plan.

Operations in the Baltic News came at the beginning of the week of two interesting engagements in the Baltic Sea, which had occurred on July 2. A Russian cruiser fleet came upon a German squadron near the Swedish island of Gothland, and a sharp fight ensued. The German ships were overmatched, and retired in apparently good order, all save the mine-layer "Albatross," which was badly damaged and was driven ashore on the Gothland coast. In the zeal of their pursuit the Russian vessels trespassed upon Swedish waters and violated their neutrality, for which offense an apology was promptly made.

At almost the same time the German battleship "Pommern," while leading a squadron at the entrance to the Bay of Dantzig, was torpedoed and sunk by a British submarine. The "Pommern" was one of four identical vessels, the others being the "Deutschland," the "Hannover" and the "Schleswig-Holstein." These were among the best of the German pre-dreadnoughts. They were built in 1906, and each cost more than $6,000,000, had a displacement of 13,040 tons, and carried 736 men. The chief significance of the incident, however, was its revelation of the presence of at least one British submarine in the Baltic Sea, a fact hitherto unsuspected. To reach those waters from the nearest British port the vessel must have traveled 900 miles, chiefly without convoy; a distance about as great as that traveled by any of the German submarines which have been operating in British and Irish waters.

New War Orders It is due in part to the orders for war supplies that a marked increase of activity at the steel mills in the Pittsburgh district is reported. The great factories are using nearly 100 per cent of their capacity. Among the new orders is one from Russia for thirty-three locomotives and another for 4100 box cars. Some time ago it was said that Russia had offered a very large order to the Pullman Car Company. It now appears that the company was asked to make 10,000 cars at its factories in Illinois, and 40,000 more at a plant which it would be required to build in Russia. The pay was to be in Russian Imperial notes. The company preferred cash and was unwilling to do any part of the work in Russia. Therefore the contract was not made.

There are new orders for aeroplanes of the flying boat type, which can carry 3000 pounds, and for many very fast motor boats. The latter, it is said, Great Britain intends to use in a new kind of warfare against hostile submarines. They are to carry machine guns with which a submarine's periscope can be shot away. New orders for 1,000,000 rifles, 2,000,000 bayonets, and 500 motor cycles have been placed and it is asserted that Russia has engaged $60,000,000 worth of powder from the Du Pont Company, with provisions for a bonus to hasten delivery. It is understood that the orders handled by J. P. Morgan & Co. for the British and French Governments amount to $500,000,000. But only a small quantity of the ammunition included in this total has been forwarded.

The organization called Lalor's National Peace Council, of which Congressman Buchanan is president, has given to Secretary Lansing a long protest against the shipment of munitions from this country. The names of the vessels are given, with a description of their cargoes, and the Council asserts that our Government should prevent the departure of these supplies from our ports.

THE LIBERTY BELL GOES A TRAVELING

After Philadelphia had had its usual Fourth of July celebration the old bell was put on a specially constructed railway car by the state of the Panama-Pacific Exposition at San Francisco. From the State of Pennsylvania has journeyed by freight as far as Topeka, the rear observation platform of the Centennial train. Philadelphia accompanies the bell as a guard of honor.

Labor Disputes

The labor controversy which has for some time prevented building work in Chicago was ended last week by an agreement between the manufacturers, or building contractors, and the carpenters, whose strike, followed by the strikes of other workmen, deprived a large number of persons of work and led to a lockout which made 200,000 employees idle. As the manufacturers of building materials were involved in the lockout, there were indications that not less than 500,000 workmen would soon be affected. The manufacturers' committee was induced to meet a committee representing the carpenters. While the two committees were in conference, the president of one of the building companies locked them in and guarded the door. The session continued for fourteen hours, and an agreement was reached. Wages of the carpenters are increased from 65 to 70 cents an hour. They had demanded this change, and also a sliding scale adding 2½ cents each year for two years. The closed shop was accepted, and the agreement is designed to prevent a strike for three years to come. Four days before this settlement, Charles H. Johnston, secretary of the Brickmakers' Union, was called to the door of his house and fatally shot by an unknown man, who escaped.

In New York, a strike of 50,000 garment workers has been averted by the consent of their employers to submit differences to arbitration. The disagreement followed abrogation by the employers of a protocol or agreement which had been in existence for some years, and the action taken by the employers last week was due to an appeal addrest to them by a committee whose leader was Jacob L. Schiff, the well known banker. At a conference, representatives of the opposing interests voted to make a new protocol. Mayor Mitchel appointed a Board of Conciliation, composed of Dr. Felix Adler, Louis D. Brandeis, Henry Bruère (the City Chamberlain), Professor Kirchwey, of the Columbia Law School; W. C. Noyes, formerly judge of the Federal Circuit Court, and Charles L. Bernheimer, chairman of the Chamber of Commerce's Committee on Arbitration. If this board fails to make a complete settlement, there will be a resort to arbitration.

The Situation in Mexico

Mexico's capital was captured on the 10th by General Gonzales, leader of the Carranza forces, Zapata and his troops fleeing to the state of Morelos. For fourteen days Zapata defended the place, and Gonzales for a time was driven back. But reinforcements were sent to him and at last he was successful. Carranza now intends to make the city his capital, instead of Vera Cruz, and to establish his administration there. Control of the city will lead him to seek recognition from our Government, but there is no indication that it will be granted. Under the rule of Zapata the condition of the people has been most deplorable. In the food [illegible] and children have been [illegible] for gunshot wounds and other injuries. The governor appointed by Carranza has ordered that any one who steals horses, automobiles or other property shall be shot, and it is reported that Carranza will send to the city supplies of food.

There were reports that Villa had been defeated again by Obregon's army at a point a few miles south of Aguascalientes, and was retreating to Torreon. His forces, it was said, had been greatly reduced by deaths and desertions. But Villa denied that he had lost the fight. He declared that he had been the victor and had driven Obregon's men southward. Further north, however, a part of Villa's army was beaten by Carranza men at Icarnole, thirty-two miles from Monterey. Villa still desired to negotiate with Carranza for terms of peace, but Carranza would not listen to him.

After his escape Huerta was rearrested on a new warrant and placed in jail.

Porfirio Diaz, for a long time the ruler of Mexico, died in Paris on the 2d. He was nearly eighty-five years old.

Our Policy in Hayti

A French cruiser landed marines at Cape Haytien, about two weeks ago, owing to an attack upon that port by the revolutionists who seek the overthrow of President Guillaume Sam. Our Government at once ordered an armed cruiser, Admiral Caperton's flagship, to Cape Haytien, with 700 marines, the expectation being that the French marines would consent to make way for our forces. Upon his arrival at the port, Admiral Caperton found that the French marines had already gone back to their ship. He reported to Washington that he did not think it necessary to land Americans in their places. A few days later, however (on the 10th), he placed thirty marines at the railroad station. The rebels are led by Dr. Rosalvo Bobo.

Dispatches from Washington say that our Government has decided to adopt a new policy in relation to Hayti. This policy, it is asserted, involves a fiscal protectorate like the one in Santo Domingo. It is not easy to see how it differs from the old policy, for, by the Fort Commission and later by Mr. Paul Fuller, Jr., our Government urged President Sam to accept such a fiscal protectorate and he repeatedly declined to do so. Hayti is bankrupt and suffering from chronic revolution. Bobo, the revolutionist, emphatically opposes the suggested fiscal arrangement. It is said that our Government will offer to recognize Sam's Government and to assist him if he will permit Americans to collect the revenues and supervise expenditures. But this was the proposition originally addrest to him and the one which he rejected.

It is understood that James M. Sullivan, our Minister to Santo Domingo, has been asked to resign. The report of Senator Phelan, who conducted the investigation concerning his conduct, rec[illegible] ommended that he be permitted to withdraw from the diplomatic service in this way

THE STATUE OF LIBERTY—WOMEN'S RIGHTS EDITION

Miss Margaret Wycherly, who said she "dreamed for Liberty" at the foot of the Statue of Liberty in the New York parade of June [illegible] demonstration

The Attack on Mr. Morgan

The man who attempted to kill J. P. Morgan, the banker and the fiscal agent of Great Britain and France with respect to war supplies, committed suicide in the jail on Long Island where he was confined, by leaping from an opening over his cell, head downward, to the concrete floor, a distance of twenty feet. He said his name was Frank Holt, but he really was Erich Muenter, a native of Germany. Muenter came to this country in his youth. He was married in Chicago fourteen years ago. His wife died in 1906, while he was an instructor at Harvard University. He disappeared, and a few days later was indicted for murder, examination having shown that his wife had been fatally poisoned with arsenic.

In a letter sent to his wife and made public after he had been placed in jail he predicted that a ship sailing on the 3d from New York would sink on the 7th. Warnings by wireless were forwarded to several ships. On the 7th, the "Minnehaha," carrying a large cargo of ammunition, was set afire by the explosion of a bomb. She made her way to Halifax.

Mr. Morgan is recovering and his condition is so favorable that his son has gone to the exposition at San Francisco.

WARHOGS AND WAR MILLIONAIRES

BY A WAR BROKER

Three months ago we printed a racy and picturesque article on "The Business of Selling Death." It was written by one of the new class of business man produced by the Great War—the intermediaries between the American manufacturers and the big contracting groups who secure the orders for war munitions from the foreign governments. Here is a second article from the same pen. It is particularly timely when a great financier has just been shot because of his leadership in the grim business of supplying the needs of the warring armies, and when the debate on the compatibility of "selling death" and preserving neutrality waxes hot and hotter. The author knows whereof he speaks—for he is one of the salesmen. He has a vivacious imagination, for only men of imagination and daring survive and prosper in that mad business rush. He has painted here a picture that is notable for vivid color and broad impressionistic effect.—THE EDITOR.

THE attention of the world seems concentrated on the question of American war munitions for the Allies. I think it is a vital issue, for the course and duration of the war turn on it. I think it is about as great a strain getting the munitions made, sold and shipped as using them in the fighting.

Our activities attract some undesirable attention from German spies whose activities seem to increase. Whether in government service or volunteers we don't know—or care. Factories are policed and our principal offices guarded and since the attack on Mr. Morgan we have all placed loaded revolvers handy in our desks. Mysterious telephone calls annoy and sometimes, when cleverly worded, confuse us. Cranks write letters threatening all sorts of things. I don't think they are dangerous, but we are careful. Wall Street is under the intelligent protection of police, private detectives and guards stationed at banks and around elevator doors.

Since my statements to The Independent last April, I have been very busy. But the word conveys no correct idea of my extreme concentration. It may be better understood by relating that since I threw my energies into selling war materials to the Allies I have not had one day's rest, dined out, attended a single theater, read any books, been in the country or at the seashore. The greatest adventure of my life—and I've lived actively—is on now, and I cannot lose an hour from my work. What just one man does or refuses to do; or cannot do or forgets to do—on this hinges hundreds of millions of dollars for American manufacturers—maybe a cool million for the one man—and the supplying of millions of rifles and shells to vast hordes of men fighting for their cause! Suppose you were that man? Would you lose an hour from such a game? What else on earth could hold your attention?

I keep a close watch on Wall Street; it's my jungle, and one must be alert down there. I am sure that the Great War broke out at an opportune time for Wall Street. Things in brokerdom had been going badly for years and no improvement was in sight. The Civil War and the flush, wide-open three decades thereafter were the golden days of "the Street." Shrewd brokers and bankers reasoned that if that war produced profits, surely a greater one, if handled rightly, would bring even larger gains. If so, why not all get in at the start and pull together?

They all had a look around, conferred—and set the plans to working. They had plenty of leisure during the dark days, when the Stock Exchange was closed. All the old plans, practises and pulls were looked over and we were more than ready for a killing when, to our utter astonishment, this "war order" mania broke out. Every one had reckoned that the Allies would buy largely from American manufacturers, but none foresaw the gigantic size of those orders. Accustomed to millions, we were confronted with hundreds of millions, with the billion mark actually in sight. During last February the orders for guns, powder, shells, automobiles, chemicals, horses, etc., began to move gold our way and, by May, the flood was on.

About this time, New York caught this "war order" mania and the liars, licemen and warhogs appeared, bred, and multiplied in our midst. My use of the new terms, "warhog," "warsow" and "liceman," is justified by the fact that they were coined in Wall Street and are in general use. Men with deskroom are legion in the Street. They are a wise lot and ready for anything new which requires no capital, from real-estate in Labrador to mines in Tunistan. They swarmed, buzzed and bustled. All our banks pricked up their ears and smiled when cables ordering tens of millions of American products were flashed around—with the Bank of England and the Bank of France backing them up. Every facility of modern banking was open and ready, for this newest of games comes not as a borrower but as a depositor. Hence the glad welcome. For once a deal appeared that did not seek to separate New York from its coin.

Small men, full of importance, swaggered thru bronze doors and had interviews with attentive bankers. Manufacturers thronged in from every section of America, eagerly looking for orders. The Broadway hotels were filled up. A wide-open day-and-night game developed. Any statement went, for 'Change is a rookery of rumors and thrives on belief in the gold at the foot of the rainbow.

It must be borne in mind that every government, except Germany, Austria and Turkey, has a "commission" located in New York, whose function is to expedite the buying, making and shipping of munitions of war. Of course, manufacturers sought out these commissions and were confused by the terms and conditions. The fiscal agents proved rapacious and useless. Then the day of the warhog dawned. He knew it all. He had orders for everything. Trust him and get-rich-quick. Warhogs must not be confused with our efficient, powerful contracting middlemen who have offices in London, Paris and Petrograd. Warhogs root on the edges and live on manufacturers' credulity and cupidity. Middlemen actually sell a thousand tons of picric acid and warhogs offer thirty thousand tons. It's worth $1.50 a pound: figure it out. Licemen are the warhogs' outside-men. They have no office. They round up the excited manufacturer, pump him full of his own importance, secrete him in a hotel and offer to lead him to Golconda. A recent sale of picric acid was made thru a bank and the maker had foolishly contracted to give the warhogs everything over a certain price as their profit. It worked out at twenty-two cents a pound difference between what the factory received and the government paid, and I saw nine warhogs nearly come to blows over the division. Three dollars a rifle and two dollars a shell is the goal to certain circles of warhogs, when they can make the maker into a contract appointing them sole selling agents.

There is a lively demand for rifles, shells, picric, etc., but my sense of proportion is destroyed when, in one week, by keeping tab on a single office, I find that export lists declare fourteen million rifles, eleven million shells and seventy thousand tons of picric acid were "bought and sold"! Every one is now in the game

of chasing the rainbow or spurring hotly on toward the mirage which usually takes the shape of money made over night, money with which to buy houses, estates and yachts. My partner in London writes that he "does not repose on a bed of roses." He says "200,000 tons of picric acid was sold during May and not a pound was delivered!" Over there our local conditions in respect to the warhogs are duplicated.

One liar knows a man who can buy it, another represents a maker who has it. I demand of the one an interview with the buyer and my Agent begins a chase from office to office that lasts a week. I call for the manufacturer, and meet an endless procession of warhogs. One serious middleman offers a thousand cigars for the mere sight of a genuine maker of picric acid. "Circling orders" is one phase. I offer to buy picric acid, say 1000 tons, deliveries August to December at a price; next day a wild-eyed warhog 'phones me precisely my order as an offer to sell! My order has changed face in its swing around a circle of brokers. Buyers are as elusive as Charley Ross. A credulous manufacturer has satisfied bankers of his ability to produce the goods, and arranged for his surety-bonds no less than seven times in thirty days, and has yet received no order. An active warhog actually declared to me that he had "orders" for four hundred million dollars' worth of munitions.

The wildest propositions reach me. A youth gained entrance to my office by a strong letter. He assumed an air of assurance and offered me five million rifles at $24 each and demanded a dollar a rifle as his commission! He swore he had two producing factories. My partner promptly offered to buy the lot. Next day the youth 'phoned in that he had been deceived; had relied on a liceman's word—and vanished. A woman offered us four billion cartridges at a low price, naming a bank as her reference. Inquiry developed that she was unknown at the bank. We taxed her with her deception and she wept, declaring a warsow had told her she would "see the bank and fix it nicely." Our detectives trailed her home; she was the wife of a prosperous doctor in Flushing. I consider her a fit subject for some asylum.

Those 350,000 Krag-Jorgensen rifles in United States arsenals are a myth that will not vanish. Yesterday a broker swore that if I would put up $50,000 the "owner" would do the same and "guarantee" to deliver them to me "on the high seas" at $90 each. Secretary Garrison sent me word, last year, that he had sealed them up for the duration of the war. Claims for a part of commission money are made for a mere introduction. A woman "hooked out" a friend of mine in a crowded restaurant because he refused to recognize her husband as entitled to about $30,000 for merely mentioning a source of supply which led to an order being placed.

Colonel Mulberry Sellers is a back number, Wallingford and Blackie Daw mere pikers in this wild uproar which has inflated Wall Street beyond anybody's imagination. How we will ever get back to talking in the now obsolete term of thousands I can't imagine. The giddy financial hights upon which we operate have lost their power even to surprize us. Thousands is obsolete; millions our unit of calculation. My secretary—a clever girl—turned to me, saying "Isn't this an *error*? You say 15,000 rifles—shall I add 000?" In my last article I stated that $700,000 was a small order and $30,000,000 a big one. The books of our group show during June sales of $100,000,000; $140,000,000; and $110,250,000. Orders given me of $330,000,000; $86,625,000; $140,000,000 and $160,000,000. A round billion in actual business does not seem strange to my eyes. I filed one cable which my secretary afterward told me aggregated goods worth $772,875,000. I did not realize its monetary size, being interested in making a success of the deal.

The rapid rise of the individual brokers is interesting. Since March, the $1000 man is now a $10,000 chap. The former $10,000 dealer scorns sales less than $500,000. The $1,000,000 man of last spring now lords it over everybody as the $100,000 000 order-closer. This war game is breeding a new list of American millionaires. I am more modest. My gains are enough and I propose to have some health left to devote to my family and friends. A man's nerves have their limits. It is a distinct shock to clean up $250,000 in a week.

None of us were surprized when Mr. Morgan was shot; newspaper attacks, street speakers' wild advice to crack-brained loafers, lurid posters and the reckless words of the new pro-German weeklies were enough to inspire the deed. On the Saturday when we heard he had been shot, we all "ducked" and by Tuesday were composed and back on the job—to stay. The death of any of us or any banker will not cause an instant's hesitation in this grim activity.

I am continually asked "How long will the war last?" I don't know; nobody knows, but I have contracts that extend to 1918. The big show will be staged during 1917 when our east output of factory, forge and powder-mill gets on the firing line. This war will go on for years just years until definite victory comes to one side. The gain of it is that it was precipitated into our inadequate, prosperous age. I see no way to end it but to fight it out, cost what it may; take as long as it will. I really believe that the world is racing toward financial ruin. I feel that humanity will hereafter avoid war as a financial danger more than a personal one. Five years more of war and gold will vanish and paper depreciate in a dangerously low figure. The days of John Law's "Mississippi Bubble" financing in France and the tulip speculation in Holland have come again.

I have read newspapers that the world will emerge from this war and find itself facing an altered existence. Surely, if sudden fortunes and inflated ideas are a change, we will have that. It seems a pity that brave men must fight and die, and true women weep and starve and their efforts and pains serve only to create the "war game." It seems a hideous blunder on the part of somebody that permits the activities and caprices of irresponsible men either to retard or to accelerate the supplying of arms, munitions and food for those gallant troops on far away battle lines. I know a case where buyer and seller of rifles were kept apart over three months by a pack of scoundrels, one of them a subject of one of the Allies! His patriotism should be inquired into. Often the execution of a great order depends upon whether a mere boy can be persuaded to bring the manufacturer out of his willing hiding in an uptown hotel! In vain may Lloyd George call for munitions, for his voice can't move a New York warhog to produce the manufacturer—if he has one—until he is ready. Parliament, the Chamber of Deputies and the Duma wield no authority over Wall Street's mad chaos of war orders. No Order in Council is effective to limit the profits of American manufacturers. The Defense of the Realm Act might as well be issued by the Akhoond of Swat against our swarms of warhogs, liars and licemen. They play no favorites and are more neutral than Bryan, for they are out for themselves only, first last and always. They alone in all the world want a long war, a bigger and bloodier war. If our country is drawn into war, their practised hands will delve deep in the Treasury of the United States of America—perhaps!

MRS. ROBERT LANSING

THE DAUGHTER OF [illegible] SECRETARY OF STATE
AND THE WIFE OF ANOTHER

MRS. ROBERT LANSING, DIPLOMAT

BY WILLIAM NELSON TAFT

PRECISELY at five o'clock every afternoon a trim little electric coupé drives up to the private entrance to the State Department in Washington and announces its arrival by the ringing of a deep-toned bell, accompanied by the barking of a tiny little fluffy poodle perched on the cushion beside the chauffeuse, a tall, handsome woman with dazzlingly white hair and a face that seems to have been cut out of warm marble.

A few moments later a good-looking man of about fifty, a man who might pose for a picture of the "typical American man of business," leaves his office on the second floor of the building and descends for a brief spin around the Speedway and a breath of cool air. It is the man's only outing during the day and the odds are that he will have to return to his office and work late into the night.

The man is Robert Lansing, Secretary of State. The woman with the white hair and beautiful face is Mrs. Lansing, daughter of one Secretary of State and wife of another.

If Secretary Lansing looks the typical American man, Mrs. Lansing could certainly pose as the typical American housewife—for there is hardly any quality that goes to make up the woman of the world or the woman of the home that she lacks. She is accomplished in a number of ways, she speaks French and Spanish fluently and is therefore able to converse at ease with the members of the Diplomatic Corps whose English is not all that it should be, she has traveled extensively, she keeps house herself and is not unfrequently seen at market, she is prominent in church work and she takes great interest in the progress of the Washington Y. W. C. A., of which she is secretary.

With all this Mrs. Lansing has one striking peculiarity—she has no fads. Her husband is an ardent fisherman, an enthusiastic golfer, a baseball fanatic, a horseman and skilful with the pencil, and pursuer, too, of pronounced taste for problems of higher mathematics, which, he claims, serve to divert his mind from diplomatic tangles. But Mrs. Lansing rides no hobbies. She golfs, it is true, but merely because she likes to be with her husband and not because she particularly cares for the game. Walking and driving her electric are her two principal occupations during the little leisure time which she can snatch from her household and charitable duties. She probably has no time left for anything else.

Prior to her marriage to Mr. Lansing, twenty-five years ago, Mrs. Lansing was Miss Eleanor Foster, daughter of John W. Foster, of Evansville, Indiana. When James G. Blaine resigned his position of Secretary of State under President Harrison because of differences of opinion with his chief, it was John W. Foster who was appointed to succeed him, and when William Jennings Bryan resigned for like reasons, John W. Foster's son-in-law took his place.

Mrs. Lansing's training in diplomatic life therefore dates back to the time before her marriage to the young lawyer of Watertown, New York. While she was still Miss Foster she visited Mexico and St. Petersburg (there was no objection to the Teutonic appellation then) with her father, who was Minister to Mexico and to Russia. With her husband, who has been entrusted with a number of important missions abroad, Mrs. Lansing has visited London, Paris and Berlin, and numbers among her friends many members of the Diplomatic Corps in these cities.

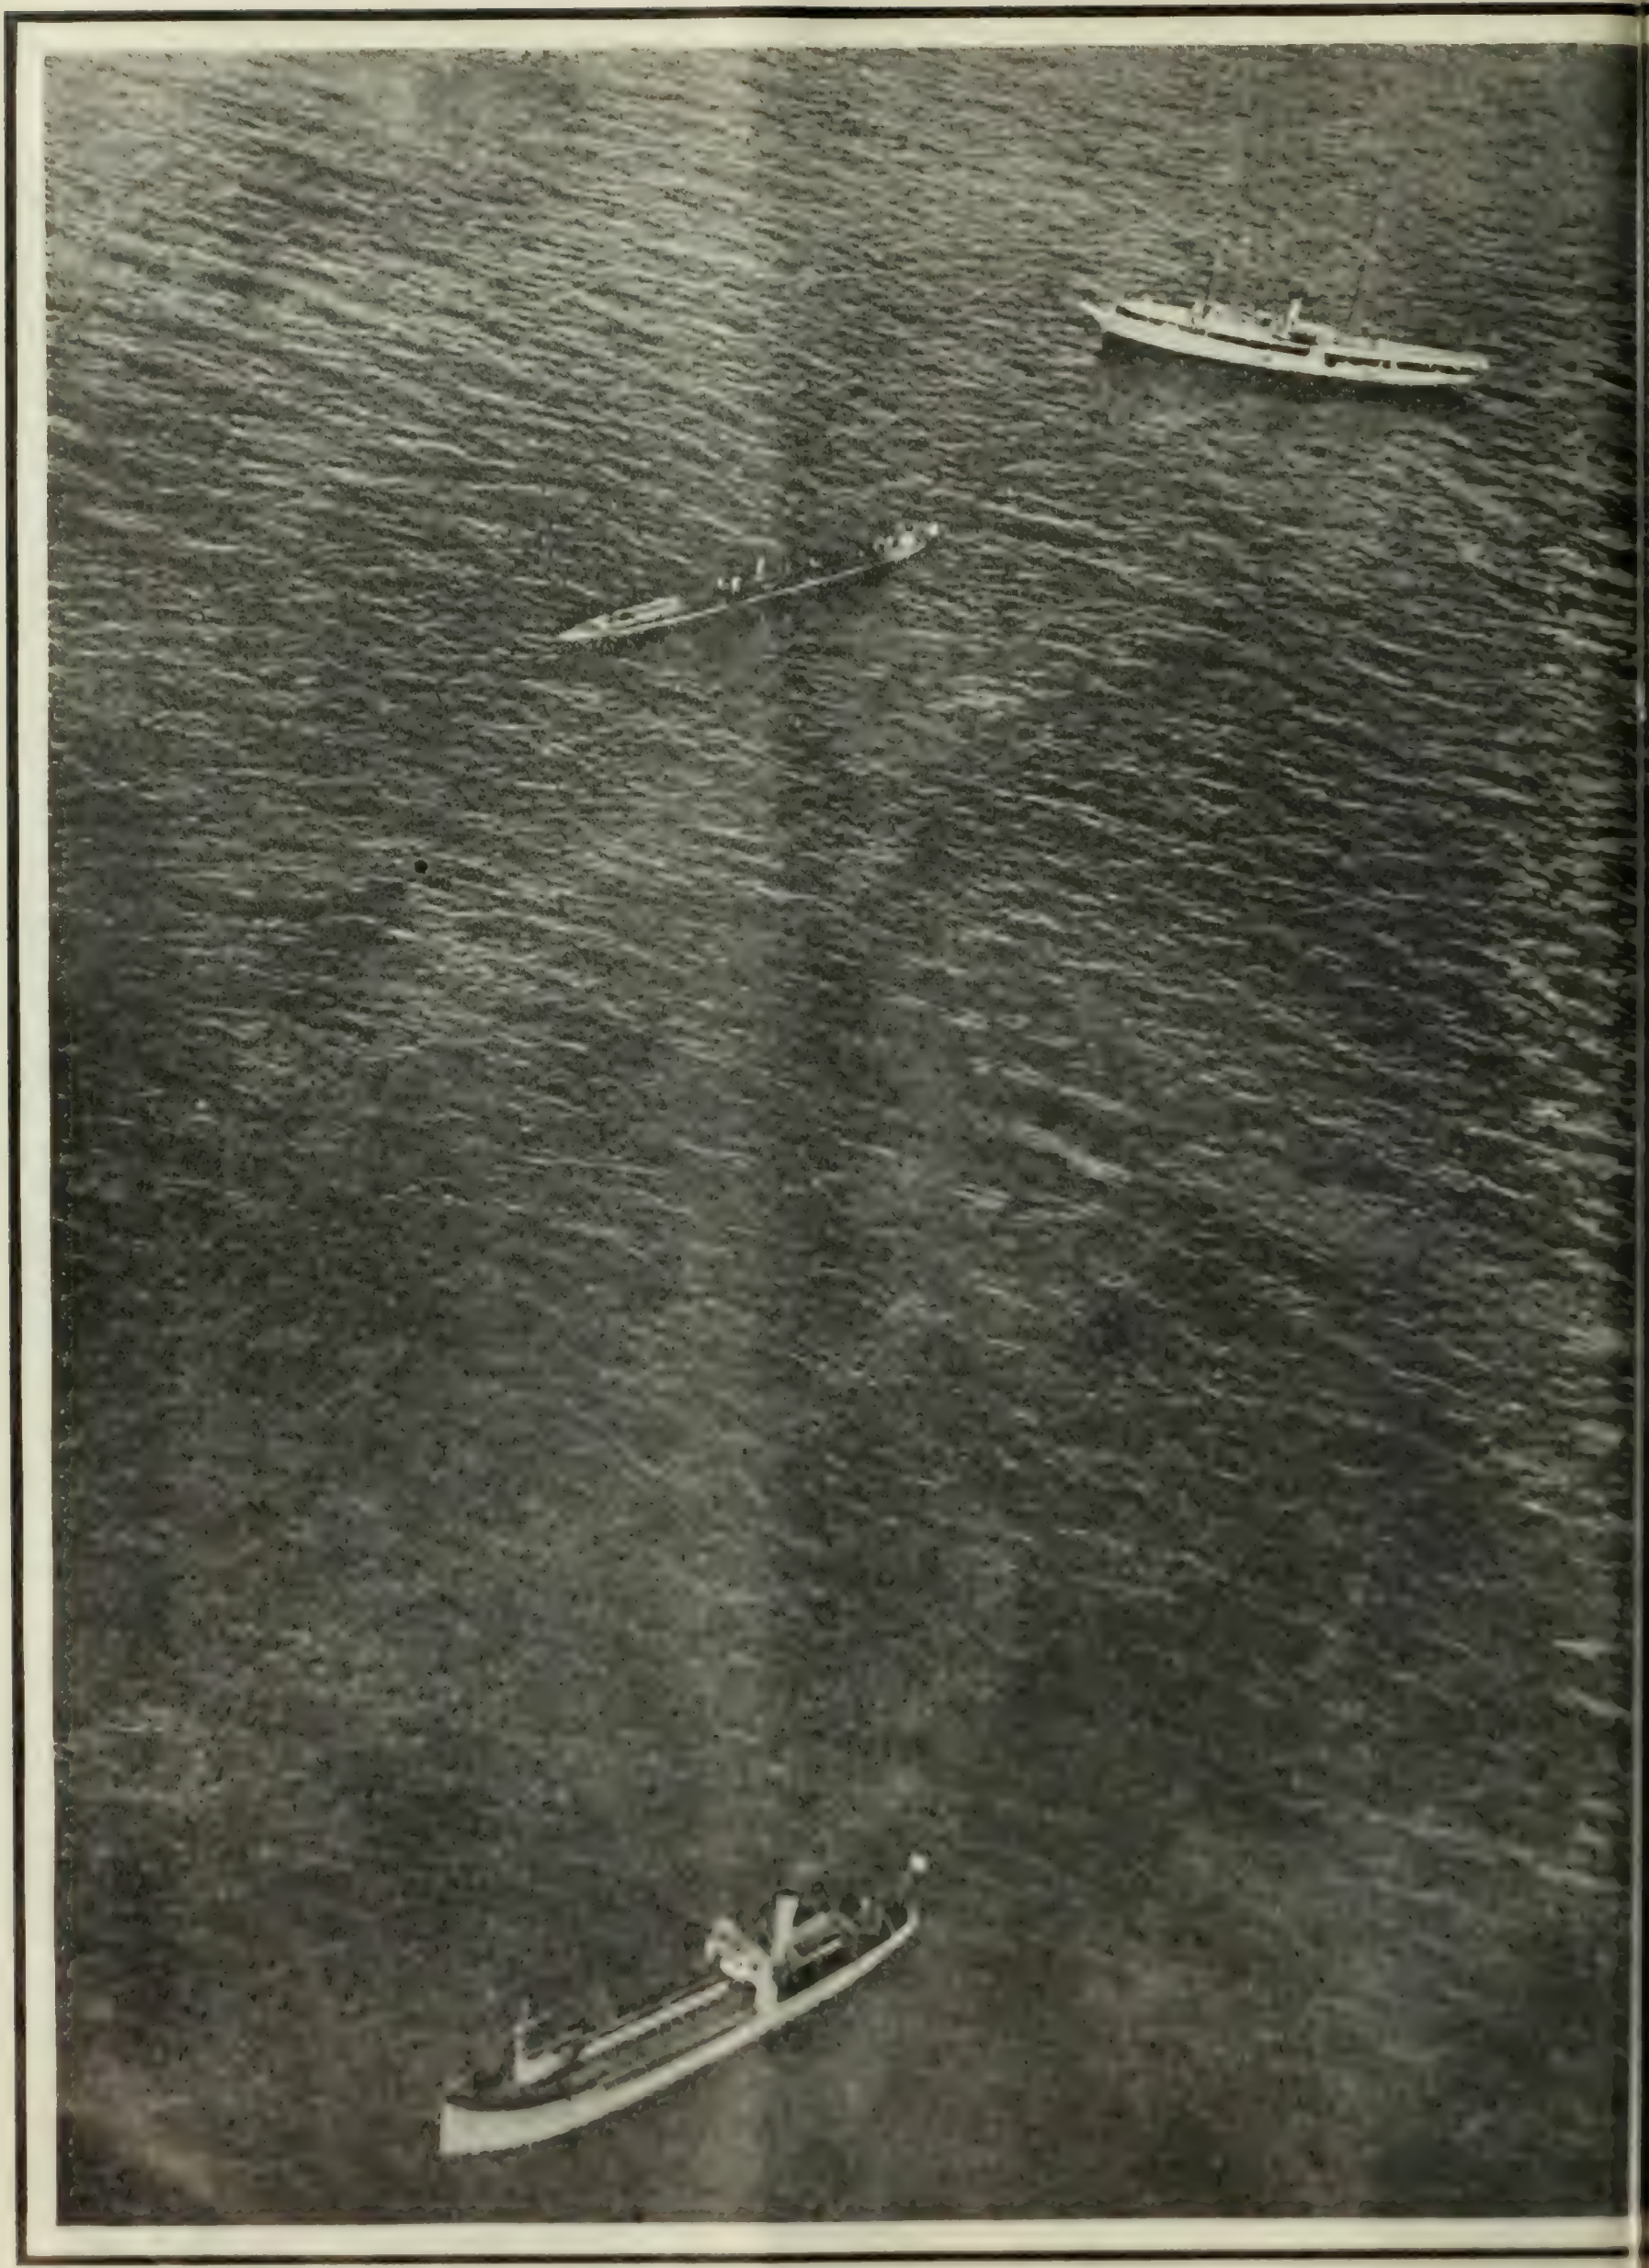
During the past winter it has not been exactly safe for any of Washington's official set to mingle too freely with either the Germans or the Allied hostesses and the capital's social leaders have been exercising quite as much neutrality as has the Government. The Latin Americans, the Spaniards, the Scandinavians and the Dutch, however, were perfectly "safe" and the vast amount has been a gay one for them. Mrs. Lansing solved the problem of the preservation of neutrality by giving a series of small afternoon functions, all of them informal, and inviting the different shades at different times, thus avoiding the almost open warfare which resulted from the meeting of ambassadors of hostile nations at the same entertainments at other houses where the hostesses were less diplomatic. Mr. Lansing admits that he "married into diplomacy"—but it would appear that he is there to stay.

In spite of the fact that she superintends the entire management of the big house on Eighteenth street, Mrs. Lansing manages to snatch enough time off to attend to a multitude of duties connected with her membership in the Church of the Covenant—where she and Mr. Lansing may be found twice every Sunday—and also to supervise the work of the Y. W. C. A. Should she be forced to leave the association her loss would be greatly felt, for there is hardly a member of the Washington branch but has been helped by her advice or tided over some hard period by her open purse.

President Wilson's physician has instructed him to get away from Washington's heat as much as he can, which means that Secretary Lansing will have to remain on the job. The Lansing house will therefore be open all summer and every afternoon, precisely at five o'clock, the trim little electric coupé will drive up to the private entrance of the State Department.

Washington, D. C.

DUST

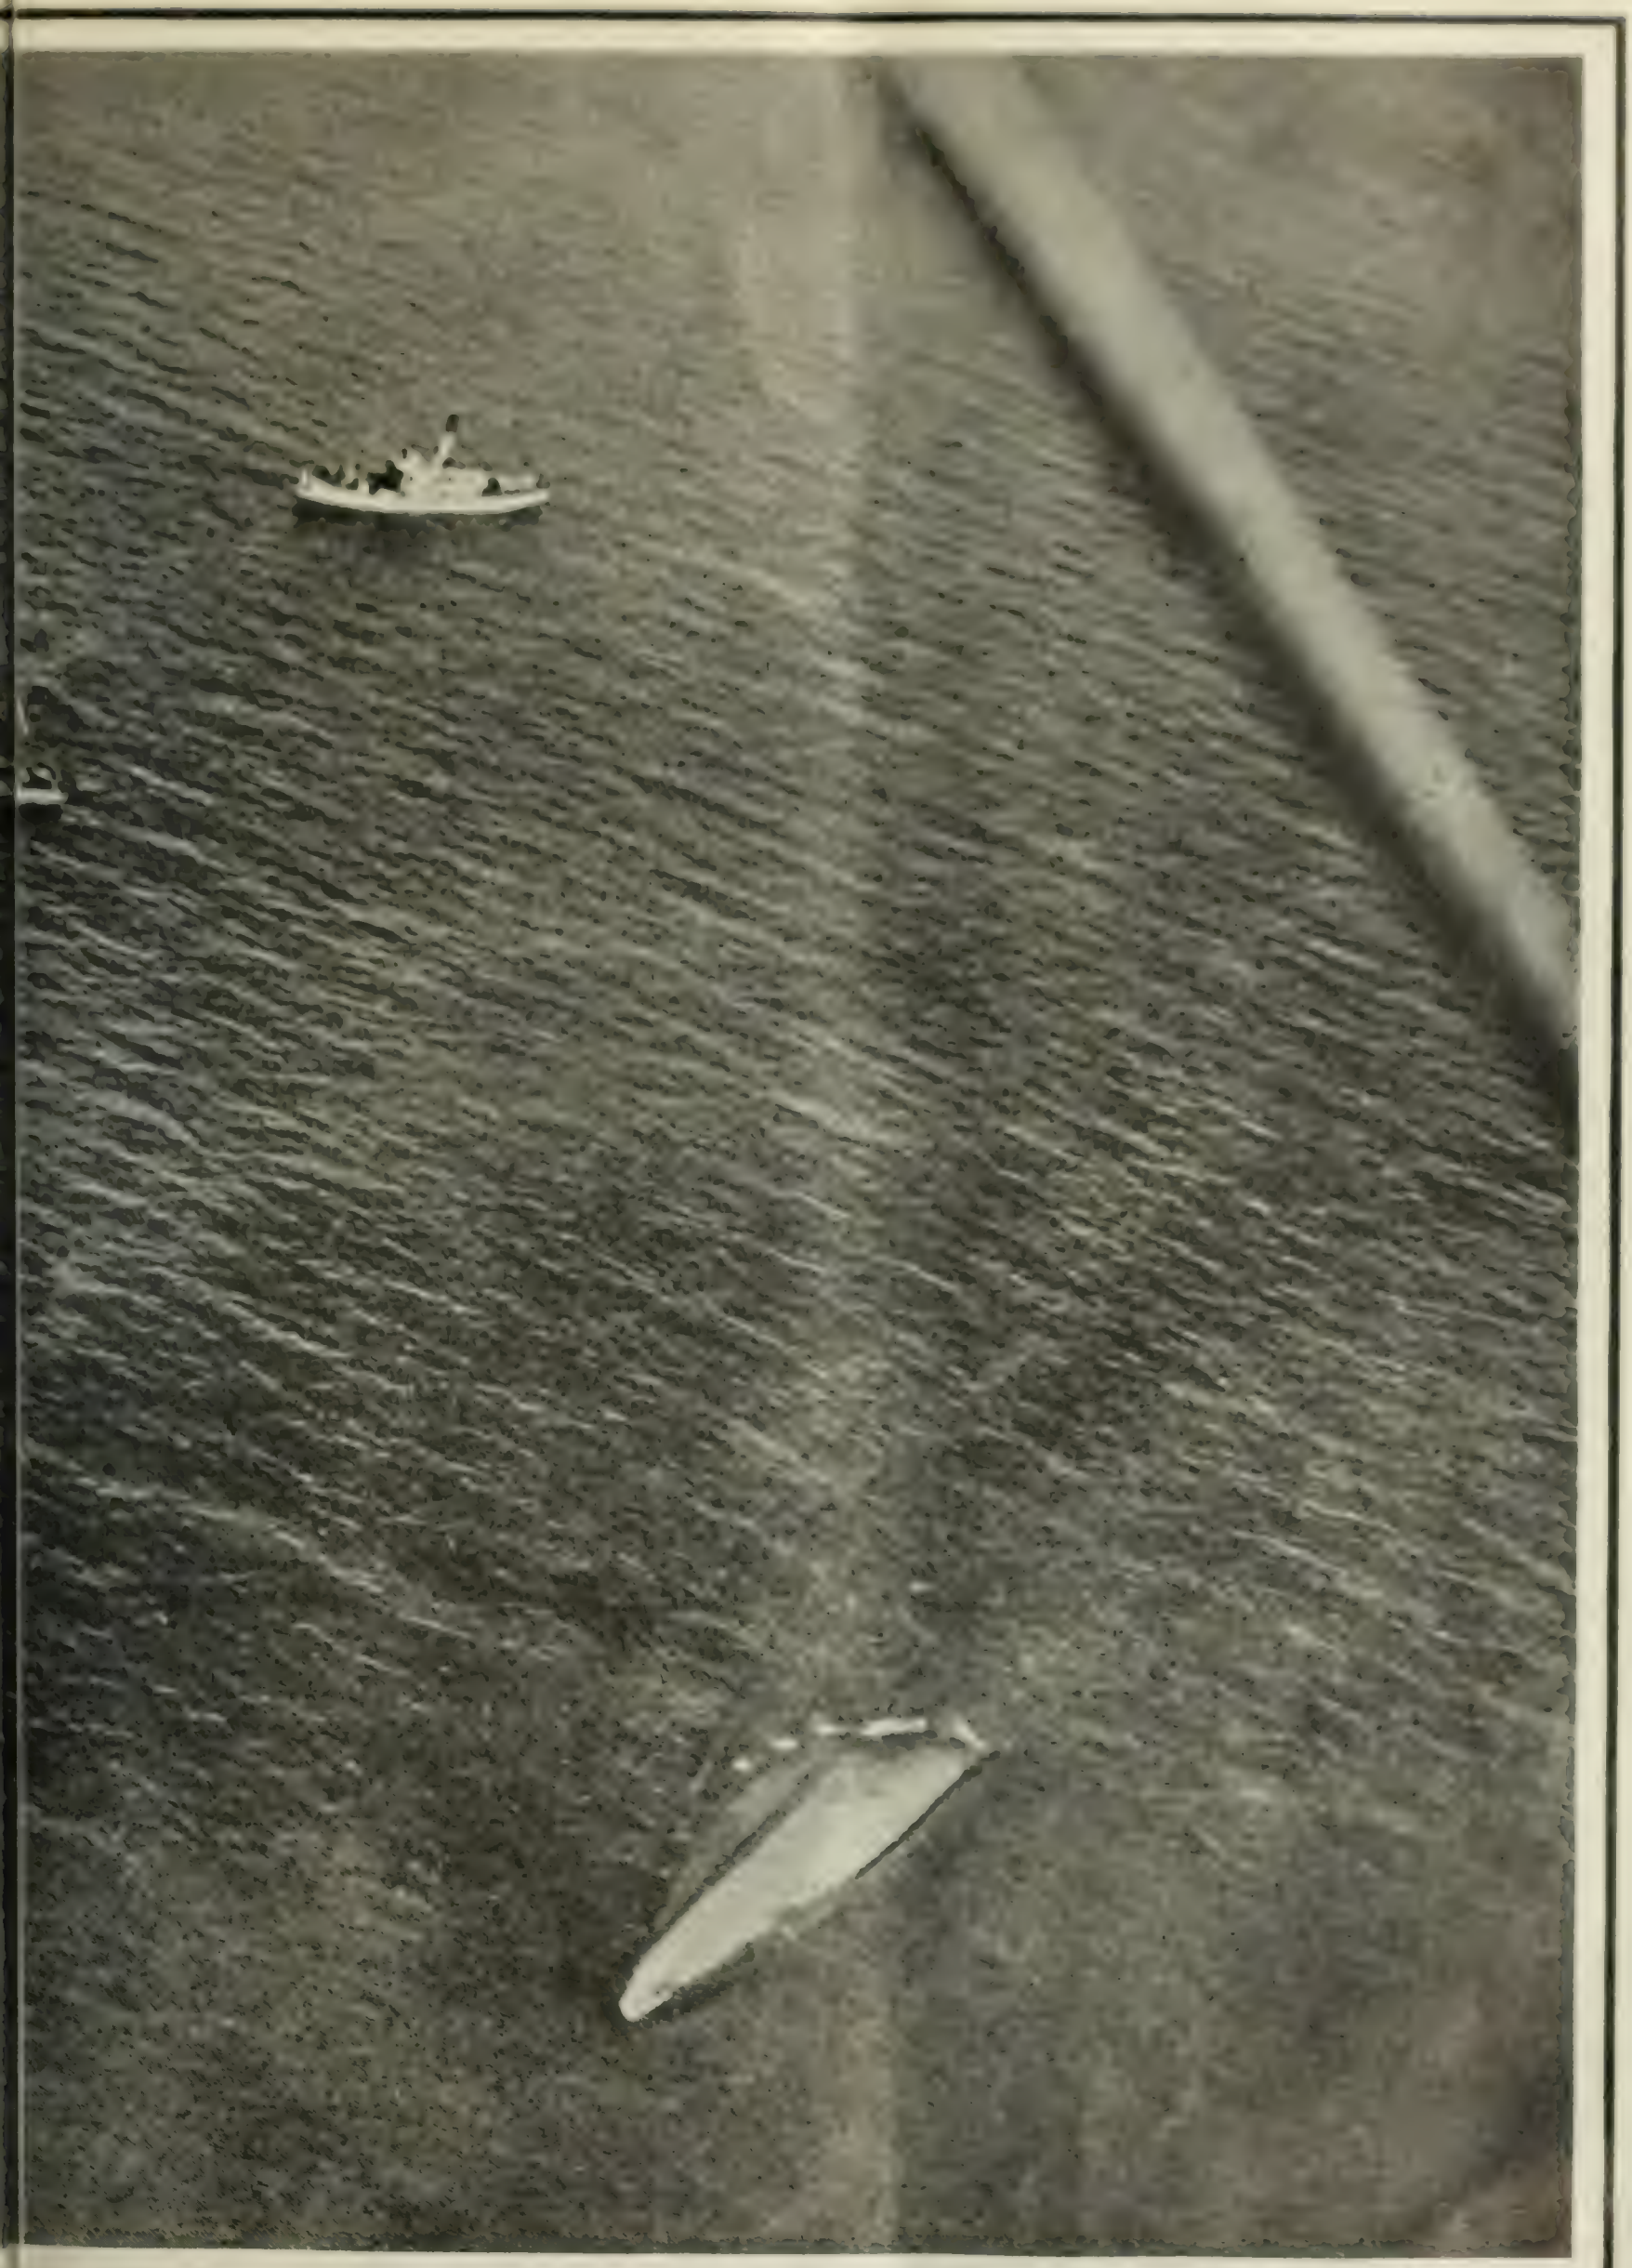


BY LEWIS WORTHINGTON SMITH

Great swirls of dust beneath the rolling wheels,
  Insensate, dulling all the wayside flowers.
Great throbbing clouds from which the thunder peals,
  And dust is stalk and leaf and petal showers.

Deep-hearted asters and chrysanthemums,
  Born of the earth and summer's sun-warmed rain.
Low, murky vapors where the north wind comes,
  And petals crisp to dust, glow sinks to stain.

Dust of the roadside where the armies bled,
  Dust of the fields where what they were is tombed.
Here men with joy shall reap their children's bread
  And pass again to dust with all the doomed.



Dust that was mind and thought, that grays the hand,
  That lived and felt, that yet may live again.
Mere grittiness a child can understand.
  Dust—and a something else. Who knows? What then?

THE WORLD OVER

Mephita Americana

We have all heard of how a healthy pair of robins, a garter snake and a few troglodyte toads will eat up all the insects on the farm if left to themselves and not unduly molested. At least such tales we read in the Country Life magazines. But now no less an authority than the United States Department of Agriculture has added to the birds, the reptiles and the Batrachians, as the farmer's best friends the good old swishtailed skunk.

The skunk's specialty is army worms, tho grubs, grasshoppers, May beetles, June bugs, cutworms, crickets, sphinx moths, potato beetles and tobacco worms are all grist to his hopper. Field mice and rats he also devours with relish. If a skunk takes up his abode near a barn, he will stay there, if undisturbed, until all the rats are gone. It is evident therefore that the skunk is a much maligned quadruped. The belief held in many districts, that his bite produces hydrophobia is a pure slander according to the United States Government. It is even claimed that only the "occasional" skunk learns to prey upon poultry. Most prefer an insect diet.

We know a celebrated biologist who once caught a young skunk and after etherizing it performed a slight operation which made it perfectly safe as a house pet. When suddenly surprized, however, the wearer of the "Alaska sable" would assume an attitude and go thru the preliminary motions that instantly caused all strange men and dogs in the vicinity to beat a hasty retreat.

If only our forward-looking farmers would follow the example of our biological friend and raise a few denatured skunks, they would enjoy not only the best insecticide outside of a drug store, but would be certain that no tramp would long infest the yard.

Saving Seals

Jo Thurber, "bos'n" of the United States revenue cutter, the "Bear," has discovered how that very valuable animal, the fur-seal, may be conserved. The race has been reduced from millions to a scant thirty thousand principally because of the starvation of the pups left ashore while the grown-ups, scouring the seas, are speared and shot by seal-fishers.

On board the "Bear" were several helpless little seals, thin and scrawny, now and then one of them dying despite the milk that was fed to them each day. In playing with a favorite pup, which gnawed at his hands with its toothless gums, Thurber accidentally snapped a ligament found across the jaws of all young seals. A day or two later he was amazed to find the same little pup devouring a fish that he had somehow secured. The discovery caused no little excitement aboard. The ligaments across the mouths of the others were broken, and where the teeth had not appeared the growth was hastened by rubbing the jaws and forcing back the flesh of the gums. These youngsters followed the example of the first in eating fish that was offered them.

About a dozen of the seals so "weaned" were shipped to the Fisheries Bureau. Bos'n Thurber's discovery may save the lives of thousands every year. But the revenue cutter crews will have to seek out each deserted seal, break the ligament and help its teething.

BOS'N JO THURBER HIS SEAL

Philippine Scarecrows

An American who has resided in the Philippines tells of a novel contrivance in use in those islands for frightening birds off the rice-fields. In a corner of each rice-field there may be seen a little house. Over the field is strung a network of bejuco, or Indian cane, much the same as that of twine strung over our cornfields at home. But the Igorrote "goes us one better." He puts his child up in the little house in the comer and keeps him pulling at a strip of bejuco, which connects with those in the field and keeps them all in motion. It is a venturesome crow that is going to fly into that arrangement.

In some places the network is kept in motion by another ingenious contrivance. Under a little waterfall a block of wood is suspended. The block is so shaped that the water, on striking it, drives it out away from the fall and, of course, down, because of the weight of the water striking it. This pulls the string connected with the network over the field. Then, of course, the block is, by the reaction, pulled up again to its former level and swung back into the waterfall, and so on, indefinitely.

Cotton Seed

There was a time, not a great many years ago, when the seed taken from cotton fiber lay in great heaps around the gins, and was worth no more than the sawdust that accumulates in sawmills. But now the seed harvested from our cotton fields in one year is worth $136,000,000. To this great sum the value of the annual product has grown in a quarter of a century from $20,000,000. After the oil has been extracted from the seed, the cake which survives crushing and pressing is serviceable as food for cattle. The by-product once ignored, or regarded as a nuisance, has increased our exports by many millions of dollars. We sold $44,000,000 worth of the oil and cake to foreign buyers in 1913.

The reduction of our foreign sales to $20,000,000 in 1914 caused inquiry by the authorities at Washington, who made a thoro investigation as to the utilization of seed taken from foreign cotton fields. From the published results of this investigation the reader may learn what has been done with the seed in all other countries where cotton grows, and how much the industry abroad owes to American machinery.

PER CAPITA WEALTH OF THE UNITED STATES

Where People Are the Richest

Americans are the richest people in the world. This was probably true before the war and is certainly true now since the richest countries of Europe are destroying property even more rapidly than lives. Various estimates before the war credited the average Englishman with $1500 to $1700 and the Frenchman with some $1400. Belgium was a close third and Germany, with about $1150, was rapidly coming up with them. But according to a recent bulletin of the Bureau of the Census on "Estimated Valuation of National Wealth," the average American is worth $1965.

How unequally this wealth is distributed is shown by the accompanying diagram, which suggests many points of interest and inquiry. It appears that as a rule the West is richer than the East and the North than the South. The agricultural and mining states of the Northwest monopolize the top places if we exclude the District of Columbia, which is supported by all the states. In such states as Iowa and North Dakota the distribution of property is more even than in New York.

The gain in the last ten years has been tremendous in the United States as a whole. In 1904 the average wealth per capita for the country was $1318.

Of course it is impossible to make an accurate valuation of real and personal property, but probably the figures are relatively correct at least. The average Iowan, then, man, woman or child, is twice as well off as a Rhode Islander and the latter twice as well off as the North Carolinian.

Magnetic Contraction and Expansion of Metals

The change of volume of various metals under the influence of magnetism, called by some writers "magnetostriction," has been carefully investigated by the Japanese physicists, Nagaoko and Honda, of the Tokyo College of Science.

The results of their investigation are curious, for the effect of the magnetization is not uniform. Steel, iron and nickel expand, while cobalt contracts. Divers other magnetic phenomena have been studied at Tokyo by Japanese investigators, and there is a very pronounced activity

Stopping the Train

What does it cost to stop a train? According to the investigations of General Manager F. W. Sever of the Cincinnati, Hamilton & Arkansas Railway it is ninety-one cents. Of course the stopping of light suburban trains costs much less and that of great, heavy expresses two or three times as much, but on the average sixty-one cents will cover the bill. The amount is itemized as follows: Thirty-one cents is expended in coal used by the engine to get the train under way again, ten cents measures the time lost by the train [illegible] to the stop, and the remaining twenty cents is wear and tear.

The Home Hamper

As a method of getting better prices for Strictly farm produce, Hal B. Fullerton, who runs a railroad company's experimental farm at Medford, Long Island, devised the home hamper idea. In substance the home hamper is a crate holding six four-quart baskets, which are filled with a variety of vegetables and fruit in season and express-direct to consumers at a price of one dollar and a half, transportation paid.

The contents of home hampers are gathered early in the morning, washed, packed in paraffin paper and express in time to reach consignees for preparation for dinner the same day. Only perfect produce is shipped and it retains its fresh-from-the-garden condition. The hamper is a carefully assorted sample package of the farm's contribution to the table. After paying express anywhere on Long Island, or to Brooklyn or Manhattan, Mr. Fullerton finds that at the price quoted he has a net profit of ninety-eight cents from each hamper, while the same produce consigned to a commission merchant would net him from four to eight cents. The same vegetables and fruit in a city market would cost them from seventy cents to three dollars more.

THE NEW BOOKS

PEACE WITH HONOR AND WITHOUT DANGER

The horrors of the Balkans did not stay, but seemed rather to whet the appetite for war in Europe. The wildfire now covers the continent and no man can prophesy when it will cease, or how far it may extend. The constant agitation in America for adequate armament for defense is wider spread and more earnest than ever before. The papers are full of it, and volume after volume is coming from the press. The question of national security is always and very properly a supreme one, for it may be that of life or death. Invasion has become a field for fiction, indeed there are now several serials in our magazines depicting possible wars on American soil and in American air and waters. *Are We Ready?* is the title of a book describing an invasion in which, after a naval battle, the enemy lands near New London and soon captures New York and Boston. The author says that experts confirm the story as entirely possible. Another, a magazine story, in book form, is *America Fallen*. In it Germany turns on us after peace is reached in Europe to punish us for non-neutrality and to redeem her own fortunes; England remains neutral because we did not join the Allies; Germany's navy is intact and far surpasses our ready fleet; our indemnity reaches billions, let alone our losses. It is a well-constructed story but rather boldly sensational. When, last summer, with hardly a week's warning, several millions of fully equipped soldiers stood in battle line and other millions were at hand, the United States had a mobile army of not more than 31,000 men and officers on its soil! Mr. Van Zile in *The Game of Empires* has reviewed the rushing incidents of the European war with all the verve of a field correspondent, bringing their warnings to our very door. It is noteworthy that in all these books on our military condition the talk is of defense, no notion of a war of aggression seems to be abroad, it is rather that of *Peace Insurance*, under which title Professor Stockton has in a business way worked out the problem of expense and considered also the problems of morality, the effect on the character of the people and soldiers, as well as the supposed opposition of labor. He does not deal with graft. This shameful feature is touched on, and also the conflict of sections and interests, in *Stultitia*, a series of live Washington dialogs, lacking finish but not lacking suggestion. Two brief and meaty summaries of the situation, both drawn from history by well-known students of war and international relations should be noted: *Arms and the Race*, by R. M. Johnston, and *The Present Military Situation of the United States*, by General Greene. The latter by its directness is very admirable, the former, with more groundwork, is stronger. Hudson Maxim, inventor and maker of implements of war and peace, writes with intensity and with a detailed practical knowledge that has forced him to choose the title, *Defenseless America*, for a significant book showing the progress of the science of war. It is because war has become clearly and completely recognized as a science, a science absorbing to its purpose many other sciences, that preparation, in the most inclusive sense, of material and training commensurate with the importance of our trust and responsibilities is now agitated. *The American Navy* has always served the country well and nobly and we are proud that it furnishes such a record as Rear Admiral Chadwick gives us. Indispensable and gallant as it is, we are often told that our navy has such a wide duty of defense that it could not safely bear the tests that might now be given it by any one of three existing navies. Neither is it equipped for modern warfare and defense. R. W. Neeser's *Our Navy and the Next War* is a serious and calm facing of present conditions, the most serious because the most broadly informing of all the books here noted. It is a statesman-like summing up after all the evidence is in. Congressmen should read it.

Are We Ready? by H. D. Wheeler. Houghton, Mifflin Co. $1.50. *The Game of Empires*, by E. S. Van Zile. Moffat, Yard & Co. $1.25. *Peace Insurance*, by Richard Stockton, Jr. A. C. McClurg & Co. $1. *Stultitia, a Nightmare and an Awakening*. Frederick A. Stokes Co. $1. *Arms and the Race* by R. M. Johnston. The Century Co. $1. *The Present Military Situation in the United States*, by Major General Francis Vinton Greene. Charles Scribner's Sons. 75 cents. *Defenseless America*, by Hudson Maxim. Hearst's International Library Co. $2. *The American Navy*, by Rear Admiral French E. Chadwick. Doubleday, Page & Co. 60 cents. *Our Navy and the Next War* by Robert W. Neeser. Charles Scribner's Sons. $1.

OFFICIAL FFFICIENCY

We have made a marked advance in recent years, as may be seen from the fact that whereas formerly we all affected to be shocked by the exposures of mismanagement in public institutions and then denounced the exposers as muckrakers, at the present time we take it for granted that things are not quite perfect and hire experts to measure the mismanagement as accurately as possible with a view to reducing it to a minimum. But the *Annual Report of the New York Department of Efficiency and Economy* is more than a record of defects. There is a large mass of material describing objectively and interestingly the organization of the state institutions for the care of the insane, delinquent and criminal, with suggestions for improvement along such lines as accounting, economy in use of material, equipment and service, the feeding of inmates, repair, etc. There are also commendations of the distinctively good features in the organization or management of the institutions, each institution having apparently some such feature, and each being also in a position to learn from the others. One gets the impression that the people in charge of this work know enough to be critical without being captious or vindictive.

Annual Report of the N. Y. Dept. of Efficiency and Economy. N. Y. State Senate, Document 37, 1915.

HANDBOOKS FOR HOLIDAYS

Mother's Day, by Susan Tracy Rice, is the latest of the useful American Holiday Series edited by Robert Haven Schauffler. Including Arbor and Flag days as well as the older festivals, these books, containing historical introductions, excellent selections in prose and verse from a wide range of writers and suggestive programs, are invaluable to all who have to do with planning holiday celebrations.

Moffat, Yard. $1.

ROAMING O'ER THE RANCH

If you're weary of the war in Europe and want to get interested in some Made-in-America scrapping, open E. M. Bower's new book, *The Flying U's Last Stand*, and you'll find yourself in the ranch-country of Montana. Besides all the old characters, such as Chip, Pink and the Little Doctor, there is a gang of claim-jumping school teachers, who keep things moving fast. It's a typical Flying-U tale.

Boston: Little, Brown. $1.50

REMINISCENCE

There are not enough books like *Memories and Musings*, by John Widdicombe, canon emeritus of Bloemfontein in South Africa. With a faculty for finding whimsicality in the commonplace, with a strong but tolerant religious conviction, with sapient comments on the London of the fifties and the veldt-life of the past quarter century, perhaps the book's first charm lies in the author's unconsciously revealed personality.

Dutton. $4

LUCK!

Is success due to luck? The anonymous author of *Getting a Wrong Start* draws such a moral. Legal dentist of the old Southwest, fattener on the boom towns of Kansas, drifting, untrained journalist and, at last, maker of best sellers, his life has been a progress, so he says, from many unlucky promises to ever lucky conclusions. Those who read his biography, however, will give credit rather to the "snap" which he treats lightly than to Dame Fortune.

Moffat. $1

GENERAL GRANT

The last decade has brought forth many biographies of Civil War leaders and perhaps no more judicial, dispassionate life of Grant has been among these late weeks than that by Lyndon Spencer Edmonds. His *Ulysses S. Grant*, the twentieth volume in the American Crisis Biographies, combines an impartial, truth-searching attitude with an exceptionally clear narrative style. His brief summary of the personal characteristics of the great general deserves especial commendation.

A PRISON THAT MAKES MEN

BY M. LINCOLN SCHUSTER

"SING SING is making men of us. Under the old system before Warden Osborne came up here everything was done to crush us. Now with the Mutual Welfare League, it is just the opposite. We have greater privileges, greater liberty, and humane treatment. Result: We have reform instead of revenge; loyalty instead of hate; hope instead of despair."

It was Sing Sing No. X3-622198 speaking—a slim, light haired fellow hardly out of his 'teens. He was seated on a rickety old fence in the prison yard, telling me about the new Sing Sing. Back of us loomed the gaunt cell block, with its grim array of tiers. In front was the Hudson, its oily surface shimmering in the dim light.

"I tell you," continued the young prisoner, "Tom Osborne has the right idea, and he's carrying it out wonderfully. He is making the state prison what it ought to be—a place not for the suppression of all that is human in us, but a place for the making of good citizens to go back to society.

"Under the old system, if you weren't a criminal when you entered Sing Sing, they made one of you before you went out. Now it's just reversed. If there's anything wrong with you when you come in, they take it out of you before you leave. And they do it, not by brute force, but by fair play and common sense."

In these words my convict-friend summed up the whole change that has come over Sing Sing within the last few months. "Change" is putting it mildly. Rather it is a revolution—a complete overturning of the accepted principles of penology. Sing Sing today is as different from Sing Sing three years ago as the American Government is from the Russian.

Thomas Mott Osborne had been for a long time a student of penology and — 1917 entered the Auburn (New York) Prison as an experimental inmate in order to get an intimate knowledge of the problem. He was chairman of the New York Commission on Prison Reform when he was appointed warden of Sing Sing Prison. It is not often that an ex-convict gets an opportunity to carry out his own program of reform, and the work that Mr. Osborne has done since December of last year is a fine civic achievement. — THE EDITOR

Precedents have been shattered; the time-worn traditions have toppled; what many persons decried as "impossible" has actually been achieved: Sing Sing is run on the honor system. It is no longer a vague dream or a fanciful experiment. It has been in actual operation, day in, day out, ever since Warden Osborne took charge of Sing Sing last December.

I spent a day at Sing Sing and went over every inch of the institution, inside and out, and I can count on one hand all the guards and keepers I saw during my entire visit. The few keepers that I did notice were lounging around, with nothing in particular to do. I saw fifteen hundred convicts eating in the mess-hall, with not a single guard in sight. I saw about ten of the prison shops run and directed solely by the convicts, with not a single "arm of the law" to watch over them. I saw the prisoners playing ball during the recreation hour with perfect freedom. I saw the Prison Band assembled in its own room for rehearsal, with no one else there but convicts and myself. I saw the prisoners hold a session of their own court, with [illegible] judges, court-clerks and a [illegible]

When you compare all this with Sing Sing as it used to be, you will realize what a tremendous revolution Warden Osborne and his Mutual Welfare League have brought about. In the old days—and they weren't so long ago, either—armed guards paced up and down the shops while the convicts were forced to work in deadly silence. Then a recreation hour was a thing unknown. But those were the days of relentless punishment and prison tyranny, the days of the lockstep and the prison stripes.

Paradoxical as it may seem, a visit to the convicts of Sing Sing will strengthen your faith in humanity. I felt that way, from the time a neatly uniformed prisoner admitted me to the warden's office, until the moment when the principal keeper locked the heavy gate as I slipt out of the prison.

Mr. Osborne gave me a hearty welcome and said that he would "begin the day's work" by having me taken around the prison by one of the convicts on the reception committee of the M. W. L. In a few seconds my light-haired young convict-friend arrived in the warden's office. He was attired in a modest gray uniform—somewhat akin to that of a subway special policeman. On his coat was the M. W. L. button, in [illegible] green and white, together with the sergeant-at-arms' badge. We walked out into the prison yard, along the mist-covered Hudson, and over toward the mess hall. My guide began to explain the new organization of the prisoners.

"There are 1700 inmates at Sing Sing now. They are all members of

BUT THE CELLS ARE STILL THERE

These abominable holes have been cleaned and painted, but they are still viciously unfit for habitation. The complete destruction of Sing Sing is urged by Warden Osborne

the Mutual Welfare League, which is the democratic, self-governing body of the prison. All the prisoners, except the invalids and cripples, are assigned by companies to some workshop or other. Each of these companies elects a delegate by secret ballot. The delegates form the board of delegates, which in turn elects the executive board of five. This board is practically the responsible governing body. Its members meet every night in the offices of the Mutual Welfare League to discuss plans, receive suggestions and to issue orders. The executive board appoints the five convict judges for each month's trial session. It also appoints the educational committee, the reception committees to handle visitors, and so on down the list.

"Any member of the league may press charges against any other member for theft, violation of the rules, or anything else that he thinks is wrong. These charges are brought up in the court, which meets every day in the chapel from four to five; testimony is taken, the accused is put on trial, witnesses appear, the judges cross-examine, and then pass sentence. When a man is found guilty he is usually suspended from the league for a few days. This is a pretty heavy punishment, for it deprives him of many cherished privileges."

By this time we had reached the mess hall. Fifteen hundred men of all ages, creeds and nationalities filled the large hall. They were seated at long, bare tables, eating Boston baked beans and drinking hot coffee. Not a guard or keeper was to be seen anywhere. A few convicts did the serving. All was laughter, fun and unsuppressed conversation. Everything seemed thoroly human. I saw none of the resentful, hateful, deprest faces that one usually associates with criminals. The prisoners here did not look awed or strange, or fearfully silent. Instead, they reacted spontaneously and normally to everything that was going on.

My guide explained: "How could you expect good character from a prisoner when armed guards, with guns or bludgeons, stood over him every second of the day, wherever he went? Under the old system the mess hall was a scene of riot and disorder, of hatred and distrust. Everything was hard rubbing against the grain. There were hawk-eyed spies and sneaky stool-pigeons. Naturally, the prisoners were always looking for a chance to 'get back' at the keepers. With that sort of feeling you could never get reform or betterment."

Now under the honor system, discipline and order are perfect. By a simple plan, the convicts' elected leaders take charge of everything in the mess hall. The end man in every third or fourth row is the leader of his company. As soon as the men in his rows finish eating, the leader or delegate walks out into the central aisle and gives the men the signal to rise. At another signal they face around and, following their leader, without guards of any sort, they quietly march out of the mess hall.

We went out into the open yard, where the boys were enjoying their ten-minute rest period after lunch—one of the privileges of the M. W. L. Most of the prisoners were neatly drest in gray flannel shirts and gray trousers. Others wore sweaters, and a few even had linen collars and bright-colored ties. Singly and in groups the boys stood around the court-yard, smoking cigarets, conversing, arguing, reading, playing ball, and what not. Some were crouched down playing checkers.

IN THE SING SING PRISON WORKSHOPS ARE EMBLAZONED

Others merely walked up and down, looking fondly over the great red-brick wall, which was sentinelled by guards with muskets. It was obvious where these boys' thoughts lay. With all the prison reform in the world the cell-bars are still a terrible form of punishment. But the new spirit of responsibility within the walls was strikingly shown when not long ago, for the first time since Warden Osborne took charge of Sing Sing, a convict escaped from the prison. Immediately the other 1600 odd members of the Mutual Welfare League passed resolutions offering a reward for the prisoner's return and vigorously condemning his breach of honor and loyalty. This is practically an unprecedented thing in prison history.

The ten minutes were up. A shrill bugle call pierced the air, and the men lined up according to their companies and marched off to the shops to begin the afternoon's work. They were still led by their own fellow-convicts.

We turned now toward the cell block, the most outstanding building on the grounds. It was built eighty years ago as a place for the wreaking of vengeance upon the state's convicts. Certainly, the men who set out to make it that achieved their purpose—and a little more besides. For of all the horror-compelling things to be seen in any of our state institutions none is worse than the ordinary cell in Sing Sing.

It is a wretchedly small affair, to be exact, seven feet long, about seven feet high and three and a quarter feet wide. It looks more like a pigeon-hole cut into the stone wall than anything else. Some of these holes have one cot; many others have two—upper and lower berth. The block consists of six rows of galleries, with two hundred cells on each, making a total of 1200 cells. Since there are 1700 prisoners, the extra ones must be accommodated by doubling up.

When you sit on the cot, which is up against the wall, your knees all but touch the other wall. But you can't sit on the lower cot unless you fold the upper one against the wall. The cots have miserable apologies for mattresses, no linen, scant covering, and bare pillows. The only other thing in the cell is the bucket, a relic of the times of insanitation. And of course the cells are dismally dark—pitch black some of them. A little light filters thru the grating of the steel gate, as well as a little air, very little. The main ventilation, so-called, is supposed to come from an opening in the back of the cell. This opening is about the size of a big man's fist!

The prison is built on filled-in land,

so that the cells are naturally damp. On some days, my friend told me, you can rub your hand against the cell-wall and find it soaking wet from the moisture. In summer the cells are bad enough, but in the winter they are really intolerable, I was told, owing to the dampness and the extreme cold. There is always a bad draft and very little heat gets up to the cells at that.

No wonder "Tom" Osborne (as many of the inmates call the warden) declared that Sing Sing is unfit for pigs. Adjectives like "abominable" and "inhuman" tell the story faintly. I can find no words to describe these cells. One minute in the cell block is more powerful than a volume of vivid description. Some of the convicts try to improve the cells a bit. Many of them decorate the walls with pictures and banners. I noticed not a few college pennants as I walked down the cell tier and peered thru the grating of the heavy doors.

The real significance of these horrible cells in the New Sing Sing is this: In spite of all the honor system and self-government, in spite of all the privileges of the M. W. L. the state prison up at Ossining is still the blackest blot on New York's records.

This is sufficient to answer the persons who assert that Warden Osborne is a sentimentalist who is making the prison an inviting place for criminals. When I told my friend that some persons were speaking thus, he gave me a brief answer:

"I'll change places with any one outside, at any time."

New York City.

"It says here that the human machine in the English language contains 148 words," observed the old fogy.

"That's wrong," replied the grouch. "The longest sentence contains only one word."

"What is that?" asked the old fogy.

"Life," replied the grouch.—*New York Evening Sun.*

EFFICIENCY QUESTION BOX

CONDUCTED BY

EDWARD EARLE PURINTON

DIRECTOR OF THE

INDEPENDENT EFFICIENCY SERVICE

Questions on health, work, business, home and everyday life will be answered by Mr. Purinton, in so far as may be possible, thru the Question Box or by personal letter. Please confine questions to one sheet. When books, institutions, manufactures, and other aids to efficiency are mentioned, they are not necessarily endorsed. The Service, being a clearing-house of information, assumes no responsibility for others.

103. Mrs. F. P., West Virginia. "My son and daughter, both at college, frequently have trouble with indigestion, and other ailments caused by it. Their health was good at home. Is there no way to ensure the utmost food-benefit even when young people are attending college?"

Nearly every large college employs a gymnasium instructor, or physical training director, who is supposed to be qualified as a dietetian. But if such an official is not available, send us a daily menu of meals and between meal bites indulged in by your son or daughter, and we will diagnose it in these columns when space permits. Lewis B. Allyn of Westfield, Massachusetts, has done pioneer work along this line; he might suggest a publication of value. Dr. Roger I. Lee, professor of hygiene at Harvard University, has undertaken a pure food campaign, we are told, for the benefit of Harvard students. Write and ask him how to obtain the published results of his work. Address Cambridge, Massachusetts.

104. Mr. C. J. W., Oregon. "Is it safe for a man of fifty, much overweight, and not in the best of health, to take up a system of exercise by mail instructions, from an athlete who is not a graduate physician?" I need the exercise, but am opposed to running risks."

You would do well to have a thoro examination by a skilled physician, particularly as to heart, kidneys and blood-pressure. Learn if your vital organs are sound before subjecting them to undue, or at least unaccustomed, strain. For a man of your age a gymnastic method without heavy weights or violent movements would be preferable to sudden exertion of any kind.

105. Mr. P. R. G., Chicago. "The following problem concerns a large number of business men. We have found that certain of our employees—clerks, bookkeepers and others—make it a practise to work on outside lines, evenings and holidays, to increase their revenues. I have in mind especially one clerk who makes and sells fine cabinet-work in spare time, another acts as agent for magazines, etc. How do you regard this practise? Should it, or can it, be forbidden by the company? Does it not react badly on the business of the employer and the health of the employee?"

A simple Yes or No is seldom the correct answer to any human problem—too many factors are involved. An accountant, bending over statistics all day, might be a carpenter several nights a week—and both he and his employer gain. But an accountant could not be a teacher of accountancy at night without impairing his work and imperiling his health, as he would be overtaxing the same group of brain-cells required in his daily occupation. Almost any large business, run properly, could utilize the spare time of ambitious employees, on a pay system satisfactory to both; and it would seem only fair to request employees to consult the employer before undertaking

Back of the MAZDA Lamps that light your home stands a Service the like of which the world has never seen—scientific research organized and carried on for the purpose of making electric lighting better, and even more inexpensive than it is.

Centering in our Research Laboratories at Schenectady, where scores of experts delve into many fields of science, MAZDA Service seeks always for new ideas in illumination, new materials and new methods of manufacture.

And when these are tested and approved, they are at once transmitted to our manufacturing centers at Cleveland and Harrison, and to other manufacturers entitled to receive this Service, for embodiment in the MAZDA Lamps they make.

And so when you see the Mark of this Service—that word MAZDA—etched upon a lamp, you may be sure that lamp sums up the latest efforts of the world's ablest lamp investigators.

THE INDEPENDENT

outside work. You cannot prohibit such enterprise, however, unless you have a check-up method which proves the quantity and quality of each employee's daily output of sales, duties or responsibilities. Then if night work depletes efficiency you can rule against it, or establish a system of rewarding your man for spare-time effort in your own business, the latter course being the wiser one.

106. Mr. E. N. S., Vermont. "My physician forbids me to eat starchy foods. I am very fond of cereals, and believe they are good for me, as I do a large amount of brain work. Can I obtain by parcel post, from New York or elsewhere, grain foods that are suitable for diabetics?"

You can. Write the Pure Gluten Food Company, 90 West Broadway, New York; also the Lust Health Food Bakery, 105th street and Park avenue, New York; also the Health Food Company, Lexington avenue and Twenty-third street, New York. You will find an assortment of gluten flour, bread, zwieback, wafers, breakfast foods, and other anti-diabetic products.

107. Mr. L. V. H., Pennsylvania. "Is there any way to prevent the wrong use, or actual theft, of one's ideas for improving business? I have often made suggestions for increasing the efficiency of my department, but invariably the chief or some other employee has taken advantage of my ideas, either gaining the credit and ultimate promotion, or bungling my plans so that they could not be used. How can I protect myself?"

Keep your mouth closed. The originator of ideas, like the originator of inventions, has no recourse against the pirate who steals the product of his thought. The original man is apt to be overgenerous and overtalkative. Think enough of yourself and your advancement to refrain from telling anybody your ideas. Many department chiefs are jealous and suspicious of their clerks, fearing loss of position and supersedence by an underling. Put your ideas into brief, dignified letters to the secretary or some other high official of your company. If your plans are good, you will find a hearing and gradually win promotion.

108. Mr. C. F. W., New Jersey. "How can a large work-room in an old building be ventilated so as to give perfect circulation without drafts?"

By leaving windows open a foot or so at the top (less in cold weather), six inches or more at the bottom, and attaching to bottom sashes an outfit of patent deflectors which turn the air current upward and prevents the inflow of "drafts." A revolving shuttle is also made, for insertion in the top sash, the force of air then the aperture keeping the shuttle in motion. A good architect or builder should be able to furnish details and specifications.

109. Dr. E. B. M., California. "I am a firm believer in the control of most ever malice, and have traced many physical diseases to mental causes. But I cannot recognize many of the prescriptions in the popular cults of the day, which have no regard for common hygiene or experience. Often I would recommend books of optimism and inspiration to my patients, but fear to put delusions in their minds. Can you name a few writers on practical psychology whose teachings are healthy and sane?"

You would probably be interested in the writings of Professor William James, Dr. Paul Dubois, Dr. O. S. Marden, Dr. Hamilton Drummond, James Allen, Horace Wood, Ralph Waldo Trine. These may do well, so far as we know, perish may call on you, but rather aim to put the individual in command of himself that [illegible] and use of his own mental and spiritual powers.

110. Mr. V. A. F., Massachusetts. "I [illegible] a race of bankers, my parents and grandparents having taught me many things. I planned to become a [illegible] and studied with that in view. On graduating I [illegible] to a business house that [illegible] operations, but [illegible] with school work. Should I take such a position, or push for a [illegible]?"

On general principles we should say take the position and push yourself [illegible]. Fate has a habit of sending us what we need. We don't [illegible] [illegible] sunken the pearl of [illegible] the whole system of education in America

is the fact that most of our teachers never did anything but teach, hence never came in touch with real life as found in the shops, factories, streets, homes, clubs, and other gathering places of ordinary people. If you can spend a year in rubbing up against actual conditions of the present world, your future work as a teacher will be greatly enhanced in value.

111. Mr. W. C. H., Missouri. "Will you kindly send me any information which you deem valuable for me, as the man at the head of a department in a large chemical works? I shall be very grateful to you."

The journals and other publications of the American Chemical Society, Hey 506, Washington, D. C., are considered standard and by experts in your field. The Librarian of the Chemists Club, 50 East Forty-first street, New York, would probably give you further information as to books designed to serve your purpose.

112. Dr. J. B. R., Pennsylvania. "You would oblige many physicians and not a few chronic sufferers by selecting, to a hospital, or a book, offering the latest investigation as to the cause and cure of cancer. This is one of the most painful problems in the experience of the best doctors, and as many people dread the affliction, whether rightly or wrongly, a word on the best authorities would be deeply appreciated."

One of the most informing books on the subject of cancer is that by Dr. William Seaman Bainbridge. This contains advice for both physician and layman. The U. S. Census Bureau has recently undertaken a system of research and investigation covering the whole subject; probably you would learn how to obtain the results, on application to the Bureau. An original method of treating cancer has been evolved by the head of the New York Skin and Cancer Hospital, Second avenue and Nineteenth street, New York. This includes, besides medication and surgery as needed, factors of sunlight, ozone, perfect mastication, the omission of dietetic stimulants and all other excesses, in short the regulation of the life habits whose disturbance aggravates the growth of abnormal cell tissue.

113. Mrs. H. C. B., Long Island. "Can you recommend a graduate of an approved modern cooking school, who might come to our home and instruct our two daughters, also our maid, in the science and art of hygienic marketing and cooking? Are there any colleges, women's clubs, or other institutions providing a mail course in this and other branches of Domestic Science?"

You might arrange with the School of Household Arts, Teachers College, Columbia University or the Boston Cooking School, or any other of recognized standing, to have a graduate act as tutor in your family. For answer to your second question write Mrs. Winnifred Harper Cooley, care of *National Food Magazine*, 45 West Thirty-fourth street, New York. Also get announcement of American School of Home Economics, Chicago.

114. Mr. D. L. A., New York City. "My chief talent is in writing verse, and I want to make this my life-work. But my poems do not sell, and as my means are limited, all my endeavors must count financially. Must I go into some line for which I am not fitted, or is there a way to earn a living by aid of a gift of rhyme?"

With some technical training, you could probably furnish advertising jingles and catch-phrases for an advertising agency, manufacturer of a product having national distribution, or company controlling the space of street-cars, bill-boards and other large advertising mediums. The newspapers in leading cities, particularly the morning ones, often buy topical verse describing a local or national current event in a bright or humorous way. Some such "pot-boiling" exercize may serve to keep your muse in trim while your experience grows and character develops.

What makes a real poet is not the "gift for rime," but the depth of feeling under it, breadth of view beyond it, sense of pain, sublimity and hope thru and around and above the expression in words. All you can expect to do for years is to keep the rhythmic faculty in tune, while your message is crystallizing from your knowledge of life. The true song is of sympathy, and sympathy is of experience.

E. K. STRATTON, Secretary.

THE MARKET PLACE

THE SEAMEN'S LAW

The United States Chamber of Commerce has asked for the opinions of more than 700 American chambers of commerce and boards of trade concerning the new seamen's law, which is driving American ships out of the ocean trade or causing them to seek registry under the British flag. The Dollar Company sold two of its Pacific ships at Vancouver last week, and the Pacific Mail's boats are soon to be withdrawn from the Pacific route. It is said that American freight carriers on the Great Lakes must take British registry or go out of business, and passenger boats there may be unable, under the new law, to meet Canadian competition. The "Minnesota" arrived at Seattle last week with the largest cargo—hemp, tea and silk—ever carried across the Pacific, and is about to sail for Vladivostok with another great cargo, including 10,000 tons of steel rails, but that will be her last trip under our flag. Resolutions adopted by the American Asiatic Association a few days ago, an association including the chief American exporters and importers doing business with eastern Asia, say that "the so-called La Follette bill" (meaning the seamen's act) not only makes the rehabilitation of our merchant marine impossible but will cause a transfer to foreign registry of many vessels now flying the American flag. They also urge reconsideration by Congress of the provisions of the new law, to "relieve our shipping interests from the disastrous consequences which they are entirely united in declaring must attend the execution of this ill-conceived and hastily considered piece of legislation." Similar action has been taken by many trade organizations.

The law will go into effect in the first week of November. It is unfortunate that Congress will not be in session until a month later. If it were in session now we believe that the law would promptly be amended.

COTTON

Many estimates of this year's reduction of cotton acreage have been made. As a rule they were excessive. It is shown by the Government's report, recently issued, that the cotton fields now cover 31,233,000 acres, the smallest area since 1909, and that the reduction made was 5,871,000 acres, or a little more than 15½ per cent. For some time after the beginning of the war, it will be recalled, our cotton growers were in an unfortunate plight, having a record-breaking crop on their hands, with foreign markets virtually closed. They were advised and urged, last year, by Government officers and others to make a large reduction of acreage for this year's crop. The reduction of 15½ per cent is equivalent to about 2,500,000 bales. The condition on June 25 (80.3) is higher than the ten years' average.

While the crop will be much below last year's, the growers will have all they can sell. Exports have recently been declining. In September last they were almost nothing. They soon began to grow and they reached the summit in February and March. In those months the average weekly shipments exceeded 300,000 bales. But for some time past the quantities going out have been small, about 50,000 or 60,000 bales a week. We cannot sell to Germany or Austria, and the Allies now have large supplies on hand. Fortunately the domestic demand has improved. But the part of the old crop carried over will be great, and it cannot reasonably be expected that prices will be higher than they are now. If the growers need help they can get it without difficulty, for there is much idle money in the banks, where reserves are very large. The Federal Reserve Board has appointed a committee, whose chairman is W. P. G. Harding, to inquire as to the condition of the planters and to make plans for giving them financial aid.

GREAT FOOD CROPS

Crops reports continue to show how fortunate our country is in the food products of its soil. Last year's record-breaking crop of wheat gave a great surplus to be exported at high prices to nations engaged in war. And now, with the war still making an abnormal demand, we are beginning to harvest a wheat crop much larger than that of 1914. Because of the war, and of the high prices due to it, our farmers increased the acreage of their crops. The recent July report of the Government shows a wheat yield estimate exceeding that of June, and there are some who think a crop of a billion bushels is in sight. From the winter-sown plants we are to have 668,000,000 bushels, and a gain of 21,000,000 in the month raises the estimate of spring wheat to 295,000,000. Here is a total of 963,000,000, with which may be compared a ten years' average of only 686,000,000, and last year's unprecedented yield of 891,000,000, which exceeded by 128,000,000 the largest crop in the past.

This report is the first in which corn appears, and corn is the largest and most valuable of our grain crops. The condition of the corn fields is not high (84.2), but an increase of the planted area by nearly 6,000,000 acres must not be overlooked. There is promise of 2,814,000,000 bushels, a crop exceeding the ten years' average and is 90 than last year's by 141,000,000. The condition of the growing oats improved in June, and 111,000,000 bushels here

The Speed of the Daily

is closely approached by The Independent, with the fine printing of the Weekly and a National reach and influence not provided by the Daily Newspaper. Swift National service for the Advertiser with a Big New Story to tell.

been added to the estimate of one month ago, making 1,260,000,000 bushels, which almost equals the highest record and exceeds the crop of 1914 by more than 153,000,000 bushels.

For nearly all the other crops the forecast over last year's yields are indicated. Barley rising from 194,000,000 bushels to 205,000,000; rye from 42,000,000 to 48,000,000; flaxseed from 13,500,000 to 16,000,000, rice from 23,000,000 to 30,000,000, and tobacco from 1,054,000,000 pounds to 1,105,000,000. But the quantity of white potatoes will be slightly reduced.

The increase of our exports of food was a great factor in making that $1,000,000,000 excess of exports over imports for the fiscal year just closed, which has been the subject of much pleasurable consideration. In the eleven months that ended with May we sold and shipped to foreign buyers $1,724,000,000 worth of foodstuffs, against only $781,000,000 worth in the corresponding months of the preceding year. Here was a gain of $443,000,000 which could not be ascribed to ammunition, guns, or other things used in battle. The outward movement of such food supplies cannot be checked for a long time, not even by the restoration of peace, and we shall be able to spare all that foreign nations may want to buy.

COST OF THE WAR

Within the last few weeks several estimates, official and otherwise, of the money cost of the great war have been published on the other side of the Atlantic. F. D. Acland, financial secretary of the British Treasury, said at a public meeting that the cost to Great Britain was $150 a second, or $12,960,000 a day. Lloyd George's average, recently made known, was $10,500,000 a day.

Asking for a credit of $1,250,000,000, Premier Asquith, in the House of Commons recently, said that England's war expenditures for some time to come would not be less than $15,000,000 a day. From April 1 to June 12 they had been at the rate of $13,300,000 a day.

Edmond Thery, a well known French economist, says the military expenditures of the Allies for the first year of the war will be $10,000,000,000, and those of Germany, Austria and Turkey $7,400,000,000. This is an average of $1,440,000,000 a month, $48,400,000 a day, and $2,000,000 an hour. The French Minister of Finance has said in the Chamber of Deputies that the cost to France in April was $500,000,000. Japan's Minister of Finance recently reported to the diet that Japan's expenditures for the war had been $50,000,000.

The following dividends are announced:

American Chicle Company, common, 1 per cent, payable [illegible].

CRITICISM HAS BEEN A BLESSING

In the official organ of the fraternal society known as the Court of Honor I find the following observation credited to Judge George W. Allen, of some one of the district courts of Colorado, quoted with approval and, to the editor, of such seeming value that he "cannot conquer an inclination to pass it along":

If you want to destroy a fraternal society and want it to go out of existence before that day—the death day—when you expect your wife and children to receive these benefits, why, criticize it; find fault with it; object to what your officers do? Circulate these criticisms among your neighbors, your associates and your fellow members, and the time will soon come when all the hope of realizing benefits from what you have paid in will vanish and the society will be no more.

As I view the subject, Judge Allen regards the situation too seriously. As a matter of fact, such progress, such improvement, as fraternal insurance has made is founded on the adverse criticisms unsparingly leveled against it in the past. No business—and after all the sentiment is exhausted, it is a business—ever started out with a bigger stock of fatuity than did that. Even tho its promoters believed the propositions they formulated—and some of them did not—they were false and, pursued, were bound to result in disaster to those who shared in them. As it is, the insurance chances of hundreds of thousands of men who believed in them, and clung to them, have been irretrievably ruined. There is no eleventh hour repentance scheme in life insurance.

Fraternal life insurance has not been destroyed by criticism. Those societies which are now dependable have been made so by it. Criticism has been their salvation. As applied to every effort, fraternal insurance included, if correct, nothing in the way of criticism can injure it; if it is wrong, it should be criticized and thereby either made right or destroyed.

THE PRUDENTIAL

Now that the Prudential Life Insurance Company has become a purely mutual organization, it is gratifying to note the action recently taken by its management in severing the relations heretofore existing between its directorate and that of the Fidelity Trust Company of Newark. We are told by President Dryden of the Prudential that one of the objects sought in retiring the stock of that institution was the severance of the interdependent stock relationship which then existed between the two companies, and the removal of representatives of each from

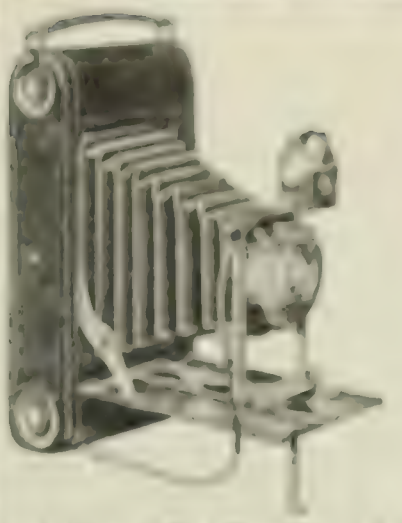
the board of the other. This has been done. The stock of the Fidelity Trust, held by the Prudential, has been sold, and the Prudential stock owned by the Trust company has been retired. Likewise, the boards of both have been cleared of members representing the other.



A. B. M., 310 King street, Charleston, S. C.—There is no better life insurance company in the world than the one you name.

H. W., New York City.—There is no Pittsburgh Life Insurance Company. The Pittsburgh Life and Trust Company has an office at 1125 Broadway.

C. A. M., Hannford, Mo.—There is no discrimination in rates against women. You are correct in believing that women should make a wider use of life insurance than they do. That field is subject to much greater development.

C. F. W., Parker, Ariz.—It is impossible to predict the future of comparatively new companies. The one you name belongs to a class of about 200, many of which in my judgment will undergo reorganization or reinsurance. Your company is entirely solvent, altho its assets are of comparatively small volume. It has made reasonably satisfactory progress since it commenced business and seems to possess a management of average ability. If your policy is on the non-participating plan (instead of the deferred dividend plan, which the company also writes) you need have no apprehension, for you have the protection at a reasonable cost.

C. B. K., Warren, Ind.—Your work will consist almost entirely in soliciting applications for insurance. Your principal object will be to earn commissions. Query: which is the easier to sell, the policies of an old company with an established record, thousands of policyholders and tens of millions of insurance in force, or one just starting on its career with its reputation to make? I can give you one solid fact of truth in this connection: In proportion as an agent's company is known in a community, his work is made less difficult. Much time is consumed in talking about a small or an obscure company that should be used in convincing the prospective applicant to act at once. Your chances of success are better with the older of the two companies you name. Now as to participating as against **non-participating plans: all conditions** equal, the participating policy is superior, viewing the question in the light of the insured's interests. Why? Life insurance is an expense; for the sake of security, its charges are inflated; the surplus is restored at the end of the year; and, according to the measure of each company's managerial ability, the net cost is brought to a minimum. The mutual company's loading **is much heavier than that of the non-participating company**, that is to say, its **rates are higher. We are to assume that** the mutual gives back all the savings it makes on premiums, and that the net cost **is reduced to the actual. The non-participating policy**, at a lower gross rate, yields **nothing in the way of dividend. But the** stockholders of the company earn dividends on those lower premium rates. It is obvious, then, that a mutual as well managed could attain a net cost equally as low and that **the policyholders in the latter would get** their insurance cheaper than those in the **stock company by the amount paid stockholders.** But the conditions are not equal. **There are different grades of company management** resulting by comparison in many **instances, in lower net cost thru non-participating** insurance. Each in skilled hands, operated to the best advantage, gives the palm of superiority to the participating company. Given a participating and a non-participating company, and a skilled management for the latter as against one of average ability for the former, and the non-participating company will show better results. It is, therefore, a question of companies, and you must choose.

WRITING THE PHOTOPLAY

THE HOME CORRESPONDENCE SCHOOL

Department 103, Springfield, Mass.

FROM STATE TO STATE

ARKANSAS: A remarkable difference of opinion as to the value of aluminum property has been exhibited in the case of the American Bauxite Company, whose works are located in Saline County. The county assessor originally fixed the value of the company's holdings at $47,000,000. The Board of Equalization cut the figure down to $2,500,000. The Saline Circuit Court then reduced it to $637,000, and now the State Supreme Court has ordered that the assessment be entered at $492,000, which the company claims is as it should be.

DISTRICT OF COLUMBIA: An exhaustive brief in support of continuance of the half-and-half financial plan of the District will be submitted in August by a citizens' committee to the joint committee appointed by Congress to investigate fiscal relations between the local and federal governments. It will sum up the history of the national capital from its foundation to the present time, showing all money contributions of the two governments, and giving complete data as to comparative assessment and taxation and as to property exempted from taxation. The expense of this large undertaking is met by voluntary contributions from citizens.

IDAHO: This state was one of eight which this year voted to submit the question of constitutional prohibition to the electorate. Pending the people's action, however, the Legislature provided the most drastic statutory prohibition ever attempted in the United States. It makes even the ownership of liquor a misdemeanor, and, on second offense, a felony.

INDIANA: More than seven hundred farmers in seven of the southwestern counties of this state were recently interviewed by representatives of *Farm Life*. With very few exceptions these farmers either owned automobiles or were expecting to own them in the near future. Interviews with dealers in these counties showed that sales of cars thus far this year have been about double those of the corresponding period of last year, and that fully three-quarters of the purchases are being made by farmers.

MAINE: With a view to determining whether there really is any relation between the external conformation of a cow and her milk production, as many dairymen contend and, if so what conformation indicates the best milk producer, Dr. Charles D. Woods, director of the Maine Agricultural Experiment Station, has begun accumulating data in the form of measurements of individual cows whose milk production is known. These measurements, forty-eight in number, include both the absolute and the relative sizes of nearly all parts of the body. Many breeders in different parts of the state and students in the College of Agriculture of the University of Maine are cooperating with Dr. Woods. That the results suggest that certain characteristics which have been supposed to indicate superiority are of no value. When these proportions are carefully measured instead of merely judged by the eye it is found that they are almost exactly the same in all kinds of cattle, regardless of milk production, or even of breed.

MASSACHUSETTS: University extension work in this state having been placed under the direction of the Board of Education, Commissioner Sneddon is preparing to unify the new work with the old. As the Springfield *Republican* points out, it has always been the policy of Massachusetts to be most generous and helpful in the matter of providing educational advantages for her people, and in pushing extension work the state board is assured of the cordial coöperation of the colleges thruout the commonwealth. Members of their faculties can be utilized not only to get the best of teachers, but by serving the vicinage the expenses of transportation can be made relatively small. There are also the teachers of the normal and textile schools to be drawn upon.

MICHIGAN: The first attack in the United States Supreme Court on the constitutionality of the federal income tax has been made by John F. and Horace Dodge of Detroit. Three main reasons are given for claiming the surtax provision of the law to be invalid: (1) that stockholders of corporations are subjected to liability for profits which the corporations have not divided; (2) that the Secretary of the Treasury is given arbitrary power of determining, without a hearing, whether a corporation has accumulated more undivided surplus than it reasonably needs; and (3) that corporations are favored over individuals and partnerships by being permitted to withhold from surtax taxation such part of profits as are necessary for the needs of the business. The Federal District Court in Michigan has held the tax to be valid.

MISSISSIPPI: As a result of the large meeting of home demonstration agents of Mississippi, recently held at Jackson, interest in the formation of home-work clubs has been greatly stimulated thruout the state. A number of demonstrators (men and women) from the Department of Agriculture at Washington were present, and the demonstrations and suggestions they made were inspiring as well as informatory to the local agents. Now clubs for encouraging home and farm work are forming all over the state and older ones are taking on new vigor. Home canning and pooling clubs are rapidly increasing because the fruit and vegetable crops this year are so abundant that the local markets are greatly glutted.

NEBRASKA: [illegible] are likely to be engaged with questions arising from the merger which recently made up Greater Omaha. In some of the outlying districts which were taken into the city the local officials, as a final act, made long-time contracts with many employees, and now the question whether these contracts are to be carried out by the greater city is dividing the legal fraternity and promising the courts much to do.

NEVADA: With the aid of funds appropriated by the Federal Government, the University of Nevada is to undertake a series of experiments in pumping irrigation thruout the state. President A. W. Hendricks of the university, who has been studying the subject for a long time, has finally convinced the Federal authorities that $8000 can be profitably spent on this experimentation.

NEW YORK: The Committee on Conservation in its report to the Constitutional Convention at Albany recommends making the Conservation Commission a constitutional department, with a single head to be appointed by the Governor and removable by him for cause only. It favors that portion of the present constitution which provides that all state lands within the forest preserve be kept forever as wild forest lands, but adds a proviso that dead timber may be cut, fallen timber removed, camp sites leased, roads and fire trails made and public hospital sites located. It also favors the taking of private lands for reservoirs to provide municipal water supplies, for the regulation of the flow of streams, or for water power purposes when a public necessity. An important amendment recommended provides that any citizen may bring an action to compel the authorities to enforce the conservation laws.

NORTH CAROLINA: With a view to furnishing profitable employment for boys during the long summer vacation, North Carolina is setting large numbers of them, at work on the roads. Under competent road engineers and under pay from the state, boys between fourteen and eighteen are engaged in building and repairing roads. It is argued that they thus live in the fresh air, learn lessons of cooperation and initiative, as well as the science of road building, and are rendered much less likely to form bad habits than they would be if merely killing time then the summer

NORTH DAKOTA: When the Legislature made this year's appropriation for the State Tax Commission it was supposed that a bill providing for a new commission would be passed. Therefore salaries for only one commissioner were appropriated. But the bill failed and the three commissioners were continued in office. Now the attorney general has ruled that the only way out of the difficulty is to divide the pay as they were among the three commissioners, all of whom are drawing on the work, or they will resign and [illegible] have to go to the courts.

OHIO: Fifteen hundred merchants of Cleveland have joined in what is called the "Save While You Spend" campaign. It is said that the system has been found, in other cities, to be good for the merchant while encouraging people, especially women and children, to save. A local savings bank issues aluminum checks in denominations of from one-half cent to fifty cents. These are sold to merchants, and by them given to their patrons at the rate of two per cent on all purchases. The checks are good only for deposit at the savings bank, but there they are received, in amounts of one dollar or more, as cash for the opening or continuing of savings accounts, on which four per cent interest is paid. It is said that under this system many persons who have never thought of opening savings accounts have been induced to do so.

OREGON: The people of Oregon are deeply interested in the brief recently filed by the Federal Government in the Supreme Court of the United States in the land grant cases, involving vast and valuable tracts in Oregon and California. The Government alleges that about 800,000 acres of a grant of 31,000,000 acres to a railroad to be constructed from California to Portland were disposed of in violation of the conditions of the grant. The suit is to recover the remaining 23,000,000 acres.

RHODE ISLAND: On a quarter-acre of land which four years ago produced only weeds, Ephraim Morley, a Providence expressman, has a wonderful orchard. There are forty-five varieties of plums, sixteen of apples, thirteen of pears, seven of figs, five of cherries and one almond nut tree. All these, excepting the fig trees, are bearing abundantly this year. On the same quarter-acre every inch of which is used, are strawberry beds which in season produce daily from fifty to sixty quarts of the finest varieties, some of the berries measuring six inches in circumference; a vegetable garden supplying a family of seven persons; a patches of English gooseberry bushes bearing fruit nearly two inches long; and a flower garden containing many rare and some unique ones. Cantaloupes, Belgian etc. Dwarfing, grafting and intensive system have made all this possible in so small space.

SOUTH CAROLINA: [illegible] is known as the Longest Sitting Committee of Conference, by reaching a signature [illegible] way by [illegible] the [illegible] [illegible] from the Ohio and Mississippi rivers [illegible] to the Lowcountry. Congress [illegible] that those rivers [illegible] to other ports that [illegible] plaint South Carolina is [illegible] one of the [illegible] [illegible] which [illegible] would be glad to [illegible] [illegible] [illegible] that [illegible]

"Ancient history closed at midnight of July 31, 1914." So The Independent a year ago began its story of the Great War. The event may appear that we are no nearer the new history of democracy and peace today than when these words were written, the year has been the most momentous of the new century. The end of twelve months sees fighting—indecisive, as it has been thru all the war—on four fronts. If we could superimpose the eighty-eight war maps we have already printed, and telescope the several hundred news stories and special articles into a single number the resulting product might be too concentrated for comfort but would present a fairly complete account of the war. We shall try to do the same thing, however, in a more direct way. A special series of maps summarizing the great campaign, a series of tables presenting the war's results statistically, and authoritative articles reviewing the year and discussing the present aspects of the struggle will be included in a special War Number next week.

Why are American families smaller? James McKeen Cattell, the editor of *Science*, the *Popular Science Monthly* and *School and Society*, contributes to an early issue an article, enriched with many diagrams, on "The Causes of the Declining Birthrate."

Mr. W. F. Dix, author, editor and financier, has written for The Independent another little study of business psychology. It is entitled "Why Does a Rich Man Work," and he really tells.

REMARKABLE REMARKS

HARRY THAW—I am done with Broadway.

WILLIAM JENNINGS BRYAN—I am glad to be home.

SAMUEL GOMPERS—We are trying to avoid strikes.

COUNT OKUMA—Calamities arise more often from within than from without.

WOODROW WILSON—In public affairs stupidity is more dangerous than knavery.

COBBA HARRIS—As for woman—she needs a lot of adding to and subtracting from.

HENRY FORD—Thrift is one of the cornerstones on which manhood must be constructed.

WILLIAM J. LOCKE—I could give up tobacco and alcohol and clean collars and servants, and everything you could think of—but not dreams. Without them the world is but a sort of backyard of a place and with them an infinite garden.

FIRE DEPARTMENT—Many [illegible] have been [illegible] [illegible] [illegible]

Unmistakably the Select Car

Everywhere, even in the most congested traffic, the closed car stands out distinctively. It cannot be hidden: its character and the type of man who owns it are unmistakable.

The closed car owner belongs to a select class. He is one of those men who, afloat, have their private yachts. And his car indicates his appreciation of finer things, and also expresses his personal taste. For the closed car of thoro quality is an exclusive creation– not copying others, but especially planned to meet its owner's individual preferences.

Both the personally-driven sedan and the chauffeur-driven limousine provide an all-year comfort, good cheer, and distinction not possible in an open car. To the family accustomed to touring cars, the closed car offers the only remaining new delight in motor car enjoyment. That's why the purchase of a sedan or limousine is the finest contribution you can make to the happiness and sense of well-being of those you hold dear.

We can create for you a Winton Six closed car precisely as you want it. That takes time, of course. If you delay ordering, you must content yourself with a stock model. So, make your selection ***now***, and let us give your personal requirements the most exacting attention, and guarantee delivery to you before the first nip of the earliest frost.

Prices are unusually attractive. $3250 and $3500. A card from you will bring full information.

A MOBILIZATION OF BRAINS

THAT IS WHAT SECRETARY DANIELS CALLS HIS NEW ADVISORY BOARD OF CIVILIAN INVENTORS AND SCIENTISTS WHO WILL GIVE THEIR SERVICES TO STRENGTHEN THE NAVY FOR DEFENSE. EDISON HAS ACCEPTED THE CHAIRMANSHIP

THE HOUR HAS COME

THE rules of international law adopted at the second Hague Conference in 1907 are not in vogue in the present war. Montenegro, forsooth, did not ratify them!

The rules of international law laid down by the first Hague Conference in 1899, however, prevail. They have been ratified by all the forty-six sovereign civilized nations of the world.

The last two sentences of Article III of the Convention for the Pacific Settlement of International Disputes, adopted at the Hague Conference of 1899, read as follows:

> Powers strangers to the dispute have the right to offer good offices or mediation even during the course of hostilities.
>
> The exercize of this right can never be regarded by one or the other of the parties in conflict as an unfriendly act.

These are the solemn words of international law binding on all nations alike—belligerents and neutrals. It is obvious, then, that the warring nations can make no valid objection, if the neutrals assemble together to discuss questions concerning the rights and duties of neutrals, the conduct of the war, the terms of peace or the basis of a lasting peace.

Not only can the warring nations offer no objection to such a course, but the neutral nations, according to the first paragraph of Article III, should "on their own initiative and as far as circumstances may allow, offer their good offices or mediation to the states at variance."

The United States has heeded this injunction. It offered mediation to the belligerent nations at the beginning of the war. Mediation was not accepted.

A full year has gone by.

Six million men have been killed, crippled for life, wounded, or captured.

For every one of these men there are loved ones at home living in the agony of despair.

Countless women have been ravished.

Children have been mutilated and starved to death.

Thousands of square miles of territory have been laid waste.

Over seventeen thousand million dollars have been spent in the destruction.

And the stupendous holocaust has apparently but begun.

In the face of this doom of civilization shall the sane portion of the human race sit silent and supine waiting for the conflagration to devour itself?

It is time for the United States, the greatest of the neutrals, to act again. Let the President invite all the neutral nations to come together in a conference at Washington or The Hague. Let the Conference sit in continuous session till the war ends.

At first the Conference would probably not offer mediation. The belligerents are bound hand and foot by the fear that any discussion of peace on their part at this time would weaken their case before the world. The Conference would begin perhaps by trying to come to some agreement on the rights of neutrals. It would then be ready to proclaim principles. Definite proposals would follow. In proportion as these were wise the governments and public opinion of the world would be moved. And they would be wise, for the nations would have to act unanimously or not at all, and if unanimously it is inconceivable that thirty nations could agree upon anything foolish. Finally, some proposal would be accepted. Mediation would naturally follow. That would be the beginning of the end.

Signs are multiplying that the belligerents will not be averse to the calling of such a conference. Certainly public opinion in the United States is strongly veering toward the idea. Besides, the conflict as it now rages endangers each neutral state. If a neutral attempts to defend its rights singly, it is in real danger of being drawn into the conflict.

It is the high duty then of the neutral nations to concentrate their united wisdom and power on the task of ending the Great War. They owe it to themselves and to humanity.

The Hour has come.

GERMANY'S COOL ASSUMPTION

THE narrow escape from a German torpedo of the Cunarder "Orduna" does not indicate any gratifying change in German naval policy. There were more than a score of American citizens on board; and their lives were saved apparently only by a miscalculation on the part of the submarine's commander. But the attack does effectually dispose of one of the main defenses set up by the German Government. For the "Orduna" was bound for New York and obviously carried no ammunition or other instruments of death to be used against the soldiers of the Fatherland.

At the same time the German note apologizing for the torpedo attack upon the American ship "Nebraskan" indicates that Germany, sincerely or willfully, does not understand what we are talking about. The apology is based upon the statement that the submarine's commander made an unfortunate—but entirely natural—mistake. For, it is explained, it was so dark that he could not make out the vessel's nationality and therefore acted upon the presumption that she was British.

Here appears the same cool assumption that has characterized the statements of the German policy since the first one last February. It is assumed that a German submarine may legitimately sink without warning and without regard to the safety of the noncombatants in passengers and crew any British merchantman sailing the waters about the British Isles.

This is in flat contradiction of the principles of international law and the customs of civilized nations prior to the announcement by Germany of its "war zone" policy. It is flatly opposed to the practice of the Allied fleets. It has no good warrant in law, in custom or in humanity.

In dealing with merchantmen belligerent ships have but one primary right; and it makes no difference whether the merchant ship is neutral or enemy. That is the right of "visit and search." The warship may stop the merchant ship, send an officer aboard to find out her nationality, her destination and the nature of her cargo, and, if she be an enemy ship or a neutral ship bound for

an enemy port with contraband in her cargo, seize her and take her into port. If for any reason it is impossible or dangerous for the warship to take the prize into port she may be sunk, provided that the safety of passengers and crew are first assured.

There is no such thing known to civilized maritime warfare as sinking a merchantman on sight. There is no such thing as sinking a merchantman without warning. There is no such thing as refusing to give the crew and passengers of a merchant ship a chance for their lives when the ship herself has to be destroyed. And it makes no difference whether the merchantman is enemy or neutral. In either case the rights of passengers and crew are identically the same.

The United States therefore has precisely the same right to denounce and to demand reparation for the killing of American citizens on a British ship as for the sinking of an American ship. Germany has already admitted our right in the case of American ships. She must admit it in the case of American citizens on British ships.

Her contention to the contrary is not civilized warfare—it is something else.

MAKING EVERY VOTE COUNT

HOW would you like to be *certain* every time that you vote for a member of your town council that your vote will not be thrown away? How would you like to be *certain* that you will have some one in the town council who is your representative because you voted for him?

Under present arrangements, you know, unless your man is elected, your vote is thrown away, and until the next election to the council comes around you are unrepresented.

But there is a system under which you can be certain—seven-eighths certain, that is, which is a pretty high degree in this uncertain world—that your vote will help to elect somebody.

The city of Ashtabula, Ohio, is to have on August 10 an election to decide whether it shall adopt this system. Ashtabula has already adopted a fine type of municipal government, the commission-city-manager plan. The new plan does not go into operation until next fall, but already a group of citizens are proposing to add to it this further improvement, which is known as proportional representation.

Like the old ward system of election the new one allows the voter but a single vote. But, unlike that outworn system, it does not select councilmen from geographical constituencies. Like the election-at-large system common to the more modern and enlightened plans of city government, it abolishes ward lines. But it introduces the principle that each man's vote shall be used to elect only one councilman.

The voter's task, under proportional representation, is simplicity itself. Confronted with a ballot containing the names of, say, a dozen candidates for the seven places on the council, he puts the figure 1 opposite his first choice, the figure 2 opposite his second choice, and so on as far as he cares to go. Counting the votes is more intricate. But even here the principle is perfectly simple. The voter having been allowed to express as many choices as he pleases, his vote is counted for the highest choice on his ballot that it can help to elect.

In the case of a seven-member council, a candidate is elected as soon as he has received one more than one-eighth of all the ballots cast. This number of votes is called the quota. In counting the ballots the first choices are first taken into consideration. If any candidate has received his quota out of the first choices, he is forthwith declared elected, and the ballots—equal in number to the quota—which have elected him are laid aside. Any additional ballots on which he appears as the first choice are then distributed among the other candidates according to the second choices on them. If any candidate has then reached the quota he is elected and the ballots which have elected him are laid aside. His surplus ballots are then distributed among the remaining candidates according to the third choices on them. At the same time, after the second count, the lowest candidate is eliminated and his ballots apportioned among those who remain, in the same way as the surplus ballots of those elected. When seven candidates have each received his quota of votes the council is full and the count is over. It is clear then that not more than one-eighth of all the ballots cast can be ineffective in electing *somebody*. Whereas under existing systems of voting it is entirely possible for a half or—since we permit election by a plurality instead of a majority—more than half to be thrown away.

Proportional representation is complicated to describe and difficult to understand from mere description. But it is perfectly simple to vote under it; and the counting of the ballots is a much easier process in operation than the casual reader would be likely to suppose.

Its advantages are overwhelming. It makes every vote—except for that small remainder of not more than one-eighth—count. It gives every councilman a unanimous constituency. By requiring the support of a different quota of voters for the election of each member of the council, it makes it impossible for any party or faction to elect a majority of that body by concentrating its vote on four candidates and takes the government of the city out of politics. It gives any minority or group comprising more than one-eighth of the voters of the city a chance to be represented in the council.

It perfects representative government by giving every voter almost a certainty of having his vote help to elect a representative. It extends democracy by strengthening the power of minorities and curbing the possible tyranny of a majority. It is a further step away from ward politics, machine rule and the dominance of the boss.

SANITY AND INSANITY

A JURY decided that Harry Thaw was insane, and that saved him from the electric chair. A few years later another jury decides that he is sane; but nobody believes he is any more sane now than he was when he murdered Mr. White, or, to put it otherwise, nobody believes he was any more insane then than he is now. When they declared him insane it was argued that he had inherited the taint of insanity. He certainly has not lost it since then.

It is not for us to declare that the present jury has erred; but it is pretty clear that either now or then the jury did err, and the reason why they did err is a very serious matter. It was money that did it, money that saved his life then or that set him free this time, as far as the jury could do it. Had it been a poor man who

had slain White he would probably have been convicted as guilty of murder. We do not mean to imply that there was any corruption of the court or jury; not at all. The jury did their best; but hundreds of thousands of dollars were spent in the efforts of the counsel to save the slayer. The purpose of the counsel is not to present the truth, but to persuade, or even mislead and deceive, the jury. Money will hire able, eloquent and skillful lawyers who can pervert the minds of twelve plain, common men, not too shrewd, and make the worse appear the better reason. This case shows, and shows sadly and dangerously, what money can do. Money could not do anything coarse or visibly corrupt. It is much to the credit of our jurisprudence that money could not prevent long detention with the criminally insane, but it could once save the criminal's life, and again claim his freedom. It could get so-called experts to declare him first insane and then sane, and eloquent and astute lawyers to secure and present the evidence desired and pervert it if required. This is a very serious case, and it is one that demands the attention of legal associations, to consider what legislation may somewhat equalize the conditions and privileges of rich and poor. It has often been suggested that expert testimony has come to be such a disgrace that a body of experts should be appointed by the courts to whose impartial decisions questions of insanity should be left, instead of buying testimony for and against one who makes this defense.

JAPANESE ETHICS

WE are in receipt of a special cablegram from our representative in Tokyo, announcing that the Government of Japan has united with the leading merchants and bankers of the empire to take immediate and effective measures to relieve the sufferers from famine in China owing to the great floods that have just killed over 10,000 Chinese and devastated great areas of land.

It will be remembered that ever since the recent ultimatum of Japan to China, certain parts of China have maintained a rigid boycott on all Japanese goods. As a result untold disaster has already befallen both Japanese and Chinese traders.

These heathen Japanese do not seem to know any better than to return good for evil.

FIFTY SCHOLARLY YEARS

IT is to the credit of British literary life that it long ago created a school of weekly journalism, sober, solid, powerful, centralized on books and literature, yet purposeful in politics and science and sociology, even as books cover these and all other fields; journals heedless of the floating gossamers that float by daily, and appeal only to thinking people who despise display heads and sensationalism. Such are the *Spectator* and *Saturday Review*, to mention only the English type, but not to omit the *Athenæum*, which differs from the others in being more strictly bookish. After this pattern was started *The Nation* fifty years ago.

But *The Nation* was not English, even tho Mr. Godkin, its editor, was born an Englishman; his associate was Wendell Phillips Garrison, who had taken over from the office of The Independent, as later was Paul E. More. It was a new thing in American journalism, founded by idealists, men whose purpose was to know and then tell exactly what they believed to be the truth about both books and public policies, fearing nobody, favoring nobody, exposing all wrong and pretense, and seeking the most competent authorities for its reviews of books, and so appealing to the universities for expert judgment. It never had a large circulation, but it had an immense influence, for it speedily became the most trusted literary authority in the country, and taught criticism to other journals. We connect it in thought with Johns Hopkins University, which after a European model taught our colleges what a university should be.

Yet it was its ethical spirit that was its most marked character. It fought every political evil, and was a stout defender of the liberated slaves in the difficult times of reconstruction. Not a religious journal—for Mr. Godkin was no orthodox believer—half its subscribers were clergymen, and the other half college professors and other men of culture and influence. With all its sharpness and conscious superiority, and with all the enmity it aroused, it set the standard and men waited for its decisions, for the best equipped men were its writers. Its palmiest days of influence were in the first half of its history, when it had few rivals, and before it was combined with the New York *Evening Post*, becoming in fact the weekly edition of that able daily, which then made Mr. Godkin its editor. If its cynicism has not always made virtue attractive, it has at least faithfully made vice odious in public life, and pretentious ignorance despicable; and we congratulate it on half a century of valiant service to patriotism and culture, and are glad to know that its present less close reliance on a daily journal is adding to its independent strength and success.

THE HANGING OF THE HAMMOCK

THE fine art of lying in a hammock is dependent upon the precedent and practical art of hanging it. The sailormen who bequeathed it to us should have endowed us with their skill at knots and hitches, for it is not so easy as it seems to tie the rope so it shall not sag down the smooth tree trunk in the course of long swinging. We assume that it is a tree, for posts and fixed hooks destroy the essence of the hammock, which is its mobility. It is the one form of bed with which we moderns can perform the miracle of taking it up and walking. A hammock that must stay in one place is little better than a brass bedstead with lost castors. The custom of slinging the hammock slantwise between porch posts cannot be too severely condemned. For one thing, a visitor can never make a dignified approach to the door when he is striding over or she is sneaking under a network entanglement. For another thing, it destroys half the pleasure of lying in a hammock to look up into a sky of smoothly matched pine boards. The only proper canopy is the green spread of tree branches or of trellised vines.

But even such a canopy has its faults owing to the bothersomeness of the sun. You stretch your hammock so that cool time will come when the leafy shade falls densest, but before long a ray of light comes flickering thru. You pretend that it is an accident due to a passing breeze that rustles the foliage above. But by and by you catch the sun again looking straight into your eyes. This time you realize that it is no accident, but an intentional

rudeness, so you move your head over a bit to avoid it. But the rude ray follows until you have reached the verge where a further shift would disturb your bodily equilibrium and involve your overthrow. You pray for the power of a Joshua, but it is not the compelling prayer of faith, for this is an age of science, and ever since Galileo proved that the sun does not move nobody has been able to stop its moving. Perhaps in compensation for this loss of power to work miracles science may invent a heliostat hammock with one end attached to a moving post regulated like a telescope by a clock to revolve as the sun moves and keep it always in the shade.

A delicate point in the hanging of a hammock is the hight. It must be swung low enough that the children can get into it without falling out and breaking their worthless little necks. It must not be so low that father, who has to put two pennies into the slot machine to get weighed, will bump the ground in his swing. To get the hight right involves the solution of the formula of the catenary, so that the lowest point in the curve shall not become tangent to the plane beneath whatever the weight and however it may be distributed. For it is embarrassing to find too late that the hammock is not fixed to carry double. And if, on the other hand, you hang it with that contingency in view, he may not come at all that afternoon.

The head of the hammock should be fifteen degrees higher than the foot. A clinometer may be used to determine the angle if necessary. Within reach of the higher end place a chair with something cool to drink and a magazine or two. Select for this purpose a magazine with a pretty girl on the front cover. Then it won't matter whether you read it or not.

THE GERMAN STRATEGY

GERMANY'S first plan for the war was a failure. It was to make the speediest rush across Belgium to Paris, and thus crush France before attacking Russia. But Belgium spoiled that plan. She clung to the side of the Germans, as a mastiff does to the side of a bear, and delayed them till France had time to gather her forces. Meanwhile Russia attacked Germany and Austria in the rear and compelled the Teutons to divide their attack.

Germany's art of war, and her supply of munitions, and the ease with which she could move and mass her armies, made it easy for her to drive back the Russians, but as soon as she turned her face again to her foes in the west, back the Muscovite would return and snap at her heels. That could not be endured, and now the second revised plan of the war has been adopted. Germany leaves a depleted army to withstand in their trenches the French and British enemy, while England is held back by lack of artillery. Germany puts her main force on the utter breaking up of the Russian campaign. She is planning now to crush Russia first and completely. Not satisfied with driving the Russians back into their own land, she will follow them up and disperse their armies. She will leave Russia helpless, and will then, it would appear, turn to Italy and leave Italy as helpless as she expects to leave Russia. Then she can, with no enemy in the rear, bring her overwhelming forces to bear on the western campaign.

And why not? Mainly because this only possible plan of campaign is a terribly costly one. It means a fearful attrition of the Teuton army. Germany and Austria have not a limitless supply of human material, and this the Allies practically have, but it takes time for them to gather their men and their munitions. They were not ready for a sudden war as Germany was. That speed is Germany's hope: speed in her first plan of war, now speed in the crushing of Russia, and then of Italy, before gathering every last fighting man for the last conflict in the west. Meanwhile swifter and larger submarines, and heavier Zeppelins, and shorter bombs will oppose the armies and fleets of Britain and France; for this is not a war of weeks like that of 1870, but of years, as it now seems, to the exhausting not of men alone, but of all the devilish appliances of remorseless science within the bounds of earth, sea and air.

TAKE-IT-BACK DAY

IN accordance with our American system of doing everything in concert at a set time we have been accumulating "days" until it seemed that even Leap Year would not suffice to contain them all. The Pilgrims, who had conscientious scruples against any kind of set holidays, started us off on the downward path with their Thanksgiving Day, on which we have to think up something to be thankful for. The Fathers followed with Independence Day, when we listen to an address on corruption in politics instead of to the Declaration. And now we have Columbus Day, when we remember who found us out; Arbor Day, when we plant a tree that doesn't grow; Dandelion Day, when we remove the suffraget badges from the lawn; Mothers' Day, when we wear a white carnation; Fathers' Day, when we wear a rose and everybody asks why; Swat-the-Fly Day, when we slay a few thousand without perceptibly reducing the muscatory population; Labor Day, when we all knock off work; Moving Day, when we exchange addresses; Old Home Day, when we write why we can't come; Good Roads Day, when the Governor takes a shovel and puts in an honest day's work; Go-to-Church Day, when we send the family; Tag Day, when we submit to hold-ups from amateur bandits for some unknown cause; Flag Day, when we celebrate a British victory; Self-Denial Day, when we take tea without sugar, thank you; Tin Can Day, when we clean up the backyard if we live in the region of the iron ration; New Year's Day, when we make good resolutions; Valentine's Day, when we receive insults in bad pictures and worse verse; All Fools Day, when we recognize the fact—and there are others which we have momentarily forgotten but which we shall be reminded of when the time comes.

It would seem that there is no need for another, but there is. The Student Council of Pennsylvania College at Gettysburg have invented it and we call upon Congress to make it compulsory thruout the country. It is Take-It-Back-Day, and on that date all borrowed articles are to be returned to their owners. If it goes into effect we shall have to expand our expansible bookcases, and how we shall rejoice to see our old friends once more, especially the Encyclopedia Britannica, limpsy slimsy edition, which vanished from our office one night. We shall have to buy a new umbrella-stand and start a deposit in another savings bank. But would we have to take back everything we have ever said that wasn't so or other people didn't like? Better get a ruling from the courts on that point before the Take-It-Back Day movement goes too far.

THE STORY OF THE WEEK

The Russian Campaigns

After the check and retreat of the Austrians between Krasnik and Lublin a brief lull in Poland was broken on July 14 by a series of German attacks north of Warsaw, compelling the Russians in the Shivka Valley to retire to their second line. The next day the Germans reoccupied Przasnysz, a fortified place fifty miles north of Warsaw which had already changed hands twice in this war. Russians posts at Franziskowa and Osowa, south of the Niemen River, were also taken. These operations meant much direct gain for the Germans in that quarter, and also restrained the Russians from pressing their advantage in the south until the Austrian army there could be rehabilitated. Consequently, on July 16 the latter force resumed the aggressive, along the upper Vistula River, at Sokal in northern Galicia, and on the Dniester River on the Bessarabian border. Thus Hindenburg at the north was aiming at Novo Georgievsk and Mackensen at the south at Brest Litovsk, planning thus to surround Warsaw at the east and cut it and Poland off from Russia.

Another German advance was made at the extreme north by General von Bülow, with the great port of Riga as its immediate and possibly Petrograd itself as its ultimate objective. Moving on a sixty-mile front between Libau and Schavli, with their left wing in touch with the fleet in the Baltic, the Germans crost the west Russian province of Kovno and entered the Baltic province of Courland, reaching the further side of the Windau River, eighty miles from Riga. The Russians presented no serious resistance to this invasion, it seeming to be a part of their plan to permit the German advance thru that largely German country, until the lines were so extended and weakened that they might easily be broken by a counter attack.

It was announced on July 14 that the prevalence of cholera at Lemberg had compelled the German-Austrian army to withdraw from that city.

Turkish Troubles on Land and Sea

The Allies on July 13 made a gain of 200 yards on the Gallipoli Peninsula, and continued their bombardment of the inner Dardanelles forts. Between that date and July 15 much severe fighting occurred. General Hamilton drove back the entire Turkish line 400 yards; during the following night the Turks rallied, attacked the British right, and regained the ground which they had lost; and again, after fighting all the next day, the Allies drove the Turks back and reoccupied the trenches. Two hills among the defences of Krithia were captured by the Allies, with 4000 prisoners.

In the Black Sea, Russian torpedo boats attacked the new Turkish batteries at Zunguldak and destroyed two steamers and several sailing colliers. A Russian submarine sank a Turkish steamer at the entrance to the Bosporus and also several sailing vessels. Still more important was the announcement on July 16 that Russian warships had destroyed the German submarine known as "U 51." This famous vessel had made the trip from the North Sea to the Black Sea. She left Wilhelmshaven in May, coasted the British Isles, evaded the British blockade at Gibraltar, traversed the Mediterranean, and passed thru the Straits to the Euxine. On her way up the Dardanelles she destroyed the British battleships "Triumph" and "Majestic," and probably some other British or French vessels; and on reaching Constantinople her captain, Otto Hersing, received the Order "Pour Merit" for the longest submarine voyage ever made. This boat had a surface displacement of 1930 tons, a speed of twenty knots, a steaming radius of 4000 miles, a fuel

THE GREAT WAR

July 12—Thirty-five French aeroplanes raid German station. Germans resume activity in Poland. Italian cavalry raid suburbs of Trieste.

July 13—French aeroplanes make reconnaissance over Essen. Italian aeroplanes bombard Görz. German thrust toward Verdun checked. Parliament thanks General Botha for conquest of German Southwest Africa.

July 14—Violent fighting in Argonne Forest. Germans reoccupy Przasnysz. Troops leave Lemberg because of cholera. Allies make gains at Gallipoli.

July 15—Germans cross Windau River in Courland on their way toward Riga. Russians sink German submarine "U-51" in Black Sea. Rumania refuses to pass Turkish military supplies across her territory.

July 16—French aviators bombard Germans at Chauny and German aviators bombard French at Gerardmer. Italian King and Prime Minister hold council at the front.

July 17—Germans pressing on toward Riga. British merchant ship "Orduna" reaches New York after evading German submarine attack like that on "Lusitania." Italians repulse Austrian attack northwest of Trent.

July 18—Italians advancing at Cadore. Germans aggressive in Poland and Courland. German and Austrian troops massing near Rumanian frontier.

Paul Thompson

IN AN ENGLISHMAN'S HOME

Fear of asphyxiating bombs dropt from sailing Zeppelins has led to the purchase of many such contraptions as this, which are kept ready against the evil day

supply for three months and an armament of one 3-pounder and one 15-pounder rapid fire guns, four tubes and fourteen torpedoes.

The most severe blow to Turkey, however, was the positive and final refusal of Rumania, on July 16, to permit the violation of her neutrality by the shipment of military munitions across her territory from Germany to Turkey. There was already a serious shortage of ammunition in the Turkish army, and the impossibility of securing further supplies caused much discouragement and an inclination to seek peace separately from the Teutonic Allies. Germany and Austria-Hungary exerted all possible influence upon Rumania to secure the passage of munitions, and on July 18 were reported to be massing troops on her frontier.

Attitude of the Balkan States

Despite Rumania's refusal to permit the passage of military supplies for Turkey, the attitude of that kingdom toward the war in general remains undefined to such an extent that the Russian Government has deemed it prudent to make elaborate fortifications in Bessarabia along the Rumanian frontier. Bessarabia is the Russian province which formerly belonged to Rumania, and which Austria-Hungary has offered to restore to her if she will aid the Teutonic empires to defeat the Czar. On the other hand, Austria and Hungary hold Bukowina and Transylvania, which Rumania also covets, and which Russia has offered to give her in return for her aid against Austria-Hungary and Germany. Apparently Rumania has determined to pursue a policy of "watchful waiting" to see which side will win.

The Bulgarian Minister of War disclosed during the week strong pro-Teutonic sympathies and inclinations, and a confidence of Teutonic victory in the war. The German party at Sofia also caused the arrest, on a charge of criminal conspiracy, of Mr. Genadieff, the former Minister of Foreign Affairs, who had recently urged that Bulgaria should join Serbia and the other Allies.

In order if possible to determine the course to be pursued by the Balkan States it was arranged that at an early date there should be a conference, at Athens, of the kings of Greece, Rumania and Bulgaria.

Battling in the Alps

The Austrians began the week with vigorous attacks and attempts at invasion of Italy in the Carnic Alps, but were repulsed. The Italians made counter-attacks in the direction of the Drave River, seeking to isolate Trent from Austria save by the way of Innsbruck. Hard fighting occurred at Krensberg and Kellerwald, in which Austrian attacks were repulsed but no gains were made by the Italians. Northwest of Trent a strong Austrian attack was made in the Upper Val Camonica, but it too was ineffective.

Italian cavalrymen made a daring raid to within three miles of Trieste, and in consequence the Austrians proceeded to remove all prisoners and tribunals from that city to Gratz, the capital of Styria. On July 17 a squadron of Italian aeroplanes at a flight of 1000 yards bombarded the Austrian encampments at Caro, in cooperation with terrestrial forces. The King of Italy remained at the front, and there on July 18 held a council of state and of war with the Prime Minister and the Chief of the General Staff. An Austrian submarine on July 18 sunk the Italian cruiser "Giuseppe Garibaldi," near Ragusa.

On the Western Battle Lines

The week began with a desperate struggle between Arras and Lens, in which the Germans regained the position in the Souchez cemetery which the French had taken a few days before. The French retaliated on July 13 by checking and driving back the Crown Prince's army at Argonne. The latter force on July 14 struck strongly at the Verdun-Paris railroad at Ste. Menehould, seeking to relieve the pressure on the St. Mihiel wedge; with heavy losses but indecisive results. Two days later the German advance seemed to be checked and the French captured Hill No. 285. Elsewhere along the lines from Artois to Lorraine there were frequent but undeterminate engagements. The week closed with three German attacks, in the Forest of Parroy in Lorraine, in the Argonne Forest, and at Ban-le-Sapt in the Vosges; all of which were repulsed. The Germans reported that the French in the recent fighting at Arras had lost 12,000 men in killed, wounded and captured.

Aerial activity was maintained. Thirty-five French aeroplanes on July 12 rode a wind blowing forty miles an hour, dropt 171 bombs of 120 pounds each upon the German station and stores at Vigneulles-les-Hattonchatel, started several fires and returned unscathed. The next day ten Allied aviators bombarded the German military depot at Ghent, and French aviators made a reconnaissance over Krupp's works at Essen. Another French air raid was made between Douai and Lille. The Germans on July 16 dropt bombs upon French troops at Gerardmer, in the Vosges eighteen miles south of St. Die, while Frenchmen bombarded and set fire to the German station at Chauny and destroyed a barge in the Oise Canal.

Germany's Loss in Africa

The complete conquest of German Southwest Africa on July 9 was preceded—tho the fact was not known until later—by the capture of Ngaundere, an important town in the heart of the German Kamerun, presaging the speedy conquest of that great colony with an area of 191,000 square miles and a population of 2,540,000; the last remaining German colony except German East Africa. The loss of German Southwest Africa was

TO PARIS BY OX-CART

The horse—in civilian harness—has almost disappeared from France. To take the place of the animals that have been commandeered the lowly ox is once more coming into his own and may even be seen on the streets of Paris

the most serious of all, for that was the most prized of all German colonies and the one which had cost Germany most to acquire and hold. A part of it, Angra Pequena, was Germany's first foothold in Africa and thus the foundation of what it was hoped would become a great African colonial empire. In the Boer-British war German Southwest Africa was made the base of many plots against Cape Colony, and there were expectations that in case of Boer success in expelling the British from South Africa that German colony would become the "predominant partner" in a German-Boer confederation which would in time be resolved into a German colonial empire occupying all of South Africa. These expectations were disappointed, but when the present European war began they were revived. German Southwest Africa was again made the base of anti-British operations, and an insurrection in British South Africa against British rule was organized and fomented there.

But General Louis Botha, the leader of the Boers in their anti-British war in 1900-2, was now the loyal British Governor of the Union of South Africa. He took the field in person, suppress the insurrection in the Union, and then in February marched to the conquest of that German colony which he had looked to as his potential ally against Great Britain. The soldier-statesman who once coquetted with German Southwest Africa as the basis of a German Boer Empire now practically annexes that region to the British Empire.

The State of the Belligerents

Germany was confronted on July 15 with the grave menace of a strike of the workmen at the great Krupp gun and machine works at Essen, their demand being for higher wages and fewer hours of labor. Three days later the peril was at least temporarily averted by the making of some concessions to the men. Social Democratic agitation against the war increased to an alarming extent, and in some places troops had to be employed to suppress or to prevent rioting. There were even rumors of an impending proclamation of martial law thruout the empire. According to German statistics the general cost of food in Berlin increased about 69 per cent between May, 1914, and May, 1915. In Vienna the increase was from 83 to 167 per cent. The German Government on July 16 prohibited the further use of cotton for cloth-making, all supplies of raw cotton in the empire being needed for military purposes. The last reserves, up to forty-five years of age, were called to the colors, and men suffering from some physical disabilities were placed on guard duty in order that the more robust might be sent to the front. It was estimated by the British that Germany had lost at least twenty-nine and possibly thirty-five submarines since the war began, and that she had not more than fifteen Zeppelin airships fit for service. A deputation of bankers was reported to have warned the Emperor of the danger of national bankruptcy, and he was said to have replied that the war would end in October.

France on Bastile Day, July 14, had a great patriotic demonstration centered about the removal of the remains of Rouget de Lisle, the author of the "Marseillaise," to a tomb in the Hotel des Invalides. Wreaths of crape were placed upon the Paris monument to the city of Lille, now occupied by the Germans, precisely as they have since 1870 been placed upon the Strasburg monument. President Poincaré declared that the war must go on until the future was made secure. The National Congress of the Socialist party of France on July 15 unanimously affirmed "unshaken confidence in the cause of the Allies and Republican France" and demanded "The liberation of Belgium as well as justice for Alsace and Lorraine." General Gallieni, military governor of Paris, forbade the use of any alcoholic liquors by the officers and soldiers of the garrison of that city.

In Great Britain men formerly rejected for physical disability were accepted as recruits. Yet Lord Lansdowne on July 13 declared that not more than 440,000 British troops were at the seat of war. The need of increasing the effective field force and also of increasing supplies of munitions led on July 17 to a vast demonstration in London of women from all parts of the United Kingdom, led by Mrs. Pankhurst, proclaiming their readiness to undertake the manufacture of ammunition, in place of strikers or to enable men to go to the front. The new munitions law was applied on July 13 to avert a strike of miners in South Wales, but the men were defiant and on July 15, 150,000 of them went on strike, against the advice and urgings of the chief labor leaders. A system of state insurance against damage by air craft raids was announced on July 13; and the Canadian and Newfoundland governments provided for a patrol of their coasts to prevent the establishment of a German submarine base. In the domain of finance alone the British outlook was encouraging. The Chancellor of the Exchequer on July 13 announced that the new war loan of $3,000,000,000, the largest in the history of the world, had been fully subscribed. Consols and old war loans converted would increase the total to $4,500,000,000. Yet bankers confidently declare that Great Britain could thus provide $5,000,000,000 a year for several years.

United States Interests

American implication in war controversies continues. The German Government on July 15 sent to Washington a note nominally apologizing for the torpedoing of the American steamship "Nebraskan," but justifying the captain of the submarine on the ground that the "Nebraskan" was flying no flag and had no neutral sign on her freeboard and therefore was not to be distinguished from a British ship. This was practically a reassertion of Germany's right to torpedo British merchant vessels without the visit and search required by international law and practise, and was thus a direct defiance of the United States, and was regarded as likely to increase the tension between this country and Germany over the "Lusitania" massacre. The unfavorable impression thus created was intensified on July 17, by the knowledge that on July 9 a German submarine had attacked, without visit and search or warning, the British merchantman "Orduna," carrying many American passengers, the circumstances being practically identical with those of the "Lusitania" (but the ship escaped).

It was disclosed on Thursday (but on June 29 the Austro-Hungarian Government had protested to the country against the sale of military supplies to the Allies), it was subsequently an-

planned, at the inspiration or with the backing of Germany, but in the interest of humanity. The American reply has not yet been made, but will doubtless be a denial of the Austrian demand and a vindication of the neutral policy of this country.

The American Government on July 17 notified Great Britain that the rights of Americans in British prize courts were to be based upon international law and not upon municipal law or Orders in Council. Similar notice had already been served upon Germany. The British Ambassador at Washington in a dispatch to his Government strongly approved and supported the American demand.

After detaining twenty-eight cotton-laden ships consigned to neutral countries and provoking the American Government to the consideration of a note of earnest protest, the British Government on July 16 announced that for the present, and without committing itself to a permanent policy, it would regard cotton as non-contraband of war. It would, however, seek to limit the exportation of cotton from the United Kingdom.

Labor Disputes

In Bridgeport, Connecticut, where the Remington Arms Company is enlarging its plant by erecting new factories and other buildings on a tract of 100 acres, because of its orders from the Allies for small arms and ammunition, there is a curious strike which threatens to spread thru New England and prevent work in many factories that are making war supplies. It began several weeks ago with the bricklayers on the new buildings. This dispute was adjusted, but it was followed on the 13th by a quarrel between two unions. The millwrights were hanging shafts when the carpenters insisted that they must join their union. They consented, and then the structural iron workers protested, saying that their union was the one that the millwrights must join. The carpenters objected, and the ironworkers went on strike. There was no disagreement with the employers about wages, hours or work conditions. The carpenters refused to accept arbitration by President Gompers of the Federation of Labor. Nothing could be done by the Remington Company or the contractors who were constructing the buildings. In a short time the machinists employed in the factories were drawn into the controversy. They have been joined by other unions, and a strike is now promised that will close the arms and cartridge factories, with twenty-one shops in the city that are working for the Remington Company on subcontracts. It is also feared that the Winchester Arms Company at New Haven, and many other concerns working on war orders in southern New England cities will be affected. The Remington contracts alone are said to amount to $150,000,000. Since the beginning the issue has been changed. The strikers are now to demand an eight-hour day and a minimum wage.

The manager of the Remington Company is Major Walter G. Penfold, who retired from the Ordnance Bureau of the army to take this position. There is "not a shadow of doubt," he says, as to the cause of the original dispute; it was "the work of Germans or of German sympathizers." He produces evidence that attempts were made to bribe officers of the bricklayers' union, and he asserts that two men connected with that union received $2,000 in New York from persons who desired to cause trouble in Bridgeport. President Gompers says that some of the labor leaders have been approached by men who desired to prevent the exportation of war supplies. Such efforts, he adds, will be guarded against in the future, ferreted out and repudiated. Since the ironworkers revolted at Bridgeport there has been a strike at the work, in the same city, of the Lake Torpedo Boat Company, which is building seven submarines for our Government.

A strike which tied up the trolley lines of Providence and other cities in Rhode Island was quickly settled last week when the union and the company accepted arbitration. Each side is to have one representative, and the third member of the board is to be Mr. Gainer, the Mayor of Providence. Higher wages are sought. A similar controversy awaits adjustment in Albany and Troy. As a result of the recent arbitration award in Chicago a wage increase of $1,250,000 a year is to be paid.

Buying War Supplies

Among the new war industries [illegible] is one for the manufacture of typewriters. The Underwood Company, which is at work on an order of the same kind, [illegible] contracts call for nearly $4,000,000. England has bought 200,000 tons of steel rails, 125,000 from the Carnegie Company, and 75,000 from the Lackawanna. The same Government is negotiating for 200,000 tons more. It is reported that Russia on the 10th placed a contract in Pittsburgh for $25,000,000 worth of munitions. The factory and underwear mills in or near Philadelphia are busily engaged on army orders, many of them for France. A visit to New York for commissions disclosed an order for $947,000 worth of picric acid. It is asserted that a $10,000,000 order for fuses to be used with shells has been distributed among several manufacturers of typewriters.

Since the beginning of the war 249,257 horses and 82,972 mules have been exported, the value of these shipments having been about $60,000,000. Agents of England, France and Italy are still buying horses, and it is said that Secretary Garrison may direct the attention of Congress to the depletion of our supply. He has accepted the resignations of Lieutenant Colonel Harris and Major Phillips, both of the army's Ordnance Bureau, to whose positions with war order companies have been offered. They are experts in the installation of machinery for the manufacture of guns.

and ammunition. The Secretary says that the factories they are to build may in the future be of great value to the Government. Secretary Daniels has accepted the resignations of two naval constructors whose services were sought by shipbuilders.

Inventors to Advise the Navy

Thomas A. Edison, at the invitation of Secretary Daniels, has consented to become the head of an advisory board of civilian inventors and engineers which is to be associated with a Bureau of Invention and Development soon to be created in the Navy Department. In a long letter to Mr. Edison the Secretary commended his patriotic determination to devote his great inventive genius to warlike subjects only in response to the call of his own country. The navy was greatly in need, he continued, of machinery and facilities for utilizing the natural inventive genius of Americans to meet the new conditions of warfare. There should be a Bureau of Invention and Development to which ideas and suggestions or inventions could be referred. While much good work in the way of inquiry and experiment had been done by naval officers, they were burdened with other duties, and there was no particular place or body of men charged with such service. He felt that public interest and support would be promoted if the department could have the aid of a man whose inventive genius was recognized by the whole world. But he could offer as compensation only the thanks of the navy and of the nation. Mr. Edison promptly accepted, responding, as he said, to a call to duty.

Several men will be associated with him. In conference with Mr. Edison the Secretary selected them, but at the end of the week their names had not been given to the public. Those most prominently mentioned were Orville Wright, inventor of the aeroplane; Alexander Graham Bell, inventor of the telephone; Charles P. Steinmetz, chief engineer of the General Electric Company; Simon Lake, whose name is associated with torpedo boats; Hudson Maxim, expert in explosives; Henry Ford, the maker of automobiles; Professor R. A. Fessenden, of Yale University; John Hays Hammond, Jr., inventor of devices for controlling torpedoes by wireless telegraphy, and Nikola Tesla. Several of these have recently made public statements of their views as to the navy's needs and the tendencies of warfare. The problems which the board must criticize are mainly those presented by the submarine, the flying machine and the protection of battleships. Mr. Daniels will ask Congress to give the board a legal status and to make appropriations for experiments on a large scale.

Unfortunate Mexico

They are still fighting in Mexico, but reports sent by the two factions do not agree. Obregon's army drove Villa northward some weeks ago, and Villa gathered his forces at Aguascalientes. Then this town was taken by Obregon, and Villa sought a resting place at Zacatecas. From that city he was driven to Torreon. While this retreat was admitted, his agents declared that he had moved southward and had captured Leon, Silao and Irapuato. Two days later it was announced that he had gained possession of Queretaro, only 167 miles north of the capital. All this appears to have been true, but the work was done by Fierro, with 3000 cavalry. He went around Obregon's forces and cut the railroads and telegraph lines between the Carranza army and the capital. This movement may compel Carranza's commander at the capital, General Gonzales, to send troops northward. But Fierro has only a small force and cannot look to Villa for support.

There has been some improvement of conditions at the capital, but only a little food has been received from Vera Cruz. Complete demoralization of the currency has forced business houses to close their doors. Zapata has cut off the water supply. His men dynamited a train bearing civilian employees of Carranza's Government from Vera Cruz to the capital, and shot those who tried to escape from the wreck, killing thirty-five and wounding fifty. Zapata's headquarters are only forty miles from the city. A Carranza gunboat was prevented from bombarding Guaymas, on the west coast, by the protest of Admiral Howard, who is at that port with a cruiser of our navy.

Huerta has been removed from the jail in El Paso to Fort Bliss. He sent to the prisoners in the jail $200 worth of cigars and candy, with a letter in which he said: "When you obtain your freedom all you have to do is to come to me and say 'I was a prisoner with you,' and it will be enough to guarantee your comfort for the rest of your life." General Pascual Orozco, who was arrested with Huerta, but who escaped from his guards, has not been found. He forfeited his bail. Letters produced at the court hearing show that Orozco had made plans for a movement in Mexico, had sufficient capital, and was relying upon the "tolerance of the Washington Government." At Huerta's request, his family and servants, thirty persons in all, have left the rented estate on Long Island and gone to El Paso, where, he says, his home is to be.

Both Carranza and Villa are seeking the favor of President Wilson, but there is no indication that he is inclined to aid either of them.

Cleveland Plain Dealer

Philadelphia Public Ledger

"WHEN WILL YOU GET TO THE POLE?" — "ELECTED"

THE NOTE THAT FAILED

FROM STATE TO STATE

ARIZONA: State officials lately discovered a new scheme which has been worked in many parts of the state for violating the prohibition law. It was noticed that the demand for a certain brand of canned tomatoes was exceptionally extensive altho the price was considerably higher than such goods are supposed to bring. Investigation showed that the cans contained no tomatoes, but were filled with whisky and not a very pure brand of it, at that.

CALIFORNIA: The directors of the California Green Fruit Association are making earnest efforts to prevent growers and packers from unloading inferior products on the market before the standardization law recently enacted in this state becomes effective on August 7. The market was guarded last year by a "gentlemen's agreement" among all members of the green fruit industry that certain standards should be maintained. Inspectors, paid jointly by the growers and the packers, kept a lookout at all the packing houses to maintain the integrity of the agreement. But the temptation is greater now that the law is so soon to go into effect, and the fear is that some will try to work off inferior products in the last hours before they can be adequately punished for doing so.

CONNECTICUT: The main house on the new state farm for inebriates in connection with the state hospital at Norwich will be ready to receive twenty-four patients about the first of August. This is only half the number which the house will ultimately accommodate. It is intended to make use of these first patients in the work of preparing quarters for the other half. The tentative plan is to provide a section of the state hospital male wards for the usual treatment of the men as they come in. After this treatment they will be sent to the farm, which consists of one hundred acres at Poquetanuck.

DELAWARE: As a means of forwarding the "Buy in Wilmington" movement a procession of fifty large touring automobiles, decorated with suitable banners and filled with members of the Wilmington Chamber of Commerce, will leave that city on the morning of July 29 for a run of seventy-five miles thru the two neighboring counties of Castle, in Delaware, and Cecil, in Maryland. Stops will be made in all the leading towns and villages, where speeches will be made and reasons given why the people of these counties should do their trading in Wilmington. It is claimed by Wilmington business men that the people of these counties go farther and fare worse by taking their trade to other cities.

GEORGIA: The people of Savannah are congratulating themselves that the contract for their handsome new granite public library has been awarded to a local builder, whose bid was only $60,570, altho the Carnegie Corporation had appropriated $75,000 for it and the Savannah Library Commission had expected it to cost practically that much. In view of the unexpected low bid the commission has decided to add some needed features which were left out of the original specifications to make sure that the cost would not exceed the appropriation. Even with these added, the cost will be only about $61,000.

LOUISIANA: A statewide organization, just formed in New Orleans has for its object the development of the agricultural possibilities of the state. The plan which has been adopted by the business men of nearly every important town in the state and by the farmers of every section, provides for a joint committee of business men and farmers in every market town to make a study of the needs of the rural schools, the agricultural courses and facilities at the institutions of higher learning, the state experiment stations and other agencies of the state and nation for rural progress. The organization will also work for road improvement, drainage, etc., and will study the needs of each district for financing, harvesting and marketing products, as well as for encouraging immigration to the rural sections.

MISSOURI: At the present prices of zinc ore and the metal, which bid fair to continue, if not to increase, during the remainder of this year, the product of the mines in the Joplin district alone is said to exceed in value the total gold and silver product of the entire United States, including Alaska. One result of the inflated prices is that wages to miners in this district have been voluntarily increased from sixteen to thirty per cent, tho the miners have had no organization there. Agents of organized labor have, however, invaded the district recently, and unions are forming.

MONTANA: The many wool growers in Montana are deeply interested in the increased prices offered in England for fine merino tops. Quotations as high as eighty-eight cents recently came from the Board of Trade at Bradford, England. This means that wool in the grease is worth to the grower in western Montana at least thirty-one to thirty-three cents, allowing a sixty-three per cent shrinkage for scoured wool and freightage to the Atlantic seaboard with insurance.

NEW HAMPSHIRE: The roads of this state, especially those leading to the famous White Mountain resorts, are in better condition this summer than they ever have been before. The state has spent large sums of money in highway improvement this year, and now the motor tourist will find smooth going added to the delights of beautiful scenery and wholesome air.

NEW MEXICO: According to a report recently issued by Statistician Lesher of the United States Geological Survey, New Mexico mined more coal in the first year (one of the worst years of its history) than in any other year of its history. The output was 2,472,000 short tons, the value being $5,440,584. This is the only Rocky Mountain state that produced more coal in 1914 than in 1913, the increase being 140,953 tons.

PENNSYLVANIA: The red bud beetle, an insect pest before reported as very destructive, has become a dangerous pest in many large sections of this state, where it has appeared in vast numbers this season. It is described as a dark red beetle less than a quarter of an inch long, and marked with five yellowish spots. It attacks the under side of leaves, and seems to prefer fruit trees, tho it often injures garden plants. Spraying with an ounce of arsenate of lead to a gallon of water is the best method known for fighting it. Trees so treated before the insects ripen are said to be immune.

TENNESSEE: What is known as the Tennessee "locker club" law, prohibiting the storage of liquors for individual use in social and fraternal clubs, has been declared unconstitutional by Judge Edrington of the Criminal Court of Memphis. The state will carry the matter to the Tennessee Supreme Court, where it is hoped to get a decision at the September term.

TEXAS: J. M. Shelton, a native of Texas, who owns the largest herd of Angus cattle in the world, having nearly 30,000 on his 500,000 acres, says Texas is now in better shape than it ever was before since he went into cattle raising there thirty-nine years ago. "Our state," he says, "has plenty of moisture, good grass, a good calf crop, wheat, corn and oats in excellent condition, and we know that under almost any conditions we can produce large crops of kaffir and maize." He recently sold 2000 yearling heifers for $86,000, and prices have been going higher ever since. Texas fed steers are now bringing the highest prices ever paid for them.

VERMONT: The United States War Department has notified President Guy Potter Benton that the University of Vermont has been placed in the "distinguished class." This is an honor conferred upon few such institutions. It means that all male officers who have been thru the military course at the university and have attained the rank of captain or major are eligible to appointment as second lieutenants in the United States army without examination. Much of the credit for this distinction is due to Captain Ira L. Reeves, the military instructor at the university.

VIRGINIA: The taxpayers of this state are jubilant over the decision of the United States Supreme Court that West Virginia must pay $12,394,000 as its share of Virginia's antebellum indebtedness. In view of the fact that more than $8,000,000 of this sum represents in-

WASHINGTON: The [illegible] primary law which has been in effect in this state for two years, is now supported by a new law. Under the old act a "write-in" vote was omitted in case if any candidate was dead or had withdrawn for a year, or if he was an inmate of a penal institution or of the state hospital for the insane, provided he had been a resident of the state for a year. It is charged that this vote came from other states and took advantage of the short term of residence required, to make the law provide that to obtain pensions they must have been born in the counties of Washington for three years. It was also found that absentee ballots were encouraged by the fact that deputies were could obtain state aid, as this clause is now wholly eliminated.

WEST VIRGINIA: A law in West Virginia makes it a crime to bring spirituous liquors into the state in quantities of more than two quarts unless the exact quantity is [illegible] announced on the outside. As a result travelers on the railroads entering the state report that it is a common sight to see baggage bearing large tags frankly announcing that they contain more than the two quarts.

WISCONSIN: Months of controversy have marked Governor Philipp's efforts to create a state board of supervision to centralize and unify the work of the several boards which heretofore have controlled the common schools, high schools, county training schools, county schools of agriculture and domestic economy, continuation, commercial, industrial and evening schools, schools for the deaf and blind, Stout Institute, the mining trade school, the seven normal schools and the University of Wisconsin. The most earnest opposition to the Governor's proposal has come from those who argue that under its own governing board the university has taken a leading place among the nation's institutions of learning and that well enough should be let alone.

WYOMING: Besides furnishing upward of $10,000,000 worth of coal a year, Wyoming gives to the world some of the most interesting fossils known to paleontology. The Hanna Basin is a veritable [illegible] of such treasures, and there is seldom a time when parties of scientists are not doing field work there. From among its coal-bearing rocks many remains of huge dinosaurs, pterodactyls and other giant beasts and reptiles of the far past have been taken; and the search for more is constantly going on.

THE CHINESE REPUBLIC REPORTS PROGRESS

BY YUAN SHIH-K'AI

As actual ruler of over three hundred millions of people at a time when the country is passing thru the most critical period in its history, President Yuan Shih-K'ai occupies a position of responsibility rarely if ever equaled in the history of the world. He has carried thru the delicate transition from an autocratic to a republican form of government; he has met the peril of domestic rebellion and a threatened foreign war with a tact and firmness that has aroused the admiration even of his enemies. The Independent is glad to serve as the medium of his message to the American people, which was given as an interview with William Francis Mannix, editor of "The Memoirs of Li Hung Chang." It was at one o'clock in the morning when Mr. Mannix met Yuan Shih-K'ai at his private quarters in the Forbidden City, for Chinese officialdom clings tenaciously to the night for the transaction of most affairs. The Chief Executive smoked a small cheroot, and referred with evident pride to the total absence of pipes, either for tobacco or opium, within the confines of the city where once they were found by the thousand. "Opium killed our people for many centuries, but we have at last executed opium," he commented with certain pride and satisfaction. Then he said: "You desire a message for the American people? Yes. And for what publication?" Yuan was shown a copy of The Independent containing his own picture. He made no comment upon it, tho he inspected it closely and smiled so broadly that his unmistakably Rooseveltian teeth could be accurately counted. The following is what he said.—THE EDITOR.

I HAVE learned from Western newspaper men that there is much greater satisfaction, when one has a message to send to a neighboring nation, in delivering it to the press than there is in attempting to communicate it thru the regular mediums of the foreign offices. Would not much misunderstanding between nations be avoided, war even be sometimes averted, if one people might thus directly speak its mind to another people with which it might have some slight dispute?

It is true that most nations of the west publish the reports of their consuls, and this is laudable from a business point of view. Such reports unquestionably assist in the promotion of commerce and trade, and these things are vital to the life and well-being of the world today. But business is not always friendship—oftentimes it leads to the very reverse, to war and cruelty and even the destruction of nations and the political and racial disruption of peoples. How poor China has suffered because of business and trade! What armies and navies, what men and money have been used to back up the recommendations of the consular and business agents!

Do not for a moment think that I am speaking as one opposed to the legitimate reports made by such officers. Not at all. Indeed, it is quite unnecessary for me to say that on behalf of China I welcome merchants and traders to all our ports and markets—from the Coast to Tibet, and that they not only will be given welcome in the usual sense of that friendly word, but that they will be given fullest protection in the prosecution of all their legitimate enterprises.

No, I do not discourage or belittle the consular reports, but it is my contention that they do not go far enough toward the cementing of real friendships between nations. Our foreign offices, according to opinions long entertained by me, should be open to the voices of the peoples by which they are supported. In times of national anger or passion it would be well to close all avenues of communication, for the old Chinese proverb that "if two women are allowed to talk long enough there will eventually be a hair pulling" is more or less true when applied to nations. But when there are messages of good will and concord to be transmitted from one people to another, I believe it is the great and sacred duty of the foreign offices to receive, send and give widest publicity to such peace-preserving and peace-attaining communications.

It probably would be a waste of time and actually superfluous for me to reiterate that great feeling of friendship and confidence that abides in China for the people and government of the United States. I, personally, do not think it a waste of time to say this thing over and over, but some people might. Some people are always on the watch for new things, new thoughts, new sensations. They forget that that which is old is venerable, else it would not be old. The great things of the earth are old, the truest and noblest words, hopes and ambitions of men are the most ancient; for it is really only the true and noble which attain venerable longevity.

My great and illustrious friend, Viceroy Li Hung Chang, since departed to join the glorious ancestors of our race, did often say to me that while America was the only country of the world which denied admittance to our countrymen, it was also the only nation which stood like the Great Wall between China and dismemberment; and it was the great Viceroy's hourly pleasure and joy to repeat the words of Major Conger, the American Minister, said at a time when all of us thought the nation was to be parcelled out among the powers: "Do not worry, Viceroy, Uncle Sam will not permit the despoliation of your country!" Can we ever forget that Government and that people? No, we do not forget, and I hope the people of the United States will know that we remember

It may be said to our American friends that the new Republic of China is now fairly started on the right road. Discontent and minor rebellion, encouraged by disgruntled individuals who had imagined themselves leaders of the Chinese people, but who were repudiated by arms and ballots, are no longer occupying our attention. A settled condition of affairs prevails in all the provinces except two, and in these latter the disturbances are not serious. All departments of the new Government are working earnestly, diligently and in concord for the betterment of the nation.

The finances are in the best condition they have been for twenty years. With the coming of complete peace in the South and Center, industry has resumed its normal ways and a vast majority of the people are earning a livelihood. Agriculture and cattle raising are in such condition that the coming years hold great promise.

Will the establishment of Confucianism as a state religion tend to injure the progress of Christianity in China? If anything, it will make a better field for the teachings of Christ. For many years the people have been falling more and more away from the doctrines of the Great Saint and I felt that it was necessary to bring them to a realization of that fact. A nation without a religion is on the downward path. I could not have proclaimed Christianity with any effect, even had I so desired; for ninety-nine per cent of our people would not have known what it meant. But when I used the name of the wonderful Confucius and called upon the people everywhere to take up his words, teachings and examples again, there was an immediate response. And a better China is already here. This, in itself, creates a larger and better field for the Christian missionary; for, as the noted Bishop Favre once said to me, "Confucius is an excellent stepping stone to Christ."

MISS KATHARINE HINES PAGE

DAUGHTER OF AMBASSADOR PAGE. SHE IS TO BE MARRIED ON AUGUST 4 TO CHARLES LORING, OF BOSTON. THE KING OFFERED THE CHAPEL ROYAL AT ST. JAMES'S PALACE FOR THE WEDDING

THE EFFICIENT MAN'S MONEY

BY EDWARD EARLE PURINTON

This is the eighth article in the series by the Director of The Independent Efficiency Service on Efficiency and Life. "The Efficient Factory," "System and Efficiency" and "Optimism and Efficiency" will be considered in forthcoming issues of The Independent.—THE EDITOR.

MONEY is the measure of service rendered the community. Every young man, at the outset of his career, should be given this conception and ideal of wealth.

The world's greatest fortunes were based on the development of a public utility—whether oil, coal, steel, sugar, land, lumber, street-cars or newspapers. Wealth is the willingness to serve, plus the wisdom to do it properly.

A man who does a useful thing better than any one else is in direct line for prosperity. Thus the incomes of the greatest surgeons, composers, actors, inventors, are in the hundreds of thousands, equaling the profits of business men and financiers of like achievement. The union of the highest possible degree of skill and service always produces ample money rewards—we need not, should not, pursue wealth for its own sake.

WHAT MONEY IS NOT

There are two false views of money. One regards money as all-essential, the other holds it non-essential. Money is the one thing everybody needs thru life—and it is the one thing nobody learns, scientifically and satisfactorily, how to regard, obtain, conserve and use. Health, beauty, popularity, genius, opportunity, even home and happiness—none of these are necessary; we can do our work, mold our fate, without them. But try to live one day without either cash or credit, and you find your efficiency gone; for you cannot employ help, or serve clients, or buy a newspaper, or live in a house, or burn fuel, or eat and drink. Why then be unwilling to face the money problem squarely, recognize the universal need for a science of finance, and dignify earning capacity with true spiritual meaning?

Doubtless we have all been tempted to wish that money had never been invented. I know I have—particularly when I didn't have as much as I thought I could use beneficially. But money is only mind in its most concentrated form, and as such it belongs in the evolution of a man or a nation. The life-cycle of every individual includes four stages or epochs—namely, those of Body, Heart, Brain, Soul. In the first, our organs and muscles develop, in the second our affections and emotions, in the third our talents and ambitions, in the fourth our inspirations and aspirations. The world is now in its brain-epoch, so the world decrees that a man, to live in the world, must have money. But a weak or defective brain is a brain that the soul has not yet fully occupied; hence, the brain of a pauper is somehow lacking in spiritual energy. Self-support is fundamental to self-respect.

There is no mental or spiritual freedom without financial responsibility. This is why the science of finance should be preached in our churches.

There is no healthy citizenship without the steady capacity of earning a good living. This is why the science of finance should be taught in our schools, factories and shops.

There is no sweet and quiet and comfortable home life without the assurance of a regular, ample, honorable income. This is why the science of finance should be made the corner-stone of every hearth.

Money is the hinge of present human relationships. Losing balance on this point, we fall into social chaos, represented by the strife between capital and labor, the dispute between scholasticism and vocationalism, the war between German militarism and English territorialism. All great battles are battles over money. Take the value out of money and the bottom would fall out of vice. The penury of idealists and the profligacy of materialists together delay the millennium; and I believe that penury is as great a weakness as profligacy is a crime.

EARNING A LIVING

The burden of hundreds of letters received in our office has been, "How can I earn more money, gain financial independence, and thus have time and strength for some real service to humanity?" A great institution might well be founded, for the sole purpose of teaching men, women and children a practical, modern science of finance. Vocational schools, efficiency courses, domestic science clubs, city employment bureaus and committees, church labor conferences—these all are steps toward financial freedom, but they do not move swiftly enough, broadly enough, deeply enough. The quickest way to learn life is to earn a living; and we are here for the purpose of learning life.

College students who never earn a dollar till after graduation are moral parasites. They are as useful to society as barnacles to a ship. I look forward to the time when schools will be themselves graded as they now grade their pupils. A college student who falls below sixty per cent in a given study thereupon is debarred and disgraced. Why not, with equal justice, pass a law that a college which fails to prepare sixty per cent of its graduates for guaranteed self-support the first year after graduation shall be publicly censured and deprived of funds from the state or individual donors, until the required grade in monetary efficiency shall be attained by the curriculum?

If I, being a parent of a youth of twenty or thereabouts, and having expended thousands of dollars on his college course, should find that he was not earning a good living six months after graduation—I would sue the college for the return of my money! Some day some father will do this. And when he does we shall be given some new light on the function and process of education, in its bearing on money matters.

THE COST OF MONEY

Few of our clerks, grumbling over their meager $10 a week, know the price that millionaires pay to become millionaires. Wealth is the world's hardest taskmaster.

A friend of mine earns more in a day than he used to receive in a month. I asked him how he has found the secret of prosperity. He smiled—but there was sorrow in his eyes—and he answered, "Your magic secret is in self-denial. I make fifty dollars where I used to make one. I do it by foregoing pleasures that most men require; by overcoming an artistic temperament and keeping my life as regular as a clock; by working before my helpers reach the office in the morning and after they leave at night; by looking for the hardest thing and doing that first. Money-making is easy to a selfish man. I am making money to prove that an artist and altruist need not necessarily be a fool. When I get that done I shall say something to the world." My friend's reply interested me. It may interest you. Every captain of [illegible] was first a captain of romance; this fact should be taught every [illegible] light on labor means love for labor.

But in managing their household

finances, our great business men are simpletons and wastrels. The butler gets his little graft; the cook feeds her friends on the sly; the son of the house "hits the Governor for a hundred bucks", the daughter of the house coaxes Daddy Dear to buy her a debutante frock worth twenty times what her mother's gingham dress used to cost. The modern curse of extravagance should be laid at the doors of American husbands and fathers, who have never learned scientific management of the household purse. If they ran their business at such loose ends their business would go to the dogs.

THE PRIVILEGE OF EARNING

If I believed in agitation, I would start an agitation on behalf of the downtrodden American rich child, who never gets a chance to earn money and acquire self-respect. My ancestors were comparatively poor, and one of the earliest ambitions I recall was to earn some real money of my own. So I formed a business partnership with another lad who was also very much a man, having just ascended into short trousers along with me. Our folks had a meadow on the hillside, thru which ran a beautiful stream. Here lay a fine bed of watercress, which is an ideal tonic and garnishment for meat or salad. My partner, being a good salesman, canvassed the neighboring kitchens for advance orders, while I, being a good prospector, went klondiking for cress.

By the close of the second day in business, my net profit was sixteen cents. I was then too rich to go back to the huckster trade, so fitted up a candy store on the sidewalk, with an umbrella for a booth. But shortly it appeared that candy would not sell in hot weather, and an efficient merchant must handle a staple product. So, having a natural gift for drawing, I invested my capital in pens and inks and art books; and ere long was earning fifty cents an hour, lettering diplomas for the schools of the college town that was my native heath. For a boy, this was good pay. I was very proud, and did the work so well that the chap in the art school who wanted my job didn't get it till I outgrew it.

This delightful jump, from eight cents a day to fifty cents an hour, so fascinated me with the joy of watching money grow by initiative and good work that I have never lost the stimulus of that boyish enterprise. Would that every child were inspired or compelled, by parents and teachers, to gain by a similar experience. Moralists tell us that "money is the root of all evil"; but they fail to tell us that the only way to uproot an evil is to "dig" for it! The act of turning an honest dollar is in itself a meant of grace.

TEACHING MONEY EFFICIENCY

Every child should be taught scientifically how to earn money, to spend money, to save money, and to give money away. I do not know, or know of, any child who is being so taught.

A youth or maiden sent thru college without having earned at least one year's tuition has been given a false start in life and must overcome a serious handicap—social, industrial, financial, mental and moral. Every town, village, farm and home in this country (save in the case of extreme poverty) offers excellent opportunities for boys and girls to make money. Parents should locate, study and classify these opportunities, and should inspire and instruct the children for their use. Care should be taken to avoid fictitious values; a child should not be paid more than a stranger would receive for doing little jobs around the house, nor paid for any service without intrinsic value. Example: to pay a child for denying himself cream on strawberries is bad business and worse ethics, but to pay him for helping to milk the cow or scald the milk pan is good economy.

WHAT DOES YOUR DOLLAR BUY?

The purchasing power of a dollar is one of the next lessons for parents to teach. A dollar buys a fair meal in a stylish restaurant. The same dollar spent in a grocery for beans, potatoes, bread, salad, cheese, apples, onions, prunes, cereals and malt coffee buys not one meal, but four or five meals—and the food is likely to be purer than the restaurant fare. Do we eat style or eat nutrition?

A good way to teach children the advantages of economy would be to offer a prize for the child who could buy the most and best food for a dollar—quantity, quality, purity, palatability, and nutritional value of the foods all being considered. (I imagine, however, that somebody would first have to offer a prize for parents who had sense enough to make the award.)

Another illustration of scientific buying: The professional men of my home town pay $25 and upward for a hand-tailored suit of clothes. When I first came to New York, fifteen years ago, I took a day or two off and personally investigated dozens of tailoring shops. I found one where special sales were held at certain times, and a made-to-order suit could be had for $16, equal in fabric, style and wear to the $25 suit back home. The difference in price being a result of the volume of output of the shop. Here is a town where living in New York is cheaper, yet how many buyers of men's clothes in New York have found this out? One of the principles of success for a young man is that he should not be ashamed to wear a $16 suit of clothes—provided the suit looked, fitted and wore well.

The principle of modern philanthropists who donate money to colleges might well be followed by parents in the home. Thus, give the child a certain allowance for food, books, charity, pleasure and so forth, but stipulate that a percentage be earned by the child. To a reasonable limit, for every quarter of a dollar actually earned by the child, seventy-five cents would be added by the parent. This method is most valuable in starting a savings bank account for children. It should certainly be adopted in the matter of "pin-money." The trouble with pin-money is that it always means a sticking point for somebody.

Every housekeeping cost should be standardized, and regular allowance made for this, as for the rent or the taxes. These cost appropriations should include rent, food, clothing, heat, light, books and papers, charity and hospitality, church, travel, amusements, wages, help, laundry, carfare, incidentals, and so forth. The housekeeper in the wife should know and maintain the scientific standard of costs, which the provider in the husband should pay, promptly and sweetly. But wo to you, Mr. Husband, if you presume to standardize your lady's gowns, or charge her matinee tickets on the same account with the coal bill! This would be a glaring example of emotional inefficiency.

CASH AND SAVINGS

Two great elements in the science of finance are a stock of immediate cash and a growing reserve fund. The trademark of a steady character is ready coin. To be low in cash is to be low in caution, or skill, or both. There are different ways for a natural spendthrift to learn to hold on to his money. He may ask a miserly friend to keep a certain amount in trust—and not give the owner a dollar save in dire extremity. He may secure a hundred-dollar bill, or a ten-dollar or five-dollar goldpiece, and resolve not to break it unless the need is a matter of starvation. He may buy a post office money order payable to himself at a place most inaccessible, which would prevent his cashing the order without a deal of trouble. He may purchase a bond or a

guaranteed stock for $100; he may start a postal savings account; he may invest in a piece of property, having taken all the necessary precautions to avoid loss by depreciation; he may take out a life insurance policy on the endowment plan; he may borrow money from a building and loan company, and gradually pay for a home of his own. Are you saving at least twenty per cent of your income? If not, how are you going to begin? To emerge from the ranks of the economic failures is to have better health and better character—to say nothing of better temper. A check on the bank is a good check on worry.

Here is an interesting experiment for one who has not yet reduced his expenses to a satisfactory basis. Prepare an estimate of the percentage of your income, that should be devoted to the specific necessaries of life, such as rent, food, clothing, books, amusements, charity, hospitality, and so forth. Take rent, for example. This should not exceed twenty per cent of your gross income. If you earn $200 a month, you should really not pay more than $30 monthly rent (fifteen per cent of the gross). There are thousands of people in New York who pay a full week's salary, or over, each month, for rent alone, merely to "keep up appearances" in a fancy-looking apartment house. When a brownstone front is a false front, a thatch front is better.

After you have judged what each of your expense items should be on a percentage plan, call your folks together and get their opinion. Having made the estimates unanimous, keep strict account of all your expenditures for a month, and let each member of the family do the same. You will be surprised at the way in which certain items overrun their normal appropriation, and will be in a position to reorganize your finances on a more scientific basis.

Signs are here of a great revolution. Public sentiment is waking to the financial and economic truths underlying real education. A Brooklyn public school recently established a savings bank system, and we understand that during the first two years of its operation $10,000, mostly in dimes, nickels and pennies, were deposited by the children. A New York high school has taught the girl graduates to make their own graduation gowns, and has fixed a limit of expense—$1.50, as I recall—for the materials in each dress. An Indiana community school has furnished the children of miners and mill workers with a little piece of ground, a package of seeds—flowers for the girls and vegetables for the boys—and is teaching the little folks how to become producers and craftsmen. A Massachusetts board of health, coöperating with a hygienist-chemist, has revolutionized the eating habits of the town by showing high school pupils how to analyze, compare, select, buy and cook the foods that enter the home. Other schools and corporations have adopted similar methods of training in efficiency and economy for the young people.

A society has recently been formed to promote American thrift by families, corporations and individuals. A consumers' league instructs women how to buy the necessaries of life economically and well. The Association for Improving the Condition of the Poor in New York issues, thru its Dietician Household Expense Account, blanks and records which make it easy for housekeepers to handle their accounts in systematic and convenient shape. These blanks, in connection with the budgets which families are helped in drawing up, establish the finances of the average charity family on a better basis than that reached by the average middle class family.

A clarifying word may be needed, in closing. A man may be so rich in heart, mind and soul that physical riches look like baubles to him. Thousands of men are not able to amass large sums of money. Tens of thousands are not willing to—the sacrifice of time and strength involved would not seem worth while, compared with all the finer objects of endeavor.

The real motive in working toward financial independence is to fulfil our just obligations, care wisely for our loved ones, live free of penury and worry, command the leisure and opportunity for self-culture and broad human service. Only on such a basis of altruism and idealism does wealth become desirable, its pursuit enjoyable and profitable. The reason for having money is that we may not have to think about getting it.

EFFICIENCY MONEY QUIZ

FOR ANY SELF-SUPPORTING MAN OR WOMAN

DIRECTIONS. When the answer to a given query is Yes, write 5 in the space at the left. When the answer is No, or indeterminate, leave space blank. Find your percentage in money efficiency by adding numerals in column thus prepared. This test, while incomplete, is fair and approximately true.

1. **Have you set for yourself a definite earning capacity toward which you are working?**.....
2. Do you possess, or are you in direct line for, an income of at least $5000 a year?.....
3. Do you know how much money is being made by the most successful man in your line?.....
4. **Have you found, and are you removing, the causes for *your* failure to earn that much?**.....
5. Have you studied the life, aims and methods of any great financier, merchant, or philanthropist?.....
6. Is your present income greater than your father's was at your age?.....
7. **Are you living well within your means?**.....
8. Are you keeping out of debt?.....
9. Do you pay your bills promptly?.....
10. Have you located the best and cheapest available groceries, restaurants, tailor-shops, stores, etc.?
11. **Are you free from the mistake of confusing "expensive" with "good"?**.....
12. Can you refrain from buying bargains when they do not meet a real need?.....
13. Can you cheerfully go without luxuries, to save money for a purpose?.....
14. **Are you saving at least twenty per cent of your weekly or monthly salary?**.....
15. **Do you put your savings regularly into a safe, permanent investment?**.....
16. Have you one or more investments yielding at least four per cent return?.....
17. **Have you a good balance in a sound bank?**.....
18. Can you borrow money on your credit?.....
19. Are all your expenses standardized—do you know what each personal household and business item should cost?.....
20. Have you resolved to attain a competency—then do something in life more valuable than making money?.....

Total equals your percentage in money efficiency

CALIFORNIA'S COUNTY FAIR

BY GEDDES SMITH

THERE is just one place in the world where a cow carved from butter, a mermaid of soap, a beeswax bear, are entirely at home. That is at a county fair. At the Panama-California Exposition at San Diego they are all on duty—and perfectly at home. Some of them have been famous at other expositions, but they were never so congenially placed as here.

For this big fair—or small exposition—is redolent of the land, and particularly of California land. It is indigenous to an extent not at all approached by the Jewel City at San Francisco. Six hundred and fifteen acres are devoted almost wholly to a demonstration of the fact that if the world doesn't revolve around Southern California it ought to.

But you must not conclude that the men who built the Panama-California Exposition had an easy or a circumscribed task. It is no light undertaking to paint the portrait of Paradise, and a Paradise—when irrigated and suitably advertised, to be sure—Southern California certainly is. The analogy rises easily to the lips of the Eastern traveler and is, as one might say, officially confirmed by such real estate "literature" as this:

> Paradise! What is it? It is man's ultimate hope. His ideal of the place in which he shall spend eternity. . . . That he may enjoy it before death, the average man never even suspects. He would reject the idea, if presented to him, with scorn, and yet, in spite of this, this is the very idea we are going to present, and to do this we will draw a picture, not of some mythical land in the dim distance of eternity, but of a very material land in the sunlight of the present. When we have drawn this picture you will have seen Lemon Grove. . . . The population of the Grove is 800.

But even shorn of its celestial attributes, Southern California is preëminently the land of out-of-doors, and it is natural to find the Exposition at San Diego distinctly an out-of-doors affair. And since sober reality there means a glory of flowers, the Fair is a place of great beauty of a sort not at all traditional in exposition technique.

Buildings of creamy concrete, all of that Spanish-Colonial type which begins with a bare white wall, sweetens it with the rounded arch, and as it develops more and more luxuriously adds ornate carving to windows and doors and cornices, tho always with a reserve of simplicity where the solid surface remains unbroken, roofs of red tile, heavy curtains of dull green or blue or orange dripping from upper windows, bougainvillea clinging to the white walls and carrying its green leaves and crimson blossoms to the very cornices, and filling every vista. Between and around and behind the buildings, gardens and lawns and riotous flower-filled holes crowded with splendid color—that is the San Diego Exposition.

Between the palms of the *Prado* and the inner walls of the exhibit halls cool cloisters show the way thru the heart of the Exposition. Shaded from the hot Southern sun by day, softly lighted by reflection from the concrete walls by night, their rounded archways half filled with palm branches, they make even that tedious pilgrimage by which one "does" an exposition a pleasure. There was probably never a fair that offered so many alluring places just to sit and vegetate. Charming patios offer that unmatched blending of a cool porch, bright patches of greenery, and a courtyard filled with brilliant sunshine just far enough from your lazy chair so that you imagine rather than feel its warmth. Unconsciously your mind builds up a delightful concept of Southern California—false enough, probably—as a place where you sit on the edge of the sunlight and watch things grow.

If you stay long enough at any point of vantage some one will provide the music that alone is lacking. In one courtyard dark-skinned Hawaiian lads, with purple sashes over their clothes of tropical white, will be strumming their ukuleles. Here and there about the *Plaza de Panama* or beside the Lagoon of Flowers (San Diego, of course, calls it *La Laguna de las Flores*) or down the *Prado* strolls a band of Mexican boys and girls who sing and dance and tweak their mandoline and guitars and then—just as the knot of watchers is most eager for more—wander on and away. It was odd to see them leading the way into the Home Economics Building—"La Bella Serita and her troupe" does not sound particularly domestic—but you may be sure they did no more than circle the booths and lead the way out again.

Why should anyone stay indoors? I was talking with a mild mannered "booster" about the small rooms of California's ubiquitous bungalows. "But you don't need many rooms," he insisted. "I just can't keep my wife indoors. She'll lock the door and get out in the garden as soon as she can, and stay there." And so at San Diego there is not a great deal to tempt the visitor out of the sunlight. As expositions go, there is little to be seen indoors, and what there is might be more effectively displayed. Compared with the profuse evidences of mechanical ingenuity at San Francisco, the showing here is a little monotonous. There are not many industrial exhibits, and only Japan among foreign countries is largely represented. Few of the county or state displays are sufficiently artful to make a distinct impression; Utah, with a big relief map and interesting statistical displays prepared by the State Agricultural College, is a leader in this respect. Some of the other exhibitors, after piling up their fruits and vegetables, go no further than to inform the public by placard that this county has domestic animals worth $2,000,000, while that has 482,417 grape vines in bearing—true and useful facts, but like many true and useful things not especially amusing. And whatever may be the morals of the matter, people who go to expositions

IN THE COOL CLOISTERS

A night photograph taken by the soft reflected light from opaque electroliers. By day these passageways were just as inviting

will persist in looking out for amusement and letting education take care of itself. More effective work is done by the moving pictures, which generously reinforce the story of the promoter.

It is the Southern Counties Building, naturally, that most completely develops the county fair motif for which the butter-sculpture strikes the characteristic note. Here one finds the familiar little show-cases with the stubby compositions and squatty baskets of the Fourth Grade, Eureka District School; and Mrs. Ann Anderson's china painting and Miss Betty Bacon's hemstitched aprons (for sale); and the inlaid table made out of 2866 pieces of wood by a fine old craftsman of seventy-eight years—all the things that link up the drifting, indifferent public with the few who care so tremendously and anchor the whole Exposition to the folks of Southern California.

One field the Exposition has tilled particularly well. You hardly expect to find a community which has its eyes so firmly fixed on the future lingering over its history, but archæology and ethnology have the place of honor here. The whole Fair is a record of Spanish architecture in the New World. Half a dozen types are shown. With admirable taste, the paintings gathered at the Exposition are hung in a building of the utmost simplicity, a reproduction of the fine primitive mission, with only the color in the roof and the sturdy grace of the round arch to save it from stark barrenness. The San Joaquin Valley Building, loaded with ornament, is a type of the municipal palace of Spanish America. The California Building, whose campanile and dome, pranked with yellow and blue, dominate the grounds, is a Latin-American cathedral. Here at the host building one finds Central American antiquities—monuments and models from the Maya cities—and surprizingly beautiful photographs of the American Indian. In the Indian Arts Building, together with a little of that exploitation of native crafts with which the traveler thru the Southwest is soon surfeited, there are more significant exhibits, such as a fine series of diagrams illustrating Indian symbolism.

San Diego has a double hold on Spanish and Indian tradition. It was the first of the Franciscan missions out of which California grew, and its position almost on the international boundary makes it the first United States port as you come up from Panama and the last American city of any importance as you go down the coast to Mexico. Indeed, Mexico is so near that law-abiding American citizens who wish to investigate contemporary antiquities have only to consult the billboards and slip over the line to Tia Juana, where bull fights and cock fights may be had almost for the asking.

It is natural that the Fair should borrow local color from these sources. On the "Isthmus," small brother to the "Zone," one of the largest concessions is the "Painted Desert," where families from half a dozen Indian tribes may be seen busy at their primitive crafts in their primitive houses and properly unconscious, during business hours, of the steamer trunks and kitchen clocks which somewhat mitigate their surroundings.

Between these 'dobe huts and the comfortable bungalow on the model five-acre irrigated ranch lies the whole history of the Southwest. Indeed the bungalow is rather prophetic than historic; such convenience and beauty can hardly be typical yet. This display, part of the exhibit of the southern counties, is aimed confessedly at the back-to-the-land city man. Five acres have been under cultivation since March, 1913, and now the fruit trees and vegetables and hen-yard and rose-hedges, all well established and under constant care, drive home in a more concrete form the message of salvation by real estate which California preaches in season and out of season.

But it was not to sell five-acre irrigated ranches that San Diego invested in this all-the-year show. The Exposition has a definite part to play in the city's program. Indeed it is one of the five counts on which San Diego assures herself that she is "destined to become the greatest commercial city of the new southwest." Of course its advertising value is rather enhanced than lessened by the fact that San Francisco has another and a bigger fair at the same time. San Diego alone might not disturb the public imagination, but San Diego running a rival attraction to the metropolis of the coast piques one's curiosity, and insures a degree of publicity not to be measured by attendance figures alone.

San Diego needs advertising. Her bid for greatness is a fairly recent affair. With a history dating from 1769 she had accumulated only 2637 inhabitants by 1880, and had already lived thru two booms and two relapses. The Santa Fé reached the city in 1884, and in that decade the population increased five hundred per cent. The ten years from 1900 to 1910 saw the city more than double

International News

THE EXPOSITION BUILDINGS ARE SET IN A GREAT GARDEN

Looking across the *Cuneo Cabrillo* toward the California tower and dome. In the foreground is Laid Out Balboa Park, in which the principal Fair buildings are to remain permanently

its size, and against its 39,578 at the last census. San Diego now claims 100,000. But all good Californians answer in terms of the census of 1920 or later when you ask them about population, and the truth probably lies between that and the census estimate, for July 1, 1915, of 61,116. (This is based on the rate of growth from 1900 to 1910.) The increase is now phenomenally rapid, but that is true of Southern California as a whole, and Los Angeles, with its 400,000 and more, has rather cast its smaller neighbor into the shade.

"Los" has people and railroads, but a poor harbor even if it did push its city limits nearly twenty miles to the coast, like Athens with the Piræus, to get it. San Diego has a fine harbor; the people are coming; but she lacks railroads from her back-country. The rivalry between the cities somewhat hampers the smaller in getting steamship facilities. Los Angeles merchants prefer to ship thru San Pedro, their own port, tho equally low rates can be had thru San Diego. Even on the street corner you feel the clash of destinies: rival newsboys, brandishing headlines against each other, thrust the San Diego *Union* and the Los Angeles *Examiner* at you simultaneously in shrill competition.

Beside the Fair, San Diego pins her faith to the Canal (she is the nearest Pacific port on American soil), the "Harbor of the Sun," her remarkable climate, and the S. D. & A. R. R. The harbor is the best on the Californian coast after San Francisco Bay, and the city has already put a million dollars into docks and bulkheads. The climate is undeniably fine. The mean winter temperature of sixty is only eight degrees below the summer average, and only twice a year may the thermometer be expected to show ninety degrees.

The S. D. & A. R. R. may not sound familiar. At the close of the last fiscal year its rolling stock consisted of two locomotives and ninety-eight cars, and its total earnings for the year had been $11,828. But San Diego has no particular interest in the present. The San Diego and Arizona Railroad is intended to connect the coast with the Southern Pacific system at Seeley, California, in the Imperial Valley, and when that is accomplished it will be the shortest route to the Pacific and the cheapest route to the East (via the Canal) for a rapidly developing section of the Southwest. Forty-five of its 138 miles, in the mountains, are still to be built, and this project, like thousands of others, waits for peace. There are other railroad connections projected or rumored, but it is this which holds most hope for San Diego, which now has only a single track spur of the Santa Fé running down from Los Angeles.

Paradoxically, it is the desert which will enrich the city when the road is finished. It taps the Imperial Valley, in the southwestern corner of California, that miracle of irrigation which was utterly barren fourteen years ago, and now shows an assessed property valuation of $35,600,000. Cotton, first grown there in 1909, was in 1912 showing the highest yield per acre in the country, and short-staple cotton raised in the valley took the prize cup at the American Land and Irrigation Exposition in 1911 as the best in the United States. Dates and melons can be grown well, and there are also alfalfa, barley, oats, wheat, corn, grapes, apricots, olives, and citrus fruits. To the south, in Mexico, and further east, lies land of the same sort waiting for development.

San Diego expects, of course, to ship from much wider areas than this, and in fact aspires to turn her location and California's abundant fuel, petroleum, to account as a great manufacturing center. It is carefully explained in the official Exposition publication that "the prime object of the San Diego Exposition was not to help the city of San Diego by direct methods, as had been the case with previous world's fairs, but first in the interest of the Western States as a whole, whose good feeling San Diego is of course dependent for future prosperity." So Kansas, Utah, Montana, New Mexico, Nevada, and Washington are guests at San Diego, with separate buildings which, one hopes, are not stations of "good feeling."

At least San Diego has put a most attractive portrait of herself on exhibition. If the city's expectations seem somewhat disproportionate to her present importance, one must remember the California habit of growing incontinently. The state climbed from twenty-first place to twelfth between 1900 and 1910, with a sixty per cent increase in population, and still has only half as many people to the square mile as the average for the United States. The San Joaquin Valley—the great central garden of the state—is about the size of Italy; it holds 300,000 people to Italy's 35,000,000. California can afford to draw on her future—even if her real estate operators have already discounted it pretty generously—for the cost of two big fairs, and San Diego's investment in the garden city on the mesa is good business for a forward-looking seaport.

THE PRADO IS AN AVENUE OF LUXURIOUS GREENERY

The color of the Exposition is a matter of contrast between the white buildings, with their red tiled roofs and rich, dull curtains, and the bright hues of the flowers and foliage

THE FOUNTAIN OF TIME

A PEACE MONUMENT FOR CHICAGO'S MIDWAY PLAISANCE

"I KNOW of no piece of work in America that has even a chance of being produced, which departs so completely from the conventional forms and limitations of modern sculpture as this work of Taft's. If the spontaneity of his original conceptions can be maintained in the larger work, I know of no influence upon Western Art that will prove so potent."

That is what Gutzon Borglum—himself among America's foremost sculptors—had to say when The Independent asked him about Lorado Taft's "Fountain of Time."

A colossal figure of Time, in the completed group, will stand aloof to watch this rhythmic procession of mankind, for which the motif came from Dobson's lines

> Time goes, you say? Ah, no.
> Alas, time stays; we go,

just as a scene from Maeterlinck's "The Blind" inspired the finely expressive group, called by the same name, that is Taft's best known work. And since the life of man is as a wave of the sea, a hint of the waves runs thru this newer work; indeed at two points a clearly-defined wave sweeps over the figures, first of the youth who fights it, then of the old man who submits willingly to the annihilation it brings. The great monument is to be erected in Chicago, at one end of the Midway Plaisance, as one feature of the many-sided celebration of the Centenary of Peace between English-Speaking Peoples.

The Midway Plaisance, echo of the Columbian Exposition, connects with its broad stretch of turf Washington and Jackson Parks. A trust fund yielding $30,000 a year, established by the late Benjamin F. Ferguson, is being used under the direction of the Art Institute of Chicago for the enrichment of this parkway, and Lorado Taft has modeled for it a series of splendid monuments, with the Fountain of Time and a Fountain of Creation at either end. A formal canal will run from end to end of the Midway, connecting the lagoons of Washington and Jackson Parks. Three bridges will be thrown across this. At the center the Bridge of Arts will stand, with a broad crossing flanked by statues of great painters and sculptors. Nearest the Fountain of Time will be the Bridge of Faiths; on the other side the Bridge of Sciences; both enriched like the large Bridge of Arts with a number of heroic memorial statues.

From the Ferguson fund $50,000 has already been devoted to the cost of preparing a full-size model of the Fountain of Time, and it is hoped that the foundations will be provided for from the same source. This leaves $150,000 to be contributed thru the peace commemoration committee for the final marble group; and at this point John C. Shaffer, owner of the Chicago *Evening Post*, has stepped in with a generous offer to guarantee that sum. To conclude Mr. Borglum's comment:

"In dedicating this art work to the celebration of one hundred years of peace between the English-speaking peoples, its production is given a real purpose, and in Shaffer's offer to guarantee the expense of the work Chicago and the Centennial are assured of one of the happiest ways of celebrating so great an advance in civilization. Mr. Taft is to be congratulated on the opportunity given him to work out what must have been one of his great ideals."

"What did Hades get married for?"

"Lord only knows, now. He keeps right on working."—*Boston Transcript.*

For Sale—Three ox carts of descriptions, the tongue of which two oxen horns. Apply 116 Elm.

Mr. Furman has only married twice and was also in the Civil War.—*Marysville (Ky.) Democrat, quoted in Harper's Weekly.*

Schoolmistress—What is the most dangerous hour of sunday sleep?

Girl (without hesitation)—The laundry.—*New York Sun.*

Dearing (on way to church to young fisherman under bridge)—Little boy, don't you know this is the day of rest?

Wee gin's fried, mister.—*Life.*

Mr. Lastflubb—Ah! They just forgot their weight.

Mrs. Lastflubb—Dear me! I was afraid they wouldn't! It's been dangling outside all the afternoon.—*Harper's.*

"There goes a man who has more friends and more enemies than any other man in the world."

"What has he done?"

"He invented one of those 'Get off the earth' automobile horns."—*New York World.*

During the fighting a Highlander had the misfortune to get his head blown off.

A comrade communicated the sad news to another gallant Scot, who asked, anxiously:

"Where's his head?" He was smoking his pipe."—*Tit-Bits.*

A New England woman, probably of Irish extraction, who felt greatly disturbed because the cemetery in her community had not been properly cared for by those in charge, indignantly remarked to her husband: "I'll never be buried in that cemetery as long as I live'"—*The Christian Advocate.*

There is a Down East dialog, which I have often thought might furnish the motif for a tragedy under the pen of Mary E. Wilkins Freeman. It runs like this:

"Where be y' goin', Si?"

"Goin' down to Portland to git drunk. And, Gosh, how I dew dread it!"—*New York Times.*

At a party Miss Brown had sung "It's a Long Way to Tipperary," and for days after she was singing or humming it to herself.

"It seems to haunt me," she said to a friend, who had also been at the party.

"No wonder," said the friend. "Look at the way you murdered it."—*New York Sun.*

The maid of all work in the service of a provincial family, the members whereof are not on the most amicable terms, recently tendered her resignation much to the distress of the lady of the house.

"So you are going to leave us?" asked the mistress sadly. "What's the matter, Mary? Haven't we always treated you like one of the family?"

"Yis, mum," said Mary; "an' I've shtood it as long as I'm going to!"—*Ladies' Home Journal.*

He was a college professor, declares *Tid-bits*, greatly beloved because of his kind heart, but with the common scholastic failing of being very absent-minded. He visited his married niece and listened to her praise of her first-born. When she paused for breath, the professor felt that he must say something.

"Can the little fellow walk?" he asked, with every appearance of interest.

"Walk?" cried the mother, indignantly. "Why, he's been walking now for five months."

"Dear me!" exclaimed the professor, again relapsing into abstraction. "What a long way he must have gone!"—*Current Opinion.*

M. S. A. Book FREE To Automobile Owners

Write your name, address and name of your car on the coupon and mail today for a copy of the Official Book of the Motorists Security Alliance.

Join hands with the big national organization whose protection and service is helping motorists to automobile owners everywhere. Learn how the Little Red Ball Dog and patrolmen of the M. S. A. on your car will benefit you—how it protects you from theft, annoyance and fraud—how it comes to your aid in emergencies—how it works for your interests in securing the good work for good roads, the legislation, etc.

MOTORISTS Security Alliance

The National Organization of Automobile Owners for Protection, Saving, Legal Aid and Insurance

looks after the motor car's interests in a multitude of ways—keeps you out of legal difficulties—frees you from the extortion of supplymen, garages and hotels—aids you in all emergencies.

Big Savings on Supplies!

Anything and everything, from spark plugs to ladies' sundries at a substantial saving to you. Write for Purchasing Department coupon today.

LOCAL AGENTS WANTED

THE NEW BOOKS

THE GERMAN SIDE

The largest and most important work that has appeared on the German campaign is *With the German Armies in the West*.[1] Dr. Sven Hedin was a leader of the anti-Russian movement in Sweden the year before the war and an earnest advocate of an alliance with Germany to protect the Scandinavian countries from the fate of Finland. He cannot, therefore, be called a neutral, altho he comes from a neutral nation. Nevertheless his explorations of Tibet and central Asia have made him known as a thoro and conscientious observer and we may have confidence that he reports things as he sees them, tho we may regard his admiration for the Kaiser and his army as excessive and may not agree with his faith in the ultimate triumph of Germany.

This is war correspondence of a new sort, not the snapshot, hit-or-miss style of the ordinary journalist, temporarily detached from a daily staff, but the close detailed observation of a trained scientist and experienced traveler. He uses the pencil as well as the camera and the volume is illustrated with 119 of his sketches and photographs. For two months of the fall he was with the Germans in France and Belgium, where his international reputation and his acquaintance with the Kaiser gave him exceptional facilities for learning what he has packed into these four hundred big pages.

For a more lively and picturesque narrative we turn to Fox's *Behind the Scenes in Warring Germany*.[2] Mr. Fox supplements the reports of our other American correspondents both in time and space. He visited the western front in January instead of the fall before, and then he went to East Prussia in the wake of Hindenburg's army. We are pretty familiar by this time with conditions about Ypres and Lille, but of the Mazurian lakes and the Augustowo forest we have heard little. Mr. Fox had a chance to compare conditions on the western frontier with those on the eastern. From what he saw and heard it is evident that people and property in East Prussia suffered much more from the Russian invasion than those of Belgium and France from the Germans. Where the Germans entered Russian territory there was no evidence of devastation:

> There are many villages between Kowanlen and the frontier—the villages of Lalellen Drosdowen and Mierunsken. But today they are only names by which may be characterized certain works of Russian man. Not a house did we find intact on this road to the frontier, not a home but that was ashes or if of stone whose walls were black. Not even the church at Mierunsken had escaped the torch. In a few moments more we were in Russia. We did not need the striped frontier posts to confirm this—nor the holes and lumps that marked the end of German road building. Something more significant revealed to us that at last we had come to the land of the Czar. For we passed then two villages but a kilometer apart and in these not a house had been burned, not even a fence smashed; they were Amt and Filipowa, in the Czar's domain.

Mr. Fox shows that the British had made more thoro preparations for the invasion of Belgium than the Germans, for the maps and guidebooks issued in July, 1914, to the British officers and aviators contained maps and military information furnished by the Belgian authorities in 1912 and later. Even the code used in Belgian field orders is given. Photographs of half a dozen pages from the secret books of the British General Staff, captured at the battle of Mons, are reproduced.

Professor Burgess of Columbia, one of the leading American authorities on international law, comes to the conclusion in his study of *The European War of 1914*[3] that Sir Edward Grey was chiefly responsible for bringing on the war and especially for involving Belgium:

> Belgium has Great Britain to thank for every drop of blood shed by her people, and every franc of damage inflicted within her territory during this war. With a million of German soldiers on her eastern border demanding unhindered passage through one end of her territory, under the pledge of guarding her independence and integrity and reimbursing every franc of damage, and no British force nearer than Dover, across the Channel, it was one of the most inconsiderate, reckless, and selfish acts ever committed by a great power when Sir Edward Grey directed, as is stated in No. 155 of the British "White Paper," the British Envoy in Brussels to inform the "Belgian Government that if pressure is applied to them by Germany to induce them to depart from neutrality, his Majesty's Government expects that they will resist by any means in their power."

In the opinion of Professor Burgess the interests of the United States lie with Germany as the only opponent to England's ambition to rule the sea. "Three times in less than a hundred years of our history has Great Britain destroyed our merchant marine and we have never yet recovered from the last experience."

But Professor Burgess is very mild in his arraignment of Great Britain compared with Dr. Cronau in the pamphlet entitled *The British Black Book*.[4] It begins with a chapter on the growth of the Octopus Anglo-Saxonis and shows how its tentacles during the last eight hundred years have been reaching around the world. He accuses England of destroying one by one her maritime rivals—Spain, Holland, France, Denmark, America. He exposes the origin of some of the atrocity tales which horrified America in the first few weeks of the war. The little Belgian girl whose hands were cut off proves to be non-existent. The story of the forty Belgian Red Cross nurses whose thumbs and forefingers were cut off reduces an examination to one nurse who burned her wrists with a spirit lamp in making tea.

Unfortunately, however, all cases of German bloodguiltiness cannot be so explained away. The reports of the British, Belgian and French commissions of inquiry present abundant and convincing evidence of unwarranted cruelty to non-combatants. The diaries and official orders found on German soldiers are alone sufficient to prove the allegations of brutality and violation of the laws of humane warfare.

The Human German[5] was evidently written in the antebellum days when the English thought the Germans were amusing. It is a big volume filled with witty but not unkindly satire of German customs and character, probably a truer picture than most of the books on Germany that are now coming from British presses. The eccentricities of the German language is the favorite theme of Mr. Edgeworth as it was of Mark Twain. The inflexibility of the Prussian bureaucrat provides the point to most of his other jokes.

We get in our papers practically only one side of the war since all our cables are controlled by the British censor. For those who want to read the other side and have not access to the German papers the volume of translations of extracts from *A Month's German Newspapers*[6] will be useful. This contains editorials, news, letters and criticism from the leading journals during last December and shows what the German people were reading and thinking.

It was, we believe, Frank Harris who said that the world had known but three examples of perfect organization, the Catholic Church, the Standard Oil Company and the German army. However that may be, the German army certainly deserves study as a proof of what can be accomplished by scientific management. A handy little volume giving just what the ordinary reader wants to know about its history, organization and methods is *The German Army in War*[7] by A. Hilliard Atteridge. Altho British it is entirely fair and unfrenzied.

A similar handbook, *The German Fleet*,[8] deals with the rise of Germany as a naval power. The author, Archibald Hurd, derives much of the material from his larger work, *The German Sea-Power* of two years ago and does not consider the lessons of the present war.

Germany Since 1740,[9] by Professor Priest of Princeton, "is intended primarily to offer a background of German history to students of modern German literature," but it will serve the purpose of those—and that means most of us—who find it necessary to refresh their minds on the main facts in the history of the rise of the German empire.

German Culture Past and Present,[10] by Belfort Bax, is interesting as a rewriting of the history of the period of the Reformation and peasant revolts from a Socialist standpoint, but it has

little direct bearing upon the present situation.

The King, the Kaiser and Irish Freedom" presents the views of those who believe that the triumph of Germany would lead to an Irish republic. Mr. McGuire explains how England has ruined the industries of Ireland and how Germany could build them up. He tells of a plot of the British Government to assassinate Sir Roger Casement, whom curiously enough the British Government sent up the Kongo "to expose the Belgian atrocities. He denounces Redmond and other Irish leaders for supporting the Government and assisting recruiting.

If all German-Americans were as reasonable and moderate as the Curator of the Germania Museum at Harvard there would be a better feeling toward them in this country. Dr. Kuno Francke in *A German-American's Confession of Faith*" explains the German ideal of the state and shows what it has accomplished for good government, social justice and national efficiency. He remonstrates with the German-Americans for undertaking political action and urges the United States to stand with Germany in upholding the freedom of ocean trade against British aggression.

We give the last word to Professor Münsterberg of Harvard, since he has long been the recognized if not the authorized protagonist of German culture in the United States. In *The Peace and America*" he has brought together some of his recent addresses and articles on the situation. He explains the psychology of atrocity fabrication. He defines *Kultur* and shows how mistaken ex-President Eliot and others have been in depreciating German achievements in science, art and literature. He predicts the day when Americans will change their opinion of the Kaiser as Englishmen have changed theirs of Lincoln.

LAKE VICTORIA NYANZA

Dr. Felix Oswald, who made a geological survey of the region about Victoria Nyanza, brings together his miscellaneous observations in a popular volume under the unattractive title of *Alone in the Sleeping Sickness Country*. It is illustrated with numerous photographs and will interest many readers who are not naturalists.

Dutton. $3.

AN AVERAGE WOMAN

An unusual beginning to a novel is to have the heroine sit outside a church while within the man she had expected and hoped to marry is wedding another girl. That is the opening scene of *Spray on the Win-*

At the critical age of middle life

To grow old gracefully! This is the hope of every man and woman at the critical age of middle life. To keep the mind fresh, the body active—to keep from too-early "slowing up" with the weight of advancing years—to be able to resist the attack of disease with the same certainty as in younger days—this is the hope of the middle-aged.

And here the kindly help of Sanatogen brings most gratifying results. Embodying purest albumen and organic phosphorus, Sanatogen is easily assimilated into the system; it feeds the depleted cells and tissues, restores energy, reawakens the appetite, and strengthens the organism so that it is better able to withstand the inroads of disease.

Many indeed are those who, after using Sanatogen, can say with John Burroughs, the venerable naturalist:

"My sleep is 50 per cent. better than it was a year ago, and my mind and strength are much improved."

Or with the Hon. Wm. E. Chandler, former Sec'y of the Navy, who writes:

"Sanatogen is a pleasant nutriment for cases of [illegible]. It strengthens without irritating and promptly results in [illegible]."

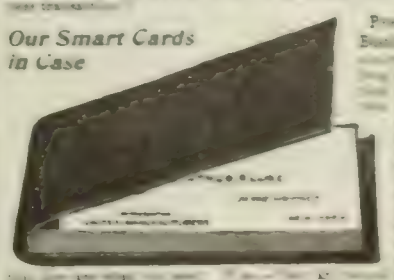
Famous men and women almost without number have given grateful praise for the restorative aid of Sanatogen, and over 21,000 physicians—after watching it in their daily practice—have written expressing their belief in Sanatogen. To guard against the pitfalls of advancing years, Sanatogen can be helpful also to *you*.

Sanatogen is sold by good druggists everywhere from $1.00 up.

Grand Prize, International Congress of Medicine, London, 1913.

SANATOGEN

ENDORSED BY OVER 21,000 PHYSICIANS



Send for "The Art of Living," a charming little book by Richard Le Gallienne, the popular poet-author, touching on Sanatogen's kindly help and giving other interesting aids to the quest for contentment and better health. The book is free. Tear this off as a reminder to write THE BAUER CHEMICAL CO., 26-R Irving Place, New York.

Tusculum College

Beautifully and healthfully located in full view of the great Smokies of East Tennessee. Founded in 1794. Tusculum is true to the ideals of its founders. The influence of the College has always been Christian. In scholarship Tusculum ranks with the best colleges in the country. Six college buildings, four dwellings, campus of 75 acres and endowment of approximately $180,000. Electric light, steam heat and all modern conveniences.

dows, by J. E. Buckrose. The seaside village, the frankly commonplace people of Sea-View Terrace and the character of Ann are pictured with arresting reality.

Doran. $1.25.

SO GOOD AND YET SO POOR

Blest with a novel idea, both for situation and character, why should a clever person like Ruth McEnery Stuart resort to such a shabby imitation of a plot in *The Cocoon?* "A rest cure comedy" it may be, but the young patient in a nerve-tire sanitarium, whose avowed faith in the best of husbands shrinks to a grain of mustard seed at the first breath of suspicion, brings it perilously near tragedy.

Hearst. $1.

A QUAINT MATCH-MAKER

It does not evidence unlimited ingenuity to explain situations in the chatter of a country sewing circle, to test bravery and assist Dan Cupid by a runaway, and to smooth a lovers' quarrel by a glimpse of a romance of a by-gone day, tucked away in the drawer of memory. But *The Little Gentleman Across the Way* by Prentice Abbot is genuine and refreshed by the fragrance of an old-fashioned garden and the eccentricity of its devoted gardener.

Boston: Badger. $1.

THE JEWEL OF THE ADRIATIC

To clothe the present's heritage from the past with all the lore of proper setting, to serve as guide to the treasure-trove of ancient towns, few are better fitted than E. V. Lucas. With him we have seen Florence, London and Paris, and now may be companioned by *A Wanderer in Venice*. The hungry traveler, used to Baedecker's plain fare of dry figures and dusty fact, will find here satisfyingly rich description, in which all necessary data have been deftly concealed.

Macmillan. $1.75

HELP FOR THE KITCHENETTE

Thanks to the perennial "young housekeeper," old housekeepers forced to new conditions, or conscious of getting into ruts, need never be in want of such practical aids as *The Small Family Cookbook*. Besides the attractive groups of Virginian and German dishes, Mary Denson Purdy has arranged the varied receipts for two, three or four persons, which will be welcome indeed to any one who has ever tried to divide three eggs and two and a third cups of flour strictly in half.

McBride, Nast. 75 cents.

BELGIAN SETTLERS

From a fortress village of Hainault to a Connecticut town, church-crowned and peaceful; from a tragic attempt at colonization in Guiana to the establishment of a New York family—this is the range of *A Walloon Family in America* as told by Mrs Robert W de Forest. Compiled from memories and family traditions, from public archives of the Old World and the New, it is a monument to the strength not only of one clan but of an entire pioneer race and spirit.

Houghton Mifflin. $2.

CAMPING FOR GIRLS

In an earlier book for girls, *On the Trail*, Edna Beard and Adella B. Beard told us the why and how, the where and when of camping and give full instructions with helpful illustrations of the many phases of life in the woods. Suggestions for appropriate and comfortable information for any emergency, woodcraft, photography, water sports and games on land were all given in detail and the abundance of information saved from monotony by the real enthusiasm for outdoor life which the book conveys.

Doubleday, Page Co.

MUCH OF A SAMENESS

Indigenous to New York are the stories by Montague Glass, of Potash and Perlmutter fame, gathered into a book taking its name from the first tale, *The Rosenthal Necklace*. The author has more than hints of Irvin Cobb's humor in the subject. He knows Ghetto and he uses that absolute faculty both for pathos and

FREMONT, NEBRASKA

CAPITAL ONE HUNDRED THOUSAND DOLLARS

1915

Atlantic Mutual Insurance Co.

Atlantic Building, 51 Wall St., New York

Insures Against Marine and Inland Transportation Risk and Will Issue Policies Making Loss Payable in Europe and Oriental Countries

Chartered by the State of New York in 1842, was preceded by a stock company of a similar name. The latter company was liquidated and part of its capital, to the extent of $100,000, was used with consent of the stockholders in the Atlantic Mutual Insurance Company and repaid with 5 years and interest at the expiration of two years.

During its existence the company has received in cash premiums $27,964,578,109.00
Received premiums thereon to the extent of 291,524,850.00
Paid losses during that period 144,820,574.00
Issued certificates of profits to date 90,804,110.00
Of which there have been redeemed 85,811,450.00
Leaving outstanding at present Dec. 6,089,660.00
Interest paid on certificates redeemed to 24,020,223.50
On December 31, 1914, the assets of the company amounted to 44,101,664.16

The profits of the company revert to the assured and are divided annually upon the premiums terminated during the year thereby reducing the cost of insurance.

For such dividends certificates are issued bearing interest at 3 per cent. and payable to bearer on demand at the office of the company.

The Market Place

MISSOURI PACIFIC

An interesting experiment is to be made by those who desire to save the Missouri Pacific Railroad Company from a receivership. About 77 per cent of the company's capitalization of nearly $400,000,000 is in bonds or other securities upon which the annual charges are fixed, and in the next five and a half years provision for $79,000,000 of these must be made. The company has recently been unable to earn enough for the fixed charges. Its credit is greatly impaired, and it cannot sell new bonds. The problem was a complicated and very difficult one. It was submitted to Kuhn, Loeb & Co., the well known bankers, who, as readjustment managers, have completed a plan which is approved by the directors and by committees representing the bonds and stock. This plan involves an assessment of $50 a share on the stock (or about $41,000,000), with issues of new preferred stock, exchanges of bonds for such stock, and other provisions, which will reduce the fixed-charge capital by about $60,000,000 and the fixed charges themselves by nearly $3,500,000 a year. It is difficult to summarize briefly the details of the plan, all of which have been carefully set forth in statements addrest to the persons directly interested.

Concessions and sacrifices are required, of course, but the question for those who are asked to make them is whether they would fare better under a receivership, which would be attended by heavy expenses. A receivership cannot be avoided if the plan is not approved by a sufficient number of the holders of bonds and stock. The project is one that has required much thought and labor from competent men and it deserves the consideration of those who own railroad securities.

A WAR ORDER STOCK MARKET

An increase of activity, with higher prices, on the New York Stock Exchange last week, was due mainly to the upward movement in those industries which are known as war order stocks. Business for the week was 1,228,[illegible] shares, against only 1,080,234 in the week preceding. While the prominent railway shares showed a net gain of from 1 to 2 points, the great advances were made by the war shares. The extent of the movement in these stocks can best be measured by the following net gains: General Motors, 10¾; Bald-

lehem Steel, 20⅛ (sales at 1911; Crucible Steel, 18⅝; Willys Overland, 14; New York Air Brake, 12¾; American Locomotive, 7; Baldwin Locomotive, 6⅞; Westinghouse, 6⅝; Allis-Chalmers, 6¾; United States Steel, 5⅝; Pressed Steel Car, 5½; General Electric, 5; Studebaker, 3

Railroad shares rose slightly, altho it might reasonably have been expected that the selling of foreign holdings, notably those owned in Great Britain, would cause a decline. It is estimated that these sales, in the four weeks ending with the closing of subscriptions to the great new British war loan, amounted to about $100,000,000. Before the beginning of that period, and after the opening of our Exchange in December, the sales from England, it is believed, were about $700,000,000, with $150,000,000 from the continent of Europe. The total for seven months therefore has been about $450,000,000.

But these sales have but slightly affected the market values of the stocks and bonds directly concerned. In several instances they have not prevented an advance. Foreign holdings of our railway securities are probably ten times the foreign holdings of our industrials, and nearly all of the industrials which have been marching upward on account of war orders have not been known to European investors. Some of them have not paid dividends on their common stock for several years past.

In England recently the sales of our securities have been caused to some extent by the terms of the new war loan. Insurance companies and other corporations which held these stocks and bonds, and which regarded them with much favor as investments, needed cash for the new subscriptions which would give them the privilege of converting their holdings of bonds of the preceding loan into the bonds of this one. A large part of the selling during the last month is explained in this way. It is possible that some foreign holders have sought to shift their investments from railroad securities to war order industrials, expecting further advances for the latter, and reasoning that no considerable gain for railway stocks can be foreseen because railway profits are, in a certain sense, limited by official regulation.

Many of the buyers of war order stocks must rely upon dividends yet to come, and not on a record of those already paid. The Bethlehem Steel Company has not been paying a dividend on its common stock, and it does not promise to pay one in the near future, but in nine months the market value of its common shares has risen from 26 to 191. This extraordinary advance is due to the fact that for a long time the company has been at work on war orders amounting to $150,000,000. Dividends are assured, buyers say, by the company's large profits. Crucible Steel (last week's advance 18⅝ points) has not been paying dividends on its common, and it owes the dividends of two or three years on its preferred, but it

now has a great market for its product, which is steel of a very high quality, and it is reported that new interests are represented now in the corporation. The Electric Boat Company (whose stock is sold in the curb market, and not on the Stock Exchange) has recently declared the first common stock dividend in five years. The price of this stock, which was 15 last year, and 35 six months ago, rose to 80 in June, and is now quoted on the curb at 180. Isaac L. Rice, who was president, has sold 16,000 shares at a profit of about $2,000,000. The company has been making motors for submarines, other parts of which, manufactured here and in Canada, have been assembled, it is understood, on the other side of the St. Lawrence. It controls the Holland submarine patents. Stock of the Du Pont Powder Company has risen from the neighborhood of 100 to nearly 700, and there have been large advances for the Hercules and Atlas companies, which were formerly associated with the Du Pont. But the stock of many of the war order companies, whether it appears on the Stock Exchange or in the curb market, is now largely in speculative hands. It is subject to sharp fluctuations.

The Steel Corporation's stock has risen above the high mark reached immediately after the court's decision in its favor, not long ago. That advance was followed by a reaction. There is abundant evidence of activity at the steel mills, and while it does not appear that the great company has any war contracts it profits indirectly by the demand for steel in various forms from other companies to which war orders have been given. Its domestic orders are increasing in volume.

BRAZIL'S COFFEE AGAIN

Loss of the German and Austrian markets has led Brazil and its state of Sao Paulo to resort again to what is called the valorization plan for the protection of Brazil's coffee planters. Dispatches from Rio Janeiro say that, at the request of Sao Paulo, Brazil's Congress has ordered an issue of about $75,000,000 of securities to be used in buying, withdrawing from the market, and holding a large part of the coffee crop.

Brazil's first valorization project excited some interest in this country, not on account of a considerable increase of price, but because the agents engaged here in the work were prosecuted by the Department of Justice for violation of the Sherman anti-trust law. The Government of Brazil demonstrated. A large quantity of the coffee, on which loans had been procured, was locked up in New York storehouses. Owing to the Government's suit it was sold and distributed.

When something very much like Brazil's plan was proposed last year for the relief and protection of cotton growers, and was advocated by officers of our Government, they were reminded of this Brazilian act and against agents and representatives of Brazil

Insurance

Conducted by

W. E. UNDERWOOD

C. L. Y., Crafton, Pa.—See reply to T. J. H. There must be a great difference in amount of benefits and their extent between your present ledger and contracts and the new one mentioned. Compare them carefully. Would not like the responsibility of advising you to change.

T. J. H., Wyomissing, Pa.—The company about which you inquire was organized in 1908 and transacts an accident and health business on the assessment plan. In that class it seems to have a good standing. Have not seen its figures up to end of 1914, but estimate its assets at about $165,000 with a probable surplus of $70,000. All assessment accident companies lack the guaranty of permanence and as compared with stock companies, their policy contracts are necessarily restricted as to benefits. The amount of premium paid generally measures the latter.

J. W. R., Hoquiam, Wash.—I cannot recommend cooperative accident and sick benefit associations. As a business proposition they are too loose-jointed. There have been thousands of them, during their ephemeral existence they performed a good work. When they failed other associations took their place. They will run along for a time and then fail. What you should have is a policy in some strong stock company. You will pay more for it, but you will have undoubted permanent security. Write to Hon. H. O. Fishback, Insurance Commissioner, Olympia, Wash., requesting a list of companies, assets, liabilities, etc., writing accident and sickness insurance in Washington.

H. A. W., Mount Vernon, Ill.—(1) Your question is one for the courts to determine; I am not capable of answering it. (2) An increase in assessments is certain; and it will be progressive, because the number of members holding assessment policies must rapidly decrease thru death and withdrawals. This wearing process from two directions augments the average age of the assessment members, who are no longer aided by the coming in of "new blood," and the increasing proportion of impaired lives remaining accelerates the death rate. It would be difficult to estimate the increase in assessments. (3) In the absence of the life insurance report of the Iowa Insurance Department, would suggest that you write Hon. Emory H. English, Commissioner of Insurance, Des Moines, Iowa. He may be able to give you the statistics you want. See my article, "Facts Furnished By One Company," in The Independent of June 21.

H. W. S., Ostrander, Wash.—(1) It indicates a merger and reorganization, not a failure. (2) Have not seen a report of the consolidated companies, but am satisfied the reserve value of your policies is not impaired; your prospective dividends are doubtless greatly abridged. (3) Yes, at present; write Insurance Commissioner of California at San Francisco. (4) That is a point on which I have no information; ask the Insurance Commissioner. (5) This answer would depend on the answer made to your fourth question. (6) Yes. You have in your deferred dividend policies about as unfavorable contracts as a policyholder could get. The company which issued them has never even pretended to maintain a fund of earned dividends, if any have been earned, and by way of explaining that deficiency has stated that the contracts do not require it to do so. I understand that since the merger provision has been made for such a fund, but I don't understand that such dividends as should have accrued in the past will be supplied.

Resinol Soap

keeps the complexion healthy and beautiful

Many an otherwise attractive girl is a social failure because of a poor complexion. If your skin is not naturally fresh, smooth and glowing, if it has suffered from summer sun and dust, or an unwise use of cosmetics, Resinol Soap will clear it—or greatly help to do so—in a normal, healthy way. It is so easy to—

Just lather your face for several minutes with Resinol Soap and hot water, working the creamy lather into the skin gently with the fingertips. Then wash off with more Resinol Soap and warm water, finishing with a liberal cool rinse to close the pores.

Do this regularly once or twice a day and you will be surprised how quickly the blemishes disappear, leaving the skin fresh and clear, the pores refined, and the complexion as healthy and beautiful as it should be.

When the skin is in a very troubled condition, you should use a little Resinol Ointment for two or three nights before using Resinol Soap. Resinol Soap is sold by all druggists. *For a trial size cake, write to Dept. 24-C, Resinol, Baltimore, Md.*

THE CHAUTAUQUA IDEA

"THE MOST AMERICAN THING IN AMERICA"

CONDUCTED BY FRANK CHAPIN BRAY

NOWHERE is the kind of summer community life seen at Chautauqua quite duplicated. This is a distinction which makes it peculiarly interesting to observers from foreign countries and surprizes new American visitors as well. Sociologically speaking Chautauqua is an experiment station for the cultivation of community spirit. Moreover, the program topics of a special "Community Service Week" suggestively deal with the schoolhouse as the nucleus of social organization, as the community center of civic practise, the music center, the pageant and festival center, the disseminator of modern home-making methods, the community health office, library, center of adult education, and the like. For those who wish to specialize there are summer school courses in social center development, the pedagogy of school and community coöperation, and the relation of the church to the community. These courses are conducted by such leaders as Mr. E. J. Ward, Wisconsin state adviser in civic and social center development; Miss Ada Van Stone Harris of Pittsburgh; Dr. Shailer Mathews, dean of the divinity school of the University of Chicago. A practical demonstration of the educational value of motion pictures is being carried on during the season. The subjects of the films shown daily are correlated with the topics presented on the public platform, by the Community Motion Picture Bureau of Boston.

College specialists and popular speakers on international affairs are provided for university summer sessions and Chautauquas this season by the Educational Division of the Carnegie Endowment for International Peace. Courses on international law, international relations and South American affairs are given in the summer schools at some fifty colleges. One thousand Chautauquas in twenty-six states will be addrest by speakers on various phases of international problems. Several of the lecturers will give single addresses on Circuit Chautauquas of the Middle West and the South. Others will spend a week at each Chautauqua and conduct a daily "educational hour." "The work which we are undertaking is purely educational, scientific, non partizan," says President Nicholas Murray Butler. "We want to know as a scientific fact whether it be true that man must go on settling his differences forever by war. If this should turn out not to be scientifically true, we want to know how man is going to give the war method up and what he can substitute for it. The problem of international peace has largely resolved itself into the job of disseminating a little intelligence among the educated. That is why we shall conduct a widespread campaign to disseminate intelligent international information during the next few months while public attention thruout the country is focussed upon the subject of war." Hamilton Wright Mabie, Rabbi Wise, Hamilton Holt, Atherton Brownell, S. Parkes Cadman and Dr. Thomas E. Green are among the more prominent of the speakers scheduled.

An outdoor Pageant of Peace and War, first elaborately presented at the Panama-Pacific Exposition in June, will be staged at Chautauqua during the period of the Foreign Missions Institute. The story was written by Mrs. Henry W. Peabody of Boston, who is chairman of the central committee of the United Study of Foreign Missions. With the exception of the songs and one short speech, the pageant of six scenes is all pantomime. The tunes are all familiar, most of them being printed in the pageant book. The costumes are all described in detail and may be easily made in any country home out of the cheapest materials, so that performances by local talent in any community may be possible. The whole purpose of the pageant, according to the foreword, is "to show the beauty of peace, the sorrows of war, and the possibility of peaceful and friendly relations with all nations when Christian ideals shall prevail."

"The old university was a thing apart, a city set on a hill," says President Charles W. Dabney of Cincinnati's municipal university. "When it occasionally marched out of its door to visit the people, music and banners celebrated the event. Some thirty years ago it took on what was called 'university extension.' The very name 'extension' implied that the university needed to be set free to serve. 'University extension' was, however, the beginning of a new era in the life of universities, developing in them a consciousness of their duty to the public. The service of some of our great state universities is a splendid illustration of what can be done by such institutions to promote the agricultural, industrial, political and social, as well as the educational interests of their states. In similar manner, the university mind is becoming the city mind, and the city itself is becoming a university for training its own servants. Now the municipal university is needed to develop this city mindedness and to organize this study of the city's problems."

"Movable schools" of three types: a Soils, Fertilizers and Crops School, an Orchard School and a Farm Dairy School, are conducted as a part of the agricultural extension work in New Hampshire. These schools last four days and lectures and demonstrations are made as practical as possible, the demonstrations being given in field, orchard or farm in rural neighborhoods. For extension instruction and demonstrations in home economics, women's clubs are organized and visited by an instructor once or twice a month. Courses for reading and study are outlined to cover ten or twelve months on such subjects as foods, household management, textiles and clothing, and the care and feeding of children.

By way of attracting summer students university advertising overlooks no natural advantages of climate and environment. Here is the University of Vermont announcing "the coolest summer school east of the Rockies," and the University of Washington "close to Puget Sound, in sight of stately Mt. Rainer and in full view of the white-capped Olympics across the sound and the Cascades to the eastward. Boating, swimming, fishing, mountaineering." Boston University, it may be noted, provides "excursions to points of historical interest," while the University of Wisconsin lists "favorable climate" and "lakeside advantages."

The program of the Rural Life Conference at the University of Minnesota is so planned that rural life leaders, particularly pastors of rural churches, may hear discussions of the special problems of the rural churches, of the agricultural problems confronting the people who make up rural congregations, and of such agricultural work as pastors may enter into with real profit and pleasure to themselves.

Among the Summer School's innovations at Columbia University this summer are a Conference on Religion for ten days in coöperation with Union Theological Seminary, a special course in scoutcraft for Boy Scout leaders and organized efforts to develop community music during the season. Lectures, open air concerts, music festivals and excursions are featured.

The Massachusetts Institute of Technology conducts a Summer Surveying Camp for two months at East Machias, Maine.

For the first time Chautauqua summer schools offer courses in practical journalism.

ASSORTED NEWS

Dr. B. J. Lloyd, a surgeon in the United States Health Service, regards the rat-proofing of buildings as an economic as well as a sanitary measure. He is quoted as saying that in this country rats eat $100,000,000 worth of foodstuffs every year.

When the principal of the Iola High School, in Kansas, recently asked the 350 pupils how many of them knew what the blinds in a saloon are for, only nineteen could tell, and when they were asked how many had never seen a saloon, more than one hundred hands were raised.

The passing of what was known as Governor Dunne's waterway bill is regarded the most important thing done by the recent Legislature of Illinois. This law provides for the construction of an eight-foot channel connecting the Chicago draining canal with the Illinois River, thus forming a direct water route from the Great Lakes to the Gulf of Mexico by way of the Mississippi River.

According to *Architect and Engineer* the highest street in the world is Main street, Denver; the richest is Fifth avenue, New York; the widest is Market street, Philadelphia; the shortest is the Rue Blé, Paris; the dirtiest is Tehanksi, Nankin; the cleanest is the Via Castile, Seville; the most aristocratic is Grosvenor Place, London; the most beautiful is the Avenue des Champs Elysees, Paris; and the narrowest is Via Sol, Havana, which has a width of no more than forty-two inches.

A plan is now being perfected for planting trees, shrubs and flowers along the entire length of the famous Lincoln Highway from ocean to ocean. Each state will designate the varieties to be planted within its borders. Already much work has been done. New Jersey, for instance, will border the highway with fruit trees, Pennsylvania will plant forest trees, decorating the tropics with vines and the evergreens with weed. Illinois will use the plains trees, while Nebraska will plant great shade trees 200 feet apart, with ornamental small trees and shrubbery in between.

The tag system is now in force in nearly every large city on the Pacific coast. Police officers are supposed to attach a tag to each vehicle found violating any law. The owner of the vehicle must then report at headquarters where, for a first offense, he is generally warned after having the law explained to him. The tag is then filed, and if the same vehicle is tagged again for a similar offense the owner is severely punished.

A 50½ per cent increase in population since 1910 is the remarkable record of Hamtramck, Michigan. But the defiance of the usual speed limits for city growth is perhaps explained by the fact that the village of Hamtramck is a suburb of Detroit and therefore in one of the most prominent centers of the automobile industry. As the manufacture of automobiles increases there and requires more and more workmen, the nearby factory villages can well afford to grow.

War, with its attendant isolation of Germany from the importation of raw materials and foodstuffs, has stimulated the efforts of German scientists to discover new uses for seemingly waste products.

A Berlin chemist has discovered a method of making straw a nutritious food for man. By laceration of the inedible cell walls, he has freed the nutritive substances within, and has made a flour containing cellulose, various sugars, mineral salts and alkalis. Straw-porridge and straw-bread are said to be excellent food for fighters.

An edition of 610,000 copies of the last telephone directory of New York City has recently been distributed. And when one considers that each copy measures nine and a half by eleven and a half inches, is about two inches thick, and weighs approximately three and a half pounds, the enormous size of this publication is even more apparent.

In 1878, when the first telephone directory was issued, it contained 252 names, printed on a single card. Now it has 350,000 listings for 566,000 telephones in the city. Which would seem to indicate that in spite of the much-talked-of decrease in the purchasing power of a dollar, the purchasing power of the humble nickel has increased considerably.

The preparation of this directory required fifty carloads of paper, seven tons of ink and 230 miles of binding wire.

GORHAM

The Touch of Finality
in Silverware

A great name in literature, in music, in art, establishes for us the finality of all that it touches.

The Shakespeares, the Beethovens, the Raphaels — those are sign posts pointing to the highest productions of the human mind.

By the same token, the name of GORHAM on silverware is a symbol of excellence in the art of fine silversmithing.

It is the court of first and final appeal in silverware of refinement and repute; and into the simplest silverware for domestic use, or the most resplendent creations of the silversmithing craft, the name of GORHAM sheds the lustre of an added glory.

This GORHAM trade-mark is a most significant symbol.

For sale by leading jewelers everywhere.

THE TOWERS, FROM THE HARBOR

NO MORE WORDS

THE third note to Germany closes the debate. There is no more room for words. Calmly and dispassionately the President of the United States sets forth for the third time the "immutable principles" upon which rests the freedom of the seas. He announces again our unfailing championship of those principles, "from whatever quarter violated." He declares that our defense of that sacred freedom will be maintained "without compromise and at any cost." He sweeps aside the evasions and casuistry of the German defense. He puts an end to words. He appeals to the deeds of the future. As Germany acts, so shall we know what we must do.

With rare diplomatic skill the American note turns the German point against the German breast. We are glad to observe, it says, that you accept without reservation the validity of the principles for which we contend. These principles are that the high seas are free; that the character and cargo of a merchantman must be ascertained before she can lawfully be seized or destroyed; and that the lives of noncombatants may in no case be put in jeopardy unless the vessel resists or seeks to escape after being summoned to submit to examination. You admit their validity in excusing your ignoring of them as an act of retaliation upon the enemy. "A belligerent act of retaliation is *per se* an act beyond the law, and the defense of an act as retaliatory is an admission that it is illegal."

Thus does the President make use of the German assertion that the German submarine warfare is justified in retaliation for Great Britain's attempt to cut off food stuffs from the German people. Other items of the German defense are dealt with summarily. Berlin is curtly reminded that the conduct of other belligerents is "irrelevant" to any discussion with Germany of what the United States regards as "grave and unjustifiable violations of the rights of American citizens by German naval commanders." It is declared that persistence in a retaliatory campaign which is inseparable from a violation of the acknowledged rights of neutrals —particularly the right to life itself—would constitute an unpardonable offense against the sovereignty of the neutral nation affected. The further assumption that altered conditions of naval warfare justify a new attitude toward the rights of neutrals is brushed away with the brief declaration that the rights of neutrals are based not upon expediency, but upon immutable principles; it is the obligation of belligerents to adapt the new conditions of warfare to those principles and not to bend the principles to fit the novel facts. Germany is finally reminded that the German navy itself has shown by the past two months of activity that the submarine can be used in substantial conformity to the accepted practises of civilized warfare.

In a single sentence the demand for reparation, "so far as reparation can be made for a needless destruction of human life by an illegal act," for the American lives lost on the "Lusitania" is reiterated. But the great emphasis is laid not upon the past but upon the future.

The remarkable suggestion of the German note that American travel be confined to certain ships designated with the approval of the German Government is rejected. Such an arrangement would obviously imply that other ships in the war zone were open to unprovoked and unannounced attack, and would be tantamount to an abandonment by the United States of the principles for which it has consistently contended.

The note closes with the solemn warning—and the language of diplomacy has few words of graver import —that the United States will consider any repetition by the commanders of German naval vessels of acts in contravention of the rights of American citizens as "deliberately unfriendly."

When such a warning as this has been given by one great nation to another, disregard of it could not but lead to the most serious consequences. It is for Germany to decide what the future shall be. She will not permit that to take place which will be considered a "deliberately unfriendly" act, unless she is ready and willing to range the United States among her enemies.

If the worst should come to the worst, and more American lives should be lost by the wilful intention of the German naval authorities, and if the United States should be compelled to take active measures in resistance to such a course of deliberate unfriendliness, we should have the high gratification that we are acting, not in retaliation for past injuries to ourselves, but in defense of the future of humanity. If Germany should choose to transform our ancient friendship into active hostility, we should be constrained to accept the lot, not because our rights had been infringed and reparation refused, but because a wanton assault had been made upon the sacred rights of humanity, of which, as a great sovereign power of the world, it is our duty and our privilege to be a guardian.

THE LOSERS

IT is not yet possible, altho we are at the end of the first year's fighting, to say which side wins. We can, however, without waiting for the issue, say now which loses. Every country engaged in the war has already lost except Japan and Italy. Italy has not yet gained as much territory by entering the war as Austria offered her to remain neutral, but she stands a good chance of getting more. Japan by a comparatively small sacrifice has gained virtual possession of the Shantung peninsula, a dozen Pacific islands and dominant position in China.

As for the other belligerent powers, it is hard to imagine any outcome of the war that will leave them as well off as they were before, to say nothing of compensating them for their losses. If the war had been decided within a month or two after it started the victorious nation might have been able by imposition of an indemnity or the annexation of territory to have covered its expenditure and financial losses. But now the expense and destruction of the war has become so great that it would be impossible to cover it by any indemnity which the defeated party could pay, or by annexation of any

territory sufficient to compensate without involving the ruling of hostile peoples. Let us consider each country in turn to see if it could gain.

Assume the Allies win. Serbia stands to gain Bosnia and Herzegovina and an Albanian port. But Serbia has lost a very large part of her population in three wars within three years. The annexed provinces would probably not be so prosperous as they have been under Austrian rule and a considerable minority of their population would oppose the change. It has been proposed to give Belgium, besides an indemnity, the duchy of Luxemburg and some small cessions of German territory along the borders, but the more farsighted Belgians reject the idea of any considerable expansion of sovereignty over alien land. France for the same reason has no wish to acquire German territory, except Alsace and Lorraine and perhaps a few miles further. The national debt of France before the war was the largest of any country in the world, over six and a third billion dollars. It has now been increased by three billion more. The birthrate in France before the war was not sufficient to maintain the population. It is now less than one-tenth of what it was then. That is, France is losing population at the rate of nearly two thousand a day, not counting the soldiers slain at the front. There can be no compensation for this. Great Britain has probably spent more on the war than any of the other powers if we include her loans to Russia, Italy, Serbia, etc. She has used up the current profits of her commerce, industry and investments and drawn heavily upon her capital. She cannot recover her losses from Germany because Belgium and France have the first claim on an indemnity, and Germany can pay a heavy indemnity only on condition of being permitted to develop her industry and commerce as before; but this is impossible, because for some years at least German goods will find few purchasers among the Allies. Great Britain and France will doubtless retain the German possessions in Africa and the Pacific which they now hold, but these are not assets but liabilities, since they do not pay expenses. There remains Russia. If Russia should get Constantinople she might regard it as worth her effort, but this is more a sentimental than an actual gain, and certainly would not pay for the devastation of her territory and the cost of the campaign. The Russian treasury was almost bankrupt before the war in spite of lavish French loans, and it will be a long time before the country can recover from the strain. Russia must also count Poland as virtually gone, since this country is to be made autonomous if not independent. The Allies have lost.

Let us now see if the other side stands any better chance of gaining by the war. If the Allies should be absolutely crushed and Germany be free to dictate terms of peace she might claim the British, French, Belgian and Portuguese territory in Africa, that is, practically the whole continent, and perhaps also certain Asiatic and Pacific possesions. Such an empire would transcend the wildest dreams of the Pan-Germanists, and would be well worth the sacrifices of the war unless it turned out that the German people had lost their stamina in the struggle and were unable to develop its potential wealth. But it is inconceivable that the Germans should achieve so sweeping a victory. If they should hold what they now have, that is, most of Belgium, a strip of northern France and the greater part of Poland, it would be more than they have any reason to expect. But Germany does not want any more Poles than she has and the value of Antwerp and northern France lies in their commercial possibilities. German commerce is ruined; its recovery depends upon the good will of other countries, and this Germany has lost. Even with Asia Minor thrown in, Germany would still be a loser on the whole. Austria if she wins might take Serbia, Montenegro and part of Albania, but even with the long sought Salonika this would not make up for her losses and expenditure. As for Turkey, she loses whoever wins, alike whoever wins her people will be the gainer. The Teutonic powers have lost.

Such is the situation. The Great War is a universal catastrophe. In the end, whenever it ends, those who call themselves victors will be but little better off than those who confess themselves vanquished.

THE KINGS MUST GO

A YEAR ago we said, "The kings must go, the good ones with the bad ones," and we added, "They will go."

They are not gone yet, not even the bad ones, not even the unforgivable ones, who, from their swaggering dissolute youth planned the murder of men by millions which now, in fulfilment of public boasts made long ago, they are perpetrating. But it took a long time to make kings, and it may take a longish time to unmake them. We have seen no reason to abandon our prophecy. Only now, after a year of observation and reflection, we have to emphasize more strongly the word of obligation. The kings must go.

Kings were begotten by superstition in the womb of war. Primitive men feared their strong men not as dynamos, but as "daimons"; the same thing, but different. They were full of the awful "mana," the divine dynamic of the supernatural frightfulness. In the most literal sense of the words, they ruled by divine right. In war their value was supreme because they were "devils of fellows." Their chief business was to terrify their foes.

It has already been their chief business. It would be their chief business now if there were as many superstitious people in the world now as there used to be. The people that still believe in kings are the people who, in their secret hearts, still reverence kings. The kings that still believe in themselves still think of themselves as "daimons." They do not doubt that they are "possest and inspired." To those of us who believe such stuff no longer they are the same thing, but different. We change "ai" to "e" in our spelling. They are "demons."

They are demons because their one birthright and normal function is to be frightful in war. That is the one thing they can do better than anybody else. If a nation is to give itself over to militarism it should on all accounts have a king. If its proper business and its ideals are the business and the ideals of peace it should quietly, humanely and by due process of law get rid of monarchy. The sovereignty of a war-making empire dwells in the "mana." The sovereignty of a peace-abiding nation resides in its people.

The kings must go. There can be no security for civilization while men who believe that their thoughts and their purposes are divine, and therefore of higher authority than the consciences and the covenants of ordi-

nary men, are permitted to rule. Why should not king or emperor make war to save his dynasty from overthrow, his house from profanation? Would any other course be less than impious?

Between the sovereignty of the "mana," the "daimon," the "demon," and the sovereignty of conscience, of reason, of humanity, there can be no compromise. One or the other must go.

GEORGIA

THE most ignorant state in the Union is Louisiana. Its school system is wretchedly inadequate. The most lawless state in the Union is no longer Texas but Georgia. According to the record kept at Tuskegee Institute there were thirty-four cases of lynching in the United States during the first six months of this year, and eight of them were in Georgia. These are cases only of lynching, ordinary murders not counted. The record for the country is not cheering, thirteen more lynchings than in the corresponding period last year. As might be expected where lynching gets popular, white men are suffering from the mob-madness. In these last six months ten white men were lynched, while last year only one. Of the thirty-four only one-fifth were charged with the "usual crime" (one a white man), and the other cases were of stealing cotton, hogs, meat, and similar offenses.

WHO IS THE DIPLODOCUS?

WHEN it comes to calling names there's nothing quite so handy as a knowledge of paleontology. It enlarges the vocabulary of vituperation. Professor Pierre Marcelin Boule, paleontologist of Paris, has evolved a new theory of Germanism. It came to him one day when he was walking thru the museum and came upon the case of the eighty-eight foot diplodocus from Wyoming which Andrew Carnegie has donated to the leading countries of the world. The German nation, he says, like this gigantic saurian, is a monstrous development of an antiquated type, an overgrown brute, specialized in strength, mad with its own might. But the man, the nation or the species which becomes afflicted with this megalomania is destined to become extinct just as the great armored fish, the mighty reptiles and the mastodons perished in the hight of their power.

Now curiously enough H. G. Wells has used the same metaphor in *The New Machiavelli*, but to represent his own country instead of Germany.

> The British Empire is like some of those early vertebrated monsters, the Brontosaurus and the Atlantosaurus and suchlike; it sacrifices intellect to character; its backbone, that is to say—especially in the visceral region—is bigger than its cranium. It's no accident that things are so. We've worked for backbone. We brag about backbone, and if the joints are anchylosed so much the better.

Mr. Wells carried his paleontological prophecy further and predicted that as these big boned and small-brained saurians were killed off by the smaller but livelier carnivorous reptiles, so Great Britain was in for a licking from the hands of "the better organized, more vigorous and now far more highly civilized peoples of central Europe," and he concluded "for my own part, since I love England as much as I detest her present lethargy of soul, I pray for a chastening war—I wouldn't mind her flag in the dirt if only her spirit would come out of it."

That was five years ago. The chastening war has come and it is having the effect for which Wells hoped. The British Empire is becoming unified, organized, and its brains are being called to its head. The recent changes in its government mean that the men who can do things are being put into positions where they can get things done.

It would not be becoming in neutrals like ourselves to decide whether these hard names should be applied to Germany or to England, so we will leave Professor Boule and Mr. Wells to settle it between themselves. But it is worth while to consider if the United States is not in danger of being involved in this Jurassic symbolism. Are there no symptoms of megalomania on this continent? Are we not inclined to put faith in bulk? Is the United States utilizing its intellect for the good of the whole organism? Be it remembered that the saurians of the prehistoric slime did not perish for lack of brains. There was enough gray matter in their dorsal vertabræ to fit out a college. But it did not do any good because it was not in the right place, at the head of everything. Are we the diplodocus?

CAPTAIN REDMOND

DO you know who Captain Redmond is? No? Well, you know who John E. Redmond is, member of Parliament for twenty-four years, accepted leader of the Irish party, who has won the Irish Parliament, and has just declined a seat in the British Cabinet. Captain William H. K. Redmond, M. P., is his brother, and he leaves Parliament to be an officer in the Irish Brigade, so firmly does he believe it to be the duty of Ireland to stand by England and Belgium in the present war. Hear him:

> How strongly do I hold this opinion? I hold it so strongly that even at my age, not so very far off from sixty years, I do not hesitate to leave my home, to leave my family, to go down into the camp and stand shoulder to shoulder with 12,000 brave men who form the Irish Brigade. When they go in a few weeks, I will go with a proud heart, and with a steady step, and advance to the front, and with my body stand by my countrymen and friends, and show to the world that the Irish Brigade is not going to *skulk* in the background while civilization and religion, and the very house of God are being attacked by the Germans.

So Captain William Redmond, and so John Redmond, Ireland's chosen and victorious leader, tell Ireland she must stand by the nation, stand by Ireland, stand by Belgium and justice and liberty and civilization, that it would be a lasting shame and disgrace to skulk.

We hate war and fighting, but we read the words with a thrill, such as one must feel when he sees men offer their lives boldly for what they believe is holy and true. And we recall one who, bravest of the brave, in the darkest danger to the freedom of England's Church, scorned ease and the love of learning and letters that he might lead the faltering and empty the vials of God's curse on oppression. Hear him tell what his soul would have heard all his life long if success had been won, and he had no part in it, if he had skulked:

> Slothful and ever to be set light by, the Church hath now overcome her late distresses after the unwearied labors of many her true servants that stood up in her defense: thou also would take upon thee to share among them of their joy. But wherefore thou? Where canst thou show any word or deed of thine which might have hastened her peace? Whatever thou dost now write or talk or look in the glass of other men's prudence and zeal, 'tis not now to say or do anything better than thy former sloth and wilfulness, or, if thou darest thou dost impudently to make a thrifty purchase of boldness to thyself out of the painful merits of

other men. What was before thy sin is now thy duty, to be abject and worthless.

There is—it cannot be denied—a glory in war. It is not in the deadly and hateful blare of battle, but in the stern sacrifice of all in life that is dear, and of life itself, to defend justice or liberty or truth, worth more than the lives of ten million men. That is noble, heroic. To skulk is to confess one's self to be "abject and worthless." Therefore John Milton hastened back from Italy and plunged into the struggle, and therefore William Redmond leaves Parliament to defend England's promise to Belgium.

LIBERTY IN PRACTISE

THERE is no bigger fool than the man who cannot or will not learn from his antagonist. That part of the civilized world which is doing business under the flag of the Allies has, as we think, a better purpose and a truer notion of human well-being than the German and Austrian empires are exhibiting at the present time. But Germany and Austria, as from time to time we have insisted, and as we expect further to maintain, have done some things in a more workmanlike manner than one sees elsewhere; and they have some ideas about the eternal fitness of things that the peoples of the allied nations might well give heed to. We in the United States in particular have not exhausted our possible indebtedness to German civilization.

It is one of the rather cheap stock complaints against Germany that it is the land of the omnipresent sign "verboten"; and the disquisitions on "the liberty that isn't" in Germany are as abundant and as tedious as sermons used to be in New England. That the difference between the German notion of liberty and the notion which prevails in France and England and in the United States is profound and vital, we think we understand and do not hesitate to proclaim. But we are not talking now about the question whether a government of the people which does many things for them is more or less democratic than a government by the people which does fewer things for them and leaves them to do most things for themselves. We are interested at the present moment in the concrete things that are or are not "verboten."

Let us look at a few examples. It was not many years ago that a grown-up man could not lawfully buy or possess a box of cigarettes in the State of Indiana. The list of states is lengthening in which a Californian, who owns a wine-producing ranch, may not legally buy the vintage of his own acres. In many states of the Union it is still illegal to fish or to play ball on Sunday, or to drive or perform useful labor unless the act can be construed as a work of necessity or mercy. The wisdom or the unwisdom, the rightness or the wrongness of these restrictions we are not now debating. We shall only classify them with reference to quite other considerations. It is enough now to remind the reader that they are "verboten." In the same states which make them illegal one may do various other things with impunity. He may, for example, litter street cars or railway trains with peanut shucks; he may throw his newspaper out of the car window into the street, or scatter papers, luncheon boxes, and chicken bones in the public parks. With boon companions he may go howling thru the streets at night, singing inane doggerel or getting meaningless yelps "off his chest," regardless of weary citizens whose rest is broken or even of the sufferings of the sick. With little danger of punishment he can make himself any kind of a nuisance in a public vehicle or in a railway station. He can attach himself to a mob of ruffian-minded men and women thronging a railway station to shake hands with a distinguished statesman passing thru on a train. He can participate in a lynching with assurance that he probably will never be called to account for his infamous behavior.

How is it in Germany? For some reason or other the German people associate the word "liberty" with conduct that is primarily a man's own affair, and they write "verboten" against the behavior that annoys one's fellow citizens or disturbs the peace. It would not occur to the German mind that drinking a stein of beer or a bottle of Löwenheimer with one's dinner in a respectable restaurant should be branded as a crime, or that recreations proper for respectable young people or grown-ups to engage in on certain days should be proscribed for other days. But reasonable quiet and decorum at all times and in all places are regarded as socially desirable. Order, neatness, and beauty in streets and parks are thought of as sufficiently worth while to be secured and enjoyed in practical fact. The man who litters and defaces will pay a fine or go to jail as surely as he will breathe. He will not a second time yell and howl where and when his howling is a public nuisance, and distinguished murderers will not be exploited, by themselves or by others, as public exhibits.

If anyone cares to maintain that these differences between the folkways and *mores* of the Germans and the Americans are evidences of Teutonic barbarism, we shall not try to undermine his faith; but we suggest that in practise liberty is always subject to limiting metes and bounds. This being so, it is at least interesting, and possibly useful to inquire whether any one people has made its list of things "verboten" so complete and discriminating that it has nothing to learn from its neighbors.

SHALL WE LET IT HAPPEN AGAIN?

WHEN the "Eastland" rolls over in the Chicago River and drowns a thousand pleasure seekers, some one is to blame. Somewhere behind the tragedy lies criminal negligence. It would be a refreshing novelty if some responsible persons should be heavily punished for their share in the neglect. But it is even more important that we should soberly face the question, What is to prevent its happening again?

Had the "Eastland" been properly inspected under the Federal law?

If she had, is the inspection law laxly and inefficiently—perhaps, even, corruptly—enforced? Or is there something lacking in the law?

Was the "Eastland" overloaded with passengers?

Whose business was it to know of the overcrowding and to forbid it?

Are there other "Eastlands" in the same or other waters, their passengers running the same deadly risks from day to day?

Who should hunt them out and make them safe—or keep them idle?

Once more we are all by a heart-breaking disaster shocked awake. But it is so easy to drop off again. Shall we stay awake long enough this time to do the job?

THE "EASTLAND" CAPSIZED IN THE CHICAGO RIVER

THE STORY OF THE WEEK

The German Drive at Warsaw

Warsaw was the week's center of war interest. On Monday the German forces at the north, under Von Hindenburg, were within fifty miles of the Polish metropolis, and were pushing steadily forward. At the south the German and Austro-Hungarian armies under Von Mackensen were within ten miles of the Lublin-Cholm railroad, Warsaw's chief means of communication with the rest of the Russian Empire. On the western front the Germans were also pushing forward, tho the Russians maintained a resolute resistance on the Bzura River. By the close of July 20 the invaders were within cannon shot of Novo Georgiewsk, the great fortress twenty miles northwest of Warsaw; and they occupied Blonie sixteen miles west of Warsaw, Grojec, twenty-five miles south, and Radom, the capital of the Polish province of that name. At the same time the auxiliary campaign far to the north in Courland resulted in the German capture of the Baltic port of Windau.

The Russians halted their retreat on July 21 and turned at bay on the northern battle line. From Novo Georgiewsk, from Pultusk and from Rozan, they made simultaneously three determined counter-attacks upon their pursuers, whose advance they succeeded in at least temporarily checking. At the south, also, similar tactics were undertaken. Near Ivangorod, between the Bug and Vistula Rivers, a great battle occurred, upon the result of which was expected to depend the control of the Lublin-Cholm railroad and consequently the fate of Warsaw. Meantime in all the churches of Russia there were held twenty-four hour services of prayer for the success of the Russian arms. The situation was comparable with that at the battle of the Marne, in which the Allies made their last, desperate and successful stand against the German drive at Paris.

The defense held good. At the south the Russians were indeed compelled to retire into the citadel of Ivangorod, but there their position seemed impregnable and the Germans could drive them no further and could not reach the coveted railroad. At the west, only nine miles from the outer forts of Warsaw, the Russians stubbornly held their ground, and at the north, on the Narew River, they actually took the aggressive against the legions of Von Hindenberg. Despite their heavy losses they were undaunted and even their foes testified that their morale was unimpaired.

The German offensive was, however, resumed with increased fury on July 24, particularly at the north, and official reports from Berlin announced that the invaders had crost the Narew River and has passed on between the two fortified towns of Pultusk and Rozan, the chief defenses of Warsaw in that region. This achievement was intended to threaten the northern lines of communication between Warsaw and Russia, and to compel the Russians either to retire at once from that city or to assume the risks of a siege. At the same time in Courland the German advance was deflected from the road to Riga toward the interior of Livonia, apparently with the aim of cutting the communications between Warsaw and Petrograd, tho its precise object remained a matter of conjecture.

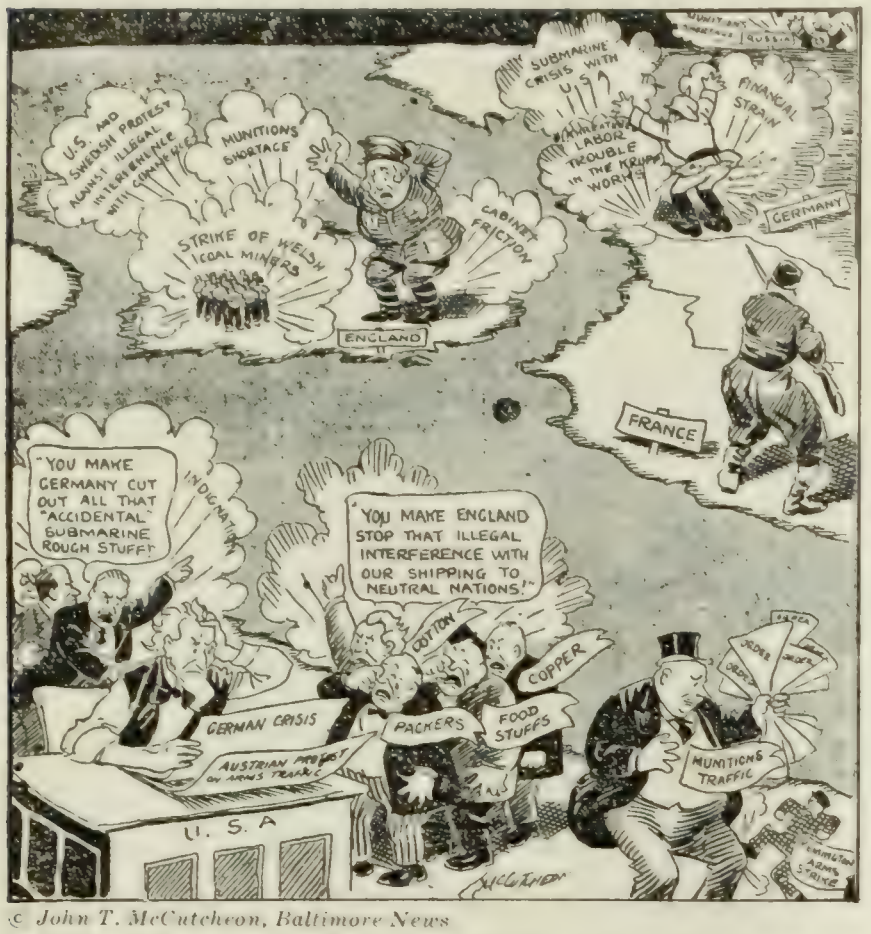
The Western Battle Line

Hard fighting opened the week at many points in Northern France and Belgium, the net results being, however, indecisive. Some gains were claimed by the British at Ypres, while their loss of Hill No. 60 was admitted. On the hights of the Meuse the French made some gains. The Germans bombarded Soissons and Rheims, and made violent attacks upon the French at Souchez, but their gains were immaterial. On July 20, however, the Germans captured a French salient in the Argonne Forest, and made substantial gains in the Forest of Apremont. Several days of fighting in the Vosges Mountains resulted in slight French gains and culminated on July 24 in the complete repulse of vigorous German attacks at Reich Ackerkopf and on the hights east of Metzeral, and on July 25 in substantial gains at Ban-de-Sapt.



French aviators were busy and effective. On July 20 they bombarded the railroad station and military depots at Colmar, in Alsace, and inflicted some [illegible] upon the Germans. They also dropped bombs upon Vigneulles-les-Hattonchatel Aer the second time. On the following day they bombarded the important railroad junction of Conflans-en-Jarnisy, near the border of Lorraine. A German aeroplane was forced to descend near Bethincourt and the two aviators were captured.

The Italian Advance

On the Carnic Carso and Isonzo fronts the Italians on July 19 began a general advance which was meant to be maintained until Görz was taken. The next day there was bitter fighting along a line of more than seventy-five miles, from the Gulf of Trieste to Tarvis in Carinthia. Further northwest, from Malborghet to Caporetto in the Carnic Alps, the Italian advance upon Carinthia was confined to heavy artillery firing, intended to destroy fortifications and clear the way for the infantry. Such a process was consummated on the Carso Plateau, east of Sagrado, and by the end of the day, July 20, several miles of territory had been taken. On this occasion the Italian troops were inspirited by the arrival among them of five grandsons of Garibaldi, who had been fighting for the French in the Argonne Forest.

Further gains were made on July 21, Tolmino at the north and Görz at the south being simultaneously approached and practically invested. All that night the battle raged unabated, and in the early morning of July 22 the Italians made an irresistible rush near Plava, driving the Austrians before them with heavy losses. A few hours later the Italians were vigorously bombarding the bridge-head at Görz, while the Austrians, in anticipation of the speedy capture of that city, transferred all its official departments to Innsbruck, away up in the northern Tyrol; apparently deeming Laibach and Klagenfurt, the capitals of the adjacent provinces of Carniola and Carinthia, too near the Italian invasion to be secure. Nor was this apprehension unfounded. The Austrians confest that wave after wave of the Italian attack was rolling upon their weakening defenses, with a force which could not much longer be withstood. Finally, on July 25, came the announcement that the Austrian general staff had evacuated Görz, and had warned the Government at Vienna of the imminence of its fall unless strong reinforcements were immediately supplied.

Meantime the war raged in the air, on the sea, and under the sea. An Austrian aeroplane bombarded Bari, on the Apulian coast of Southern Italy, but was brought down into the sea with rifle fire and the two aviators were captured. Two Austrian submarines left Pola to reconnoitre the Italian coast, and failed to return. It was believed

DOESN'T FRANCE HAVE ANY INTERNAL TROUBLES?

Philadelphia Public Ledger

THE NEW WAR LORD

TROUBLE BEHIND THE FIRING LINES

that the Austrian submarine which torpedoed the Italian cruiser "Giuseppe Garibaldi" was itself sunk by its victim just as the latter was going down. The survivors of the "Garibaldi," having no ship to serve on, immediately entered the army. An Austrian scout ship bombarded Ortona, a seaport of the Abruzzi, and did some damage to noncombatants. During the night of July 21-22 an Italian dirigible dropt bombs upon the San Polai and Nebresina railroad, a few miles north of Trieste, doing much damage. Trieste itself was reported to be at the verge of famine, and in a desperate plight; anticipating the fall of Görz, the severing of its communications with Austria northward, and the opening of the way for the Italian advance down the Isonzo.

The Turkish Campaigns Comparative inactivity prevailed on the Gallipoli Peninsula thruout the major part of the week, partly because of insufferably hot weather. A Turkish anti-airship gun was destroyed by the Allies on July 19, and two days later a small Turkish redoubt and some trenches were captured with little trouble or loss. On July 23 the Turks bombarded the Allies' trenches in the southern section, and then made a dashing infantry charge upon them, which was easily repulsed.

Elsewhere the Turks suffered severe losses. A British expedition advanced up the Euphrates River from the Persian Gulf and occupied Sukesh Sheyukh, 100 miles above Bussorah, aiming at once at the conquest of Asiatic Turkey and the seizure of the German railroad line down the Euphrates Valley from Asia Minor to the Persian Gulf. A fleet of fifty-nine Turkish sailing vessels bound for Trebizond with munitions for the Turkish army in Armenia and the Caucasus was annihilated by Russian torpedo-boat destroyers, most of the crews being captured.

The impossibility of obtaining ammunition and arms from Germany impelled the Turks to undertake their manufacture at Constantinople, under the supervision of German officers, and it was reported that several thousand shells for heavy artillery were being turned out daily. Constantinople was still well supplied with food, and the health of the city was as good as usual, but political plots and the activities of the secret police caused much disquiet and apprehension.

Indecision in the Balkans Uncertainty and indecision prevailed in the Balkan States, with a tripartite struggle among the friends of Germany, the friends of the Allies, and the advocates of continued neutrality. In Rumania this conflict became so animated and bitter as to cause an extensive schism in the Greek Orthodox Church. Three members of the Synod seceded, with a numerous following, and went over to the Russian Church; explaining to the public in an address that they did so because the other members of the Synod had been corrupted with bribes of German gold. The government remained resolute in its refusal to permit violation of its neutrality by the passage of military munitions from Germany to Turkey across its territory and there were intimations that further German demands to that effect might be considered as an ultimatum, provoking a breach of friendly relations. A Rumanian officer was reported to have asked a German diplomat caustically why the munitions were not shipped by the more direct route thru Serbia! The Bulgarian Government showed increasing unwillingness to join the Allies without a guarantee of receiving in return the major part of Serbian and Greek Macedonia. Neither Greece nor Serbia would, of course, consent to such spoliation.

The King of the Hellenes with his court and general staff showed increasing inclinations to side with Germany, at least to the extent of refusing to aid the Allies. The masses of the people, on the other hand, led by Eleutherios Venizelos, strongly favored intervention in behalf of the Allies. The government, however, ordered all newspapers to abstain from attacks upon the Allies, and particularly upon Italy.

Submarine Warfare Submarine warfare continues to be one of the most striking features of the great conflict. The British are said to have destroyed several German submarines thru the device of disguising gunboats as trawlers, and also of concealing their own submarines behind trawlers until they can get within striking distance of the enemy. German reports are that the French submarine "Joule" has long been missing and is undoubtedly lost. They also deny last week's news of the sinking of the "Pommern" by a British submarine in the Baltic. German submarines in British waters on July 25 destroyed a French steamer, a British steamer and four British trawlers.

Among the most thrilling episodes of the war at sea were the escapes of the "Anglo-Californian" and the "Orduna," British steamers. The "Orduna" reached New York on July 17 after having been pursued and attacked by a German submarine, from which she

escaped by her superior speed. The "Anglo-Californian," from Montreal, reached Queenstown on July 5 with her captain and eight men dead, and with her sides and upper works riddled by German shot and shell. She sighted a submarine at eight o'clock in the morning and immediately put on full speed in a zigzag course, to avoid being torpedoed, and sent out wireless telegraphic appeals for help. The submarine, steaming on the surface, was much swifter and soon overhauled her and began firing with machine guns and rifles, the zigzag course of the Briton making it impossible to use a torpedo. The wireless telegraphic apparatus of the "Anglo-Californian" was wrecked, and the captain was killed as he stood on the bridge. But the captain's son succeeded to the command and the unequal fight was kept up for four hours. Then British destroyers, which had heard the first call for help, appeared upon the scene, and the submarine dived and fled. Of the eight seamen killed two were Americans.

The Germans have been said, on good authority, to be planning to send a squadron of large, seagoing submarines across the Atlantic Ocean, to establish a secret base somewhere in Canadian waters and to prey upon British commerce on the American coast. The new German submarines, with a radius of action of 4000 miles, would be able to do this. They could lie in wait in the Strait of Belle Isle and in the Cabot Strait, so as to intercept Canadian troopships and supply ships emerging from the St. Lawrence, and also off the Newfoundland coast could prey upon British shipping on the way to or from New York. There seems to be little question of the practicability of this scheme. Following close upon its announcement, however, came the report of a British invention by means of which one submarine could detect the presence of another anywhere within a radius of twenty miles, and could accurately determine its location. This device was said to be under the consideration of Lord Fisher's Naval Inventions Board, and it was thought that the adoption of it would enable the British to baffle and destroy the German submarine navy.

At the beginning of the war Germany is said to have had twenty-eight submarines. Since then she has built between thirty and forty more. How slight their ravages have been in proportion to the whole volume of shipping may be seen from the fact that since the beginning of the war 20,000 vessels have entered or left the harbor of Liverpool, of which only twenty-eight have been lost.

The State of the Belligerents

The British Minister of Munitions on July 21 averted the grave menace of a strike in the coal mines of South Wales, and the men resumed work. This was the more important because the coal mines of France are now in German hands and that country has to look to Great Britain for supplies of fuel. On the same day a great Socialist demonstration was held in London, with speeches by Henry M. Hyndman, Ben Tillett and other radicals, earnestly supporting the Government in its prosecution of the war.

In view of the talk about possible conscription, the British Census Office reported that in England and Wales alone there were 3,032,000 unmarried men between the ages of eighteen and thirty-five, and 234,000 between the ages of thirty-five and forty; while of [illegible] [illegible] [illegible]

producing war supplies for the enemy," would be prosecuted criminally for treason.

United States Interests

Beside the sending of the third, strongest and presumably final note to Germany on the "Lusitania" massacre, the American Government was much concerned in the progress of the war, in the maintenance of neutral rights. Complaints were made to the State Department by aggrieved merchants on July 19 that the British government was reselling cargoes of cotton which had been consigned to neutral ports and which it had seized. Since May 31, it was said, nearly $60,000,000 worth of cotton had been shipped from the United States, the major part of which had not been permitted to reach its destination. Following this, on July 20, the British Board of Trade made a ruling which was interpreted as an order for the seizure without compensation, as contraband of war, of all cotton shipped to Germany, even to private consignees, or to neutral ports on the way to Germany. This was based upon the alleged circumstance that the German government had seized and would seize all cotton for its own use, in the manufacture of munitions of war, and that therefore there could in fact be no private consignees. It was demanded and expected that the United States would protest against this, but doubt was exprest of the validity of such protest.

It was also expected that the United States would protest against the British seizure of the cargo of the American steamer "Neches," on her way from Rotterdam to New York. The cargo was seized because of its German origin, in pursuance of an Order in Council of March 11 for the suppression of all outgoing German commerce. But the United States has never acquiesced in that Order, and it is difficult to see how its legality could be vindicated.

The United States purposes to press upon the German government diplomatic inquiries concerning the attack upon the passenger ship "Orduna," with a number of Americans aboard; and also to file claims, amounting to some millions, against Germany for American property seized in Belgium, Northern France and Poland. Our government was asked to take charge of Belgian and Serbian interests at Warsaw, in anticipation of the German occupation of that city. Meantime the German press, under permission of the Imperial censor, has been renewing bitter attacks upon the United States, and discussing the probabilities of war between the two countries. Its comments upon the last American note on the "Lusitania," tho restrained and dignified, were generally unfavorable in tone, resolutely refusing to accede to the American demands and in some cases attributing them to British influences.

New War Orders

The Spanish Government has given to a company in Illinois an order for cartridges, and it is said that the work will keep the factory busy until February. Italy is still buying horses; many carloads from Montana passed thru Pittsburgh last week. For the Calumet stockyards in Indiana, where, it is said, 100,000 horses for the Allies have been inspected, thirty-five acres of adjoining land have been bought because more room is needed. A financial journal publishes a list of war orders as to which there is no doubt. The total is $493,000,000. With this is a list, amounting to $668,000,000, of orders the reports of which have not been fully confirmed.

The foreign demand for automobiles is indicated by the official statement that the exports from New York since the war began have been $40,953,178. Russia placed a new order for auto trucks last week in Lima, Ohio. It is estimated that the orders given to the Baldwin Locomotive Company amount to $100,000,000. They include rifles and shrapnel as well as locomotives and cars. It is now said that the orders for fuses used in shells, recently taken by an association of typewriter companies, may be increased from $10,000,000 to $50,000,000. The Italian Government has decided, the dispatches

New York Tribune

[illegible]

BY AMERICA MEANWHILE

WHAT OF ENGLAND IN THE GREAT WAR?

say, to buy large quantities of American grain and meat, intending to supply not only the army and the navy but the people of the country. A motor car company in Cleveland has undertaken to make $8,000,000 worth of rifle barrels. Great Britain is in the market for 1,500,000 shells. Reports from Vladivostok say there is a great congestion of freight at that port, where the arrival of 20,000 cars and forty locomotives from this country is awaited. This freight includes armored motor cars, guns, ammunition and large quantities of cotton. So many ships come in that all of them cannot find dockroom, and a large force of workmen is building new piers.

Labor Controversies

A general strike at the works of Remington Arms Company in Bridgeport, Connecticut, has been prevented by the company's concessions. A strike of the machinists was ordered for the 20th, and on that day a few quit work, but the movement was checked by assurances from Major Penfield, the manager, that the desired eight-hour day would be granted, with a half-holiday on Saturday and an increase of wages. Therefore the men voted to remain at work. Similar concessions by subsidiary companies make the entire number of employees affected 15,000, and 5000 of these are girls. The disturbance excited much interest at Washington and thruout the country. Mr. Gompers, president of the Federation of Labor, repeated his charge that foreign interests with an unlimited supply of funds had, to his knowledge, sought to make trouble and to retard the shipment of war supplies. They had attempted, he said, to corrupt union officers of influence among longshoremen and seamen. After the settlement in Bridgeport, Mr. Keppler, the leader of the union machinists, turned his attention to a disturbance at the works of the E. W. Bliss Company in Brooklyn, where projectiles and torpedoes are made and where the men have demanded an increase of pay. Plans were also considered for a campaign designed to secure an eight-hour day for all the machinists in New England, where the average is about nine hours. This movement may affect 500,000 men. A beginning is to be made at the plant of the Winchester Arms Company in New Haven. The Bliss Company has granted an eight-hour day, but demands for a minimum wage have been rejected. The Winchester Company announced last week the adoption of an elaborate pension system for its 12,000 employees.

At the refineries of the Standard Oil Company in Bayonne, New Jersey, there have been bloody riots in connection with a strike which began with a demand from 100 cleaners of stills for a wage increase of fifteen per cent. Other classes of workmen were drawn into the movement and riots followed the strikers' failure to obtain arbitration. The plants of the Tidewater and Vacuum Oil companies were tied up. In the riots three strikers have been killed by policemen or guards and many persons—policemen, strikers and noncombatants—have been wounded. The Governor was asked to call out the militia, but he was not inclined to do so. At the piers of two of the coastwise steamship lines in New York the longshoremen are on strike for higher pay. From many parts of the country come reports of labor unrest and of strikes projected by workmen who desire to get a share of the profits made on war supplies. A general strike of 60,000 workers employed in making men's clothing has been averted in New York by an agreement which provides for an increase of wages. It is expected that recommendations proposed by Mayor Mitchel's Council of Conciliation will prevent a threatened strike of those engaged in making women's garments.

The "Eastland" Disaster

At a little before 8 o'clock last Saturday morning, the 24th, the passenger steamship "Eastland," crowded with employees of the Western Electric Company and their families, rolled over at her pier in the Chicago River, near the Clark Street Bridge in Chicago, and went down. The exact number of the lost, a majority of whom were women and children, is not yet known, but the latest estimate is 1478. Before evening came hundreds of bodies had been recovered. In two days, 915 were found and 1002 persons were saved. There is conflicting testimony as to the number of passengers. Officers of the company that had chartered the boat say, and they are supported by the two Government inspectors, that tickets had been taken from 2408 persons. The number permitted was 2500. There were 72 men in the crew. But others say that more than 3000 had been allowed to go on board, and it is asserted that 400 or 500 who had gained admission were

removed by the officers just before the disaster. The Western Electric Company's employees were about to be carried across the lower part of the lake to Michigan City, Indiana, where there was to be a picnic, with a parade. Five boats had been chartered, and this one was to take the lead. The hawsers had not been cast off, when the "Eastland" began to list. Some say a majority of the passengers had gone to one side to watch a speeding launch. The list became more marked, and a panic followed. Then the boat turned on her side and went down. Her hawsers were still unfastened, but the strain on them tore out the planking of the pier. Only six minutes elapsed between the beginning of the listing and the sinking of the ship.

Tugboats, fire boats and other craft hastened to the place. At the end of the day it was thought that only 400 had been rescued, but further inquiry has shown that the number saved slightly exceeds 1000. More than 500 are missing, and probably nearly all of these are dead. Many pathetic stories about the disaster have been told. Hundreds of physicians were promptly in service and all possible efforts to resuscitate those taken from the water were made. Artificial respirators were operated on the sidewalks. But life was found in only a few of the bodies. A professional diver who took many of them from the river became insane. A man out of work who had gone to the river to commit suicide rescued nine persons.

A special grand jury has been called and there will be a thoro inquiry. The officers of the boat and of the chartering company are under arrest. President Wilson has directed the Department of Commerce to make an investigation. Some think the boat was ballasted unevenly. The "Eastland" had an unfortunate record. Immediately after she was built, in 1903, a naval architect, who now says her hull was badly planned, recommended that her upper deck be removed and that her water ballast compartments be always kept full. The suggested changes were made, but her tendency to list was the subject of comment. Year after year she was operated at a loss, and she was sold several times. On the lakes she was not regarded as a safe ship.

The Situation in Mexico

General Gonzales gave up the capital of Mexico on the 19th, after holding it for eight days, and Zapata again took possession of it. Gonzales' excuse was that he desired to fight in the open against Zapata. The truth was, however, that Villa's flying column, rapidly moving southward, had taken Pachuca, forty miles from the capital, and cut communication between Gonzales and his base at Vera Cruz. Gonzales found the capital untenable. Some expected that Obregon would send a force southward, and that Villa's flying column might be crushed by two armies. On the other hand, it was seen that Zapata, having 20,000 men, could join and support the flying column. There was little or no news about the armies in the south, owing to the destruction of telegraphs and railroads.

In the north, Carranza's men, commanded by General Calles, attacked Naco, on the Arizona border, killing several of the Villista defenders and driving others across the boundary. This was a violation of the pact made in January last, when, at the suggestion of General Hugh L. Scott, Calles and Maytorena (Villa's commander in Sonora) agreed that Naco and Nogales, another boundary town, should be regarded as neutral territory. After the capture of Naco, Maytorena prepared to defend Nogales, Calles having approached the place with 3000 men. Our Government sent a note to Carranza protesting against the violation of the agreement and asking that the captors of Naco should withdraw at once. General Funston, in command on the border, was directed to prevent firing across the boundary. This would not necessarily involve invasion, but might require the use of artillery. Calles then decided to refrain from attacking Nogales, saying that he could confine Maytorena there by surrounding the town. Maytorena said to our Government that he could have protected Naco if his forces had not been employed in defending American colonists against the Yaqui Indians.

Cardinal Gibbons, in an interview, said he feared the sword was the only argument that could have weight in Mexico and that sooner or later there must be some form of intervention.

MAN [illegible]

IS JUSTICE INFALLIBLE?

Governor Whitman, of New York, owes his election largely to his success in prosecuting the police lieutenant, Charles Becker, for the murder of the gambler, Rosenthal. Now he is responsible for the final action on Becker's plea for clemency. Harry Thaw, who murdered Stanford White and escaped the death penalty by being declared insane, has now been released from [illegible]

A YEAR OF WAR AND AFTER

BY WILLIS FLETCHER JOHNSON

EDITORIAL WRITER FOR THE NEW YORK "TRIBUNE"

"NEITHER party expected for the war the magnitude of the duration which it has already attained. Each looked for an easier triumph." These words of Abraham Lincoln, uttered after nearly four years of our Civil War, might with equal fitness be applied to the Great War and its belligerents at the ending of its first year. A month of declarations of war, a year of waging war, inestimable months or years of war yet to be waged, and generations of slow and incomplete recovery from the results of war: Such in epitome is the record of the past, present and future of the Great War.

Between July 28 and August 28, 1914, no fewer than fourteen individual wars, "all parts of one stupendous whole," were declared or recognized to exist; and half a dozen more at later dates. They were: Austria-Hungary against Serbia, against Russia, against Japan, and against Belgium; Germany against Russia, against France, and against Belgium; Great Britain against Germany, and against Austria-Hungary; Montenegro against Austria-Hungary, and against Germany; Serbia against Germany; France against Austria-Hungary; and Japan against Germany. Later acts of war involved Turkey as an ally of Germany and Austria-Hungary, and Portugal and Italy on the side of the Allies.

The grand plan of campaign was Germany's. That was to fight her three great foes separately and crush them in succession. She was herself ready "to the last shoe-button," while not one of her adversaries was even measurably prepared for war. She therefore aimed to strike first at the least unprepared, and planned to leave the most unready to be dealt with last. Therefore she tore up her treaty with Belgium as a "scrap of paper" and violated the neutrality and integrity of that country in order to launch her first tremendous blow at France on an undefended frontier. Thus she hoped to dictate peace at Paris and to eliminate France from the problem before Russia, unready and slow-moving, could give her serious trouble at the east. Next she would transfer her vast and victorious armies, rich with the spoils of France, to her eastern marches, smash Russia, crush Serbia, and dictate a second peace at Warsaw. Finally, with the Continent subdued, she would try conclusions with her most hated foe, Great Britain, which she regarded as the most unready of them all, and indeed as a power which could never be formidable on land, but would be dealt with on the sea alone.

One city spoiled that plan. Liége was the new Thermopylae. The four days' delay of the German advance in hurling first men and then eleven-inch shells at Brialmont's domed fortresses, was brief, but it served

THE WAR BY SEA

Submarine Exploits

September 4—British cruisers "Cressy," "La Hogue" "Aboukir" sunk in North Sea by German submarine "U-9" Captain Otto Weddigen in command

October 10—Russian cruiser "Pallada" sunk in Baltic by German submarine

October 16—British cruiser "Hawke" sunk in North Sea by "U-9"

December 14—British submarine "B-11" dove under five lines of mines at Dardanelles and sank Turkish cruiser "Messoudieh"

January 1—British battleship "Formidable" sunk in English Channel

January 30 Three merchantmen sunk in Irish Sea by German submarine

February 18—German war-zone around British Isles in effect. Germany threatens to sink all enemy merchantmen in this area. 218 vessels sunk to date

March 28—British liner "Falaba" sunk in St. George's Channel. One American citizen lost

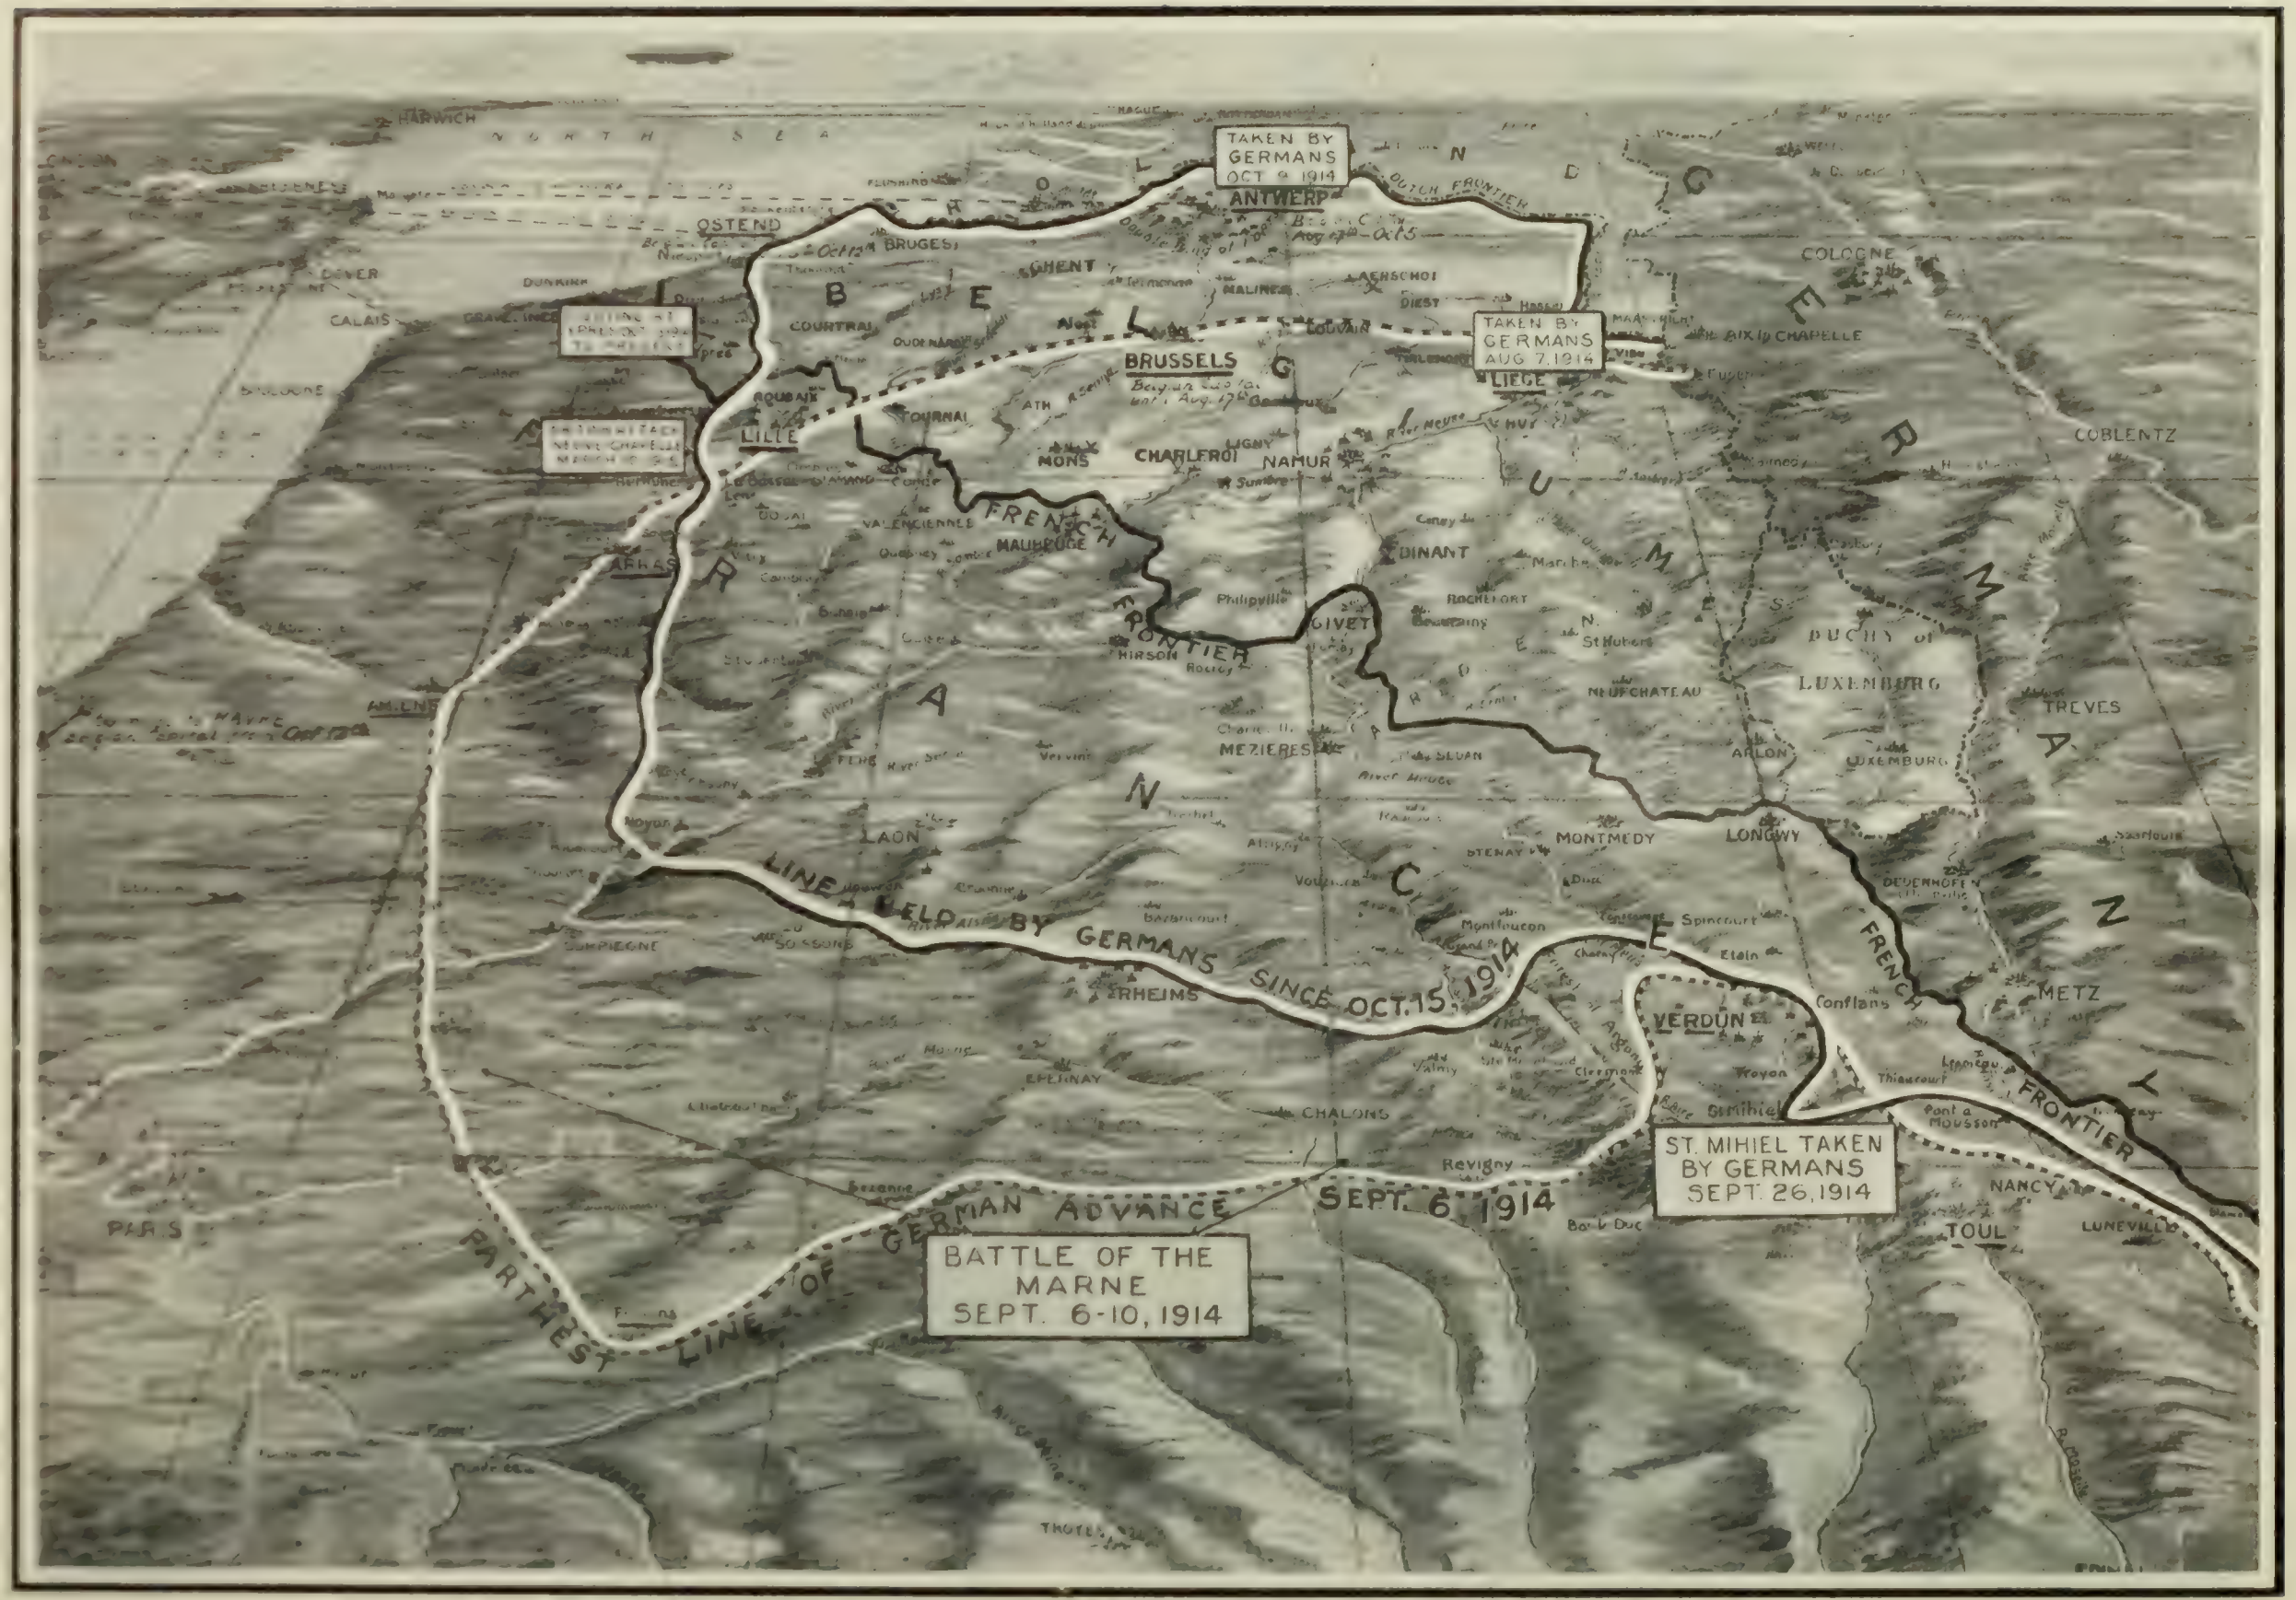
May 1—American tanker "Gulflight" sunk off Scilly Islands. Three deaths. Germany promises indemnification

May 7—British liner "Lusitania" sunk west of Queenstown by German submarine. 1152 deaths, including 114 Americans

May 25—American merchantman "Nebraskan" torpedoed but not sunk, off Fastnet, Ireland

May 25 and 27—German submarine "U-51" sinks "Triumph" and "Majestic" at Dardanelles after voyage of four thousand miles from Wilhelmshaven

June 17—Italian submarine sunk by Austrian submarine—first such event in history



July 2—German battleship "Pommern" sunk by British submarine at Bay of Dantzig, 900 miles from British base

July 18—Italian cruiser "Giuseppe Garibaldi" sunk by Austrian submarine near Ragusa

It gave France time to weld to her needs and Great Britain time to respond to the call of her ally. The German tide flowed on, bearing all before it, all thru that month of August, headed straight for Paris, which the Germans expected to occupy by mid-September. The French Government fled to Bordeaux, and Paris, with the thunder of German guns heard in her streets again after forty-four years, grimly awaited siege and storm. The German van was within four days' march of the city. But the four days which would have carried them to its walls had been lost at Liége, and now a million French and British troops were massed along the Marne, under orders to die rather than to retreat.

Another decisive battle of the world, and probably the greatest in human history, began on September 6 and raged for five whole days; and at its end the German tide ebbed from its high-water mark, never to regain it. The French and British prest forward, hoping to transform repulse into hopeless rout. But they had not calculated German thoroness. As if anticipating just such operations, the Germans had already prepared behind them elaborate defensive works upon which they could fall back and to these they did fall back and there turned at bay. A vast but indecisive battle followed, on the Aisne, and then the combatants settled down to a grim rivalry in long endurance. The battle line which was drawn at the west at the end of the first six weeks of war has changed but little, merely vibrating to and fro in distances measured by yards rather than miles, thru all the weary year.

The chief changes have been at the extreme northwest. Baffled in the direct rush toward Paris, the German armies again and again have striven to turn the left flank of the Allies and to gain the French shore of the British Channel; aiming thus to break the directest line of communication between France and Great Britain, and to secure a base from which to attack and to invade the latter country. For weeks the fiercest fighting of the war was near and on the coast at the Franco-Belgian boundary. On the ground and under the ground, on the sea and under the sea, and in the air, it raged relentlessly; and even the sea itself was let in, to swallow the land and to drown the combatants. But in the end, as at the Marne, the line of last

THE WAR BY SEA

Clearing the Sea of Germans

August 15—German battle-cruiser "Goeben" and cruiser "Breslau" sold to Turkey to avoid capture in Mediterranean

August 27—German auxiliary cruiser "Kaiser Wilhelm der Grosse" sunk north of Cape Verde Islands by British cruiser "Highflyer"

November 10—German light cruiser "Emden" destroyed at Cocos Island in Indian Ocean by Australian cruiser "Sydney," after having captured twenty-six merchantmen

March 14—German auxiliary cruiser "Prinz Eitel Friedrich" put into Hampton Roads after sinking seven merchantmen, including the American ship "William P. Frye." Subsequently interned. Germany consented to pay for the "Frye"

March 15—German cruiser "Dresden," survivor of the Falkland Islands fight, blown up at Juan Fernandez Island to avoid capture

April 11—Last commerce raider, auxiliary cruiser "Kronprinz Wilhelm," put into Hampton Roads and was subsequently interned

defense held good and the German advance was checked.

Meantime another disaster befell the German plans at the eastern borders. Russia mobilized her armies more slowly than did France, but she did mobilize them and sent them surging across the frontiers into both Austria-Hungary and Germany. By the end of August, when the Germans were pressing toward Paris and needed every man and gun to make that drive successful, the Russians had invaded East Prussia as far as Allenstein and Tannenberg, and were threatening Konigsberg, Dantzig and Posen. Then came disaster, when they were routed and driven back with appalling losses, while the Germans poured into Poland in a drive at Warsaw. At the south the Russians were more successful. They overran Galicia and Bukowina, captured Lemberg, Przemysl and Czernowitz, threatened Cracow, and crost the Carpathians to the borders of the great plain of Hungary. But here, too, were reverses. Lack of munitions, which left tens of thousands of Russians to fight with clubbed rifles and sticks and stones, led to disaster and compelled defeat. Przemysl and Lemberg were abandoned and nearly all of Galicia and Bukowina were evacuated. Vast and repeated fluctuations to and fro marked the story of the eastern battle line all thru the year. At the end of the year the Russians have lost nearly all that they had gained, while the victorious Teutons have overrun the bulk of Poland, have put an iron ring three-fourths of the way around Warsaw, and are sweeping with little resistance thru the Baltic Provinces toward Riga if not toward Petrograd itself.

Advance on one side means, however, inertia if not peril of disaster on the other; and Germany thus suffers the immense disadvantage of having to fight all her foes at once instead of one at a time, a circumstance which has transformed the whole aspect of the war. As for the auxiliary campaigns, they have been of minor interest. After many violent fluctuations of fortune, the Serbs and Montenegrins at last expelled the Austrian invaders and themselves became the aggressors in Austro-Hungarian territory. Turkey entered the war at Germany's command but has been handicapped by the impossibility of getting supplies across the barrier of Rumanian and Bulgarian neutrality. She has consequently been chiefly on the defensive, with her strength steadily waning, and with a prospect that the Straits will soon be in the hands of the Allies and be opened as an avenue for Russia's much-needed supplies. Japan wrested from Germany the latter's Chinese holdings; Australia took New Guinea and other islands; and France and Great Britain or their colonies took all of Germany's extensive African possessions save one, which also seems doomed soon to be taken. Last, Italy entered the war, fighting however not against the Teutonic powers in aid of the Allies but simply against Austria-Hungary for the advancement of her own interests and es-

THE WAR BY SEA

Two Mysteries

October 27—British superdreadnought "Audacious" reported sunk off north coast of Ireland. Disaster unexplained and not admitted by British Admiralty

November 3—British battleship "Bulwark" blown up in Thames. British Admiralty gives internal explosion as cause

THE WAR BY SEA

Naval Battles

August 18—Off Heligoland. Rear-Admiral Sir David Beatty with squadron of British battle-cruisers, light cruisers and destroyers sunk three German light cruisers and two destroyers

November 1—Off Coronel, Chile. German squadron — armored cruisers "Scharnhorst," "Gneisenau," third-class cruisers "Leipzig," "Dresden," "Nürnberg," Admiral Count von Spee in command—defeated British cruisers "Good Hope," "Glasgow," "Monmouth" and transport "Otranto," Admiral Sir Christopher Cradock in command; sinking "Good Hope" and "Monmouth"

December 8—Off Falkland Islands. British squadron—battle-cruisers "Inflexible," "Invincible," battleship "Canopus," armored cruisers "Carnarvon," "Cornwall," "Kent," second-class cruisers "Glasgow," "Bristol," Rear-Admiral Sir Frederick Sturdee in command—defeated Admiral von Spee's squadron, sinking "Leipzig," "Scharnhorst," "Gneisenau" and "Nürnberg"

January 24—In North Sea. British squadron — battle-cruisers "Tiger," "Lion," "Princess Royal," "New Zealand," "Indomitable," Vice-Admiral Sir David Beatty in command—pursued German raiding squadron—battle-cruisers "Derfflinger," "Seydlitz," "Moltke," "Blücher," Admiral Hibber in command—sinking "Blücher"

THE WAR BY SEA

Dardanelles Campaign

February 19-21—Combined allied naval fleets of battleships by fleet of forty warships. Vice-Admiral Carden in command, including British superdreadnought "Queen Elizabeth" and a number of French battleships

March 5—Forts near Kilid Bahr shelled by "Queen Elizabeth" firing across Gallipoli peninsula

March 18—French battleship "Bouvet," British battleships "Irresistible," "Ocean" sunk by floating mines. British battle-cruiser "Inflexible," French battleship "Gaulois" disabled by gunfire. Attack suspended. Operations bombardment and sweeping in following weeks. Ten warships undersea fleet

March 18 and intermittently thereafter—Russian fleet bombards Bosporus forts

April 25—Anglo-French fleet renews bombardment to cover landing of troops on Gallipoli

May 13—British battleship "Goliath" torpedoed by Turkish destroyer

May 24 and 25—British battleships "Triumph" and "Majestic" sunk by German submarine

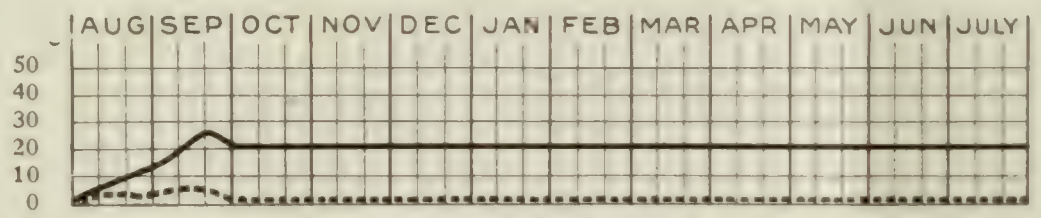
June—Larger warships withdrawn from Dardanelles

THE LOSSES IN THE GREAT WAR

As Reported in Official Statistics and Reckoned by the Red Cross and Other Relief Organizations

	Killed	Wounded	Prisoners and Missing	Total
Russia	800,000	2,000,000	800,000	3,600,000
France	450,000	800,000	310,000	1,560,000
Great Britain	125,000	250,000	90,000	465,000
Belgium	50,000	165,000	45,000	260,000
Serbia	65,000	113,000	50,000	228,000
Montenegro	8,000	15,000	5,000	28,000
Italy	5,000	12,000	2,000	19,000
Totals	1,503,000	3,355,000	1,302,000	6,160,000
Germany	500,000	900,000	250,000	1,650,000
Austria-Hungary	355,000	800,000	200,000	1,355,000
Turkey	50,000	100,000	50,000	200,000
Totals	905,000	1,800,000	500,000	3,205,000
Grand totals	2,408,000	5,155,000	1,802,000	9,365,000

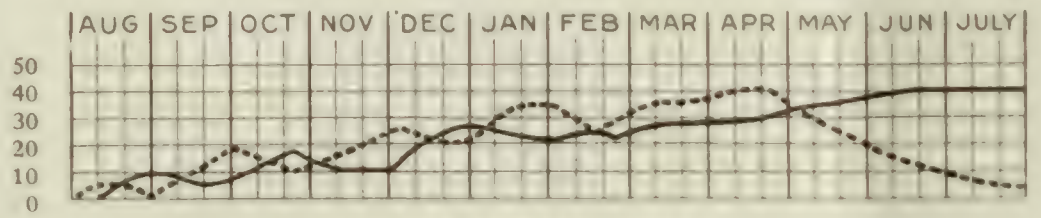
pecially for the recovery of "Italia Irredenta," in the Alps and on the Adriatic.



The first year of the war has therefore produced conditions quite different from those which were confidently anticipated, and probably a comparably great change in the attitude of the belligerents toward the issues involved. At the beginning, exulting in their known strength and never having tasted defeat, the Germans, even the foremost men of light and leading, talked of nothing less than the annexation of Belgium, northern France, Poland, the Baltic Provinces, and the bulk of Great Britain's colonies, and the exaction of indemnities which would "bleed white" all their antagonists. Now, with their plan of campaign defeated, and with their empire surrounded by an iron ring of foes threatening at once to starve and to crush it, they speak of an "honorable peace" without annexations or indemnities but on the basis of the *status quo ante bellum.* That Germany can be starved is doubtful. That she can be beaten thru failure of military supplies also seems doubtful. That she will in the course of another year suffer grave embarrassment if not disaster through monetary famine—in brief, bankruptcy—seems far less doubtful if not, indeed, quite probable. It is this aspect of the situation and of the outlook which now causes most concern and the most zealous desire to press the war with some speedy and decisive stroke.

The tone of the Allies, too, has greatly changed. The first hot flush of wrath at the violation of Belgium may not have cooled, but the expectation of wreaking speedy and overwhelming vengeance has been disappointed. There is no more talk of a swift march to Berlin, of the fall of the Hohenzollerns, and of the dissolution of the German Empire. The allied powers are, indeed, bound by a common pledge to make no peace until all are agreed upon its terms. But they are thoughtfully considering the question of how long it will take to march to Berlin if a year of such furious and costly fighting as the world has never seen before has not sufficed to drive the invading Germans out of France and Belgium.

Great Britain is of all the Allies the most belligerent in sentiment, tho the least so in action. Also, she has suffered least. She is the least inclined toward peace, and insists upon the *sine qua non* of the restoration and full indemnifying of Belgium, the surrender or destruction of the German navy, and the adoption of such measures as will make impossible another German attack upon her. It is yet to be seen how heavier losses and increasing financial burdens will affect her.



France has been waging a war with immeasurably greater losses to herself than either of her great allies has suffered, but with a fortitude and resolution never surpassed by any nation in history. Her first spontaneous demand was for a restoration of Alsace and Lorraine and repayment of the two milliards wrested from her in 1871. Whether the latter part of this demand is still so positively maintained is open to question.

THE FLUCTUATING INVASIONS

ON THE WESTERN FRONT

The figures at the left indicate the area of alien territory conquered, in thousands of square miles

ON THE EASTERN FRONT

These diagrams indicate approximately the fluctuations of the tides of invasion and occupation of territory by the belligerents in the west of Europe—Belgium, France and the Reichsland of Germany—and in the chief eastern seat of war—Poland, Galicia, Bukowina, East Prussia and the Baltic provinces. In the upper diagram the continuous line shows the area occupied by the Germans in Luxemburg, Belgium and northern France, the high-water mark of about 23,000 square miles being at the beginning of the Battle of the Marne in the second week of September. Since November the changes have been inconsiderable. The dotted line indicates the gains of the French in Alsace and Lorraine, amounting at most to only a few hundred square miles, and exaggerated for the sake of clearness on this diagram. Much greater gains on both sides, and greater fluctuations, appear in the lower diagram. The continuous line shows the advance of the Germans and Austrians in Russian Poland and the Baltic provinces, now higher than ever before and approximating 70,000 square miles. The dotted line indicates the occupation by the Russians of German territory in East Prussia and Silesia and of Austro-Hungarian territory in Galicia, Bukowina and Hungary, reaching a maximum of about 50,000 square miles in April and now ebbing toward the vanishing point.

THE TIDE OF BATTLE IN THE EAST

THE SHADED PORTION OF EACH MAP SHOWS TERRITORY HELD BY RUSSIA

THE RUSSIANS IN EAST PRUSSIA

About August 15, the height of the Russian invasion. The battle of Tannenberg, immediately after this, compelled the Russians to retire. The Austrians were in southern Poland and the Russians were pressing toward Lemberg

THE GERMAN DRIVE AT WARSAW

About October 15. The Germans reached a point 45 miles from the city, but began to fall back about October 25. The Russians had invaded Galicia as far as Tarnow, but had to retire, owing to the German victories in Poland

THE RUSSIANS OVERRUN GALICIA

About April 15. Since October the Russians had again invaded East Prussia and again retired, had swept to the frontiers of Poland and retreated to the Bzura, and had lost and recaptured Przemysl

THE LINE OF BATTLE TODAY

The Germans have invaded the Baltic provinces, taking Libau May 7; with the Austrians they have swept the Russians almost out of Galicia; and they now threaten Warsaw, from three sides, more dangerously than at any time since the war began

LANDMARKS OF THE CAMPAIGNS

On the Eastern Front

August 12—Austrians invaded Serbia and bombarded Belgrade
August 23—Battle of the Jadar River. Austrians driven out of Serbia with great loss
August 24—Russians penetrated far into East Prussia, threatening Königsberg, Dantzig and Posen
August 30—Russians routed at Allenstein and Tannenberg and driven out of East Prussia with tremendous losses
September 2—Russians took the Galician capital, Lemberg, renaming it Lvov
September 5-15—Serbians invaded Austria-Hungary, captured Semlin and threatened Sarajevo
September 23—Russians captured Jaroslav and overran most of Galicia, threatening Cracow
October 1—Russians crost the Carpathians and threatened Hungary with invasion
December 2—Austrians occupied the Serbian capital, Belgrade
December 14—Serbians reoccupied Belgrade and assumed the aggressive against Austria-Hungary
January 1-5—Russians invaded Hungary, occupied Bukowina, and threatened Transylvania with invasion
February 4—Great German drive at Warsaw, directed by von Hindenburg
February 10-12—Germans under von Hindenburg inflicted crushing defeat upon the Russians in the Mazurian Lakes region, driving them out of East Prussia
March 19—Russians occupied Memel and threatened Tilsit
March 22—After a siege lasting since September the Russians captured the Galician fortress of Przemysl
April 2-15—Tremendous battles in the Carpathians
April 30—Germans invaded the Baltic provinces
May 3—Great German and Austrian victory in Galicia, in consequence of which the Russians began to retire
May 14—German and Austrian armies began attacks upon Przemysl
June 4—Germans and Austrians retook Przemysl from the Russians and moved toward Lemberg
June 23—Germans and Austrians retook Lemberg, and soon afterward drove the Russians out of most of Galicia and Bukowina
July 15—Great German drive at Warsaw simultaneously from west, north and south and German occupation of Courland threatening Riga

LANDMARKS OF THE CAMPAIGNS

On the Fringes of the War

August 26—Germans surrendered Togoland to French and British
September 25—Australians captured New Guinea
September 28—French and British seized the German Congo Colony
July 9—British Union of South Africa completed conquest of German Southwest Africa
November 7—Germans surrendered Tsing-tau to the Japanese

April 21—Armies of the Allies landed on Gallipoli Peninsula for conquest of the Straits

---

May 26—Italians began their invasion of Austria, moving simultaneously toward Trent, Görz and Trieste
July 12—Italian raiders penetrated to within three miles of Trieste

LANDMARKS OF THE CAMPAIGNS

In France and Belgium

August 2—Germans took possession of Luxemburg in violation of its neutrality, and thus gained unobstructed entrance into France
August 7—Germans entered Liège, tho some of its forts remained unconquered, and passed on thru Belgium toward France
August 8—French troops occupied Mülhausen and advanced as far as Colmar, in Alsace
August 19—Germans destroyed Louvain
August 20—Germans passed thru Brussels, unopposed, on their "way to Paris"
August 21-23—French driven from Namur and British from Mons, slowly retreating into France before the oncoming Germans
September 2—French Government retired from Paris to Bordeaux and Paris prepared for siege
September 6-10—Battle of the Marne, in which the French and British, under orders to "die rather than retreat," checked and turned back the Germans at the high water mark of their invasion of France and drive toward Paris
September 15-28—Battle of the Aisne, in which the Germans held their ground against the attempt of the Allies to drive them out of France
October 10—Germans captured Antwerp, completing their conquest of Belgium, and the remains of the Belgian army retired into France and joined the Allies
October 15-25—Five-fold battles of four nations in western Flanders in which the first great German drive at Calais and the Channel coast was baffled
October 30—Belgians flooded western Flanders to drive out Germans
December 30—German warships bombarded Dunkirk
March 11—British captured Neuve Chapelle after several days' fighting with heavy losses on both sides
April 22—In great battle near Ypres the Germans began the use of asphyxiating and poisonous gases in warfare, with effective results
June 2—Battles in the Carpathians began

Austria-Hungary planned at the outset to crush and spoliate Serbia, to dominate the Balkans, and to gain an outlet upon the Aegean Sea. Now she is confessedly ready to assent to anything which her greater partner may deem expedient or necessary; even to the granting of guarantees to Serbia and of actual concessions of territory to Italy and Rumania.

Russia entered the war as the defender and champion of all the Slavs. She meant to crush Austria, to shatter Germany's military power, to annex Galicia and perhaps Silesia and Posen to her own Poland, and to magnify Rumania, Serbia and Bulgaria as her minor allies. Doubtless that is still her purpose. But Muscovite ways are not the ways of western Europe. Her policy may not break, but it often bends; she may not abandon her designs, but she may postpone them. Suffering heavy losses and with declining credit, a readiness on her part to temporize is not beyond the pale of possibility.

Italy is fighting for her own hand. She wants to redeem "Italia Irredenta," to remove the menace of Austria at Lake Garda, and to establish a greater influence for herself on the Albanian shore of the Adriatic. But she is not at war with Germany, and she is not bound to make peace with Austria collectively with the Allies.

Turkey, at least in Europe, is probably doomed, not so much thru the aggressions of the Allies as thru the refusal of Rumania and Bulgaria to let the military supplies which she needs pass to her from Germany across their neutral territory. The fall of Constantinople and the opening of the Straits to the Allies will be chiefly important because it will enable Russia to be far more readily supplied with the military munitions

WAR SURPRIZES

Temperance and abstinence as measures for military efficiency
Sixteen-inch siege howitzer throwing ton shell fifteen miles
Failure of steel and concrete fortifications hitherto considered impregnable
Submarines 400 feet long with cruising radius of 5000 miles
Aerial warfare with aeroplanes, Zeppelins and Zeppelin destroyers; using artillery and showers of steel darts
Armored and armed motor cars
Incendiary grenades
Searchlight bombs
Use of asphyxiating gases
Photography from rockets
Five-fold warfare: Terrestrial, subterranean, aerial, marine and submarine

THE ARMIES AT WAR

When they entered the war the belligerents were possest of the following approximate numbers of trained soldiers:

Russia	5,962,000
France	3,878,000
Italy	1,115,000
Great Britain	633,000
Serbia	240,000
Belgium	222,000
Montenegro	50,000
Total of Allies	12,100,000
Germany	4,000,000
Austria-Hungary	1,820,000
Turkey	1,100,000
Total	6,920,000
Grand total	19,020,000

During the first year of the war these forces have suffered total losses of approximately nine million men, as indicated in another table. New levies have filled the places of these losses and have made the armies at the end of the year probably larger than at the beginning

MONEY COST OF THE WAR

William Mahonia, of Paris, an honored Chinese statesman, is quoted as estimating the present cost of the war to the chief belligerents at $42,250,000 a day, or at the rate of nearly $15,500,000,000 a year. Allegations as to these figures are, they but more probably below than over the truth. Mr. Asquith recently reported to Parliament that Great Britain then was spending $15,000,000 a day. It has been credibly estimated that France and Russia are spending at least $12,000,000 a day each. Such figures, carried thru the list, would make the total cost something like twice the figure of Mr. Mahonia. The loans issued and subscribed by the chief belligerents down to the present date have been as follows:

Great Britain, two loans	$5,125,000,000
France, two loans	3,375,000,000
Russia, one loan	1,000,000,000
Total for Allies	$9,500,000,000
Germany, two loans	$3,451,000,000
Prussia, one loan	1,250,000,000
Austria-Hungary, two loans	1,500,000,000
Total for Teutonic powers	$7,251,000,000
Grand total	$16,751,000,000

The minor powers and neutrals have also made loans on account of the war. Belgium has borrowed $50,000,000 and Serbia $4,000,000 from Great Britain without interest until the end of the war. Rumania has borrowed $25,000,000 from the same source. Switzerland has raised $20,000,000 in three loans to improve her defenses against violation of her neutrality. The figures cited do not, of course, indicate the whole cost of the war, as other large expenses are met from increased taxation. It has recently been estimated by careful and competent authority that the first year of the war will have cost $25,000,000,000, or more than the sum of the public debts of all the nations engaged at the beginning of the war.

moved from the scene of war and from interest in its issues, has been subjected to belligerent influences and considerations far more than in any preceding foreign war; more, even, than in that Napoleonic war of more than a century ago which led to our becoming involved in our second war with Great Britain. Our interest arose from a variety of causes. The large number of our population of foreign origin and sympathies, the extensive purchase of supplies in this country by the belligerents, the widely different conceptions and interpretations of neutrality held by this country and by some of the belligerents, and above all, perhaps, the corresponding differences in regard for international law. The United States has from the beginning insisted upon maintaining the same principles of neutrality which have consistently governed its course, and upon observance of the international rules of warfare which have hitherto been agreed to and respected by all nations. Some of the belligerents, on the contrary, have demanded a radical abandonment of some of our fundamental principles of neutrality, and have insisted upon arbitrarily changing the rules of warfare without our consent and to our great injury. The result is that the close of the year of war finds our relations with some European powers more seriously strained than they have ever been before without actual breakage. A breach of relations between this country and any European power is not to be anticipated, tho it cannot be regarded as impossible. Its occurrence would presumably involve diplomatic rather than military operations. Its effect upon the future course and outcome of the war could scarcely fail to be very great and probably decisive.

The effect of the year upon the general international relations of the world seems likely to be little short of epochal. The ending of the war will probably mean a reorganization of European affairs greater than that of the Congress of Vienna a century and a year ago. It will also profoundly affect the aspect of international law and of treaty obligations. The war began with one of the most flagrant violations of a treaty stipulation ever recorded in history, and it has been prosecuted with a similar disregard for the plainest requirements of international law and treaty agreement in the methods and manners of conflict. It will devolve upon the nations of the world, not merely upon the belligerents seeking peace but equally upon the neutrals, to determine to what extent and by what means the sanctity of treaties and of law shall be vindicated, and also in what respects the international rules of war shall be modified to meet the changed conditions and methods of warfare which this conflict has introduced. More than the Napoleonic wars, and perhaps more than any others since the great religious and racial struggles of the Middle Ages, the war of which the last year has seen the first stage involves the general welfare and future destiny of the whole human race.

New York City

which her backward industrialism makes her unable to provide for herself.

Rumania, Bulgaria and Greece have so long kept out of the struggle that they may succeed in doing so to the end, unless they gratuitously inject themselves into it for the sake of seeking a share in the spoils. However that may be, there can be little doubt that the settlement at the end of the war will comprise a radical readjustment of affairs in that much-troubled corner of the continent. The ostensible pretext, tho not the actual cause, of the war was in that region, and there, too, must be felt its results.

The United States, altho so far re-

MOTION

A REVERIE INSTIGATED BY THE RESTLESSNESS OF THE WAVES

BY EDWIN E. SLOSSON

Somewhere in the South Atlantic, July 12, 1915.

"WHO hath desired the sea?" Nobody, apparently. Certainly none of this long row of muffled and motionless forms which lie stretched out on steamer chairs like mummies in a museum, each labeled at the head with name and number. Male and female are they, tho some are so nondescript of garb and blank of visage as to be of indistinguishable sex. Here are specimens of all races, of all ages; some have faces flushed, some pale; others are yellow or sea-green, but whatever the color of complexion they look curiously alike. For each is thinking about the same thing, namely himself. Each has his thoughts turned inward, for like yogis in a trance their attention is focussed upon the vital nexus. It is an individualized affliction. No one can feel for another. Words of condolence are perfunctorily spoken and received with coldness. Every one in the crowd is lonely and they have naught in common save their common enemy, the sea. Toward it all eyes are turned and as a charmed bird gazes with horrid fascination upon a serpent so they watch hour after hour the slimy, slithering shape that slips along between the deck and rail. Even those whose eyes are closed cannot shut out the sight of the thing. Some faces wear an expression of mere ennui; others of utter disgust; a few of cold defiance and disdain; and yet others look like Germans reciting mentally Lissauer's "Song of Hate Against England."

WHY this consensus of aversion and dislike, this instinctive human fear and dread of watery waste? Why is it put among the promises of the Apocalypse that when heaven shall reign upon the earth "There shall be no more sea"? The sea is beautiful. There is no color more cheerful than this bright blue trimmed with lace-like foam. It is not colored blue like a painted board. It is color itself, sending forth its rays as tho there were a blue sun in its depths. These sharp-crested waves and rounded valleys look like a landscape as seen from some high peak which one might think well worth a hard day's climb to gaze upon.

But these mountains are in motion. Therein lies the secret of their horror for human beings.

Not that all motion is necessarily repugnant. Quite the contrary. We delight in movement and the watching of movement. The fascination of the dance, of automobiling, of bicycling, of those Coney Island contrivances which turn, twist, toss and tip us about in boats and baskets, lies in the same titillation of the semi-circular canals as we experience on shipboard. And watching the waves is much like watching a fire. The flames, like the waves, rise and fall, appearing out of nothing, taking varied forms and vanishing again, and in this rhythmic monotony lies the fascination of both. But the fascination changes to disgust when we both perceive and partake of such movement too long. For then there is no point of stability anywhere and the soul of man craves fixedness.

When Dr. Slosson, the Literary Editor of The Independent, boarded the good ship "Guiana" for the Caribbean Sea and the little-known islands that are strung between Porto Rico and the mainland of South America, we promised readers that they might expect several articles dealing with "The Fringe of the Continent." This first message from mid-ocean deals rather with the fringe of chaos, but we publish it nevertheless for the benefit of those who are tossing uneasily on aqueous or intellectual billows.—THE EDITOR.

OVER this wilderness of water it floats like the dove cast forth out of Noah's ark and finds no resting place. The ocean is the last remnant of a chaos once universal, the fluidity of the prime. The first step in creation was the setting of a firmament. But four-fifths of the earth's surface yet remains inchoate. This great green Midgard serpent still encircles the globe and holds its tail in its mouth. This can no man tame. "His control stops with the shore." Over this wild, restless, heaving waste of water we are powerless. Other fluids we can manage, we can use if we cannot tame. The rivers run our mills; the winds, tho wanton as the waves, can yet be harnessed. But the ocean, big, baffling, enigmatical, unmanageable, mysterious, remains a perpetual reproach to us, a reminder of our impotency. Man may overpass it, but he cannot understand it. Its wasted energy, its futile laboring, is a distress to his sense of efficiency and economy. Man as the most highly organized of all beings, resents its inorganity. His duty is to regulate, to create, to establish, to integrate. The sea, which strives to reduce all hights to one level and to dissolve all things in one universal fluidity, is his eternal enemy, the Fiend incasuate, second only in malignity to him whose element is fire and who would resolve all things into their primordial nebulæ.

Man inherited a creation incomplete. His task it is to carry on the cosmic process. But for that he needs a stable standing place. When Archimedes said, "Give me a fulcrum and I will move the world," it was not a boast of power as has generally been assumed. It was a cry of despair at impotency. For fulcrum there is none in this universe of never-ending motion, neither in the heaven above nor the earth beneath nor in the waters underneath the earth. "All things flow!" cried Heraclitus, and he was known as the Weeping Philosopher. If our modern philosophers weep less than he it is not because they have been any more successful than he in discovering the Absolute, the Infallible, the Permanent in this world of relativity, error and change.

We turn our eyes from the whirling sea and seek relief by fixing them upon the wooden deck, but to our confusion we see that eddy also in the opposite direction. You call this an optical illusion? So it may be, but still it is nearer the truth than the customary optical illusion of immobility. From this stream of water that goes rushing by the ship catch and hold a drop. Put on a glass slide under a microscope, the drop of water seems as simple, clear and still as the crystal beneath it. But scrape into it some particles of carbon, a bit of India ink, and look again thru the lens. At once we see that what we mistook for immobility is intensest activity. The inky atoms dance about like a swarm of midges, buffeted hither and thither by the invisible molecules. We gaze down into blackened vortices, into maelstroms, cyclones and hurricanes in miniature.

SO far the microscope takes us, but here we will not halt for the mind's eye will lead us further and show us greater activity and increasing complexity. For each of these molecules is more complicated than the solar system. The simplest of the atoms contains a thousand satellites, each a corpuscle of negative elec-

tricity, bound to an undiscoverable central sun of positivity, and every corpuscle is in vibration, moving with the speed of light. A Newton could resolve the movements of all the heavenly bodies into a formula that a child can learn, and by it can be laid down the paths that they must follow for a thousand years to come. But never will there be a Newton who can formulate the movements which go on within a single atom during a second of time. Not all the mathematicians since the world began, combining their efforts and laboring night and day, could calculate the ephemeris of the atom and prescribe the orbits of the thousands, tens of thousands or hundreds of thousands of planets which, tho flying swift as the sun's ray thru space, are yet held within the invisible line of the atom's circumference. We seek in vain for rest in the infinitely little as in the infinitely vast. The microscope and the telescope, whichever way we turn them, only serve to reveal to us more and measureless and unimaginable motion. The history of philosophy, of science, is the record of the search of the soul for stability.

IN despair man turns to himself and seeks to discover in his own soul that fixity and permanence which he has failed to find in the external world. This seems promising, for a simple line of logic leads in the desired direction.

All motion is relative. Space is everywhere the same. We cannot stick a surveyor's pin into it at a certain point. We cannot blaze our way thru it as we do thru a forest. Only objects move and their movement consists in change of their position in relation to one another. Does the ship slide thru the water or does the water rush by it? The question considered closely is meaningless. What we see is that a speck of foam on the wave and a particular post on the ship's rail are a minute later no longer in line. This is "the immediate data of consciousness" as Bergson calls it. We may interpret it as best suits our convenience. When we stand on the dock and look up at the vast expanse of an ocean liner just pulling out we are irresistibly impelled to believe that it is the dock and not the ship which is in motion because the ship is the biggest thing in sight and so is naturally assumed as the stationary object. We call this an "illusion," but it is merely an uncustomary point of view. If the ship is eastward bound the "illusion" is indeed more true than the other view because with reference to the stars—assumed for convenience to be "fixed"—both dock and ship are moving westward at the rate of some thousand miles an hour, but the dock is going a trifle faster than the ship and so they are parting company. It is then merely a matter of convenience whether we assume that the dock is stationary and the ship moving or the ship stationary and the dock moving or that both are moving in the same direction at any rates of speed whose difference equals the speed of parting or that both are moving in opposite directions at any rates of speed whose sum equals the speed of parting. Of all these equally tenable hypotheses the first is the simplest and commonly the most convenient, so we rightly call it "the right" one. It is a matter of choice but not a matter of indifference which point of view is taken.

We see then that the quarrel between Galileo and the Pope was not a "conflict between religion and science," but merely a clash of antagonistic intolerances. Galileo demanded the right of the astronomer to his new point of view. The Pope refused to allow any but the traditional or common-sense point of view. The Inquisition held that the Pope alone was right and Galileo was forced to recant. Later the world reversed the verdict and, finding that Galieo was right, arrived unwarrantably at the conclusion that the Pope was wrong. In our more liberal days both views are tolerated, for both are useful on their lawful occasions. The astronomer would find it highly inconvenient, tho by no means impossible, to calculate the movements of the planets on the assumption that they as well as the sun revolved around a stationary and motionless earth. But catch the astronomer in mufti and you will hear him talk about the rising and setting of the sun like any of us ordinary people. It would be extremely awkward for him to carry his book language into ordinary life. Except on those rare occasions when we want to figure out the orbit of a comet we will insist upon keeping the earth in the center of the universe. "Where Macgregor sits, there is the head of the table."

SO much is clear and easy. Now for the application of it all to our present predicament. Since all motion is relative and any point can be taken as fixed, let us assume that we are at rest. Draw a straight line thru the brain, connecting the semi-circular canals. Bisect it at the point P. Postulate P as stationary. Now do we feel more comfortable? Alas, no. What use is it to convince the brain if the viscera remain unconverted? The Bible is right in placing the seat of conviction elsewhere than in the brain. We have not the pride of Macgregor, at least not now. But perhaps even his self-assumption was no more than sufficient for the dominance of a dining hall and would not have sufficed to make him the center of a revolving universe. No, with all else in motion, with the water heaving and falling, with the deck slanting this way and that, with the mast drawing strange curves in the sky, with even the horizon line by which we set our levels cutting capers before our bewildered eyes, with all visible and some invisible things in manifest commotion, we cannot bring ourselves to believe that we are at rest.

If we could only get a proper conceit of ourselves we should be at peace. That, then, is the secret of seasickness. It is due to a lack of self sufficiency, to the failure of self-esteem. Man is no longer "the captain of his soul." He has been temporarily dislodged from his proud post at the center of the universe. The fault is in ourselves, not in the stars, or in the sea. It is *mit mal de mer*, but *mal de moi*.

HAVE we not felt before and on *terra firma* this sinking sensation, this feeling of queasiness? Yes, we remember. It was when we entered the lobby of a theater with a party of guests and found that we had left the tickets in our other clothes. It was when we thoughtlessly praised the Kaiser in a group of English people. It was when in our dream we discovered that we were walking down the street with some indispensable article of apparel missing. It was when we thought that the staircase had one more step—and it hadn't; when we got scared in the dark; when we missed our way and our pocketbook in a foreign city; when we lost our equilibrium in crossing a plank bridge; when we felt ourselves in danger of losing our money, our job, our friends, our reputation, our courage. In short, it is the physical sensation of fear. Any blow to our self-esteem is a hit below the belt, a form of attack debarred by the code of politeness as it is by the Marquis of Queensberry rules.

Against a mental malady like this even chloretone is powerless. To minister to a mind diseased other remedies are necessary. But seasickness is not incurable. Somehow one does get over it in time. He recovers his equilibrium. He assumes once more his rightful position as the one fixed point in the center of a world of change. Then he can look with indifference on the tumult of the waves

and feel without a quaver the writhing of the ship beneath his feet. He can afford to let all things go, for he has found himself. He is captain of his soul.

The philosophy of seasickness also serves as a key to the interpretation of the intellectual history of mankind. When we look back to the sixteenth century it seems to us as tho the people were crazy. Why should a harmless necessary theory like that of Copernicus have aroused such fear and hatred? Why should those who held it have been persecuted, ostracized, imprisoned, tortured, burned at the stake?

It was because the new theory displaced the world from its centric position, and so scared people. The *odium theologicum* was mostly mere seasickness. The earth used to be a rock; it became a boat. What was man if his world was but one of the minor planets? As Chesterton puts it:

The dear sun dwarfed of dreadful suns
Like fiercer flowers on stalk;
Earth lost and little like a pea
In Heaven's towering forestry.

Once again the world got seasick and for a similar reason. That was in the middle of the nineteenth century when Darwin delivered a knock-out blow as disconcerting as had been that of Copernicus. Man, from being the end and aim of all creation, was reduced to a mere link between the ape and superman. As the Copernican theory dislodged man from his dominant position in space, so the Darwinian displaced him from his dominant position in time. But the world got over this attack in time and may therefore be confident of withstanding any similar shocks in the future. This is lucky, for the ship of human progress is going on and we must go with it. We cannot get out and walk, nor can we go back and stand as before upon the dry land of dogma. We must find a way of maintaining our equilibrium even when all around us is in motion and seeming disorder. And we can do it. The Copernican is no more dizzy than the Ptolemist. The Evolutionist is no less conceited—to say the least—than the Anti-Evolutionist. The sun does truly rise and set and serve as a lamp—to the earth. Man is truly the measure of all things—for man. Pessimists and cynics, all the host of the terrified and intolerant, are simply people afloat on a metaphysical flux and too much upset by it to be rational. The optimists, the pragmatists and all sensible people are those who have got their sea-legs.

Karl Struss

WHERE OPEN AIR OPERA MAY BE SUNG IN NEW YORK

THE NEW MUSICAL STADIUM AT THE COLLEGE OF THE CITY OF NEW YORK, WHERE CHANVILLE BARKER PRODUCED "THE TROJAN WOMEN" AND HEINRICH IN FAUST LAST SPRING TO THE DELIGHT OF LARGE AUDIENCES, MAY BE PUT TO A STILL MORE NOVEL USE WHICH HAS LARGE POSSIBILITIES OF PUBLIC EDUCATION AND ENJOYMENT. A GROUP OF MEN ESPECIALLY APT TO ENTHUSE THE PROJECT ARE TALKING OF ARRANGING OUTDOOR PERFORMANCES OF "MUSIC-DRAMA" FOR THE SUMMER SEASON. BITTERLY A BARRIER SAGE FOR OPERA LOVERS IN AMERICA, THE PERFORMANCES UNDER MR. BARCLAY'S DIRECTION PROVED NOT ONLY THE ACOUSTICS OF THE AUDITORIUM OR STADIUM [illegible] MORE ADMIRABLE AND THERE IS SOME REASON TO BELIEVE THAT A COMBINATION ORCHESTRA AND CHORUS WOULD BE SUFFICIENT FROM ITS OWN NUMBER OF SINGERS WOULD MAKE IT POSSIBLE TO WAIVE THE ADMISSION CHARGES LAW, AND IN SPITE OF THE SCALE OF THE AMPHITHEATRE ACOUSTIC PROPERTIES BACK OF THE TOWER SEATS, THE TOWER WOULD UNDOUBTEDLY TAKE FULL ADVANTAGE OF SUCH A UNIQUE OPPORTUNITY. [illegible] "MUSIC-DRAMA" WHICH THE METROPOLITAN OPERA COMPANY GIVES IN THE HARVARD STADIUM IN JUNE. THE PLAN IS QUITE [illegible] THIS STADIUM WAS USED THIS YEAR FOR THE FIRST TIME FOR A SIMILAR PURPOSE

AT A COLLEGE CAMP MEETING

BY WILLIAM T. ELLIS

A SHORT and very black Zulu, in the clipped English of one not speaking his mother tongue, had made an earnest plea for Africa, and his words weighed the more because many of the six hundred and fifty three students listening to him knew that he was returning from his American college course to a heathen home, where his Christianity would be opposed. The little speech caused the chairman to comment, "That is the call from Macedonia."

"I am from Macedonia," quietly remarked a young Levantine down in front. Then in a few words he laid the plight of his harassed people upon the hearts of his hearers. Quick to sense the dramatic, this gathering of Mississippi Valley college men at Lake Geneva broke into applause. They were hearing in reality what came to Paul in a vision.

The occasion was one of thrills. For it was the closing week-night session of the Lake Geneva Students' Conference, and the students themselves had the floor, to give their own impressions of this Conference which they had been attending for a week, and to express their life purposes.

All the expressions were brief—necessarily, for nearly two hundred men spoke within an hour and five minutes—and some were colloquial and unexpected to a degree. A Chinese convulsed the crowd by his testimony that he had found the students' religion to be "not all hot air." An American was greeted with a roar when he said that his spiritual life had been "magnanimously rejuvenated." One youth, evidently a football captain, said that hitherto he had merely had his mother's religion, which was so much a habit that one night when he knelt mechanically to say his prayers he found himself giving football signals instead!

Interesting as were these little peeps into the American student mind, it was the foreign delegates who dominated the occasion. The meeting, like the Conference, was a laboratory of cosmopolitanism, an experiment in international brotherhood. More than a hundred students of darker hue than the home-grown product had mingled in the life of the Conference for a week. At this Saturday night "experience meeting" they came to the fore with striking testimonies, which were typified by the speech of one Chinese, which I report verbatim and entire: "Above all nations is humanity. Thank you for teaching that to me."

Toward the close of the hour a student arose and said, "The testimonies of these foreign brothers have settled my life work." Another boy put the same idea more picturesquely when he declared "These foreign brothers certainly have got my goat."

Dr. Ellis has been a leading figure in religious campaigns for many years. The editor of "Men and Missions," he has edited "Forward," a Presbyterian weekly, and is now "editor afield" of "The Continent." He is a speaker of Chautauqua's undergraduate hour in January all over the country. He has served also on the editorial staff of the Philadelphia "Press" and is now on the staff of the Philadelphia "North American."—THE EDITOR.

What it means to the cause of internationalism and of world peace to have such a visualization of human brotherhood enter into the lives of hundreds and thousands of college men goes without saying. The situation in the Lake Geneva Conference was duplicated at Northfield, Massachusetts, and Eagle's Mere, Pennsylvania, and Estes Park, Colorado, and Black Mountain, North Carolina, and other of these student conferences which the Young Men's Christian Association conducts every summer.

Possibly these student conferences may be dubbed the revised version of the primitive American camp meeting. The likeness consists in the essentially religious purpose of the gatherings; their situation under the trees, with the men living in tents; and the daily program of meetings. In place of the ecstatic shoutings of the old-fashioned camp meeting we have college yells and songs—the dining-room especially being a bedlam of rival yells.

No camp meeting ever had a régime like this. Military regularity governed the camp. Everybody was up at six, with breakfast at 6:45 (thus providing time for the "Morning Watch," to which most of these students are committed), and then followed a succession of classes and meetings, treading on the heels of one another until noon. A uniform Bible study in "The Kingdom of God" was pursued by half a hundred groups of about sixteen men each, led by ministers and trained workers who attended the Conference for this work and for personal interviews.

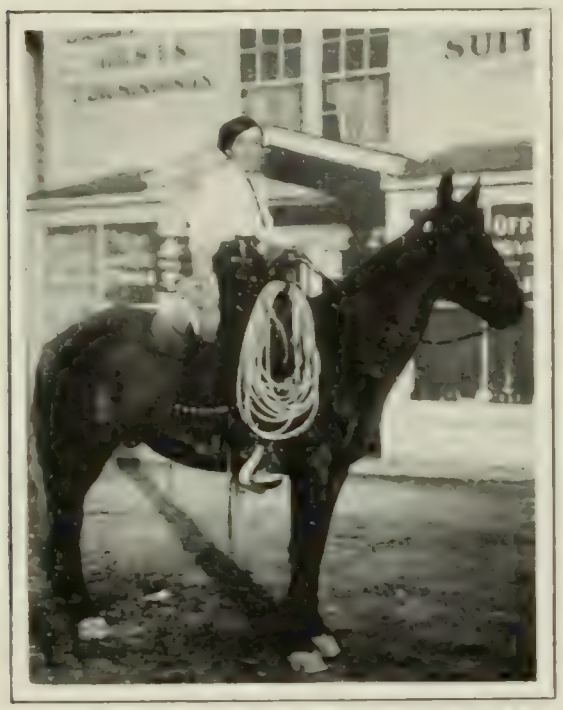
Somehow, one was reminded of ancient Greece, and of the youth sitting at the feet of its philosophers, by the spectacle of these interviews in process. All the afternoon a visitor might see unwearied teachers—men who at home are bishops, secretaries, professors or pastors—sitting at tent doors or under trees or by the lakeside, giving counsel to appointment, to an unending succession of students. There are experts provided for all the groups of problems confronting youth, men prepared to talk concerning the teaching profession, business, the ministry, medicine, law, missions, and all qualified to deal with the delicate personal questions of faith and life.

"Life-work" is the keynote of these conferences. It resounded from the eleven o'clock and the night meetings in the auditorium, special classes were devoted to it, and every evening, at twilight, by the lakeside, the boys sat on the hillside and heard the leaders of men talk of a man's work in the world.

The sort of speaking heard by the students is indicated by the outstanding names of the Conference—John R. Mott, Bishops McDowell and Henderson, of the Methodist Church; Dr. John Timothy Stone, George Sherwood Eddy, Fred B. Smith, Raymond Robins, Dean Bosworth and A. J. Elliott, the Young Men's Christian Association secretary in charge of this Conference, and of the student work in the Middle West—"Dad" Elliott he is called by college presidents and freshmen alike.

There is no better organized or more statesmanlike Christian work being done in America today than this which is conducted in the colleges. The students themselves are being set to work for their fellows. "Dad" Elliott reported at Lake Geneva that in the Mississippi Valley last year there were 139 "gospel teams" in sixty colleges. These "teams" aggregated 587 men, who went on deputation to 132 towns and held 1075 separate meetings. The character of their service, aside from the platform, appears in the report that they made more than four thousand calls upon men, and held more than three thousand interviews on personal religion, and reported conversions to the number of more than two thousand.

Sanity and wholesomeness mark the college man's religion. At Lake Geneva the students made more noise at their afternoon athletics—and in the dining-room—than at any of the religious meetings. Quick to laugh and cheer, they are not the less pious for being lovers of out-of-door sports and wholesome good times. They have religion without religiosity, patriotism without jingoism, and idealism so genuine that they are a tonic of optimism for the nation.



Swarthmore, Pennsylvania

THE WORLD OVER

A Girl Champion

Miss Marion Carterett, champion woman "broncho buster" of Nevada, who won her spurs in competition with cowgirls from all over the West in the bucking contests at Elko last year, has just emerged victor in another competition, having been appointed postmistress of Deeth, over a number of men candidates for the position.

Miss Carterett enjoys the distinction of being the only woman in the country who has succeeded in riding some of the vicious "outlaw" horses, which have proved the undoing of many an expert

POSTMISTRESS—EXPERT HORSEWOMAN

man rider. During her years of competition Miss Carterett has suffered a number of broken bones, caused by her horse falling backward on her—a favorite trick of the bucking broncho.

In addition to her skill on horseback Miss Carterett is an expert with the reins, and at one time for several months regularly drove a team of eight horses on one of the local mountain stage-coach lines. She has also accomplished the more difficult feat of driving a "line team" with fourteen horses in it. A line team is a number of horses driven with just one line, which is fastened to the outside ring on the leader's bit, the horse being trained so that if the line is pulled he turns one way, and if it is jerked he turns the other. The driver rides a wheel horse and controls the other animals by voice.

How Our Nerves Work

We see, we hear, we smell, we feel, and we taste. Each time one of these processes occurs few of us realize what an elaborate mechanism is at work. The general impression is that a nerve impulse travels along a nerve fiber very much as the voice travels over the telephone—without producing any appreciable change in the apparatus itself over which the impulse travels.

Just what immediate effect an impulse has on the nerve fibers has for many years been a much discussed problem. Since there had never been found any structural change, or heat production, or consumption of material occurring in the nerve tissue, it seemed as tho the change was entirely of an electrical nature.

To a Japanese physiologist, Dr. Shiro Tashiro, who is working at the University of Chicago, is due the honor of having discovered that, besides the electrical change, there is also a chemical change when the nerve fiber is stimulated. That this was not detected in previous investigations on nerve physiology was due to the fact that the right kind of apparatus had never been constructed. It is only recently that an instrument has been devised which measures carbon dioxide in such small amounts as one ten-millionth gram. Such minute quantities of this gas would seem to be insignificant were it not for the fact that the nerve fiber itself is very small.

Dr. Tashiro believes that in order for a nerve to conduct an impulse certain unstable chemical substances must be present which place the nerve in readiness to respond to a stimulus and the results of his experiments bear out this theory. By means of the sensitive apparatus which he used he was able to discover that chemical changes do take place in nerve fibers. When stimulated, the nerves increase their production of carbon dioxide, the amount produced depending upon the strength of the impulse and the distance of the different parts of the fiber from the place where the impulse is first received. He also found that those nerves which are known to be the most sensitive are the ones which produce the largest amounts of carbon dioxide when not at work.

The World's Railroads

According to the German Government's annual compilation of railway statistics of the world for 1914, just published, the total mileage of the world is 690,133. Of this the governments own thirty-three per cent and private companies sixty-seven per cent.

Outside of North and South America, government ownership largely prevails. Great Britain, Portugal, Greece and Turkey are the only nations in Europe that have no state railways. In North and South America, on the contrary, only 28,233 miles are owned by the governments out of a total mileage of 156,317.

Of the seventy-five nations and colonies for which statistics are given, forty-two have more private than government mileage and thirty-three have more government mileage.

The total railway capitalization of the world is $56,350,804,230, of which the United States has $15,330,131,446. Of the total mileage of the world, over thirty-seven per cent is in the United States.

A Burning Shame

Over $9,500,000 went up in smoke last year from forest fires alone. And more than half these fires, so the United States Forest Service estimates, were due to easily preventable causes, such as campers' carelessness, railroad locomotives, brush burning, incendiaries, and sawmills. It is a matter for grave concern that such needless waste of the nation's resources can continue from year to year. The six million acres which were burned over in 1914 might have furnished much of the needed food and clothing during the past winter of hard times. No country, however prosperous, has money to burn.

The Largest Bascule Bridge

To the Canadian Pacific Railroad belongs the honor of operating its trains from Sault Ste. Marie, Michigan, over the longest bascule bridge in the world, which crosses the United States ship canal at that point. The bridge is 356 feet long between the centers of the piers, and has two folding leaves, which open so as to permit vessels to pass thru and close in such a manner as to form one rigid span from pier to pier.

Each leaf is composed of two riveted trusses 168 feet long and fifty-five feet deep, spaced twenty feet apart, and counterbalanced by heavy overhead masses of concrete, suspended from counterweight trusses. Each leaf with its machinery is carried on a tower, the trunnion being at the base of the framing which carries the bearing for the counterweight and the accompanying mechanism.

Allowance for contraction and expansion in the superstructure, 126 feet long over all, including the towers, is made by placing one tower with its leaf and counterweights on rollers, making

A GOOD ROADWAY BY DAY AND—

that end of the span free to move longitudinally when the ridge is closed, while provision is made for holding the tower in a fixed position during the operation of the bascule leaves.

Electricity is the operating power of the bridge. It can be opened and closed in one and one-quarter minutes. The weight of the structural steel in the entire bridge is 1400 tons, and each of the two bascule leaves, with its floor system, weighs about 400 tons.

For a Uniform Barrel

The last Congress, in its wisdom, enacted a law "to fix the standard barrel for fruit, vegetables and other dry commodities." This sounds simple and sensible. But like most things in life it is not so simple and sensible as it sounds.

The intent of the law is evidently to make all barrels the same size, tho curiously enough the large cranberry barrel is excepted from its provisions. A standard barrel, therefore, is ordained and it is to contain 7056 cubic inches of space. This is all right when apples, pears, potatoes, onions or other fruits or vegetables are to be used. But when all "dry commodities" are to be compressed into barrels of 7056 cubic inches the framer of the law evidently forgot that from time immemorial, flour, sugar, lime, cement, etc., have used special large-sized barrels, and any violent change may work much hardship to these industries.

Fortunately the law does not go into effect until July, 1916, so that there is time either for the manufacturers to accommodate themselves to the law or else get the next Congress to revise and accommodate the law to them.

A Museum That Goes to School

Did you ever watch a crowd of schoolchildren being shepherded by a harassed teacher thru an exposition or museum? Or did you, a too-much shepherded schoolchild, ever tramp wearily from case to case while information about the things that interested you least was showered on you?

If you did, you will understand why Dr. Frederick J. V. Skiff, director of the Field Museum of Natural History of Chicago, suggested the plan that the museum, thru the generosity of Mr. N. W. Harris, has now put into operation. "The fact appears to be," said Dr. Skiff, "that the school children, being taken from their routine, and transported in a body to another, and often unfamiliar, part of the city, and to a public park, or a museum, ... possibly consider the expedition to the store of a holiday, and the benefits ... referred are rather of a temperamental than an educational character."

So, since Mohammed showed a tendency to misbehave at the mountain, the mountain obligingly comes to Mohammed. Nearly seven hundred cases of exhibits are now being sent from school to school, in lots of six or seven at a time, to bring all the children into touch with what the museum has to offer. Formerly less than ten per cent of Chicago's 280,000 pupils ever visited the museum even for "temperamental" benefits.

The exhibits are not merely stuffed animals and chipped rock. They display in miniature the same careful technique that the great museum commands. Birds and beasts are shown in a bit of their own habitat, manufactured products are logically linked up with raw materials, and economic exhibits that many a museum lacks are attractively put together. There is a clear, simple label on everything that is shown, and an explanatory card beside, so that during the two weeks that the cases remain at one school the boys and girls can do plenty of intelligent looking for themselves.

The School Board of Chicago has furnished racks to hold the cases, each about three feet long, and the museum distributes them by automobile. Another year a catalog will probably be provided so that principals may order the particular exhibits which are in demand to illustrate the work of various classes. The Field Museum of Natural History was inaugurated at the close of Chicago's World Fair in 1893. In 1915 the N. W. Harris Public School Extension of the Field Museum of Natural History, in turn, shows its work at the San Francisco Exposition. If the chain is extended the expositions will truly be milestones of public education.

LAID BY ON A RAINY DAY

Hundreds of schools—the result of one day's inquiries on the New York Subway—which have been turned into the "Lost and Found" office of the company. By means of an efficient system of labeling, many of these umbrellas are identified in daily sessions and returned.

A Chip of the Old Block

"How many uses has wood?" is a question that requires a surprisingly large answer. For just one product—wood fiber—makes at least a score of practical articles in everyday use. Silk stockings, dresses, ties and rugs have given wood fiber great commercial importance. To realize that your tie grew in a forest may be a bit difficult at first. But the fact remains that silk ties and railroad ties belong literally to the same family tree.

Heavy "cloth" sacks for packing coffee and onions to be shipped are made from wood, too. And yarn and twine and pulleys of this same fiber have given a "cord" of wood a double meaning.

The use of wood pulp for commercial purposes has greatly increased within the last four years and its field of usefulness is continually broadening. It holds an important place in the manufacture of pasteboard containers, and a sanitary milk bottle, made of pulp and paraffined, is coming into prominence. Suit-cases of wood-pulp combine light weight with durability, and insulating bodies made from prest pulp have been found valuable in electrical work.

Perhaps the most ingenious use of wood pulp, however, is that to which a Massachusetts firm has recently put it. Lumber, unusually strong and heavy, has been manufactured by cementing the layers of pulp together. We may yet make forests out of sawdust.

PEBBLES

With Edison and Wright on the job, our Government should have a lot of important secrets to make public soon.—*New York Evening Sun.*

"When I sing I get tears in my eyes. What can I do for this?"
"Stuff cotton in your ears."—*Chicago Tribune.*

Our Office Boy (anxious to enlist, but rejected)—All right, general! Only if the Kaiser licks yer, don't blame me!—*Boston Transcript.*

"For Sale—In Bangalore, one 6-H. P. A. C. Sociable Cycle Car, in good order till recently driven by a lady."—*The Madras Mail, quoted by Punch.*

Two solemn-looking gentlemen were riding together in a railway carriage. One gentleman said to the other, "Is your wife entertaining this summer?" Whereupon the second gentleman replied, "Not very."—*New York Times.*

"Look here!" said an excited man to a druggist. "You gave me morphine for quinine this morning!"
"Is that so?" replied the druggist. "Then you owe me twenty-five cents."—*Christian Register.*

"My wife is certainly hard to please!"
"She must have changed a heap since she married you?"
"She certainly has; but how did you know—er—think you're funny, don't you?"—*Houston Post.*

Enthusiastic Aviator (after long explanation of principle and workings of his biplane)—Now, you understand it, don't you?
Young Lady—What makes it stay up?—*New York Times.*

Caddie—I got that ball we lost this morning, sir—got it from a small kid.
Golfer—Good! I'll hand you what you gave him for it.
Caddie—No, thanks; I gave him a punch in the eye.—*Boston Transcript.*

"What?" exclaimed the motorist, who had run over a farmer's toe, "you want five hundred dollars for a crushed foot? Nonsense! I'm no millionaire."
"Perhaps not," cried the suffering farmer, "and I'm no centipede either."—*Ladies' Home Journal.*

"Aw, aw," said Snobleigh—"it must be—aw—very unpleasant for you Americans to be—aw—governed by people whom you—aw—wouldn't awsk to dinner."
"Oh, I don't know," said the American girl; "no more so than for you to be governed by people who wouldn't ask you to dinner."—*Ladies' Home Journal.*

"Ma! Ma!" bawled Freddie as the usual morning wash was going on. "Do my ears belong to my face or my neck?"
Ma temporized. "Why, what is the matter," she asked.
"I want to get clear now. Every time you tell Mary to wash my face or my neck she washes my ears too."—*Ladies' Home Journal.*

At the funeral of Baron Lionel De Rothschild, father of the recently deceased Lord Rothschild, a poor old man wept loudly and bitterly.
"Why are you crying?" enquired a bystander. "You are no relation of Rothschild."
Young Lady—All but one thing. What makes it stay up?—*New York Tribune.*

Friend—What? You're not going back to the wife's Mid-season?
Closet Actress—No. I have an offer from Belasco, for instance, for Mrs. Malaprop, Mrs. Candour, Lady Teazle, Lady Sneerwell,

The New Books

THE LAND BEYOND THE WAR

The Great War has at least stirred the lovers of peace to literary activity, albeit of varied quality, and not a few have chosen to frame their thoughts in dramatic form. Across *the Border*, by Beulah Marie Dix, while not so strongly and surely handled as the *Rada* of Alfred Noyes, is lifted by a touch of genuine mysticism above the level of such plays as *War Brides*. Like Hauptmann's *Hannele*, the drama takes place within two worlds, a real world of sordid horror and a dream world "across the border" of life. But, unlike the German poet, Beulah Dix does not make herself equally at home in the here and in the hereafter. The descriptions of the place where the warrior soul is purified thru seeing for the first time the real nature of his life work and of the land of warless quiet for which this purgatorial process has fitted him, are drawn with nobility and a fine restraint. But the first and the fourth scenes, laid within the world of reality, are disfigured by a certain amount of that mixture of sentimental rhetoric and needlessly brutal realism which is too common in pacifist drama.

Across the Border, by Beulah Marie Dix. New York: Henry Holt & Co. 80 cents.

ORIGINS OF THE GREAT WAR

There has been more than one creditable attempt to discover the true causes of the Great War by a careful analysis of the official documents issued by the European governments to justify their respective courses of action. Professor Ellery C. Stowell's *The Diplomacy of the War of 1914* is not only the best of these undertakings but, one might almost say, it is the best which could be written at the present time. A true diplomatic history of the war cannot, of course, be written for many decades, and not then unless the archives of Europe are freely thrown open to students. Everyone, certainly including Professor Stowell, feels that in spite of the polychromatic variety of the official papers now given to the public we are still largely in the dark as to the real motives which determined the diplomatic maneuvers of last July and August. But so far as the causes of the war are a matter of record, the record is here.

The first section of the book is devoted to a brief but adequate sketch of the European balance of power as it existed in 1914, giving the causes of the formation of the Triple Alliance and of the Triple Entente, the various "incidents" which have in recent years threatened to involve the European powers in a partial or a general war,

No Gears to Strip

Gray Gearless

Detachable Row Boat Motor

FITS ANY ROWBOAT

More Power 2½ H. P. — because it has greater cylinder displacement than any other portable marine motor of the same rating, and because less power is wasted between motor and the wheel.

The Gray Gearless is made by a **responsible** and experienced Marine Engine building concern. There is service and responsibility behind it.

The Gray Gearless is the lightest portable motor for its power on the market. The crank case is made of aluminum. The main bearings are strong, long, liberal, and are interchangeable. This means long life. Bearings are easily renewable—in most other portable motors it would be necessary to buy a new machine when the bearings wear. Runs in either direction.

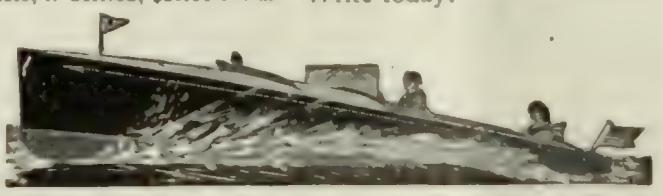
The Flexible Shaft Drive is the strongest part of the motor. This transmission is the big, strong, and mechanical feature. Made of Chrome Vanadium, heat treated; maximum strength, 250,000 lbs. per square inch.

All bevel gears are done away with, no wasted power from this source. The big, cumbersome speed retarded, containing hubs are also dispensed with.

The strong and smoother power of the wonderful ***Gray Gearless*** motor is transmitted to the propeller shaft by a wear-resisting Vanadium flexible drive shaft. Each one is tested to transmit 7 H. P.

The propeller is the weedless type suitable for use in either fresh or salt water. No supporting projections, pinions and racks to catch weeds. The ***Gray Gearless*** is a race winner; it drives your boat faster than is possible with other portable boat motors.

No Gears to Strip - No big hub to obstruct water or catch weeds. Note how clean a run the water gets forward of propeller.



Price F. O. B. Detroit

$55.00

This price includes the complete motor, ready to attach and operate; also ignition equipment, including high-grade spark plug and spark plug protector, battery box, battery set, spark coil and switch. Magneto, if desired, $10.00 extra.

Be An Agent for this motor. Men wanted in every locality to sell the ***Gray Gearless.*** Write today.

Book of 172 Boats to Select From

FIFTY LEADING BOAT BUILDERS have joined with the Gray Motor Co. in issuing a catalog of ***Specialized Boats***—specialty of each concern from a 16 ft. fishing launch at $103.00 to a beautiful mahogany express runabout with every ingenious device that modern thought has developed in a boat, with a self-starting 6-cylinder GRAY motor, complete in every detail for $2500.00—or a snug, safe, roomy little cruiser with all the comforts of a home—***172 boats*** that you choose from. Write for this catalog today, sent free. We make it easy for you to find just the boat you want, at the price you want to pay, and in the locality you wish to buy it in, with a ***GUARANTEED*** motor installed.

Gray Marine Motors

3 to 50 H. P. 1 to 6 Cylinder.

You can have a 1915 guaranteed Gray Motor with all the new features in your boat for the least outlay of money. Complete line of 2 and 4 cycle motors. "There's a Gray for Every Boat." Gray's are cheapest in the long run. Write for catalog.

Gray 2 cycles sold as complete motor (ready to install). The 3 H. P. single cylinder Model "C," sells for - - **$55 complete**

Gray 4 cycles sold either as complete unit power plants or bare engines. Prices depending on equipment **$156 and upwards**

and the reasons why the outcome of the Balkan Wars made it harder than ever before to keep the peace in Europe. The second section is a detailed review of all the known diplomatic procedure from Austria's demands on Serbia to Italy's declaration of neutrality and England's intervention on behalf of Belgium. The subsequent entrance of Japan, Turkey and Italy into the sphere of conflict is not treated. The third section of the book consists of a number of documents of the most varied character which bear upon the issues of the war. The text of the Austro-German alliance, the Franco-Russian convention respecting Morocco, the Anglo-German agreement as to the reversionary rights of the Portuguese colonies if they should ever come into the market, Richelieu's plan for an independent Belgium, Thucydides's account of the seizure of Melos by the Athenians, apologetic articles and speeches by public men in Germany, Great Britain and the United States—these are but a few of the many selections compiled by the author as exhibits illustrative of the policies of the various nations and the historic commonplaces of international rights. Finally, the appendix contains a chronological list of events from June 24 to August 4, 1914, inclusive.

On the face of the documents as presented the conduct of Austria-Hungary and of Germany appears thruout as absolutely indefensible; while that of the Allies, altho certainly not above criticism, showed at least some regard for international comity and a preference for pacific measures. But Professor Stowell is so thoroly aware that legality is not the whole of morality that he has taken pains to show (pages 583 to 586) that the brutal note of Austria-Hungary to Serbia was *in form* closely paralleled by our own diplomatic attitude toward Spain after the blowing up of the "Maine," for we, too, refused to consider an offer to arbitrate and insisted upon our own officials taking part in a judicial investigation held on foreign territory. The real difference in the two cases was the *motive;* Austria-Hungary designing to crush a minor nationality and we to rescue one from oppression. So Professor Stowell's final verdict for the Allies is based less upon Germany's uncouth diplomacy than upon Germany's refusal to take part in the great plans for international arbitration and disarmament favored by America, France, Great Britain and even by Russia. Germany had, in the author's opinion, deliberately elected to pursue her national ambitions without consulting the wishes of others and thus she naturally found herself enclosed by a ring of hostile states.

Chapter XII consists of an interesting series of "Questions and Answers" and a very amusing list of "Questions without Answers." In the former group are such queries as: "Did Austria intend to precipitate the war?" "Did France intend to violate Belgium's neutrality?" "Did Germany believe England would remain neutral?" "Did

Great Britain enter the war against Germany in order to protect Belgium's neutrality?" Among the questions which are frankly given up as still unanswerable are "Why did Germany invade Belgium?" "Why did Sir Edward Grey not find some means of effective collaboration with Italy?" "Had England been guilty of any commercial oppression of Germany or interference with the expansion of her international trade?"

The Fundamentals of the War (of 1914). By Edgar C. Stanwood. New York: Houghton Mifflin Co. $1.

THE FRENCH SIDE

The English in France found that the meager reports from the front giving merely the names of unknown towns and disheartening lists of casualties were not sufficient to keep the nation up to fighting pitch, so an official Press Bureau, whose despatches were signed merely as an "An Eye Witness," was attached to the General Headquarters in France. Only portions of these descriptive accounts have appeared in the American papers, so it is convenient to have them brought together in a volume, *Eye Witness's Narrative of the War*, which covers the period from the middle of September to the end of March, or from the battle of the Marne to that of Neuve Chapelle. It contains descriptions of the country, details of the fighting, picturesque incidents and quotations from letters found on Germans captured or killed.

Eric Fisher Wood's diary of his observations and experiences in Europe, *The Note-Book of an Attaché*, is one of the most interesting and enlightening of the many personal narratives that have been published. A Yale graduate, he was studying architecture in Paris when the war broke out and he offered his services to the American Ambassador, who was naturally overworked since besides caring for the thousands of stranded American tourists he was called upon to act as the representative of Germany, Austria-Hungary, Great Britain, Japan and Guatemala. Every ambassador, except Mr. Herrick, and most of the consuls fled from Paris at the approach of the Germans. Mr. Wood describes their desertion of the capital and of their own countrymen in their hour of need as a stampede due to sudden fright.

It seems strange that when thousands of British heroes of the army are dying brave deaths on the field of battle, not a single British hero was to be found in the diplomatic corps with nerve enough to risk the inconveniences of a siege.

They must have felt pretty sheepish when they came back to find Paris as safe as Bordeaux.

It shows how misleading were the reports on which we based our ideas of the opening campaign that Mr. Wood gives as the turning point in the war the battle of Fère Champenoise, about which we heard nothing at the time. Later he was sent to Germany and Hungary, so he had a good chance to become acquainted with both sides. He was struck by the fact that the Germans give their men at the front a

If it isn't an Eastman, it isn't a Kodak.

The No. 1 Autographic KODAK, Junior

Now fitted with the new Kodak Anastigmat Lens, *f*. 7.7 and the Kodak Ball Bearing Shutter.

Price, $15.00

Here are efficiency *and* economy.

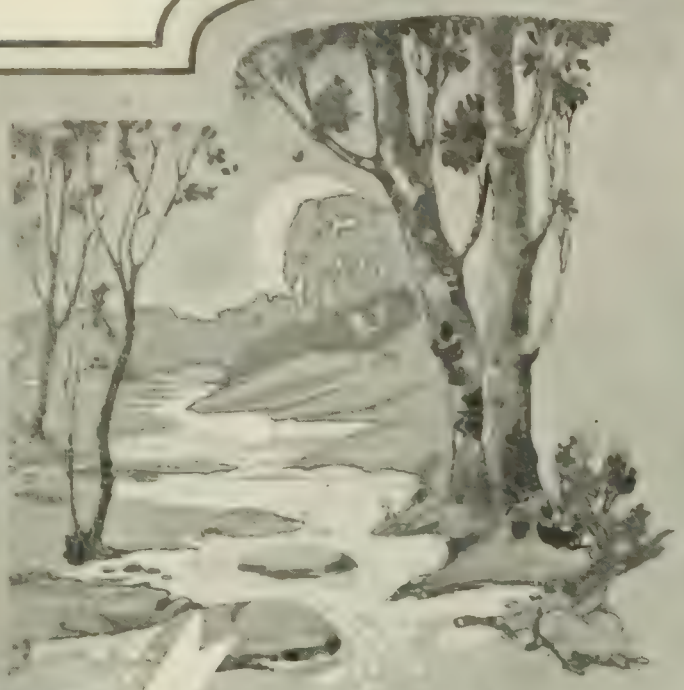
THE LENS. The Kodak Anastigmat *f*. 7.7 lenses are slightly faster than the best Rapid Rectilinears. But their marked superiority lies in the perfect definition (sharpness) which they give up to the very corners of the picture. They are not as fast as the most expensive anastigmats, but they are fast enough for the usual hand camera work and no lens gives *sharper results*. Made exclusively for use on hand cameras, they meet the hand camera requirements.

THE SHUTTER. The No. 1 Kodak Ball Bearing Shutter furnished with the anastigmat equipped No. 1 Autographic Kodak, Junior, has variable speeds of 1/25, 1/50, 1/100 of a second, and the usual time and "bulb" actions. It is accurate, reliable and remarkably free from jerk or jar.

AUTOGRAPHIC. It is "autographic," of course. All the folding Kodaks now are. You can date and title the negative easily and permanently at the time you make the exposure.

A BIT OF DETAIL. The No. 1 Autographic Kodak, Jr. makes pictures 2¼ x 3¼ inches. It measures 4⅛ x 3⅛ x 6⅞ inches. Has brilliant, reversible, collapsible finder, tripod sockets for both vertical and horizontal exposures; covered with fine seal grain leather and is well made in every detail. Simple to use, efficient in its work and economical to operate.

THE PRICE.



No. 1 Autographic Kodak, *Junior*, with No. 1 Kodak Ball Bearing shutter and Kodak Anastigmat lens, *f*. 7.7.	$15.00
Do., with No. 0 Kodak Ball Bearing shutter and Rapid Rectilinear lens.	11.50
Do., with meniscus achromatic lens.	9.00
Autographic Film Cartridge, 6 exposures, 2¼ x 3¼.	.20

All Kodak dealers'.

vacation, usually at home, every month or so, while the French and British soldiers are unrelieved. His conclusions as to what is most important in war are worth quoting for the benefit of those who are trying to improve the American army:

> All my observations have led me to believe that the essentials of military preparedness are, first of all, a rapid mobilization. Without this everything else is useless. By "rapid" I mean a mobilization of at least half a million men or upward in not more than ten days. After this in importance comes the ability to hide, to dig, and to shoot. To hide is impossible when wearing a uniform as conspicuous as the French, which might be called maximum, and has, I should estimate, been the cause of from three to four hundred thousand extra casualties.

A vivid picture of the seamy side of war is presented in *La guerre vue d'une ambulance*, by Abbé Klein, who tells what he saw and heard in September when he was chaplain of the American ambulance in France. A photograph of a white woman scrubbing wounded Sudanese in a bathtub is one of the strange sights of this strangest of all wars. France will never forget how the American Red Cross came to the aid of the compatriots of La Fayette and Rochambeau.

A woman can always see things that a man overlooks, so in spite of the many diaries published by residents in France there is room for Mrs. Clarke's volume of her personal observations from August to December, entitled *Paris Waits*. Perhaps the most interesting chapter is that telling what the French now think of their ancient enemies, the English—as interpreted by an Englishwoman.

Eye Witness's Narrative of the War. New York: Longmans, Green & Co. 75 cents. *The Note-Book of an Attaché*, by Eric Fisher Wood. New York: The Century Co. $1.00. *La guerre vue d'une ambulance*, by Abbé Felix Klein. Paris: Armand Colin. 3f. 50. *Paris Waits*, by M. E. Clarke. New York: G. P. Putnam's Sons. $1.25.

JOFFRE IN AFRICA

My March to Timbuctoo, by General Joffre, is a laconic, forceful unpretentious report of the famous expedition, written in 1895, with an excellent biographic introduction now added by Ernest Dupuet.

Dutton. 75 cents.

NEWSPAPER ART

Cartoonists have never expressed popular feeling more vividly than now and some of the most eloquent drawings of the past months are among those [illegible] of the War by Boardman Robinson, reprinted from the *Tribune* and *Harper's Weekly*.

Duffield. $1.50.

IN TIMES OF PEACE PREPARE!

E. Phillips Oppenheim has not yet caught up with the actual war game. His last two books, both appearing within six months, deal with the preliminaries. If he be the kind of story teller you like you will like *The Double Traitor*. It is unquestionably eventful and exciting, the German spy system in England leading to [illegible] and tense climaxes which he has outlined to us well.

Boston: Little, Brown. $1.30.

BEFORE THE WAR

A German army officer [illegible] English society follows a series of happenings. *His Dearest Wish* is by [illegible] by A. C. Curtis from the German of Rudolph Stratz, and according to the publishers puts the book with very popular [illegible] of the [illegible] class.

The "MINNEAPOLIS" HEAT REGULATOR

The kind of service obtained with the use of this device for most of the months in the year is worth many times its cost.

It puts and holds the coal every minute of the day and night, keeping the temperature at the degree and even temperature of outdoor conditions changes.

It has been the standard for nearly a third of a century. It is used with any heating plant—hot air, hot water, hot oil or steam—burning either coal or gas.

wall to as to what purpose seems to be to point a contrast between the life of the Low-Dutchess and one by no means favorable to the English. It is according to the author German idealism against English materialism.

Longmans, Green. $1.50

NAPOLEON'S LAST CHARGE

One hundred years ago on the open fields of Belgium which are now marked with Europe's shame Napoleon met his last defeat at Waterloo. Cyrus Townsend Brady takes the facts of this battle, throws over them a garment of love and romance between and thus makes a realistic romantic tale, called *The Eagle of the Empire*.

Dodge. $1.35.

HOLLAND

Hendrik Willem van Loon proves that history may be not only as interesting but as entertaining as fiction. He tells the story of *The Rise of the Dutch Kingdom* somewhat as Carlyle might have told it; could Carlyle's sarcasms have been turned into humor and his superlatives into excellent simple English. If Holland in a century could rise from the depths she knew during Napoleon's career, there need be no doubt of Belgium's future.

Doubleday, Page. $2.50

OUR FOREIGN RELATIONS

The present transitory stage of our national policy gives a volume on *The Monroe Doctrine: National or International?* particular interest. Prof. W. I. Hull of Swarthmore College discusses seven different solutions of the problem and concludes that "The United States must convey to the representatives of the family of nations the rights and duties pertaining to the Monroe Doctrine." The book presents an excellent statement of the views of those favoring universal arbitration and an international police force.

Putnam. $2 net.

FROM CAESAR TO KAISER

As one reads Ruth Putnam's historical study of the fortunes of the little lands of Alsace and Lorraine between their great neighbors owned now by one now by the other, and now by both at once, one recalls the proverb, "The go-between was killed." Nothing that deals with medieval Europe or with the Holy Roman Empire can be simple. But this swift narrative is heightened by human touches and by caustic comment. Eight pages make clear the changes from Gaul of the three parts to the Germany of 1871.

Putnam. $1.25.

FOLK WHO WRITE

General von Hindenburg is described in a recent book as square of jaw, with hair brushed squarely back, eyes under heavy lids square at the ends, and with square cut moustache or square cheeks. What a triumph for the Cubists!

Earlier in the war John Masefield sold manuscripts and autograph books for the benefit of the Belgian sufferers. Now, just back from a French hospital, he announces a further sale for a French nursing unit, close to the army of the Argonne, to save some of the wounded the train journey to the hospitals.

In the United States there is some slight confusion as to the personalities of Sherlock Holmes, W. J. Burns and Sir Conan Doyle. But with the novelist's return to war articles, for one man Sir Arthur is eliminated from the puzzle. He is simply the splendid war correspondent, author of a vivid story of the Boer war. What has he been doing with himself since 1900?

Mr. Phillpott's forthcoming book, *My Shrubs*, fits our notion of England as a happy land that knows not droughts, where each author has a garden filled with his favorite plants. We confidently expect one of these days the gay story of "My Sunflowers" from Mr. Hardy, a gentle essay on "My Violets" from Chesterton and from Bernard Shaw of course a work on "My Mosses."

Better Cigars for Less Money

I'm Hard to Please

My own Hunters—unpurchasable in any store—each with great value in my personal smoking, I used cigars extensively. The flavor's made great by age.

I put away 1,000 cigars because I found the best cigar I ever smoked—and the best cigar I ever paid less than 5c straight. Today among connoisseurs, "Hunters" are a household word.

Decide for Yourself

Every 5 cents I received the choicest cigars I ever tasted. Now I charge 10c straight. I could never make a cigar that could equal them at any price.

AGENTS WANTED

The fastest selling book on "Sex Hygiene" is Dr. Stillings's "Plain Facts for Both Sexes." Over 500 pages. Many valuable plates. Every seller makes. Unusually large. Low price. Write quick. Address Globe Bureau, Dept. 1000, 354 Wells St., Globe Block, Chicago.

My Facial Beauty Exercises

Will soon make you look younger and more beautiful.

What does a flabby, wrinkled face and neck need more than anything else? Why, exercise, of course! Nothing else can put the firm, even contour in the cheeks, chin, throat and neck that you have seen in pictures of beautiful women. Nothing else can put the color in your face that you desire.

Why have I not exercises for my face, eyes, neck, arms, shoulders, bust, hands and feet? Because I have found that the most effective exercises are those that are applied to the part that needs attention. Because I have found that the most effective exercises are those that are applied to the part that needs attention. Because I have found that the most effective exercises are those that are applied to the part that needs attention.

None too old to benefit

I will give you a most beautiful figure, and shall explain how you can do it. Send me your name and address. Hands and feet.

Write today for my FREE Booklet and learn about this wonderful method of improvement. You I am making women of all ages in all parts of the world. If you tell me what improvements you would like, I can write you more to the point.

KATHRYN MURRAY, Dept. 338, 109 N. Wabash Ave., Chicago

STEINWAY

THE purchase of a Steinway for the home means the selection of the ideal piano, tone and workmanship being of first importance.

It is the price of the Steinway which makes possible its supreme musical qualities, but you will find that the Steinway costs only a trifle more than many so-called "good" pianos.

Style V, the new Upright, and Style M, the smallest Steinway Grand, offer a special advantage in price. They embody all the distinct Steinway features, but, being of reduced size to meet the requirements of the modern home or apartment, are offered at very moderate prices.

We shall be glad to send you, free, illustrated literature, with the name of the Steinway dealer nearest you.

HARTSHORN SHADE ROLLERS

THE APPLIED CHAUTAUQUA

Teachers College and the Extension Department of Columbia University offer special classes in cooking, sewing, millinery, textiles, dancing, swimming and gymnastics.

Night classes in agriculture and rural and household economics are being conducted this summer in the Labor Temple on Fourteenth street, New York City, by the Extension Department of Cornell University.

Chautauqua Institution inaugurated European Travel Educational Parties several years ago and offers a Travel Party to Japan in this year of European war. New York University has announced a two-months tour of Alaska and the West especially for teachers of geography and geology.

Open lectures and concerts are popular attractions of the summer session of the University of Chicago. The series for 1915 includes about 125 lectures and other entertainments. A tent on the campus has been used for such events to supplement the facilities of university halls and auditoriums.

Courses for athletic coaches are offered for the second time this summer session by the University of Illinois. The athletic plant of the university is turned into a laboratory and a large part of the instruction is given on Illinois field. Six-week courses are given in baseball, track athletics, basketball and football.

When several thousand persons assembled in Seward Park on the crowded East Side to hear a musical program by combined orchestras of the People's Institute and the People's Music Society, together with an address on war by the United States Commissioner of Immigration, the New York newspapers headlined it as a "City Chautauqua."

Special lecturers are engaged for each of the eight weeks of the summer session of the University of Pittsburgh. Their series of lectures are grouped as Special Feature Weeks, called Nature Study, Educational Psychology, Educational Philosophy, Sociology, Secondary Education, Educational Administration, International Peace and Educational Sociology Weeks.

A series of illustrated lectures, musicales and receptions to students from different sections of the country is provided for the evenings during the Summer School session at the University of Pennsylvania. Two Shakespeare plays by the Ben Greet Players are scheduled; also trips to the League Island navy yard, Cramp's shipyard and the Curtis Publishing Company's plant.

Booker T. Washington and a party of twenty-five representative colored men have completed a remarkably successful "educational tour" into the black parishes of Louisiana. Introductions by white officials and the attendance of both white and colored people at these educational mass meetings emphasized endorsement of the Tuskegee gospel of cooperation, educational and economic, to black folk and white.

The Market Place

WAR ORDER STOCKS

The market for securities continues to be under the influence of the trading, sometimes wild, in the stocks of companies that have war orders. Last week's transactions on the New York Stock Exchange showed irregular results. One war stock, Bethlehem Steel, had a net gain of 20 points, another lost 25 points, and there was an interesting variety of changes. Railroad shares moved slowly; there were gains and losses, but both were slight. Express company shares advanced on the commission's decision which will increase revenues. Copper shares declined. The price of the metal has fallen from 20½ to 19½ cents, and exports of it are far below the normal quantity. But there are great shipments of copper in the forms of brass and ammunition. Many of the mines are working at full capacity, and it is expected that last year's output will be exceeded this year by twenty per cent. The publication of our Government's note to Germany was followed by higher prices in the stock market. Many have said that the advance indicated public approval of the note's emphatic character.

Those who buy securities or trade in them are convinced that the profits on war orders will be great. What took place last week with respect to Crucible Steel shows that it is almost impossible to shake their conviction. In May the shares were selling below 22. A rise was checked by the officer's assertion that the company had no war orders. But from 18, to which the price declined, there has been an advance to 49½, and 260,000 shares were sold last week. On Monday, Horace S. Wilkinson, a member of the company's executive committee, published a warning. He pointed out that the company owed $7,200,000 in unpaid scrip and accumulated dividends on the preferred stock. (It has never paid a dividend on the common.) It was guaranteeing $7,800,000 of bonds, he continued, and had $3,000,000 more of bonds on its subsidiaries. Its profits this year could not exceed $2,500,000, and the preferred dividend would call for $1,750,000. In constructing a new plant it was expending $2,000,000. Its war orders amounted to about $15,000,000, and on these there might be a profit of $5,000,000 or $6,000,000, but, he added, "with large expenditures necessary for the new plants, I can see no reason why the common stock of the company

DIVIDENDS

FEDERAL SUGAR REFINING CO.

The regular quarterly dividend of ONE AND ONE-HALF PER CENT (1½%) on the Preferred Shares of this Company will be paid August 2 1915 to stockholders of record at the close of business July 22 1915. Transfer books will not close. A. H. PLAUT, Treas.

UNITED CIGAR STORES COMPANY OF AMERICA.

COMMON STOCK DIVIDEND NO. 11

A quarterly dividend of 1¼% has been declared upon the common shares of the outstanding capital. Payable August 2nd 1915 to stockholders of record at the close of business July 15th 1915. Transfer books will not close.

GEORGE WHITNEY, Treasurer

should be able to pay dividends for a good many years, or be worth its present selling price." This dash of cold water caused a decline of 6 points, but the buying public could not be restrained, and at the end of the week so much of the loss had been regained that only 2¼ points of it were left.

In the curb market there was a spectacular advance in shares of the Electric Boat Company. These were selling a year ago at about 15, and there were sales last winter at 11. In one day, recently, there was a rise of 53 points, to 248, and on Saturday an addition of 100 made the price 365. It is reported that the company has an order for the machinery and motors of submarines, and for a large number of fast motor boats. The hulls, it is said, will be made by the Bethlehem Steel Company, and powerful new interests are represented in the corporation. The sharp advance in American Can on the Stock Exchange has been due to reports about an order for $90,000,000 worth of products, but it appears that the order is for only $38,000,000, and that two other companies have shares of it. Some think Bethlehem Steel will earn seventy per cent on its common stock this year. This accounts for the advance to 209. But President Schwab's remarks have been discouraging to those who look for a dividend on the common shares.

One-eighth of last week's business was done in Steel Corporation shares, and there was little change in the price. The company's plants are working at ninety-one per cent of full capacity. Prices of several products have been increased, and in some branches of the industry new orders cannot be filled within five months. Wire mills are working at double turn, and heavy foreign orders keep the tin plate factories busy.

FOREIGN LOANS OR CREDITS

Arrangements had not been completed, at the end of the week, for the large credit or loan which is required on account of the British Government's obligations here, continually growing, for war supplies. It was reported that $100,000,000 of short term bonds might be offered in our market. Plans for a new French credit of $20,000,000 have been finished. They involve no public marketing of securities. There is also to be a new Russian credit of $25,000,000, granted by prominent banking houses on a basis of ninety-day drafts bought from Russia at about five per cent.

The British Government needs a credit here of more than $100,000,000; the situation calls for $250,000,000 or $300,000,000. But there are difficulties in the way. If our investors should be asked to buy British bonds, they would be unwilling to take them subject to the British income tax. And the rate of that tax may be increased. At present it absorbs a considerable part of the annual interest upon such securities. The British Government does not like to exempt foreign investors in its bonds from a tax which its own people are required

Insurance Department

of The Independent.

Many of them are securing valuable information through the Insurance Service Department, conducted by Mr. W. E. Underwood, to aid them in selecting the right insurance.

to pay. Another difficulty is that the bonds probably could not be marketed in this country unless the interest rate should be higher than that which the Government now pays to the British people for their loans. A rate high enough to assure success here might excite criticism and discontent at home. The problem is not an easy one.

The Dominion of Canada has negotiated a loan of $45,000,000 in New York. Canada's Government has been accustomed to borrow in London. Since the beginning of the war, however, and before this transaction, several Canadian provinces and cities—among them Manitoba, Alberta, Ontario, Montreal and Ottawa—negotiated loans in New York amounting to about $20,000,000. The new loan of $45,000,000, which was in the hands of J. P. Morgan & Co., Brown Brothers and two or three banks, is represented by $25,000,000 one year 5 per cent notes, sold at 100, and $20,000,000 two years 5 per cent notes, sold at 99½. Only a few minutes after the subscription books had been opened by the syndicate they were closed. The offered securities were regarded with so much favor that the subscriptions were for more than three times the amount. These notes not only bear interest at 5 per cent, but they are also free of all present and future taxes in Canada, income tax included, and are convertible into the Dominion's twenty-year 5 per cent bonds (maturing in 1935) on even terms. The tax exemption applies also to these bonds. There was a report that the proceeds were to be used in settling the British Government's obligations here for war supplies, but a representative of the Canadian Government denied this, saying the money was to be expended in defraying the cost of public works now in course of construction.

The rate of interest, 5 per cent, which yields a little more in the case of the two-year notes, may be considered in its relation to the British Government's problem. All of the Canadian provincial and municipal securities placed here have had this rate, and some of them were sold at prices which yield 5¼ per cent. Canada's credit is good. Evidently, the British Government cannot expect to place a note loan here at less than 5 per cent. But the rate on the great new war loan in England is 4½ per cent, and this is reduced by the income tax.

An interesting and successful experiment has been made during the last twelve months by the Pacific Gas and Electric Company of California, one of the largest corperations of its kind in the United States, its authorized capitalization being $160,000,000. Its 389,000 consumers or patrons were invited to buy shares of an issue of six per cent cumulative first preferred stock. The result has been very gratifying to the officers who devised the plan. The offer was made in July of last year. At the end of May 2054 consumers had taken stock having a par value of $3,588,000. A similar offer to employees induced 1630 of them to take $549,700 worth. Subscriptions continue to be received. In June 231 consumers were added to the list of stockholders, taking $429,300.

THE EQUITABLE LIFE

Since the purchase last month of the controlling interest of the stock of the Equitable Life Assurance Society by General T. Coleman du Pont, I have received several letters from policyholders of that company requesting information and advice, and revealing a feeling of unnecessary apprehension respecting the safety of their interests. One question in particular is raised by all these correspondents, in substance, as follows: Why, if the Equitable is a mutual company in its relations with policyholders, and its stockholders are limited to a semi-annual dividend of 3½ per cent on the par value of their holdings, should any one pay from $2,500,000 to $3,500,000 for 502 shares of its stock?

I am bound to admit that I cannot satisfactorily answer that question. With the knowledge I possess covering the organization of the Equitable, the terms of its charter provisions, the insurance laws of New York, and the attitude of the Insurance Department of New York, I would not, if financially capable, make such an investment. I am inclined to believe that Mr. Ryan, the first purchaser of this block of stock, was speculating, purely. I believe he finally concluded the enterprise was impracticable from a Wall Street viewpoint, and that he was glad to get his money back, with interest, when Mr. Morgan took over the stock. What were the latter's motives, I cannot conceive, unless he really believed he could bring about the retirement of all the stock and transform the company into a full mutual. Mr. Morgan died, and it is quite probable his estate, absorbed in matters of more importance to its members, welcomed any purchaser of character and standing who would take the property off its hands.

We have now reached General du Pont, the present owner of the stock. He has publicly stated on several occasions that he will use the opportunity to attempt to mutualize the company. He has so advised the Superintendent of Insurance, and has asked for the assistance of the Insurance Department. I believe we may rely on this pledge.

I am not predicting, however, that mutualization will be effected. As I view the matter there are at least two serious obstacles to be overcome. First, the owners of the minority stock, 148 shares, may not consent to sell their holdings; and second, if all are agreed to permit the policyholders to buy, the price demanded may be exorbitant. There are two grave difficulties.

According to prevalent rumor, General du Pont paid the Morgan estate at

the rate of about $1900 a share for his stock. I am asked if it is worth that sum as a legitimate investment. Certainly not. It can never earn more than $7 a year, per share. But, I am reminded, it carries with it the control of a financial institution possessing assets of $510,000,000, an unlivested surplus of $72,000,000 and an annual income of about $80,000,000, which greatly enhances its value. It should not, but I will admit that, for trading purposes, it does. Against this advantage we may set the authority vested in the supervising powers of the State of New York thru its Insurance Department. Almost every move by the owners of the control which might adversely affect the policyholders' interests can be checkmated by the Department. That being true, the advantages of mutualization are not as substantial as they seem. In short, the present constitution of things offers the same measure of security to policyholders as ever it has. No policyholder need worry.

Now for a seeming contradiction: It is desirable to end the peregrinations of the stock control. It has been lodged in the hands of four owners during the past ten years. While we may hope and believe that General du Pont will not part with it, except to the policyholders, for various reasons he may, and I am of the opinion that, now the subject is up for consideration, it should be permanently settled. Of course, this would involve the expenditure of a sum of money largely in excess of the intrinsic value of the stock; but even so, the future advantages would be an abundant offset. The affairs of the company would be forever removed from the theater of speculation.

I see no reason, by way of beginning this work, against the purchase by the company of General du Pont's 502 shares. Doubless the necessary authority would be granted by the New York Legislature.

P. F. W., Wilkinsburg, Pa.—Have no information on building and loan associations. Concern you name certainly does not write life insurance. Cannot find its name in the Pennsylvania insurance report.

W. B. A., Ypsilanti, Mich.—I know of but one way in which you can utilize the two twenty-payment and the endowment policies for the purpose indicated, and that would be to borrow their loan values. Calculating without the exact data, I should estimate the total of these three items at $1350. Your suggestion as to prepayment of the premiums would be no aid. Correspond with the companies and ascertain what your present borrowing capacity is.

F. E. C., New Haven, Conn.—I cannot advise you to keep the policy described. Its cost will increase as you and the membership of which you are a part get older. You will never build up anything under it as it is what is called one-year term insurance. I would advise you to pay a proper premium now under a policy which will accumulate a reserve. The agent of the company is trying to persuade you to do the wise thing. The business the company is writing now is level premium reserve and it will not be used to bolster up the tottering fabric of its assessment membership. You are young enough to abandon the fallacy and put yourself under the protection of a scientific scheme of life insurance in the same company. The fact that the company has tried assessment insurance for thirty-two years and admits it is a failure, should be convincing.

You might as well be using an 1898 calendar

Man alive, realize how far behind the times you are by having your stenographer write every letter *twice*—once in shorthand and once on her typewriter.

Cut out the wasted time she spends at your desk taking shorthand dictation, and waiting to take it. Give her a chance to earn her salary by spending all her time in producing what you pay her for—finished typewriting.

Shorthand wastes everybody's time—your time and your stenographer's. And it wastes your money, too. The Dictaphone saves everybody's time—and of course, it saves your money. We can't hope to tell you all of the *how* here.

Reach for your telephone and arrange for a demonstration on your own work now. If you do not find that name in the book write to

AN INCOME FOR LIFE

Of all the investment opportunities offered there are few which equal the safety and profit of a Metropolitan Life Annuity. Absolute safety is the first requisite and large profit and lasting satisfaction the next. Aside from guaranteed funds, the return under which is small, there is nothing more safe and certain than an Annuity in the METROPOLITAN LIFE INSURANCE COMPANY by which the guaranteed fund is actually liberated as it is paid for, thus would be earned by the annuitant an income of 5% on the investment for savings, or invested in securities giving much higher return, but with the possibility of loss. Thus a payment of $1000 by a man aged 65 would receive an annual income of $83.30 for life. Write Department, METROPOLITAN LIFE INSURANCE COMPANY, New York, will give advice as to the return at any age, male or female.

AMERICA'S LAST WORD TO GERMANY

"CONTENDING FOR THE FREEDOM OF THE SEAS WITHOUT COMPROMISE AND AT ANY COST"

DEPARTMENT OF STATE,
WASHINGTON, July 21, 1915

THE note of the Imperial German Government dated the 8th of July, 1915, has received the careful consideration of the Government of the United States, and it regrets to be obliged to say that it has found it very unsatisfactory, because it fails to meet the real differences between the two governments, and indicates no way in which the accepted principles of law and humanity may be applied in the grave matter in controversy, but proposes, on the contrary, arrangements for a partial suspension of those principles which virtually set them aside.

The Government of the United States notes with satisfaction that the Imperial German Government recognizes without reservation the validity of the principles insisted on in the several communications which this Government has addrest to the Imperial German Government with regard to its announcement of a war zone and the use of submarines against merchantmen on the high seas—the principle that the high seas are free, that the character and cargo of a merchantman must first be ascertained before she can lawfully be seized or destroyed, and that the lives of non-combatants may in no case be put in jeopardy unless the vessel resists or seeks to escape after being summoned to submit to examination; for a belligerent act of retaliation is *per se* an act beyond the law, and the defense of an act as retaliatory is an admission that it is illegal.

The Government of the United States is, however, keenly disappointed to find that the Imperial German Government regards itself as in large degree exempt from the obligation to observe these principles, even where neutral vessels are concerned, by what it believes the policy and practise of the Government of Great Britain to be in the present war with regard to neutral commerce. The Imperial German Government will readily understand that the Government of the United States cannot discuss the policy of the Government of Great Britain with regard to neutral trade except with that Government itself, and that it must regard the conduct of other belligerent governments as irrelevant to any discussion with the Imperial German Government of what this Government regards as grave and unjustifiable violations of the rights of American citizens by German naval commanders.

Illegal and inhuman acts, however justifiable they may be thought to be, against an enemy who is believed to have acted in contravention of law and humanity, are manifestly indefensible when they deprive neutrals of their acknowledged rights, particularly when they violate the right to life itself. If a belligerent cannot retaliate against an enemy without injuring the lives of neutrals, as well as their property, humanity, as well as justice and a due regard for the dignity of neutral powers, should dictate that the practise be discontinued. If persisted in it would in such circumstances constitute an unpardonable offense against the sovereignty of the neutral nation affected.

The Government of the United States is not unmindful of the extraordinary conditions created by this war or of the radical alterations of circumstance and method of attack produced by the use of instrumentalities of naval warfare which the nations of the world cannot have had in view when the existing rules of international law were formulated, and it is ready to make every reasonable allowance for these novel and unexpected aspects of war at sea; but it cannot consent to abate any essential or fundamental right of its people because of a mere alteration of circumstance. The rights of neutrals in time of war are based upon principle, not upon expediency, and the principles are immutable. It is the duty and obligation of belligerents to find a way to adapt the new circumstances to them.

The events of the past two months have clearly indicated that it is possible and practicable to conduct such submarine operations as have characterized the activity of the Imperial German Navy within the so-called war zone in substantial accord with the accepted practises of regulated warfare. The whole world has looked with interest and increasing satisfaction at the demonstration of that possibility by German naval commanders. It is manifestly possible, therefore, to lift the whole practise of submarine attack above the criticism which it has aroused and remove the chief causes of offense.

In view of the admission of illegality made by the Imperial Government when it pleaded the right of retaliation in defense of its acts, and in view of the manifest possibility of conforming to the established rules of naval warfare, the Government of the United States cannot believe that the Imperial Government will longer refrain from disavowing the wanton act of its naval commander in sinking the "Lusitania" or from offering reparation for the American lives lost, so far as reparation can be made for a needless destruction of human life by an illegal act.

The Government of the United States, while not indifferent to the friendly spirit in which it is made, cannot accept the suggestion of the Imperial German Government that certain vessels be designated and agreed upon which shall be free on the seas now illegally proscribed. The very agreement would, by implication, subject other vessels to illegal attack, and would be a curtailment and therefore an abandonment of the principles for which this Government contends, and which in times of calmer counsels every nation would concede as of course.

The Government of the United States and the Imperial German Government are contending for the same great object, have long stood together in urging the very principles upon which the Government of the United States now so solemnly insists. They are both contending for the freedom of the seas. The Government of the United States will continue to contend for that freedom, from whatever quarter violated, without compromise and at any cost. It invites the practical coöperation of the Imperial German Government at this time, when coöperation may accomplish most and this great common object be most strikingly and effectively achieved.

The Imperial German Government expresses the hope that this object may be in some measure accomplished even before the present war ends. It can be. The Government of the United States not only feels obliged to insist upon it, by whomsoever violated or ignored, in the protection of its own citizens, but is also deeply interested in seeing it made practicable between the belligerents themselves, and holds itself ready at any time to act as the common friend who may be privileged to suggest a way.

In the meantime the very value which this Government sets upon the long and unbroken friendship between the people and Government of the United States and the people and Government of the German nation impels it to press very solemnly upon the Imperial German Government the necessity for a scrupulous observance of neutral rights in this critical matter. Friendship itself prompts it to say to the Imperial Government that repetition by the commanders of German naval vessels of acts in contravention of those rights must be regarded by the Government of the United States, when they affect American citizens, as deliberately unfriendly.

JUST A WORD

The cartoon "Keep Going," on page 148 of the August 2 Independent, was credited to the Minneapolis *Journal*. The drawing was originally published in the New York *Evening World*, to which credit should have been given.

"To justify himself, the wise anti-militarist should be the most earnest advocate of reasonable preparedness." This is the conclusion which Lindley M. Garrison, Secretary of War, reaches in a careful discussion of the problem of national defense—a problem never more vital and more compelling than at the present moment. The article will be published in an early number.

PEBBLES

"Does your daughter play the piano by ear?"

"No; she uses both hands and both feet, but I don't think she has learned to use her ears."—*United Presbyterian*.

"Nothing lost here but the squeal," declared the pork packer. "Are you as economical in conducting your business?"

"Just about," answered the visitor. "I'm in the lumber business. We waste nothing but the bark."—*Sacred Heart Review*.

Old Zeppelin and all his works
I'd find myself forgiving
If he'd soar up to where it lurks,
And from the sky
So high, so high,
Bring down the cost of living.
—*Current Opinion*.

"GONE, BUT NOT FORGOTTEN"

"Are caterpillars good to eat?" asked little Tommy at the dinner table.

"No," said his father; "what makes you ask a question like that while we are eating?"

"You had one on your lettuce, but it's gone now," replied Tommy.—*Ex*.

Mr. Lloyd George was addressing a meeting in South Wales when the chairman, thinking to be witty at the Chancellor's expense, remarked to the audience that he was a little disappointed in Mr. Lloyd George's appearance.

"I had heard so much about Mr. Lloyd George," he said, "that I naturally expected to meet a big man in every sense; but, as you can see for yourselves, he is very small in stature."

"I am grieved to find," retorted Mr. Lloyd George, with mock seriousness, "that your chairman is disappointed in my size, but this is owing to the way you have here of measuring a man. In North Wales we measure a man from his chin up, but you evidently measure him from his chin down!"—*Current Opinion*.

OLD SILVER

The oldest piece of silverware known to the writer

Silver spoons have been found in Herculaneum and Pompeii.

The use of antique plate was largely fashionable in Columbus, especially in England.

All they [the Shermans] carried for pay and the support were paid by the provident people.

Silver was made to medieval times and generally for purposes and for church decoration.

Silver furniture was at one time in vogue. Louis XIV possessed much furniture of this sort.

Articles of silver were in high favor among the most savage nations. They are still worn in India and Burmah.

Cups made of cocoa-nut, with silver mounts done in repoussé work and engraving, were produced as early as 1610.

The beads of the highly ornamental necklaces used by citizens in Rome [illegible] were made smaller than those of modern [illegible].

Bishop Eyre's spoons at Corpus Christi College, Oxford, have nuts on their handles. These are of 1500. Seal-topped spoons date from 1450 to 1620.

The silver of the Queen Anne period was noted for its massiveness, simplicity and freedom from ornamentation. Fancy [illegible] decoration was then the ruling idea.

Genuine English hallmarks, cut from a spoon or other small article, are sometimes transferred by unscrupulous vendors to cups, vases or other important pieces.

The acorn bowl was an early decorative form. Sometimes a plain knob was used. An image of the Blessed Virgin appeared as a decoration for spoons as early as 1450.

In 1784 England imposed a tax on silver-plate. A new hall-mark appeared in the form of a sovereign's head which was placed on a silver article to indicate that the duty had been paid.

Sheffield plate was first made by Thomas Bolsover in 1742. He had discovered the process of coating with silver a metal of less value, and out of his discovery grew Sheffield ware, or a copper base with an outward coating of silver.

In 1300 it was established by an ordinance "That no goldsmith should make any vessel, jewel, or other thing of gold or silver, unless it be of good and true alloy . . . and that no vessel of silver depart out of the hands of workmen until it be essayed by the wardens of the craft and marked with the Leopard's head."

Silver was utilized as a proper medium upon which to impress some of the earliest of the Greek coins. The rude and often misshapen lumps of silver thus used by Greek artists have, in many cases, fortunately come down to us and, still bearing designs boldly and spiritedly exprest, have found places in numismatical cabinets and collections.

The famous Paul Revere was brought up to the trade of goldsmith, and he cut many book-plates, pieces of old silver plate and other metal objects. At the close of the war of the Revolution he cast church bells, brass cannon and iron ware, in addition to his work as silversmith. There are many collections of Revere silver. A portrait of Revere, by Copley, shows him at the bench in shirtsleeves, holding a silver cup in one hand and with engravers' tools by his side.

The Apostles' spoons are not as ancient as is popularly supposed. A careful examination of old inventories shows that they did not come in general use much before the sixteenth century. They were then often given to children at christenings. These spoons were surmounted by figures representing the Apostles, which were indicated by symbols such as the key for St. Peter, an ox for St. Matthew, a spear for St. Thomas, a cross [illegible] for St. Philip, etc.

Everyman's Education

A Message to Teachers and Parents

TEACHERS of large vision are realizing that they have not done their full duty when they lead their students through the prescribed text-books without also showing them the way to an intimate acquaintance with the best literature on the subjects chosen for class-room study.

Parents who have at heart the best interests of their childen are taking greater pains to encourage them toward the reading of intelligently selected books, to round out and make most effective the work they do in school hours.

Few schools can maintain an adequate library. At best their shelves contain only a single copy of each book. Besides that, only a small proportion of the average class can afford to buy the expensive volumes that would necessarily be recommended.

That is the thought that prompts this message to readers of The Independent.

For the first time a library has been created which makes the world's greatest literature available to schools and colleges, in a form and at a price suited to text-book purposes.

Everyman's Library, perhaps the greatest single undertaking in the history of book publishing, is widely recognized as a boon to educators.

For the small sum of Thirty-five Cents a volume, this library with over seven hundred titles, has placed standard books, good books, well printed and well bound books, well edited and capably translated books within the reach, not only of "everyman," but of *every child* and every school.

Here is provided, at a minimum cost to the teacher or student, a list of the best standard texts from all the world's store of literature.

Everyman's Library is under the editorial supervision of Professor Ernest Rhys, with whom are associated many famous educators, authors and literary critics.

Among them are such men as Professor George Baker of Harvard, Hillaire Belloc, Anatole Le Braz, James Bryce, G. K. Chesterton, Austin Dobson, Edward Hutton, Alfred Noyes, Brander Matthews, Hamilton Wright Mabie, Professor Barrett Wendell, Arthur Symons and many others who stand highest in ability and authority.

CO-OPERATIVE EDUCATION

Such editions of the most desirable works have never before been offered to schools at so low a price, or with so wide a field of choice.

The achievement has been possible because of the great extent of the undertaking, and the fact that it is a co-operative enterprise between a great publishing house and the educational interests of the country.

The teachers of today recognize the value of carefully selected reading as a supplementary method toward the best educational results.

The teacher wishes the student to realize clearly that the study of English, or History, or Science, is not merely a class-room task. The successful teacher is the one who finds a way to make the student *enjoy* the books he is studying. To that end the publishers of Everyman's Library are seeking a closer relationship with teachers everywhere, in order that real assistance may be rendered in the arrangement of their courses and the selection of the most desirable texts for collateral reading and study.

The Service Department of Everyman's Library therefore invites letters from any teacher or parent who is interested and wishes suggestions as to the best courses.

A series of lists have been prepared which indicate the various groups of books most suitable for use in any particular branch of study. These will be gladly furnished without charge.

To meet this same need the publishers will send to any Independent reader who uses the attached coupon:

Free on the asking

A VALUABLE COMPLIMENTARY VOLUME

The Dictionary Catalogue of the First 505 Titles in Everyman's Library, arranged and annotated by Isabella M. Cooper, of Simmons College, and M. A. McVety, of the Newark Public Library, charges prepaid, bound in serviceable cloth and printed in type similar to that used in the Everyman's volumes. This book will be found very useful for reference, giving much detailed information about books and authors. A complete list of the Library will be sent in the same package.

COURAGE

THE procession of months, and years, it may be, of this frightful war is no time for the lately eager advocates of peace to lose courage and hope. Our older readers recall the sad years of our own Civil War, from Bull Run to Gettysburg, when defeat followed defeat, until at last came the victory which righteousness is sure to win in the end, with union and peace. This greater war cannot fail to ensure a broader world peace.

Give us young courage, the assured hope of youth, and the steadier courage of age.

Of the courage of youth we have admirable examples in the work of England's three great nineteenth century poets, Wordsworth, Tennyson and Browning. How bravely Wordsworth held to faith in liberty when Bonaparte became dictator of France:

> Happy is he who caring not for Pope,
> Consul or King, can sound himself to know
> The destiny of Man, and live in hope.

And did not Tennyson in his youth call out to his generation:

> When shall all men's good
> Be each man's rule, and universal Peace
> Lie like a shaft of light across the land
> And like a lane of beams athwart the sea,
> Thru all the circle of the golden year.

And Browning was always a voice of courage and cheer, for he knew and never forgot that "God's in his Heaven! all's right with the world." At fifty he could write:

> Grow old along with me,
> The best is yet to be.

But Wordsworth and Tennyson lost young courage in their old age. We believe that Browning would not have it that his "Lost Leader" was directed against Wordsworth, but it is hardly doubted that the Poet Laureate was in his mind when he said:

> Shakespeare was of us, Milton was for us,
> Burns, Shelley were with us, they watch from their graves!
> He alone breaks from the van and the *freemen*,
> He alone sinks to the rear and the slaves.

And there is Tennyson's "Locksley Hall, Sixty Years Later," as melancholy a specimen of the Torvism of age as one would grieve to see. But Browning kept perpetual youth.

So poets can hold exuberant faith in bloom surviving amid faded hopes and the deadly nightshade of war. And we need cultivate no shorter vision, but wait for the smoke to blow over, for surely after a while peans of peace shall thunder the world over out of cannons' mouths.

THE REASON OF IT

WHY is it that American children are so backward in their education as compared with German children?

There are several reasons, all valid. One is clear on the face of it, that it takes an American or English child at least a year longer to learn to read and spell than it takes a German child. German spelling is phonetic; English spelling is arbitrary. Germans plan to make the path of early education as straight as possible; they have simplified the spelling within the last fifty years. We do not care how hard and disagreeable we make the child's pathway; we discourage him the very first year as if to make school disagreeable. The American child will always be at a disadvantage, at least a year behind the German, until we get over our stupid conservatism and make our spelling more nearly phonetic.

Another reason why German children and youth get and keep ahead of American children is because they go to school to learn, and are pushed to it by parents and teachers. It is beaten into them that their success in life depends on strict application to their studies. Government positions will not be open to them unless they excel. They will have a shorter period of military drill, a year off if they are scholars. So they go to school to study, not to do something else, and certainly not to dawdle. Their ambition is expended in the legitimate work of the gymnasium or scientific school, and of course they excel. They cannot help it.

Why is it that in our city schools the children of immigrants, and particularly the Jewish children, excel the children of our native Yankee stock?

That question answers itself in the same way. They go to school to learn, and so they learn. Their parents urge and crowd them, and they want to succeed and do succeed. It almost seems at times, when we observe the ambition of these newcomers, as if the native breed were exhausting their energy, and the incoming of a new stock were likely to regenerate the breed; just as immigrants take our wornout farms and make them pay.

Why is it that with inadequate equipments the smaller colleges of the West, what are called the fresh-water colleges, and equally the larger Western state universities, graduate a larger proportion of well-trained, scholarly men than do the large and wealthy colleges of the East?

There is one and only one reason for it, and that is that the students come from a middle class who have

learned to work and who mean to make the most of their opportunities for learning. They are not rich and they want to learn. They have distractions, of course, but the distraction is not the principal thing. They have already fastened on a purpose in life, on what they want to be, be it farmer or lawyer, and they choose the department in the university which will help them, and they work in it. They succeed because they deserve to succeed.

Why is it that in coeducational schools the girls almost always excel the boys in their classes? In almost any academy or high school the girls at the end of their course will take the choice places on the commencement platform and will earn the prizes; why is it?

Not because the girl has more brains than the boy, nor because she matures earlier. It is solely because the girl puts her brains to work on her studies much more faithfully than does the boy. She works more honestly on her studies. She puts time on them at home. She has not the distractions that the boy allows himself. She may amuse herself with basket ball, but baseball and football are not for her. The boys are so daft that they take much more pride in having earned a letter on their sweaters than in the highest legitimate success of the school. Athletics is good, but it is not first. We see in the papers the announcement that such and such an academy athlete will go to Harvard or Yale, but never are we told where the valedictorian will go. Some college athletes do finely in after life, but it is the Phi Beta Kappa men that will in future win the most prizes. They have trained their brains more than their muscles.

It is brainwork that tells. It is not this college or that, it is ambition to excel and hard work. There is no royal road. The effort must be laborious and persistent. The Oxford student learned it, who had tried to make up by special cramming at the end for negligence during the year, and who wrote on examination day:

I've spent all my cash on a crammer,
And I shall get *Beta* or *Gamma*,
While that girl over there
With the flaming red hair,
Will get *Alpha plus* easily, damn her!

THE DIFFERENCE

THERE comes a sudden revolution in Hayti and its President captures and kills a hundred of the rebels. Then the populace are so angry with him that they attack him and he flees to the French legation; but the mob beats its way in, drags him out and fills him with bullets. The news is two days old, and President Wilson sends a military force to the capital to protect foreign lives and to maintain order. It is a small republic and a negro republic, and it does not count. We can take sudden and forcible and drastic action.

Two days; but Mexico has been in a turmoil for more years than that, fighting all over the country, multitudes of prisoners murdered, from President down, foreigners murdered by the dozen (none were murdered in Hayti), and American and British and Germans robbed, their lives endangered when they are not killed, obliged to flee for their lives and leave millions of wealth to be looted. The condition has been appalling, and the United States has looked on and watched and waited. The President has threatened, but thus far has not interfered, except as for a few weeks to send soldiers to a coast city for protection. The President does not treat Mexico as he does Hayti.

If the President makes his threat good he will very soon do something stern. He has said that he will interfere if the parties do not come together. But they do not come together. We do not want war with Mexico, but we believe there can be some sort of intervention that will be effective and will yet come short of war. At any rate the President is pledged to it, and the time is well past which he seemed to set for showing his hand. It is for him to choose the sort of effectual intervention which he will attempt. It may be that he will give somewhat more than moral aid to one of the parties. It may be that he will encourage some one of the rivals to set up a separate government for the northern states of Mexico. Whatever may be the best way, which it is his business to know, it appears to be time to bring the chaos to an end in Mexico, as we did twice in Cuba and have just done in Hayti. President Wilson has well said that the present condition in Mexico is intolerable, which means that we should not tolerate it any longer.

WAR STOCK SPECULATION

TRADING in the shares of companies which are at work on war orders has multiplied the sales and purchases on the New York Stock Exchange by three in the last three weeks. There were two million-share days last week, and at the end great advances for several of the war order stocks were shown. Notable examples were gains of 54 points for Bethlehem Steel and 23 points for Crucible Steel. Sales of the latter in six days had been no less than 558,700 shares.

This trading in war order stocks has become wild and dangerous speculation. Much of it is done not only in ignorance of the real condition and prospects of the companies, but also in defiance of explicit public warnings from their responsible officers. The price advances have been unreasonable. Here are two examples:

Bethlehem Steel common stock, on which the company has been paying no dividend, has risen in nine months from 26 to 275. Last week's gain was 54 points, as we have said. There has been no word from the officers since President Schwab said in April that probably there would be no dividend on the stock for some time to come, because funds were needed for extensions of plant. The price was then below 100, but 175 points have since been added. It is reported that the company's orders amount to $150,000,000, but a long time will be required for completion of the work, parts of which have been given to other companies on subcontracts.

There were sales of the Crucible Steel Company's common stock in May last at 22. Last week the price, on large transactions, rose to 83. No dividend has been paid on this stock. The price had not passed 51 when, a few weeks ago, Horace S. Wilkinson, a member of the company's executive board, gave a warning to the public. The company owed, he said, the accumulated dividends of three years on the preferred stock, or about $7,000,000. These must be paid before there can be any dividends on the common shares. The profits this year would not exceed $2,500,000. There was bond interest to be paid, and $2,000,000 was going into a new plant. Profits on $15,000,000 worth of war orders might be, in the course of time, $5,000,000. "I can see no reason," said he in conclusion, "why the common stock of the

company should be able to pay dividends for a great many years, or be worth its present selling price." But since this plain warning was published, more than 50 points have been added to the market price of the shares.

There are many war orders. Probably the total of those placed, with those under negotiation, exceeds $1,000,000,000. Mr. Morgan has had the supervision of contracts amounting to $500,000,000. But the work on a considerable number of the orders will require more time. Buyers of such shares must take into account a possible unforeseen ending of the war. Speculation or investment of this character, however, may end in a crash even if the war shall go on for a long time. Sufferers in such a crash would be inclined to criticise and attack the Stock Exchange. While we do not see what the Exchange authorities can do, beyond a careful examination of all transactions, enforcement of the rules and exclusion of manipulation, this hazardous and unreasonable speculative movement should receive their thoughtful consideration.

THAW, BECKER, *ET AL*

THE men who get elected to state legislatures in the United States are probably in fact as in theory fairly representative of the average obtuseness and the average crookedness of the American people. In the school books we say, "the average intelligence" and "the average morality," but school books are written for the innocent-minded of tender years. It would be cruel and inexpedient to open their eyes to all the realities of life before they reach years of discretion.

Our criminal law and our procedure in criminal cases are made in part by legislatures, in part by the bench and the bar. Our judges all in all are perhaps not more thick-headed or more crooked than our legislators; our lawyers, taking them by and large, are possibly a little more crooked. Without venturing to express too dogmatic an opinion upon such delicate matters, we content ourselves with the purely journalistic and impersonal observation that our criminal law and its applications are most rationally explained by presuming them to be the work of a passably clever criminal class, leaving the class otherwise undefined.

We anticipate, however, that the public in its average obtuseness and rascality will not express itself in such carefully considered phrases as we have used. The public likes to put its misfortunes "up to" somebody in particular; distributed responsibility is not melodramatic; and of late the public has shown a disposition to hold the courts responsible for sin, poverty, the cost of living, and sudden death. It undoubtedly holds that the courts reprehensibly mishandled the cases of Thaw and Becker.

If there are persons with old-fashioned ideas still alive, and if any of them chance to read these lines, we warn them not to suppose that the public condemns the courts for releasing Thaw from custody and permitting every legal means to be tried to save Becker from a felon's death. There is no more doubt that Thaw and Becker are popular heroes in America than there is that the ball pitcher and the prize fighter are idols. The average intelligence in America believes that Thaw is sane, that he always has been sane, and that he "had a good right" to shoot Stanford White. The average crookedness in America believes that Becker was done to death by the treachery of people that he had shielded, and that he died "game."

No, the "popular intelligence" and "the moral sense of the plain people" are not condemning the courts for releasing Thaw and allowing three years to be used up in the attempt to save Becker alive. They are muttering against the District Attorneys, judges and governors for "persecuting" a rich and dissipated "young fellow" for doing "what any red-blooded man would have done" and for "murdering" a really "good" man for no better reason than that two jurors found him guilty of planning and ordering a cold-blooded murder to save himself from exposure as a crook.

There are judges in New York and in other states who are neither criminals nor accomplices of criminals, who are neither congenital fools nor fools by habit. There are lawyers who are both high-minded and single-minded. Do they realize what the existing criminal situation is, or are they perchance asleep like a certain god of old, or gone on a journey? Do they understand that the criminal element in America, and in particular in the State of New York, openly defies them all, believing that it can and does undo the law by legislative and judicial and executive sabotage; and that the defiance is backed up by millions of idiots who, in all sincerity, hold that any punishment of crime is "unfair," undemocratic and un-American?

OUR REPRESENTATIVES ABROAD

WHEN that eminent French Dreyfusard, M. Urbain Gohier, was in the United States not many years ago he gave vent to these somewhat ungracious remarks in the columns of The Independent:

> The diplomats of old Europe are gentlemen recruited from the richest, the most polite, the most ceremonious, the most egotistical, the most infatuated, the most limited, the most anti-democratic class; they gather ribbons and medals of imperial or royal orders. They array themselves in gorgeous apparel of laces and plumes and absurd tinsel, yet still manage to draw prestige and authority from them. They cover their miserable nakedness before the eyes of the people with a double veil of mystery and falsehood. The time has come to put an end to this sort of international politics.

This is one picture of the older diplomacy. When nothing was to be done it went thru the motions well enough. But when a real crisis arrived it frequently failed.

American diplomats have been the laughing stock of the world in the piping times of peace. Their unconventionalities, shirt-sleeve frankness, and democratic ways have been a perennial source of gossip to all the old ladies of both sexes in court circles. But when the emergency comes then the American diplomats are accustomed to rise to the occasion. Fresh from a life where success is achieved only by courage, hard work and willingness to assume responsibility, they know how to bring about results. Since when have the diplomats of the United States been put under a heavier strain than during the past year? And since when have the American people greater cause for pride in their work?

Walter H. Page, James W. Gerard, Brand Whitlock, Henry van Dyke, Henry Morgenthau, Paul S. Reinsch, to mention only a few, have truly represented the genius of the American people abroad. No finer work is now being done by American citizens than that by our diplomatic and consular representatives in the countries to which they are accredited.

THE STORY OF THE WEEK

THE GREAT WAR

July 26—German air raid on Warsaw. French victory in the Vosges. Italian gains on Isonzo River.

July 27—Hard fighting at three sides of Warsaw. German submarines sink thirteen vessels. Slight German gains in Artois. French gains in Alsace.

July 28—Russians check German advance upon Warsaw. Total British losses in war reported to be 330,995 officers and men. Italian advance at various points.

July 29—German advance upon Warsaw resumed. German gains in Flanders. French gains in the Vosges. Italian gains on Carso Plateau. American protest to Germany about forged passports.

July 30—Germans and Austrians capture Lublin. Russian Government announces evacuation of Warsaw. Eight aerial raids by sixty French airships.

July 31—Italians advancing toward Görz and Triest. Pope issues letter to all belligerents urging peace. Holland provides for great increase of army.

August 1—Germans occupy Cholm. Italians break second Austrian line on Carso Plateau. Czar reaffirms pledge of autonomy for Poland.

The War in Poland

The German-Austrian drive at Warsaw, in some respects the most extensive and formidable army operation of the war thus far, was the dominant feature of the week. This stupendous movement had a triple object. First, it was to capture the Polish capital, and to win for Germany the political and diplomatic prestige which that achievement would afford. Second, it was to capture or to destroy the Grand Duke Nicholas's Russian army of 1,500,000 men and its vast stores of supplies and arms; which would be an irremediable disaster to Russia and the greatest military stroke of the kind in human history. Third, it was to release vast German and Austrian armies, either for a swing of the pendulum back against the Allies in the West and a drive at Paris or at the shore of the British Channel, or, more probably, for a drive southward thru Serbia for the conquest of that country and for the relief of Turkey and the defense of the Straits.

Von Hindenberg on the Narew at the north was only twenty-four miles from Warsaw on July 26, and from that point essayed an airship raid to destroy the Vistula bridges at Warsaw and thus to hinder Russian evacuation, but the attempt was fruitless. At the south Von Mackensen was for the time checked before the Lublin-Cholm railroad. Far to the north, in Courland Von Bulow's huge cavalry army moved southward to threaten the Grodno-Vilna railroad line from Warsaw to Petrograd. Thus with both the north and south routes in danger, there was left to Warsaw securely only the third and central line, by way of Siedlce and Minsk. Over this last the evacuation of the doomed city was hastened. Hundreds of thousands of the inhabitants, all the government archives and treasure, all the military stores and provisions, were carried eastward into Russia, beyond the Bug River and the Brest Litovski line of defenses. All copper and lead and other metal work, even the church bells, which could be used for military purposes, were stripped out and taken away. Factories and shops were dismantled or destroyed. Finally the three great bridges over the Vistula River were mined so that they could be destroyed when the last of the retreating Russians had crost over them.

Desperate resistance was meanwhile offered to the invaders on all three battle fronts, the Russians inflicting far heavier losses than they themselves suffered. On July 28 the whole attack

THE LOW TIDE OF RUSSIAN FORTUNES

The German drive at last forced Grand Duke Nicholas to the south of Warsaw and the Russians, by evacuating Warsaw and the Vistula line, saved their army. Lemberg, the capital of Galicia, was captured by the Austrians on August 1.

seemed checked, but on the next day it was renewed with added fury. At the west the Germans captured Pisarzow, only fourteen miles from Warsaw forts, and at the south Von Mackensen was reinforced by Austrians who had crost the Bug River at Sokal and pushed forward to Pinski and Biskupice on the Lublin-Cholm railroad. The Russian government on July 30 announced a withdrawal from Warsaw and the whole Polish salient to a new line of defense running thru Kovno, Grodno, Brest Litovski and Lutzk; and in the afternoon of that day the Teutonic Allies entered Lublin and secured control of the great southern railroad line from Warsaw and Ivangorod. Cholm was entered the next day. The fall of Warsaw seemed then a matter of hours rather than days, but the Russians claimed the satisfaction of having saved their army and withdrawn it intact and undemoralized, and of having inflicted upon their foes losses of half a million men.

The War in the West

The war along the Belgian, French and German line was supposed to be held somewhat in abeyance during the greater operations in the East, yet it did not lack activity and interest. At the beginning of the week it consisted chiefly of heavy artillery fighting, with some hand grenade work in the Forest of Ailly and mining in Champagne. The French on July 26 captured a strong German position in the Vosges north of Münster and dominating the Fecht Valley, while their aviators showered bombs and steel arrows upon the military railroad station at Nantillois, near Montfaucon. At the same time the Germans bombarded Furnes and East Dunkirk and their aviators dropt bombs upon Dunkirk. The next day the Germans took the offensive in the Vosges and in Artois, but made no gains of importance, tho they reoccupied some trenches in both regions. The French made further gains in the Vosges on July 29; there was spirited but indecisive fighting around Arras, Soissons and Souchez; and in Flanders the Germans bombarded and destroyed a pontoon battery on the Furnes Canal.

During the night of July 29-30 the Germans made an attack with "flame projectors" upon the British trenches at Hooge, and captured 500 yards of the first line, some of which was regained by the British on July 31. A furious attack with hand grenades and bombs was made by the Germans in the Labyrinth on July 30, but it was repulsed, as was also an attack upon the Verdun line. In Alsace the French moved from Metzeral down the Münster Valley toward Colmar, making a substantial gain. The last two days of the week were marked with extraordinary aerial belligerence. Germans dropt bombs upon Nancy with little result. They bombarded Gravelines and Pol-sur-Mer and killed some non-combatants. Two English aviators were compelled to descend and were captured on the Belgian coast. The French made a simultaneous series of eight aerial raids upon the German lines from Flanders to Alsace, in which more than three score aeroplanes were used. Fribourg, a factory of asphyxiating gas at Dornach in Alsace, the railroad station at Chaunay, the Ypres-Roulers railroad, German camps at Longneval, the German lines facing Rheims, and stations at Chatel in the Argonne Forest and at Burthecourt in Lorraine were all attacked by French aviators, who were said to be equipped with better aeroplanes than the Germans. The chief raid of all, with forty-five aircraft, was directed against the important oil works at Pechelbronn, near Strasburg. Baffled by dense clouds and fog, only a part of the fleet reached its destination and dropt 103 bombs upon the place, with results which could not be ascertained.

Incidents of the Week

The heavy hand of German authority fell upon two Belgian cities during the week. The people of Ghent on July 28 were forbidden to wear, show, buy or sell the banner or the national colors of Belgium, pictures of the King or Royal family, or any patriotic tokens or emblems, under penalty of $1000 fine or five years' imprisonment. The city of Brussels was fined, on July 29, $1,000,000 because of supposed connivance at or exultation over the destruction of a Zeppelin airship by British aviators at Evere.

The Government of The Netherlands on July 30 provided for the immediate increase of the Dutch army from 330,000 to 550,000 officers and men, and for a corresponding increase in equipment prepared for immediate use.

There was made public on July 31 a letter from Pope Benedict XV addrest to the rulers and people of all the belligerent countries pointing out the fruitlessness of the war and exhorting them to seek negotiations for ending the "horrible slaughter which is dishonoring Europe."

The Italian Advance

The Italian advance upon Görz and Triest was continued tho not so rapidly as in the preceding week. Following the usual artillery prelude, on July 25 and 26 the infantry made appreciable progress on the lower Isonzo River. The Italians used the bayonet with much effect, while the Austrians resorted to hand grenades and poisonous gases. So destructive was the fighting that a truce was called to give opportunity for burying the dead. The Italian aviators dropped bombs upon Riva, an important town at the head of Lake Garda in the Austrian Tyrol. An Italian force occupied the island of Pelagosa, in the middle of the Adriatic Sea opposite the lower extremity of Dalmatia, and French vessels destroyed the Austrian aeroplane and submarine station on Lagosta, one of the southernmost Dalmatian Islands. The Austrians on July 29 strove to retake Pelagosa, but were repulsed with loss.

Austrian aviators on July 26 dropped bombs, without serious damage, upon the historic city of Verona, in the interior of northern Italy. They also bombarded Ancona from the skies.

while from the sea their cruisers and destroyers fired upon the railroad along the Adriatic coast between Ancona and Pesaro, destroying the station at Fano and doing much other damage. It was reported that the Germans had sent a Zeppelin and a Parseval to Pola, for the purpose of bombarding Rome. To guard against such a raid the Italians mounted aerial guns around their capital, and the Pope removed some of the art treasures of the Vatican to subterranean strongholds.

On the Carso Plateau the Italians made steady gains on July 29, 30 and 31, breaking the second Austrian line and winning several miles of trenches. They prest forward at Doberdo, on the road to Triest, and in the Cordevole Valley; and effectively repulsed an Austrian counter-attack in the Valley of Padola. In Carniolo their artillery destroyed Austrian fortifications. They suffered, however, in the campaign on the Isonzo the irreparable loss of General Cantore, one of their best commanders and the first general officer to be killed in the war. Austrian preparations for the evacuation of Görz were continued. It was estimated that Austrian losses in the war with Italy thus far amounted to more than 80,000.

Dealings with the Turks

The Turkish war has been in a week of slack water, no operations of commanding significance being reported. The Allies on July 26 bombarded some Turkish fortifications on the Asian side of the Dardanelles, and an aeroplane of the Allies put to flight a German submarine which was seeking to attack a British troopship. A slight Turkish gain was reported near Sedd-ul-Bahr, while north of Chanak the French advanced their right wing and their aviators did harm to the Turkish camp. The British battleship "Lion," which in January was seriously damaged in an engagement in the North Sea, was reported to have joined the Allied fleet at the entrance to the Dardanelles.

The Turks were said to have scarcely a month's supply of ammunition and to be desirous of making at once a separate peace with the Allies. But Enver Pasha, the Minister of War, in addressing the troops at Gallipoli bade them to be of good cheer, because within a month he would return them in triumph to their homes. Serbia, he said, could not last much longer, for soon an irresistible German army would march down thru that country to Turkey's aid. There were other indications that such a movement was contemplated by Germany and Austria, to follow upon the fall of Warsaw. Of course, if Serbia were conquered and traversed, Bulgaria would still have to be crost before the Teutonic aid could reach Turkey. But negotiations were in progress between Bulgaria and Turkey, and the expectation was increasing that upon the conquest and partition of Serbia the former country would at once join forces with the victors, anticipating reward in an apportionment of Serbian territory.

Meantime Italian animus against Turkey steadily increased and the Government at Rome seemed to be seeking a pretext for declaring war on the ground that Turkey had violated the treaty of Lausanne.

The British were reported on July 26 and 29 to be advancing rapidly up the Euphrates Valley in Asiatic Turkey, defeating a Turkish force and driving it twenty-five miles and capturing the town of Nasiriyeh, above the junction of the Um-el-Jemel Canal connecting the Euphrates with the Tigris River.

The Balkan States

The Balkan States are still halting between two opinions. Attempts to reorganize the Balkan League of three years ago have thus far failed, altho fostered by Italy and the Allies, and the meeting of the kings of Rumania, Bulgaria and Greece, which was to have been held this week, has apparently been indefinitely postponed. The Bulgarian government showed increasing inclinations to side with Germany and Austria-Hungary, doubtless because those countries promise her a large share of Serbia if they are successful, while the Allies can promise her nothing in that direction and nothing more than a very small part of Turkey. Rumania is strongly inclined toward the Allies, but hesitates to engage in the war because of lack of munitions. These latter can be got from abroad only by way of the Dardanelles, and she therefore awaits the fall of Constantinople and the opening of the Straits, and Russia's reinvasion of Bukowina, before declaring war upon Austria-Hungary. Meanwhile she bars the passage of German supplies to Turkey, and searches all cars from Germany and Austria-Hungary in order to prevent the smuggling of contraband of war across her territory. She has also imposed the practically prohibitive export duty of $100 a wagon load upon corn and beans, which will mean the cutting off of large supplies to Germany and Austria-Hungary, and heavy loss to contractors in those countries who have made large purchases of those products and have paid in advance twenty-five per cent of the purchase price.

Rumania has notified Austria-Hungary that since the participation of Italy in the war she is considering herself free to act according to her own interests, and Austria-Hungary has responded with an ultimatum-like demand that on or before August 12 Rumania shall declare her intentions. Two days later, on August 14, the Greek Parliament will reassemble with Eleutherios Venizelos in overwhelming control. There has been a strong disinclination to proceed to extremes against the will of the King during his serious illness, but Venizelos and the mass of the people are so intent upon intervention in aid of the Allies that action may not be long delayed.

Against the menace of a German-Austrian drive the Serbian army, 250,000 strong, has been reorganized and is said to be in admirable condition. French aviators patrol the frontier, and Belgrade is guarded by six Serbian, two British, two French and two Russian batteries. Meantime the Austrians, mindful of the efficiency of the Serbian attack, have laboriously constructed three lines of defense against another Serbian invasion.

The State of the Belligerents

The British government reported on July 28 that the total of army and navy losses down to July 20 had been only 330,996, so much less than had previously been reckoned from other official reports and reports of the Red Cross and other relief organizations. These losses were divided as follows:

Army—Killed, 4000 officers, 51,384

Paul Thompson

A LESSON ON POISONOUS GASES

The schoolmaster-German raids on England lend force and timeliness to the chemistry teaching in the schools. Here a class is learning what chlorine is and how to fight it

men; wounded, 5430 officers, 166,199 men; missing, 1464 officers, 62,592 men.

Navy—Killed, 499 officers, 7439 men; wounded, 87 officers, 787 men; missing, 29 officers, 774 men.

A closer scrutiny was made for spies; many arrests were reported, and on July 30 two convicted spies were put to death. Mr. David Lloyd George, Minister of Munitions, reported that he had established sixteen national munitions factories and had added nearly 40,000 men and women to the working force.

The French National Association of Liquor Dealers called a convention on July 29 to consider the government's anti-alcohol measures and to devise ways and means for saving the liquor trade from ruin. Meantime the government has been extending and strengthening its prohibition of the use of intoxicants.

In Germany, particularly Berlin, there is much complaint of a shortage of beer, the supply having been reduced about sixty per cent. In Wurttemberg a war budget was voted by all save three Socialist members of Parliament; all the other Socialists declaring that in the presence of great national peril all political differences must be ignored. Clothing for the army for another winter campaign is being prepared, and plans are being formulated for a third war loan.

German submarine activity was greatly renewed during the week. Six vessels were sunk on July 26, including the American steamer "Leelanaw"; thirteen on July 27, including two Norwegian sailing ships, and nine on July 28, including two Swedish and three Danish vessels. It was reported from Berlin that down to July 25 German submarines had sunk 229 British vessels (the majority doubtless fishing boats), thirty other enemies' vessels, and thirty-three belonging to neutrals, of which last six were destroyed "by mistake" and the rest because they were carrying contraband goods.

The Russian Duma has reassembled, and the Czar has reaffirmed his pledge of autonomy for Poland.

American Interests

The American steamer "Leelanaw" was destroyed near the Orkney Islands on July 25 by a German submarine. The procedure was, however, apparently in accordance with international law. The ship was stopped, visited and searched, and found to be bound from Archangel to Belfast with a cargo of flax, which Germany considers contraband. The crew was taken off and towed to within reach of land and the ship and its cargo were destroyed. The case closely resembled that of the "William P. Frye" in the Pacific in January last. The United States Government at once took steps to secure an explanation and indemnity, a note being dispatched on July 31. This was the eighth American vessel to be attacked since the beginning of the war. Three were sunk by mines, one by a cruiser, and two were sunk by submarines. One was torpedoed [illegible] and one was bombarded by an aeroplane. [illegible] American were killed or [illegible] while [illegible] aboard [illegible] killed on British ships.

The British Government is understood to be preparing a supplementary note to ours concerning the British war policy as now representing that it complies with the requirements of international law and earnestly strives to cause American [illegible] a minimum of inconvenience.

A grave development of the week was the disclosure of wholesale passport frauds, apparently committed by officers of the German Government. There has been found in Holland a veritable factory of forged American passports, directed by German officers. It is equipped with paper made in exact imitation of the American watermarked official paper and with facsimiles of American official seals. The Secretary of State on July 29 instructed the American Ambassador to Germany to call attention to this state of affairs, to demand an explanation and disavowal, and to give warning that such acts, if continued and sanctioned by the German Government, would constitute a distinct breach of friendship.

Workmen and Wages

The movement, which originated in Bridgeport with the strike at the Remington works, for an eight-hour day and high wages in all machine shops, is spreading slowly. At the Remington works the strike ended last week, because the eight-hour day and increase had been granted. The reduction of hours was conceded by the Bliss Company in Brooklyn, but there is danger of a strike there on account of a demand that the minimum wage shall be forty-one cents an hour. This company is making torpedoes and shrapnel. The leader of the union machinists was to make demands at the works of the Winchester Arms Company in New Haven. The company, however, voluntarily raised the rank's rate from [illegible] to forty-eight and granted wage increases. It has large war contracts. In New York City the employees of a company making machinery used in the manufacture of ammunition went on strike in accordance with the plan of J. J. Keppler, the socialistic leader, who aims to [illegible] in every war order factory in the country for eight hours and higher pay.

The Bethlehem Steel Company on the last day of the month voluntarily gave a wage increase of about ten per cent to its 17,000 employees. This company has been at work almost since the beginning of the war on orders amounting, it is said, to $150,000,000. An increase of twenty per cent was granted by the Hercules Powder Company, whose profits have been enlarged by war orders. A large carpet company in Yonkers, New York, voluntarily added ten per cent to the wages of its 7000 workmen. So far as the war order mills are concerned, it is plain that the machinists have determined to get a share of the profits. Probably strikes will be prevented in most cases by concessions.

President Gompers of the Federation of Labor has repeated, over his signature, his charges about foreign interest in strikes. He has not, he says, spoken of Germans, and he did not assert that the malign influence was exerted at the Remington works. But he has good evidence, he adds, that efforts were made to corrupt men in order that there might be strikes among seamen and longshoremen, and that the corrupting influence was that of "agents of a foreign government." But the efforts failed.

The strike of the Standard Oil employees at Bayonne, New Jersey, was ended by the somewhat remarkable labors of Eugene F. Kinkead, the sheriff of the county. Having sought in vain for militia aid and for the help of the

[illegible] POLISH CHILDREN GETTING [illegible]

The forced withdrawal of the Russians from the Warsaw salient leaves Poland in German hands and, as in Belgium, the welfare of the people will depend on the Germans and such relief agencies as they permit

police in neighboring towns, he set out to do the whole thing himself and was successful. He promised to get a wage increase for the men, and they accepted him as an honored leader. Incidentally he let several agitators feel the weight of his fists and had 129 of the company's strike guards arrested. They had killed four strikers. Under his leadership 8000 men resumed work. The wage increase is about ten per cent.

The Situation in Mexico

General Gonzales, who recently retired from the Mexican capital, saying he desired to attack Villa's flying column, reoccupied the city on the 31st. Little resistance was offered by Zapata's men. The flying column, Gonzales said, had withdrawn from Pachuca and gone to the mountains. Our Government had sent an emphatic note to Carranza telling him that he must restore railway communication between the capital and Vera Cruz at once, in order that food might be carried to the capital's residents.

It is reported that President Wilson has completed a plan which he will ask the factions to accept. It gives the office of provisional president to that member of Madero's Cabinet who was in line of succession; provides for the approval and support of Argentina, Brazil and Chili, with the aid of our Government; asks Villa, Carranza and Zapata to waive all personal claims, and offers the support of American financiers. It also involves an embargo upon the shipment of arms to those who oppose the new Government, while permitting such exports to the recognized authority. Vasquez Tagle would probably be the Cabinet member chosen. Villa would consent, but Carranza has shown stubborn opposition. He claims that his power is steadily increasing. Luis Cabrera, his Minister of Finance, has been sent to Washington. It is expected that he will ask for the recognition of Carranza's Government.

The Murders in Hayti

It was a bloody week in Hayti. The dark record began on the 27th. For ten days there had been a reign of terror in Port-au-Prince, the capital. President Guillaume Sam, seeing the gains of the revolutionist leader, Dr. Rosalvo Bobo, and distrusting those around him, made many political arrests. He placed in prison 160 prominent residents of the capital. He also disbanded one of his own regiments. These soldiers turned against him, and, with followers of Bobo, attacked the palace. For a time it was defended by the President and General Oscar, governor of the city, but they could not hold out and both found it necessary to run away. Sam got refuge in the French Legation, and Oscar found shelter in the legation of Santo Domingo. First, however, they put to death all of the 160 political prisoners. One of these was ex-President Oreste Zamor, who was driven from office last year by Davilmar Theodore.

When the people of the capital heard of the slaughter of the 160 prisoners they invaded the Santo Domingan legation, took General Oscar to the street and there shot him to death. Then Bobo proclaimed himself President. All this was on the 27th. On the following day the relatives and friends of the murdered prisoners broke into the French Legation and, in defiance of the French Minister's protest, took President Sam out and killed him. They mutilated his dead body and after dragging it thru the streets, dismembered it and marched about with parts of it displayed on poles.

Admiral Caperton of our navy landed marines on the 29th to guard the legations. Bobo is hostile to Americans and to the purposes of our Government. The landing was resisted and six Haytians were killed. Two of our sailors lost their lives. Undoubtedly France will resent the invasion of her legation, and if we, under the Monroe Doctrine, were not opposed to the taking of territory there by European powers, she might seize and hold the capital for apologies and reparation. Probably we shall have to represent her interests. A battleship has been sent to the port and 2000 marines and sailors will soon be available. They may hold the capital while there are negotiations for a treaty, with provisions for a fiscal protectorate like the one in Santo Domingo. Bobo has opposed such a protectorate. A committee of public safety offered the presidency to a dozen men. All refused to take it and then the committee named Bobo. Ex-Governor Fort, head of a commission sent to Hayti by President Wilson, says our Government should intervene, exercize control and stop the revolutions.

THE GRIM BUSINESS GOES ON

NORMAN ANGELL

WHY NOT WAR, AND IF NOT WAR, WHAT?

BY NORMAN ANGELL

AUTHOR OF "THE GREAT ILLUSION," "THE FOUNDATION OF INTERNATIONAL POLITY"

IF America does not go to war in the ordinary sense with Germany over the sinking of the "Lusitania" it will not be, let us hope, because she takes lightly an act of that kind, but because we have now arrived at some real understanding of the permanent issues involved and have realized how ineffective would war in the ordinary sense be as a means of vindicating those principles laid down by President Wilson in his notes to Germany.

But because Americans realize the ludicrous ineffectiveness of war at this juncture to promote the principles for which they stand, that does not in the least imply that the only alternative is passively to submit to outrage and insult. Those who call for war seem to take it as an axiom, as self-evident, that war is necessarily effective for such ends as those which America now has in view: for insuring, that is, the future security and protection of American citizens, the observance of international law and the due punishment of those guilty of breaking it. Whereas the whole point of discussion is that war and military power is obviously and ludicrously ineffective to achieve any of these things.

First, let us see just how America now stands with reference to certain facts of this war as a whole.

The protest against the sinking of the "Lusitania" derives its real importance of course from the fact that if the United States were guilty of inert acquiescence in it she would be sanctioning the establishment of a precedent which would mark a definite step backward in the maintenance of certain fundamental principles of human relationship. America would have a large part of the blame for allowing to take place a re-barbarization of international relations and for undoing such small advance as we have made so slowly and painfully in the past.

So with her case against Great Britain. It is not a mere matter of profit on export trade which is concerned; nor is it because America wants to harass Great Britain at a difficult time over dollars and cents matters that she presses her points, but because if she accepts that reading of sea law which enables Great Britain absolutely to control the neutral international trade of the world in war time she might be placed in the position of having to accept the same reading when some other power has command of the sea in some future war—Japan at grips with China or with Russia. America might, if she accepted this view of international law, find herself compelled in some measure to become the unwilling ally (because the belligerent that controls the sea can avail himself of the economic resources of neutrals and prevent his enemy from so doing) of some sea power other than England in a cause upon which she might look much less favorably than upon the British cause in the present war.

Now the mere fact of joining the Allies and helping in the defeat of Germany would not necessarily ad-

vance the solution of any of the problems here indicated.

American lives at sea would not be more secure; during the war at least they would obviously be less. And as to the future, if America, in joining the Western Allies, committed herself to accept the view of at least some of them on sea law, American ships would still in future wars be subject—legally—to destruction in war areas by floating mines; neutral rights would during the war at least be likely to be still further whittled because America herself would cease to be a neutral and would become a combatant, and consequently tend to take the combatant rather than the neutral view; and if it be said that the final defeat of Germany would facilitate the internationalization of sea law it is necessary unhappily to reply that it is England that has in the past opposed the internationalizing process and Germany that has favored it: on the whole, Germany and America have stood for it in the past as against English influence. The fact of becoming England's ally would not make it easier to stress points of difference but the reverse, just as the existing relations of England and the others to Japan has made it impossible for them to protest even verbally against Japanese action in China—or Russian action for instance in Finland. Nor would American action against Germany be rationally punitive for the "Lusitania" outrage. The last thing likely to happen even in the event of German defeat is the efficient punishment of German admirals or bureaucrats. The soldiers and sailors whom America would share in killing would be those having had no part in the outrage, who were possibly averse to it.

And even if America could secure some sort of undertaking from the Allies as to the future law for which they would stand, what assurance has she that this agreement would outlive the existing military alliance if the military motives and ambitions of European states are to be in the future what they have been in the past? It is nearly true to say that of all the combatants now fighting there is not an enemy who was not in quite recent times an ally, nor an ally who was not quite recently an enemy. For—and this perhaps is the most important consideration of all—this war is a struggle for political power. In the most general view it is the result of the attempt of a nation not content to be a member of the society of nations, to impose its domination on the world. Such a pretension as that of one nation to dominate the world even tho it be based upon an alleged superiority of ideals and culture is fatal to real freedom: no really free society of nations can be formed on the basis that one nation can by its power dictate to the rest. But as a matter of fact, world power, the capacity to dictate in large measure to the rest of the world, belong to the nation that controls the sea because, as this war proves and as Admiral Mahan has shown other wars to have proven, the issue of any great war is determined by predominant sea power, "a truth that becomes truer" as nations become more interdependent.

There is a very significant passage in President Wilson's last note to Germany, the full import of which hardly seems to have been realized either in Germany, England or America. The note says:

> The Government of the United States and the Imperial German Government are contending for the same great object, have long stood together in urging the very principles upon which the Government of the United States now so solemnly insists. They are both contending for the freedom of the seas. The Government of the United States will continue to contend for that freedom from whatever quarter violated without compromise and at any cost.

What does this mean, "the freedom of the seas"? Is the United States really contending for the free movement or the partly free movement of German merchant ships upon the sea in war time, so that Germany can in some degree supply herself with materials and so limit the effectiveness of British sea power which so many Americans believe in large part stands between their country and the possibility of German aggression? Had not Germany the freedom of the seas before she made war? Could not her ships move freely without interference? What, then, does the President mean?

Well, as a matter of fact, if the position that America is taking in this matter means merely freedom for Germany to supply herself despite England's naval superiority, there are certainly very many Americans who would regret that the United State should stand for anything of the sort. But freedom of the sea stands for both more and less than this.

Let us suppose that Britain's views of belligerent rights at sea are freely admitted and become the rule for nations in the future. Then, when Germany is defeated she will argue "We were defeated because we did not control the sea. In future we must be sure of doing so." And other nations will argue in the same way and you will get what Admiral Mahan prophesied would take place a competition among groups of nations as against other groups for the domination of the sea. Armament competition and the struggle for political power will go on between the nations in an intensified form. There is one thing only that can prevent it and that is that limitation of belligerent rights for which America is contending and which must end finally in the internationalization of the sea, which in its turn must end in the internationalization of the world.

Two courses are open to the world: to sanction a sea law which by the whittling down of neutral rights makes sea power more and more the determining factor in all great international conflicts; or, by development of sea law, the growing internationalization of the sea to place the final decision of those conflicts in the hands of the nations as a whole. The first solution means an intensified armament rivalry, a weakening of the powers possest by the community of nations as a whole and a strengthening of the powers possest by the commander of the seas for the time being. It is irrelevant to say that Britain has never abused her command of the sea. Others than she may be involved in certain conflicts of the future; and if she holds her power as a great international trust on behalf of civilization, then it should be legally internationalized and civilization should be duly represented.

And there is this hope in the internationalization of sea power: if the nations are agreed so to do they can exercize a blockade or siege of a given country by means that will be perhaps more largely non-military than military. If, for instance, the nations of the world had agreed not to export anything whatsover to Germany they would be doing more effectively perhaps by agreement between them the thing which England is now trying to do simply by the power of her ships. If there were international control of world communications, civilization would possess a very powerful instrument for the coercion of a recalcitrant member of the society of nations. But this power, if exercized at all, is one that should belong to the nations as a whole, to be exercized on behalf of the community, not by an individual nation against all the rest.

To that end the policy now espoused by the United States will finally lead if it is pursued with resource and energy. If America can obtain the cooperation of the great states of the world—and she might so obtain it at this present juncture—to exclude Germany from intercourse with civilization it could be

made plain that military aggression involved a price which even Germany—perhaps especially Germany—would not lightly pay. If Germany had to face the alternative either of cooperation in some sane peace, a rational settlement or the exclusion of her merchants from every market of the world for half a generation, the inability of her ships to enter a civilized port, the confiscation of such German ships and other property as might be found outside Germany for the purpose of indemnifying Belgium (say) on the judgment of an international court, the nations as a whole would at least have something wherewith to bargain other than the threat of the use of armies—an instrument which has proved to be, not for the first time, of very uncertain effectiveness. Those non-military forces have hinted at have not been organized and coördinated, but if the United States, obliged to take some coercive action against Germany, offers her economic cooperation to the Allies on conditions which will mean finally an international control of the highways of the world, she would certainly be taking a long step in the direction of such world organization.

"Sea law" sounds an abstract thing of little interest save to lawyers. But round it will probably gather the main problems of civilization during the next ten years. Very nearly the whole case was stated as briefly as I have seen it stated anywhere, by certain American university students interested in international affairs and gathered recently at a national conference. The statement took the form of a resolution in these terms:

[illegible] seems have shown that the lives of [illegible] and other neutral citizens and Americans and other neutral commerce on the high seas cannot be made secure by America's taking part in a war in which both sides are in some measure straining or violating the law and support an interpretation of law which would have those rights without the protection in the future.

We respectfully submit that the protection of American rights necessitates

(1) The development and reform of existing international law, which involves

(2) An international legislative body for the framing of such law,

(3) An international court for its just interpretation, and

(4) An international arrangement for the due execution of the Court's decision by such combination of economic or military measures as may be most effective.

That is very nearly the whole case

THE RETURN OF AUGUST

BY PERCY MACKAYE

Darkly a mortal age has come and gone
And man grown ancient in a single year.
August! The summer month is blasted sere
With memories earth bleeds to dream upon.

To dream upon. Ah, were we dreaming then
Ere Europe, blindfold, lulled in holiday,
Harkened the sudden thunder thru her play
And fumbling held her breath to hark again,

Or is this blighted year our dream?—How swift
The blackening tempest fell! How vast, thru fire
And cloud of Belgium's rape, a planet's ire
Flared on that pall of shame, while thru the rift

The livid sorrows racked our sympathies!
For still thought burned unclouded: Right and wrong
Strove for the palm as in epic song;
And so we poured our succor overseas,

Neutral in act but never in our souls,
Yet guarding the brave goal of peace. Till soon—
Slow-warping to the waning year's blind moon—
The tide ebbed back, and in the freezing shoals

We stared upon the dead—the dead, whose mothers
Suckled them still in dreams. Stark mid the stench
And yellow choke that reeked from shell and trench
They lay together there—mere boys, and brothers.

Were *these* the epic hosts of Wrong and Right
Whose clash had whirled us in their spirits' war?
These silent boys! What had they battled for
To lie such still bedfellows in the night?

Must breath of dying brothers wake the brass
That thrills the call to arms? Shall ghostly lips
Summon the living to the dark eclipse
And all their dearest shout to see them pass

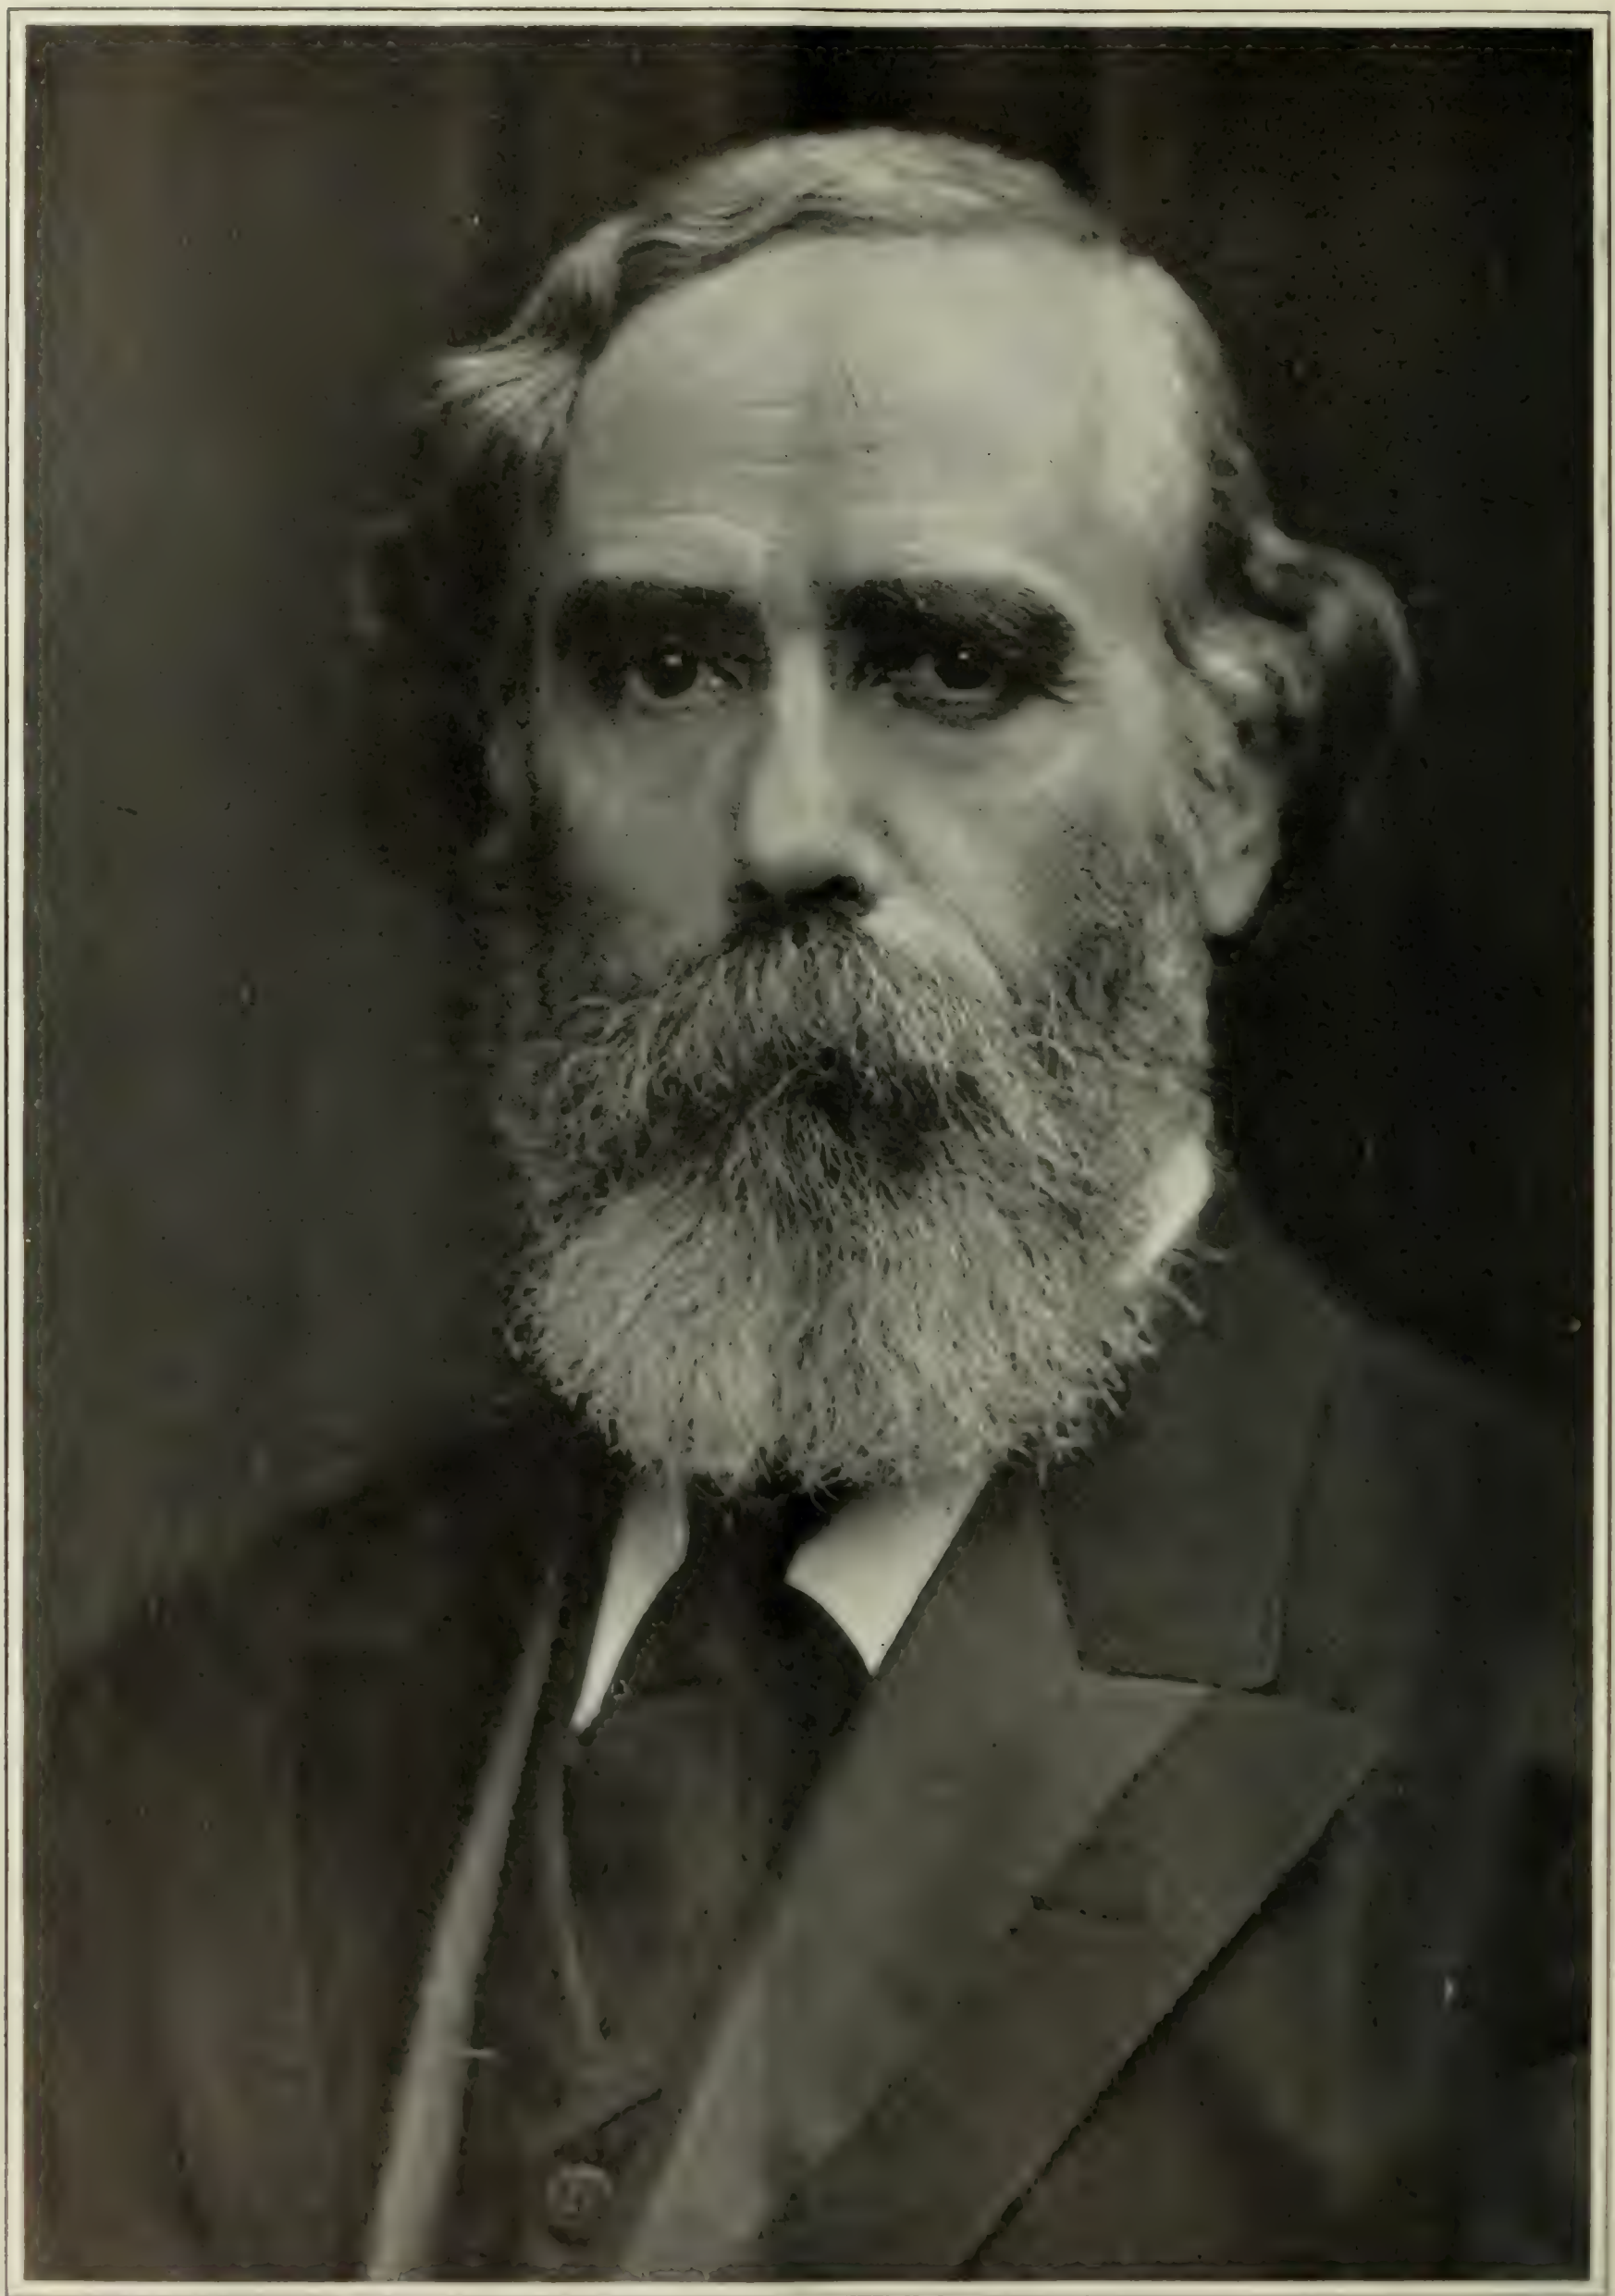
Merely for this: That these who might have shared
A simple handclasp share a bloodied sod?—
So for a while we gazed and questioned God:
A haunted while: for dimly as we stared

Far off we heard the multitudinous cry
Of mangled Poland like a cry in sleep,
And Serbia fever-panting, and the deep
Half-breathed self-doubt of prisoned Germany,

And still far tidings blew, but that first spark
Of August splendor burned in them no more;
Pity and sorrow palled, and custom wore
A deeper callus and a blur more dark,

Till sudden—the "Lusitania"! Lightnings shot
The unhallowed message, and a shuddering fire
Leapt from our long-charred hearts—a glowing spire,
And Europe's sword swung nearer to the knot

That ties the bonds of peace. And now— And now
The summer steals again toward winter's sleep.
The reaping time draws near—ah, *what* to reap?
And spring, that lurks beyond, comes hither—how?



. . . . . .

Still, O my Country, while we may, look back!
The blighted year cries from the charnel grass:
Must breath of dying brothers wake the brass
That thrills the call to arms?—A blood-sered track

Leads backward to that other August day
Prowled by the still unglutted Minotaur;
But we, who watch to slay that beast of War,
Shall we hunt *him* or those he mangles?—Say:

For reason has its ire more just than hate;
Imagination has its master hour,
And pity its foil, and mother-love its power
Mightier than blood-lust and more obdurate.

My Country! poised in forward visioning,
With pity, love and reason let us pray
Our lives shall serve to cleanse this August day!—
The summer wanes: the ploughman comes with spring.

DR HENRY M LEIPZIGER BUILDER OF A PEOPLE'S UNIVERSITY

THE APOSTLE OF THE OPEN SCHOOLHOUSE

DR. HENRY M. LEIPZIGER, THE PIONEER OF ADULT EDUCATION IN NEW YORK

BY G. W. HARRIS

A QUARTER of a century ago one man in New York City had a splendid vision of the possibilities of a university for the people. And he did more than dream about it. His vision would not let him rest. Fortunately for New York he possesst in rare degree executive ability—a genius for administration—as well as creative imagination. He saw not only the vital need of adult education, but also that the schoolhouses, hitherto used only for teaching children and used only six hours a day, could be utilized in providing it. He became the apostle of the open schoolhouse.

By following his dream with unflinching zeal and ceaseless labor, in the face of great and recurrent obstacles, he has built up in the last quarter of a century (and is still building) an institute for adult education, which in reality is a great university of a new kind.

This man is Dr. Henry Marcus Leipziger, officially known as the Supervisor of Lectures of the Department of Education of the City of New York. He was born in Manchester, England, in December, 1854. He came to New York in 1865 and received his schooling here, being graduated from the City College in 1873 and from the Law School of Columbia University in 1875. While in college and university he supported himself by work in a public library and by teaching night school, and these activities led ultimately to the development of the chief purpose of his life. For eight years he was an instructor in the public schools of the city and that experience imbued him with an intense love for democratic education. He decided not to follow the career at the bar for which he had been trained, but to devote himself to educational work and particularly the broadening of the concept of education.

His experience showed him also the one-sidedness of the educational curriculum then followed, and after his resignation from the school system because of broken health, he found opportunity to study and reflect for a space on the problems of educating the people in a great city like New York. He became a pioneer in the cause of industrial education, advocating the training of hand and eye as an essential part of the school curriculum. He was the leading spirit in the development of several free libraries which now form a part of the New York Public Library. Dr. Leipziger started the first manual training school of a public nature in New York City, directing it from 1884 to 1891.

In 1889, following the suggestion of the New York *World* that lectures on historic and scientific subjects would be of great value to a large class of residents of the city, and having secured the necessary legislative sanction, the Board of Education started in a tentative way a system of free lectures "for the benefit of workingmen and workingwomen." These lectures were given on two evenings a week, from January to April, in six schoolhouses situated in those parts of the city where the population was thickest. Dr. Leipziger (he received a doctorate in philosophy from Columbia in 1888) at once joined the staff of lecturers and threw himself into this new work with such ardor and energy that at the end of the second season he was appointed Supervisor of Lectures, which high and responsible office he has held ever since.

This public lecture system is not a series of miscellaneous lectures. It is systematically organized. Hundreds of courses are given and several centers have been devoted for years to lectures on specific subjects. Nothing is done by chance. Every detail is worked out as a coherent part of a great and complex plan. Dr. Leipziger's constant aim is to make the courses of studies sequential. Use is made of the syllabus and the quiz. The question-period at the end of the lecture is encouraged and has developed to a surprizing extent. Examinations are held and certificates are awarded which are highly prized by their winners.

Courses are provided in general and applied science, including particularly the great industries carried on in New York; courses in descriptive geography; courses in history and biography, ancient and modern, American and foreign; courses in social subjects, including government, federal and municipal, economics, education, sociology, public questions, vocational opportunities and home economics; and courses in literature and the fine arts, for Dr. Leipziger says:

> Valuable as civic education is, and desirable as is efficiency, still the joy of life must also be increased thru acquaintance with the treasures of music, literature and art. Under the stimulus of the lectures people go to the museums of art and science who never went before, and people who went before look at their treasures with keener intelligence.

The purpose of the whole plan and scheme of the lectures is not to amuse and entertain, but to instruct and uplift, and the content has gradually but steadily increased in seriousness and educational value and in breadth of appeal. In the course of the season from October 3 to May 1, lectures are given in 175 lecture centers (mostly schoolhouses, tho a few of the "centers" are public halls and two or three are churches). These lectures are given by about 700 lecturers, speaking on some 1700 different topics, before 6400 audiences. And these audiences comprise a total attendance of more than 1,200,000. Is not that a great university, indeed?

The lectures are attended by people of every class and station in life. Most of the lectures are in English, of course, and are given by specialists in the subjects on which they speak. But certain courses, particularly in subjects helpful toward fitting them for American citizenship, are given in Italian, in German, and in Yiddish.

Would this marvelous development indicate that this great dreamer had realized his vision completely? By no means. Only its initial stages have been realized. His University for the People does not confer degrees. But Dr. Leipziger hopes to make it possible to secure a degree from a university thru the medium of the free lectures. He has no idea of inventing a short-cut to knowledge, but a possible future development of the reading in connection with the lecture courses into a correspondence school, and he does not regard it as at all utopian to arrange courses of study graded to the various capacities of the student auditors. He says:

> This city contains a number of institutions of higher learning. A federation of our colleges and universities could be made possible, and by coöperation with the public lecture system a correspondence school under the ægis of this great union could be established. This would greatly increase the influence of these great institutions of learning, and thru the public lecture system bring them more closely in touch with the people!

This dreamer, who marshals and directs his great body of educators with the skill and regimen of a commanding general, is a man of quiet and retiring modesty, a nature of innate and ever-present kindliness. He does not seek advertisement or personal exploitation. His work has worn him and impaired his health. But he has given his strength gladly.

New York City

UPBUILDING AMERICAN EDUCATION

THE NATIONAL WORK OF THE GENERAL EDUCATION BOARD

BY ABRAHAM FLEXNER

THE General Education Board is one of many privately established and managed funds devoted to educational improvement. It belongs in the same category as the Peabody, Slater, Jeanes and Carnegie endowments, differing from these only in the extent of its resources and the breadth of its purposes. First and last, Mr. John D. Rockefeller, its founder, has contributed to American education thru the General Education Board a little less than $75,000,000; of this sum $41,000,000 have gone mainly to strengthen the resources of higher institutions of learning and to develop public education in the southern states; the Board retains a productive fund valued at $34,000,000 and yielding an annual income somewhat in excess of $2,000,000.

The charter of the General Education Board is drawn in general terms, so that it is free, within the limits of the United States, to undertake any kind of educational endeavor whatever. Obviously, however, the Board could hope to be effective only by concentrating its efforts on carefully chosen strategic lines, in coöperation with other agencies. It could not alone undertake to create or to maintain educational systems. Its resources were not adequate and the undertaking would, in any event, have been in the highest degree unwise. Coöperation became, therefore, the keynote to its policy. Thus, having decided to promote training in agriculture, the Board arranged to coöperate with the United States Department of Agriculture; having decided to interest itself in secondary, rural and Negro education in the southern states, the Board established effective relations with state universities and state departments of education; having decided to assist in the development of promising colleges and universities on private foundations the Board has coöperated with religious denominations, alumni and boards of trustees.

A word as to why these several lines of activity were selected. In the decades immediately succeeding the war, the need of adequate state educational systems was acutely felt thruout the southern states. For the South was undergoing a social and industrial reconstruction, the thoroness and the success of which, it was seen, would depend largely on the education of the masses of the southern people. Meanwhile, the economic situation was in a high degree unfavorable to educational progress

The General Education Board has at its direction an annual income of about two and a half million dollars, to be used for "the promotion of education within the United States of America, without distinction of race, sex, or creed." Frederick T. Gates is its chairman, Wallace Buttrick its secretary, and Dr. Flexner one of its assistant secretaries. Dr. Flexner served as an expert with the Carnegie Foundation for the Advancement of Teaching from 1908 to 1912, during which time his work and his educational views came prominently into public attention thru the publication of his books, 'The American College," "Medical Education in the United States and Canada," and "Medical Education in Europe." Since 1912 he has been serving the General Education Board. On August 6, 1908, The Independent published an article on the work of the Board, by Dr. Wallace Buttrick, its secretary, and these two authoritative studies of this influential educational agency are, we believe, the only articles by members of the Board that have been published. An account of the work of the General Education Board with illustrations has recently been published and will be sent gratis on application to the Board. 61 Broadway, New York.—THE EDITOR.

The South must derive its wealth, in the first place, from agriculture; yet despite highly favorable conditions in respect to soil and climate, one crop was disproportionately emphasized, and even this was wastefully and inefficiently produced. School systems could not be presented to the southern people as gifts; the southern people could not themselves afford to support them. The South must have something more to tax before it could have proper school systems; and this "something" must come from the soil. The Board, therefore, undertook to assist in educating the adult southern farmer as the shortest cut to that increased wealth, which had to be procured if schools were ever to be successfully supported by taxation.

AGRICULTURAL EDUCATION

After diligent search and inquiry for a method of doing this, the Board at length found in the "demonstration method" of Dr. Seaman A. Knapp precisely the instrument it required. Thru Dr. Knapp, and in coöperation with the Federal Department of Agriculture, annually increasing numbers of southern farmers have been "taught by doing." Dr. Knapp was engaged in showing how the boll weevil could be circumvented by intelligent and efficient agricultural methods. The United States Government supplied the money necessary to this demonstration instruction in states afflicted with the boll weevil. It was clear, however, that the method was equally important to states not thus afflicted; and the appropriations of the General Education Board enabled Dr. Knapp and the United States Department of Agriculture to extend the work. In the course of a few years, it was so organized that eleven southern states became practical schools in improved agricultural processes. In 1906, 545 farmers were receiving instruction in Dr. Knapp's methods; in 1912, over 106,000. As the work has proved its value, the sections profiting by it have shown eagerness to contribute to its support. In the year 1913-14 Congress appropriated $375,000; the General Education Board $252,000; the southern people $490,000. Improved cotton raising was the first of Dr. Knapp's objects. But crop rotation was soon emphasized, and the same principles were thereupon employed in dealing with corn, tobacco, hay, stock raising, dairying, gardening and poultry raising. Toward the close of his life Dr. Knapp induced the General Education Board to support a similar line of work for boys and girls: corn clubs were accordingly founded for the former, poultry and canning clubs for the latter. The improved southern agricultural outlook, and the agitation in favor of higher standards in domestic activities are thus to no small extent the direct result of the deliberate decision of the General Education Board to aid in developing southern agricultural resources in order that schools should follow as the sequence of greater earning capacity.

This plan and forecast proved entirely sound. Taxation for education followed hard upon increasing prosperity. But trained leadership was lacking. The southern people were willing and anxious to establish public schools—high schools as well as elementary schools. Despite the aid of the Peabody Fund and the Southern Education Board, the state departments of education were operating with very insufficient personnel. At the request of one state after another, accordingly, the General Education Board provided salaries and

JOHN D. ROCKEFELLER, FOUNDER OF THE GENERAL EDUCATION BOARD

traveling expenses for a group of educational agents whose object it was in each state to encourage and guide the development of high schools, rural schools for whites, and rural schools for Negroes, respectively. An organized group was thus formed in each state; and the different states were quick to get into close and effective coöperation with one another. Under this stimulus the state appropriations for public elementary and high schools in North Carolina, for example, increased from $1,091,226 in 1901 to $4,300,000 in 1913; and in Alabama from $1,369,809 in 1900, to $4,279,478 in 1913. Other states have done equally well. It is no exaggeration to say that at this moment the South leads the country in educational striving. Its resources are, of course, still relatively meager. A photographic description would therefore show very unsatisfactory conditions in many respects. But a situation of this kind cannot be fairly represented except in a moving picture, showing the direction and the rate of progress. Southern educators are pushing the educational campaign in every direction in which there is the least prospect of scoring an advance. They are fighting illiteracy; warring upon truancy; endeavoring to improve school buildings and school sanitation; consolidating rural schools; multiplying and improving high schools; and experimenting in a variety of ways to make the school a community center, competing as such with the church and the courthouse. There is a long way still to go, but the march is in full swing.

THE COLLEGE SITUATION

The Board's largest and most important activity during its first decade has, however, lain in the field of higher education. Unlike—and very fortunately unlike—the nations of continental Europe, we have developed in the United States two types of college and university—one state-supported and managed; the other privately supported and managed. The General Education Board has assisted in the development of the latter. It was believed that, in a democracy, privately conducted institutions of learning possessed great advantages which it was important to foster. They are more readily kept free from political influences; they occupy a position of greater strength and independence. On the other hand, the state universities have the financial strength that comes of close association with the taxing power. The loyalty of alumni, friends and beneficiaries must stand the privately supported institution in place of the state purse. The General Education Board has helped substantially to strengthen the financial resources of the private institutions. Thru gifts aggregating almost $12,000,000 it has participated in a movement that has in ten years added to the funds of a hundred colleges and universities over $40,000,000. The institutions aided have been chosen on the basis of their location, their present strength and their prospects of support from other sources. Some are denominational; some non-denominational. Some are for men only; some for women only; some are coeducational. The Board holds no views as to what and how they should teach. It has absolutely and consistently refrained from any interference in internal affairs. It has believed that faculty and trustees are best capable of dealing with whatever problems arise; that in the long run freedom will develop the variety of viewpoint and policy required for sound national development; that meanwhile the proper function of an organization like the Board would be found in helping to provide funds that will insure greater usefulness in whatever ways the institution itself deems best.

THE GENERAL EDUCATION BOARD

In the back row, reading from the left, George E. Vincent, president of the University of Minnesota; Anson Phelps Stokes, secretary of Yale University; in the second row, Wickliffe Rose, director-general of the International Health Commission; Dr. Harry B. Frissell, principal of Hampton Institute; John D. Rockefeller, Jr.; Edwin C. Sage, assistant secretary of the Board; Starr J. Murphy; Albert L. Page, editor of the *American Review of Reviews*; Jerome D. Greene, secretary of the Rockefeller Foundation; in the front row, Edwin A. Alderman, president of the University of Virginia; Frederick L. Gates, chairman of the Board; Charles W. Eliot, president emeritus of Harvard University; Harry Pratt Judson, president of the University of Chicago; Wallace Buttrick, secretary of the Board, and Abraham Flexner, assistant secretary. Ambassador Walter H. Page, Edgar L. Marston and Andrew Carnegie are also members

I said a moment ago that our position in respect to higher education is fortunately unlike that of European governments. The present war has proved that governmentally conducted universities can be made an effective instrument in carrying out a particular governmental policy. When, therefore, policy is illiberal or unenlightened, higher education, which ought to be the stronghold of free and searching criticism, becomes an adjunct to bureaucracy. It may be highly improbable that our state universities will ever become so intimate a part of a state political machine; but assuredly, the danger, whatever it is, is reduced by the existence of strong and numerous colleges and universities in a position to deal independently with all questions that arise. Indeed, the state university itself is safeguarded by the private institution: it has been well said that, if half the universities of Germany had been privately supported and managed, German learning and German science would never have become the pliant tool of German militarism.

MEDICAL EDUCATION

An organization like the General Education Board need not, however, confine itself merely to current activities; it can afford to support promising educational experiments, for which it is usually difficult to procure financial backing. Perhaps the most important experiment that has been thus assisted lies in the field of medical education. It is well known that medicine and surgery have been hitherto taught by men engaged in medical and surgical practise, with the result that both teaching and research have suffered from lack of time and thought. It could not be otherwise: medical practise is a distracting and absorbing pursuit; medical research, difficult and complicated; meanwhile teaching makes heavy demands on time and strength. It is impossible that any individual should do justice to all three.

Having been brought to realize the need of radical measures, the faculty of the Johns Hopkins Medical School sought the aid of the General Education Board in order to reorganize clinical teaching on the "full-time" or university basis. On this basis the hospital and teaching staff in each of the important clinical branches devote their entire time to teaching and research, withdrawing altogether from paid private practise. For the purpose of effecting this reorganization in the departments of medicine, surgery and pediatrics, the General Education Board voted the sum of $1,500,000 to the Johns Hopkins Medical School; subsequently, $750,000 was voted to Washington University and $300,000 to Yale for the same object. The scheme has been in operation at Baltimore during the past year, and its first results have fully justified the sanguine expectations of those who proposed it.

For some years to come the General Education Board may be expected to develop still further the various activities above mentioned. But it will also, from time to time, take up fresh problems in the endeavor to respond to public and professional opinion. Latterly, much thought has been given to the question of creating and distributing a larger body of educational literature of scientific quality. The existing situation in this respect is highly unsatisfactory. Education is a field in which those engaged are, as a rule, altogether absorbed in practical routine. In consequence, experience remains largely the affair of the individual; it is, as a rule, not adequately studied or recorded, is rarely exposed to really scientific criticism, fails to profit from the stimulus of other minds occupied with similar problems and, even if valuable, obtains no authoritative or thoro publicity.

As a matter of fact, education is, like government, a social science in which there is something to be found out; there is room for experiment and readjustment; there is abundant opportunity for profiting both by successes and mistakes. The funds available are, however, for the most part not adequate even to the demands of routine work. In consequence, persons who might do original or critical work are utilized for routine purposes and the literature of education is largely of inferior quality.

EDUCATIONAL RESEARCH

Two or three agencies—notably the Sage and the Carnegie Foundations—are now doing important work in the field of educational research. Recently the General Education Board decided to participate in this effort. It proposes, by means of grants, to aid promising workers in the investigation of problems in educational theory and practise; from time to time it will undertake to make possible the preparation of scientific monographs dealing with large questions of educational policy and experience. Without promulgating or making itself responsible for any particular doctrine, the Board hopes to assist in ascertaining facts in order that practise may be in a position to utilize experience. Education will thus tend to develop like medicine, in which gradually a large body of scientific material has been accumulated and is being more and more made the basis of practise.

The increasing prominence of experiment and research indicates an important change in the educational standpoint. Educational authorities once possessed philosophies of education, usually associated with some particular brand of metaphysics and having little or no bearing on practical educational procedure. These philosophies were subject to change of style; but change tho they might, practise went on very much as before. The modern educator has done with the mere philosophers of education. He is interested in the natural world and the social order, and in the how, why and wherefore of specific educational processes contrived for the purpose of dealing with these two objects. He is undertaking, therefore, in the first instance, not to urge a program, but to find out what has been happening. Traditional procedure will, in this way, be subjected to rigorous cross-examination. It will have to prove its value or be forfeited. Meanwhile, the same critical attitude will be adopted in reference to suggested improvements. Education ought to be more effective, more economical, more intelligent, more liberal as this point of view comes to prevail. The General Education Board hopes to contribute directly to the progress of this wholesome movement.

Organizations like the Sage and Carnegie Foundations and the General Education Board are indigenous to the United States. Nothing like them is to be found in Europe, where, however, they are sincerely wished for by those who desire to see other than bureaucratic forces, other than official standpoints adequately represented in education. On the other hand, in the United States, these organizations do not in spirit, management and object differ from the privately supported and controlled institutions of learning that I have already mentioned. Of these institutions some have been established by single individuals, others have been created by religious denominations. So, of the privately conducted educational boards, some have been established by individuals, some by religious, others by philanthropic, societies. All alike, however, manage their own affairs. Responsible to public and to professional opinion, private initiative in higher education has thus operated to the general advantage—so much so that it may be fairly said to have been the leading factor in our educational progress.

New York City

HELPLESS POLAND

BY IGNACE JAN PADEREWSKI

The great pianist is lecturing in America in aid of the war victims of his native country. There are three relief committees at work; Russian, German and Austrian, each covering the territory held by its own nation. American contributions, which should be in cash, not supplies, are received at 33 West 42d street, New York, where the National American Committee has offices. Checks should be made to "National City Bank, for Polish Victims' Fund."—THE EDITOR.

AFTER ten months of carnage, conditions in Poland are indescribable. Three times armies have swept her territories with fire and shell, leaving their paths marked by ruin and desolation, homes burned over the heads of helpless people, whole villages wiped out, and crops laid waste before they were ripe.

Poland's geographical position makes her particularly alone in her misery. Unlike Belgium, she cannot ask succor of her neighbors. Holland and England are almost as inaccessible to Polish refugees as America. Not fronting on the sea, Poland is shut off from the aid, and in a measure, from the sympathy of the world. Her privations have been hidden behind the veil of censorship. It is only occasionally that a hint of her sufferings reaches the world.

Imagine a population of 21,000,000, more than three times that of the city of New York, without food or shelter, forced to spend the winter like beasts in the fields. Imagine children, thru exposure and want of nourishment, dying like flies, and a land from which the stench of the unburied dead continually rises. These are but the barest outlines of the sufferings of Poland today. Such wo as this the world has rarely known even in its darkest history.

Add to these horrors a new calamity! With the spring came a fresh enemy. Instead of bringing back life and balm for the sick and wounded, it brought famine, typhus and cholera. Those actually engaged in battle met a more merciful fate than the innocent non-combatants; bullets spare some, strike more quickly, and leave fewer dregs.

To combat all this, is it too much to ask aid of the nation that has responded so nobly to the appeal of others? Poland did nothing to bring on this war. She had neither neutrality nor national power to provoke the jealousy of her neighbors. Her crime was simply that she lay between the territory of the belligerents who sought one another's throats. Even her own sons were forced to turn the sword of brother against brother, and thus share in her desecration while paying for the sins of Europe.

America's heart has gone out to brave Belgium and its people. Her sympathy and aid have been extended no less to heroic Serbia in her fight against the double odds of disease and war. Will it be any the less responsive to stricken Poland, the greatest sufferer in the present war?

The plight of Belgium is happy compared to Poland. She had to suffer the invasion of one foe, only. Her lands, with the exception of Flanders and near the Meuse, have not served as battle grounds. Thanks to the great work of the Belgian Relief Committee in England and America, there has been little of starvation, of actual want or disease. The response to Belgium's cry came in a measure because Americans were familiar with the country. There was a real, personal interest in her people, her churches, her treasures. With Poland it is different. Until her present tragedy she was an abstraction, a place no longer represented on the political map. One could not go to Kalisch or Cracow on a day's excursion from Paris. Poland's great historic treasures and monuments are little known compared with those of Louvain, Bruges, or other Flemish towns.

I have spoken to many Americans who to my own knowledge are leaders in the support of great philanthropies, and the facts presented have come as a revelation to them. We meet with the most generous and enthusiastic response as soon as the frightful conditions are realized by those able to help. The one element that is essential to the success of our work is promptness. The needs are so pressing that today's contribution, even the smaller than what might be given tomorrow, will be more effectual in saving human life and postponing to the morrow of the helpless women and children.

PADEREWSKI AT HIS HOME IN MORGES, SWITZERLAND
He is conferring with Mr. Ashmead-Bartlett and Mr. Marsh, husband of Miss Goodrich, about the relief of Poland

THE NEW TEXT-BOOKS

A DESCRIPTIVE LIST FOR TEACHERS AND SUPERINTENDENTS

ENGLISH

New Practice Book in English Composition, by Alfred M. Hitchcock. Henry Holt & Co., $1.10.

Exercises in grammar, sentence structure, diction, words and various forms of composition. Special attention is given to argumentation and letter writing. There is material enough for two years of work.

Written English, by E. C. Woolley. D. C. Heath & Co., $1.

A simple but thorough text for high schools with many lucid exercises preliminary to theme work. The extracts for dictation and the chapters on punctuation are especially good. It attacks practically the weak points in written English.

The New Barnes Spelling Books, I, by Edward Mandel. The A. S. Barnes Co., 28 cents.

In this attractive speller, that it would seem might be used better as the third, fourth and fifth years, the words are grouped by subject with good phonic work and practice in abbreviations and capitals and excellent illustrations.

The Natural Method Readers, Primer, First and Second Readers and Teacher's Manual, by H. T. McManus and J. H. Haaren. Chas. Scribner's Sons, 32 to 44 cents.

The primer uses the Mother Goose jingles, repeating and combining them in prose for practice. The first reader takes the simpler fairy tales; the second a wide range of folk tales. The teacher's manual devotes large space to phonics.

New Sloan Readers, by Katherine E. Sloan. Primer, First and Second Readers. The Macmillan Co., 25 and 30 cents.

This series teaches beginners reading thru the word whole method, and then lays the chief emphasis on phonetics. Utilizes the familiar Mother Goose and other rimes, and aims later to develop appreciative and expressive reading.

The Progressive Road to Reading, five books, by Georgine Burchill, William L. Ettinger and Edgar Dubs Shimer. Silver, Burdett & Co., 32 to 55 cents.

Develops reading ability from the first by using the sentence as the unit. Imaginative and heroic tales, many from classic sources, give character to the series, "without obtrusive prescribment of morals." Has pronouncing vocabularies for foreign names.

Outlines of Composition and Rhetoric, by J. F. Genung and C. L. Hanson. Boston, Ginn & Co., $1.

In this book on English prepared for the last half of the high school course the chapters on narrative and description, the topics for oral and written work and the final chapters on argument and debates will be found especially suggestive.

The Study and Practice of Writing English, by G. R. Lomer and Margaret Ashmun. Houghton, Mifflin Co., $1.10.

This textbook for high schools and colleges devotes much attention to the development of vocabulary, and is especially suggestive in its treatment of the short story and the drama.

Practice Work in English, by Marietta Knight. Longmans, Green & Co. 60 cents.

The result of much experience in the teaching of high-school English adds to the value of this complete, tho simple practise book for writing. The examples are wisely chosen from the actual work of pupils.

Essentials of English, I., II., by Henry Carr Pearson and Mary Frederika Kirchwey. American Book Co., 40 to 64 cents.

First Book, fourth to sixth grades, analyzes reading selections for construction, grammar and

Illustrated Lessons in Composition and Rhetoric, by Lyte L. Clippinger. Silver, Burdett & Co., $1.

The Literary Readers, V., by Ella Flagg Young and W. T. Field. Boston, Ginn & Co., 60 cents.

The Teaching of English, by Paul Klapper, Assistant Professor of Education, College of the City of New York. Appleton, $1.25

Teaching to Read, by N. E. Turner. American Book Co., $1.

Readings from Literature, by R. P. Halleck and E. G. Barbour. American Book Co., 85 cents.

The Blue-Bird for Children, by Georgette Leblanc (Madame Maurice Maeterlinck). Silver, Burdett & Co., 50 cents.

An adaptation of the play in story form, for the use of school children, with charming pictures in keeping with the spirit of the original. Suitable for children in the third to sixth grades.

HISTORY

Readings in Current Economic Problems, by Walton Hale Hamilton. University of Chicago Press, $2.75

Exercise Book in Economic History of the United States, by Bogart and Thompson. Longmans, Green, 50 cents.

The Modern World, by W. M. West. Boston, Allyn & Bacon. $1.50.

The Riverside History of the United States, 4 vols. Houghton, Mifflin Co., $1.75 each.

Teaching of History in Elementary and Secondary Schools, by Henry Johnson. The Macmillan Co., $1.60

Elements of Government, by A. M. Pinkley. American Book Co., $1.

History of the United States, by M. F. Andrews. J. B. Lippincott Co., $1.

HYGIENE

The Practical Conduct of Play, by Henry S. Curtis. The Macmillan Co., $1.25.

The Health Series on Physiology and Hygiene, 4 vols. by M. V. O'Shea and J. H. Kellogg. Health Habits; Health and Cleanliness; The Body in Health; Making the Most of Life. The Macmillan Co., 45 to 65 cents.

School Hygiene, by Leo Burgerstein (Vienna). F. A. Stokes Co., $1.

Rational Athletics for Boys, by F. J. Reilly. D. C. Heath & Co., 90 cents.

LITERATURE

Chief Contemporary Dramatists, by T. H. Dickinson. Houghton, Mifflin Co., $2.75.

Introduction to English Medieval Literature, by Charles S. Baldwin. Longmans, Green & Co., $1.25.

Readings from American Literature, by M. E. Calhoun and E. L. Macalarney. Boston, Ginn & Co., $1.45.

New and Forthcoming Educational Books

Bagley: School Discipline
By William Chandler Bagley

Every teacher ought to be interested in this book. It is a treatment of school discipline based on sound psychology and sociology. It solves the problem of school discipline—the most difficult and discouraging problem that the young teacher has to solve.

Cloth, 12mo, xiv+259 pp., $1.25

Curtis: Education Through Play
By Henry S. Curtis

The book aims specifically to deal with the problem as seen by the school board, the superintendent, and the individual teacher. To this end it seeks to show the best methods of laying out and equipping school grounds, gives rules for the games best suited to school yards, and offers a plan for the adequate organization of play, both during the summer time and the school year.

Cloth, 12mo, xix+359 pp. Regular edition, $1.50; Educational edition, $1.25

Curtis: Practical Conduct of Play
By Henry S. Curtis

It is hoped that this book may serve as a helpful guide for those who are preparing themselves for playground positions, and as a practical manual for workers on the playgrounds. To this end the aim has been everywhere to give definite and detailed information and suggestions such as can be easily followed and will be helpful in the study and work of the director.

Cloth, 12mo, xi+330 pp. Regular edition, $2.00; Educational edition, $1.50

Farrington: Commercial Education in Germany
By Frederic E. Farrington

This book is a study of industrial and commercial training in the German schools. The author makes clear the German scheme of education in general and follows out the working of the system in its actual results.

Cloth, 12mo, ix+258 pp., $1.10

Foght: Rural Denmark
By H. W. Foght

The remarkable progress that Denmark has made in the face of natural disadvantages is in itself a subject that will hold interest. Danish methods as applied to American Agricultural needs are assistance of practical value to the American. *In preparation*

Johnson: The Teaching of History
By Henry Johnson
Edited by Nicholas Murray Butler

The distinguishing features of this book are: Sketches of history teaching from the seventeenth century to the present; a general description and appraisal of present theory and practice in the principal countries of Europe and in the United States; a full discussion of the problem of grading history, with specific suggestions for a solution of the problem; a new approach to the question of aims and values; a specific treatment of topics usually disposed of in a few generalities; and the application of principles.

Cloth, 12mo, xxix+497 pp., $1.40

Kennedy: Fundamentals in Methods
By Joseph Kennedy

This volume discusses many of the chief points of procedure and of methods in the large and points out fields and directions to be sought and followed or to be shunned and avoided. Its aim is to arouse and awaken teachers from a kind of habitual lethargy and to cause them to make a professional self examination and to set up for themselves standards of teaching and a true prospective of values.

xxiv+326 pp., $1.25

Lee: Play in Education
By Joseph Lee

"Joseph Lee's 'Play in Education' is the most significant book of the century on this subject treated by it. The work is in fact, a delightful treatise on the psychology of child development with play in the midst of things where it belongs."—William A. McGeer.

Cloth, 8mo, xxiii+500 pp., $1.40

Graves: Student's History of Education
By Frank Pierrepont Graves

Professor Graves emphasizes educational institutions and practices, rather than theories that did not find embodiment in the times. More than one-half of the material is connected with the last two centuries. In the account of each educational movement the author traces its influence upon education in the United States, and three chapters were devoted exclusively to the rise of educational systems in this country. This volume is not a condensation of the author's three-volume History, but an entirely new work, written with the view that whenever historical records do not desist in an analysis and synthesis of present day problems they may be frankly dismissed from discussion.

Cloth, 12mo, xxi+453 pp., $1.25

Cubberley and Elliott: State and County School Administration—Sources
By Ellwood P. Cubberley and Edward C. Elliott

A comprehensive source book, containing carefully selected readings, laws, decisions and other material intended to furnish an adequate basis for courses of instruction on the problems connected with the administration of county and state educational systems. It may be used advantageously in conjunction with Professor Cubberley's *State and County Education.* *Educational Reorganization. To be published shortly*

Keller: Societal Evolution—A Study of the Evolutionary Basis of the Science of Society
By Albert Galloway Keller

"Every student of sociology will welcome it, and it is sure to hold an important place for a good while to come," writes Professor Franklin H. Giddings, of Columbia University. The definite conception of societal evolution which the author gives the reader is essential for background to the study of human society, and is, therefore, of interest and value not only to sociologists, but to teachers, social reformers and intelligent general readers.

Cloth, 12mo, xi+338 pp., $1.50

Blackmar and Gillin: Outlines of Sociology
By Frank W. Blackmar and John Lewis Gillin

The entire field of sociology, both theoretical and applied, is covered in this comprehensive volume, as indicated by the subjects of the seven parts. I. The Nature and Import of Sociology; II. Social Evolution; III. Socialization and Social Control; IV. Social Ideals and Social Control; V. Social Pathology; VI. Methods of Social Investigation; VII. The History of Sociology. The book is intended for use as a text in college courses or for the numerous clubs interested in the study of social questions and also for the general reader.

Cloth, 12mo, viii+580 pp., $2.00

Young: The New American Government and Its Work
By James T. Young

The *work* of the government is given fully as much space as its *form* or structure. Especial attention is devoted to Government Regulation of Business. Certain phases of Social Legislation have been brought out in order to give a clearer statement of the government's work. Judicial decisions unfolding and interpreting the vital and essential public powers have been assigned an unusually prominent place. In describing the structural side of our system a stronger emphasis has been placed upon the Executive. Our government is here presented as a means of service.

Cloth, 12mo, xv+593 pp., $2.25

Munro: Principles and Methods of Municipal Administration
By William Bennett Munro

In this volume [illegible] *The Government of European Cities* and *The Government of American Cities* presents a sound and interesting discussion of municipal administration. Chapters are devoted to the quest for efficiency and city planning and to each of the important departments of municipal administration. The book is invaluable to students, city officials and citizens. *To be published soon*

THE MACMILLAN COMPANY
BOSTON NEW YORK DALLAS CHICAGO SAN FRANCISCO ATLANTA

period and pays more attention than is common to orations that are so important but usually overlooked as a part of the literary achievement of the first half of the nineteenth century.

Specimen Letters, edited by A. S. Cook. Boston, Ginn & Co., 35 cents.
Selected Letters, by S. S. Center. Charles E. Merrill Co., 40 cents.

Letters seem very gentle, reflective diet for the active high school youth, but these two small books contain delightful specimens from our most charming letter writers in English with some few translations from the French.

American Literature through Illustrative Readings, by S. E. Simons. Charles Scribner's Sons, $1.12.

This is a handbook for high school students containing short extracts from American writers, from the less accessible of the Colonial and Revolutionary periods to those of the present time, who have by far the greater space.

MATHEMATICS

Everyday Arithmetic. I. II. III., by F. S. Hoyt and H. E. Peet. Houghton, Mifflin Co., 40 and 45 cents.

In this series the work is correlated closely and cleverly with daily life and with other studies, the problems dealing, for instance, with food values, agriculture, and with questions in geography and history. There is practice in scale measuring, graph work and excellent game drills.

School Algebra, by H. L. Rietz, A. R. Crathorne and E. H. Taylor. Henry Holt & Co.

Develops one principle at a time inductively from arithmetical rules, and draws illustrations from the pupil's experience, so far as possible. Correlates with physics, physiography and other subjects through applications.

Robbins' New Plane Geometry, by E. R. Robbins. American Book Co., 80 cents.

An interesting feature of this geometry is the notes giving the history of famous theorems and noted geometricians. The exercizes are original and also practical and awaken the student's interest.

First-Year Mathematics for Secondary Schools, by Ernst R. Breslich. University of Chicago Press, $1.

A volume of the new series of correlated mathematics, in which the principles of teaching algebra and geometry in relation to each other in the first year of the high school are effectively illustrated.

Examples in Algebra, by Albert H. Wheeler. Little, Brown & Co., 90 cents.

A well-arranged textbook for the teaching of algebra. Each point is amply illustrated and impressed upon the pupil by a wide and carefully chosen set of examples.

SCIENCE

A First Year Course in General Science, by C. A. Pease. Charles E. Merrill Co., $1.20.

Although announced for first year high school work this little book could probably be used in the last years of the grammar grades. To the many who go no further it would give an understanding of the laws governing the universe and entering into everyday processes.

Methods in Plant Histology, by Charles J. Chamberlain. University of Chicago Press, $2.25.

A book which deals fully with methods of study of the structural tissues of plants and furnishes admirable suggestions for definite work on the subject.

First Textbook of Physics, by J. A. Culler. J. B. Lippincott Co., 60 cents.

This elementary introduction to physics for use in grammar schools proves to have the greatly different work in the last high school years complete and so much readily grasped and handy for ready use.

A Civic Biology, by G. W. Hunter. American Book Co., $1.25.

The [illegible] book for high schools

TEXTBOOKS

First-Year Mathematics for Secondary Schools $1.00
E. R. Breslich. Third edition to be published this month. A text based on correlation.

Silk 50¢
Lisle 25¢

George Frost Co. *Makers* BOSTON

A Practical Elementary Chemistry, by H. W. McFarland. Chas. Scribner's Sons, $1.25.

This useful book has for many years been successfully carrying out the theory of teaching elementary science by laboratory work with a textbook used simply for reference and consultation. The experiments consist of the ordinary processes which have to stand the test of years.

Elementary Textbook of Economic Zoology and Entomology, by Vernon L. Kellogg and Ronnie W. Doane. Henry Holt & Co., $1.50.

The first grasshopper looks and smells quite as interesting as the first love, a systematic survey of the whole animal kingdom being here planned to whet the appetite and satisfy it. A list of the book is given in outline.

First Course in Chemistry, by William McPherson and William E. Henderson. Boston, Ginn & Co., $1.25.

While emphasizing the practical applications of chemistry to agriculture, medicine and industry, the authors are careful to develop the scientific attitude. Much attention is given to the common carbon compounds. There is a separate manual.

MISCELLANEOUS

School Kitchen Text Book, by Mary J. Lincoln. Little, Brown & Co., 60 cents.

A practical guide for lessons in home-keeping, which makes cooking, the care of the kitchen, etc., seem work of importance and pleasure. Its information is authoritative.

Handbook of Elementary Sewing, by Etta P. Flagg. Little, Brown & Co., 50 cents.

A textbook in elementary sewing would once have seemed absurd. Now, since its value is recognized this book offers much important information, well arranged for both teacher and pupil.

Railroad Accounting, by William E. Hooper. Appleton & Co., $2.

A subject of increasing importance, which is treated in a comprehensive and interesting way so as to give much information without monotony.

Best Private Schools, by Porter E. Sargent. Boston, $2.

This directory of [illegible] secondary schools, summer camps, etc., giving carefully weighed and candid criticisms and descriptions of each must prove of great use to parents and teachers. It is intended to be an annual publication.

Instruction in the Use of Books and Libraries, by L. E. Fay and A. T. Eaton. Boston Book Co., $2.25.

Here is a book planned to aid the teacher in aiding the pupils, hence much space is given to children's books. But the chapters on the use of reference books and card catalogues are what every librarian would like to hand to every new reader.

What the Mother of a Deaf Child Ought to Know, by John Dutton Wright. F. A. Stokes Co., 75 cents.

Emphasizes importance of detecting deafness early, and of utilizing the first years for teaching the child to read facial expression and lip movements, instead of neglecting this until the child is the age for formal school instruction.

The Essentials of Agriculture, by Henry Jackson Waters. Boston, Ginn & Co., $1.25.

Presents in a form suitable for secondary schools the principles of botany, mechanics and chemistry that are directly applicable on a modern farm. Makes possible direct correlation between the school and the daily life of the pupil.

The Lesson in Appreciation, by F. H. Hayward. The Macmillan Co., 75 cents.

Can we be taught to see beauty? This affirmative answer outlines the fundamentals of this branch of pedagogy, laying its chief stress on the study of poetry, going on to music and to general principles.

The Teaching of Civics, by Mabel Hill. Houghton, Mifflin Co., 60 cents.

This is a handbook for teachers, giving topics,

[illegible] Part I, for grades 1 to 4, 25 cents. Part II, for grades 5 to 8, 20 cents.

Woodburn and Moran's Elementary American History and Government
An interesting book for Seventh and Eighth Grade pupils. Adopted in New York, Chicago, Boston, Washington, Detroit, Philadelphia. $1.00.

Horace Mann Readers
The success of the Horace Mann Method of teaching reading with all classes of children, both native and foreign born, is due in no small measure to the use of mind-stimulating, child-interesting Horace Mann Readers. In solving them their mind and consciousness is on meaning whenever it is to be learned. In this respect the Horace Mann Method possesses an unique advantage since it frees from mechanical and puerile form the drudgery of using mechanical repetitions.

bibliographies and suggestions for debates. It is practical, paying little attention to history or theory, but considering such matters as touch directly the life of the community.

Elementary French Grammar, by Everett Ward Olmsted. Henry Holt & Co.

Combines the direct with the grammatical method by introducing grammatical material as incidental to each exercise, and by concluding each lesson with a grammatical drill *in French.* Readings and themes deal largely with French life and literature.

Religious Education in the Family, by Henry F. Cope. University of Chicago Press, $1.25.

To help solve an ever-recurring problem, which has baffled many mothers, we have a guide to religious education in the family. It offers many valuable suggestions and much worth-while information.

Webster's Shorter School Dictionary. 60 cents. **Webster's Elementary School Dictionary.** 90 cents. American Book Co.

These handy desk dictionaries keep so much of the advantages of the unabridged as may be held in such small compass. The pronunciation symbols are repeated on each page, a great convenience, and the second book contains many of the useful appendices of the larger work.

The Junior Assembly Song Book, edited by F. R. Rix. A. S. Barnes Co., 38 cents.

A music book for elementary schools, this collection contains the national songs, many of the old Scotch and other ballads and folk songs, and a few hymns. The old airs are used, arranged for children's voices, and it is a good gleaning.

Complete Course in Isaac Pitman Phonography, by Abraham Rosenblum. Thomas Y. Crowell Co., $1.50.

Besides the foundation theory and elementary practice in shorthand, this volume contains letters and vocabularies used in various trades and kinds of business, and literary dictations such as cause the downfall of most beginners.

Practical Exercises in Geography, by William J. Sutherland and Chester M. Sanford. I, Our Own Country and Her Possessions; II, South America and Eurasia. Silver, Burdett & Co., 60 cents.

Pedagogically up-to-date manuals, thru which the pupils in the upper grades can be taught to study, to use reference books, to make records of their studies. Should make geography really significant.

Agriculture and Life, by A. D. Cromwell. J. B. Lippincott Co., $1.50.

A handbook of agriculture for teachers is no simple matter for the reason that agriculture is a science of many, varied and complex branches. This book contains much more than the average teacher would be wise in attempting to teach, but in it will be found helpful data as to fertility of soils, care of milk, uses of birds, etc.

PEBBLES

Germany is contending for the freedom of the seas. *I. F. J.* in New York *Tribune.*

But," said the young mosquito, "is not man much stronger than we?" "He is," replied the fond parent, "but we may rejoice to attack him on account of our superior mobility."—*Punch.*

Have you made up your mind what party you will vote with next election?" "No," replied Senator Sorghum. "In these days of political change a man must sit still and see what parties there are."—*Washington Star.*

Stranger, Sorghum owes me $ I handed him in your town today. I speak you for a dollar. You give it to the next time you meet down to square this."

Citizen (reluctantly)—Yes?

Stranger—Well, are you still sore?—*Judge.*

A certain Hibernian who is fond of quoting his boss when talking about matters of which he knows little, was overheard to say: "Me boss is a very animal on astronomy. He says the sun is the center of the solar system, and I'm inclined to agree with him."—*Boston Transcript.*

The New Books

DISCIPLINE AND THE SCHOOL

The most common cause of failure in the teachers' profession is the inability to maintain "discipline." Now many superintendents and administrators of schools content themselves with the declaration that "discipline is a matter of personality," and assume that personality is fixed by the Fates. More careful students have gathered a vast amount of material on the factors in discipline, with the result that this problem can now be treated in the normal or training schools on almost the same basis as that of scholarship, which every one admits may be acquired. Three books issued during the past school year devote themselves to this subject, and the authors approach it from entirely different points of view.

Superintendent Perry, in *Discipline as a School Problem*, analyzes the child and the internal factors that lead to those types of conduct that give the young teacher nightmare. The first part of his book is therefore taken up with a study of the psychology of conduct, in terms of intellect, feeling and will. The child's heritage or "instincts" as well as his family, race and social environment are considered; and great stress is laid upon the stages of the child's development. On the part of the teacher, Dr. Perry expects, apparently, very little more than an intellectual appreciation of the nature of the child and a knowledge of what to do to make him react as desired. Upon the principal he places the responsibility for organizing a routine that will reduce problems of discipline to a minimum; for keeping teachers up to their best effort; for coöperating with parents and with various civic agencies; and for diagnosing "cases" psychologically and physiologically. The point of view is almost entirely administrative.

In *The Discipline of the School*, Miss F. M. Morehouse approaches the problem from the point of view of methods or modes of school government. She analyzes five principal modes,—absolute authority, appeals to personal interest, control thru personal influence, "wholesome repletion," and appeal to social consciousness. She discusses the advantages and the dangers of each mode, and shows that this series corresponds roughly with the needs of the developing organism. Obedience must be absolute in the earliest stages for reasons that are well recognized, but this must give way gradually to the other modes of control. The "wholesome repletion" is more familiar to us as the doctrine of substitution, that is, you

NOTABLE TEXTBOOKS FOR HIGH SCHOOLS

Priest: Germany Since 1740

[illegible] from the accession of Frederick the Great to the outbreak of war in August, 1914. A concise, unbiased, illuminating survey valuable for supplementary use in courses in European history and especially timely just now.

[illegible] pages, with maps. $1.40

Long: American Literature

A companion volume to De Long's "English Literature" organized on the same plan and distinguished by the same aims. A textbook presenting the history of our literature in a vigorous and picturesque style that will arouse the interest of pupils in the literature itself.

[illegible] pages, fully illustrated, $1.12

Calhoun and MacAlarney: Readings from American Literature

In its selection and organization of material this volume is exactly adapted to use with Long's "American Literature". It is particularly rich in selections from the colonial period and will prove valuable in any course in American literature.

680 pages, $1.40

Muzzey: American History

A high-school history written from the point of view of the present generation. It is the first book of its kind to give adequate treatment to the period since the Civil War and the important governmental problems of the twentieth century.

672 pages, illustrated, $1.50

Muzzey: Readings in American History

A source-book, ready this fall, to accompany Muzzey's "American History". It contains a wealth of original material, giving, wherever the subject makes it advisable, several selections on a single topic. The volume will prove valuable for use with any textbook in American History.

Genung and Hanson: Outlines of Composition and Rhetoric

A new textbook for the last two years of high school. It gives [illegible] models illustrating the [illegible] power of the young writer of prose. Mr. Wm. Hanson's "Two Years' Course in English Composition", forms a course of study [illegible] the last years of high-school work.

[illegible] pages, $1.20

Hanson: Two Years' Course in English Composition

For the last two years of high school. It offers a larger number and variety of interesting exercises and subjects for composition than any other manual of its scope.

377 pages, [illegible]

McPherson and Henderson A First Course in Chemistry

A new textbook offering a brief course for beginning students. It emphasizes applications of chemistry to everyday life and is equally valuable whether the student intends to pursue the subject further or to drop it at the end of this course.

420 pages, illustrated, $1.24

Waters: Essentials of Agriculture

The first well organized and well balanced high-school textbook in Agriculture. The text makes definite application of the principles of agriculture to every important type of farming. The illustrations are a distinctive feature of this new textbook.

501 pages, illustrated, $1.25

Bergen and Caldwell: Introduction to Botany

A distinctly elementary treatment for half-year courses of those features of plant life of educational, aesthetic, and economic interest to all. It shows the interesting applications of botanical facts to plant breeding, agriculture, horticulture, forestry, sanitation, and the industries.

368 pages, illustrated, $1.12

TYPEWRITE THE NEW WAY

80 to 100 Words a Minute Guaranteed

Totally new system. Based on *Gymnastic* Finger Training! Brings amazing speed—perfect accuracy—EASY TO LEARN. Easy for anyone. First day shows results. Learn while working. **48-Page Book Free** illustrates and explains all. Cases of letters from hundreds with salaries *doubled* and *trebled*. A revelation as to *speed* and *accuracy* possible to typists. Postal will do, but write today—NOW.

TULLOSS SCHOOL OF TYPEWRITING, 3888 College Hill, Springfield, Ohio

A most remarkable book — one that should be in the hands of every ambitious man. It shows how a knowledge of law enables men to analyze correctly, direct and control—why law trained men are *picked* for business leaders. It shows how men unable to leave home or business can prepare for the bar examination through a Course in Law which includes the comprehensive features of the best resident law schools.

FOR THE FIRST TIME you can secure a thoroughly complete and satisfactory Law Course and Service—one that is recommended and approved by bench and bar.

Modern American Law Course and Service of

Blackstone Institute

Prepared by eminent authorities among whom are:

Chief Justice John B. Winslow, LL.D., Supreme Court Wis. Hon. Geo. C. Hutt, LL.D., Judge U. S. Dist. Court, S. C. Hon. Paul S. Reinsch, Ph.D., LL.B., U. S. Minister to China. Judge A. L. Sanborn, U. S. Dist. Court, Western Dist. Wis. Dean O. A. Harker, College of Law, University of Illinois. Dean H. H. Ingersoll, College of Law, University of Tennessee.

Send for free copy of "The Law-Trained Man," a 64-page bound book that tells you well in advance of the day of trials. It will tell you how a knowledge of law can be applied to many more lines of work than you suppose. It will point out opportunities and reveal to you your present duty in relation to your success in any business. It will explain the Modern American Course and Service of Law and how it can be pursued in spare time by the busiest man. It will tell you about the Faculty of Experts who have prepared the course and who are back of it to help you. It will tell you how to get this valuable book without cost or obligation and send for the book, TODAY.

Blackstone Institute

20 W. Jackson Blvd., 1540, Chicago, Ill.

must keep a child so busy that he has not time or energy for mischief. It is the scientific way of cheating the devil. There is also a study of "disciplinary devices." The latter are discussed from the point of view of aiming at self-government thru social coöperation.

Dr. Bagley's treatment is more philosophical than either of the others, and at the same time more directly usable as a textbook. In *School Discipline* the main analysis is that of the teacher's personality and is worth the consideration of every teacher and administrator. After pointing out that there has been a radical change in our ideals during the past generation and that there is in each school a "fashion" of order to which practically all the pupils conform, general causes of the unruly school are discussed, as harsh and unsympathetic treatment; indulgence and weak control; inadequate preparation and tenure of teachers. There is a chapter on each of the chief agencies for transforming the unruly school—the objective attitude; raising the standards; individual assignments; stimulating group responsibility; routinizing the work. There is a good discussion of coercion and penalties, with a special chapter on corporal punishment. Dr. Bagley's classification of troublesome types is in terms of "character" and will probably be more helpful to the inexperienced teacher than Dr. Perry's.

Discipline as a School Problem, by Arthur C. Perry. Houghton Mifflin Co. $1.25. *The Discipline of the School*, by Frances M. Morehouse. Boston: D. C. Heath & Co. $1.25. *School Discipline*, by William Chandler Bagley. The Macmillan Co. $1.25.

SCHOOLS OF TOMORROW

Politicians, educators and other citizens have before them no problem immediately concerning all the people of greater importance than the decision of next steps to be taken in the development of the public schools. Especially serious for the future of democracy is the issue as to whether vocational schools shall be an integral, vitalizing part of the whole system or a separate organization seeking primarily to provide industries with more efficient workmen rather than the best means of growth for all concerned.

It is these problems that Dr. Dewey has in mind in his latest work, *Schools of Tomorrow*—probably the most important social book of the year.

The decision of the city of New York as to whether or not she will take advantage of what has been accomplished at Gary in remaking her schools will be a matter of great consequence to all the country. The appearance of this book is fortunate at a time when the public is unusually awake to educational needs. It takes nothing for granted on the part of its readers but a sincere interest in education and in democracy. There are no technical terms used—any reader of ordinary intelligence will enjoy all of it.

The fullest accounts are those of the Gary schools, Mrs. Johnson's experiment in the far South, and that of Professor Merriam at the University of Missouri. Public schools in Chicago, Cincinnati and Indianapolis, together with nearly a dozen others, mostly private, complete the record. There is no attempt to include all schools of this type or even to list them. The rural school movement is referred to appreciatively but is not reported.

The result is surprizing even to those who are best informed. It must not be forgotten, however, that probably no other individual has done so much to make possible these evidences of progress as has Dr. Dewey. To take but a single instance—there are three factors most evident in accounting for the Gary success: the possibility of beginning with a new situation which was destined to grow at once to large dimensions, Superintendent Wirt's genius, and Dr. Dewey's experimental school at the University of Chicago back in the 90's. This last was, before the time of the Gary scheme, the most important educational experiment of which we have record. In it the essential features of all these movements were demonstrated under very difficult conditions. The superficial criticisms made concerning it, at the time and since then, failed to grasp the remarkable significance of what was accomplished. Discipline, control, information and other conventional desirabilities were never more thoroly attended to, but, for once, they were placed in a reasonable perspective.

The greatest hindrance to educational progress, in the future, as in the past, will lie in the fact that teachers and parents lack the needed vision and experience to appreciate what next steps are feasible. *Schools of Tomorrow* will be a great help in accomplishing the training needed.

Miss Evelyn Dewey has made many of the investigations necessary for the work. There are excellent illustrations, but some readers will regret the absence of an index.

Schools of Tomorrow, by John Dewey and Evelyn Dewey. New York: E. P. Dutton & Co. $1.50.

GUIDANCE FOR YOUNG WORKERS

The child labor problem has in recent years crowded over into the school, and there takes the form of the complex movement that includes the agitation for vocational training on the part of employers and for vocational guidance on the part of educators and social workers. Professor Scott in his *Historical Essays on Apprenticeship and Vocational Education* explains the rise, development and decline of the gild system of apprentices and the serious results of its unavoidable destruction. The final chapter deals with the present situation in the United States in its broader aspects.

A recent study from Cleveland by Jeannette Eaton and Bertha M. Stevens, *Commercial Work and Training for Girls*, brings out all the various features of the private vocational schools. The employer suffers because the labor force is not properly trained and the children suffer because they are neither trained nor selected. There

is a mass of significant facts on the conditions that lead to the waste of young lives, on methods for preventing much of this waste, and particularly on the kinds of work in commercial fields that are open to women.

A study of 13,000 *Working Girls in Evening Schools* in New York was made under the direction of Miss Mary Van Kleeck, Secretary of the Committee on Women's Work of the Russell Sage Foundation. This study throws a flood of light on the problems common to industry and education, but it is an illumination that hardly reaches beyond the point of making us aware of their complexity. The questions raised by Miss Van Kleeck reach to the very foundation of our economic system.

Education for Industrial Workers, by Herman Schneider, is a constructive study for vocational training in New York City. It goes deeper into the essentials of the situation than do books that consider children in some measure free to choose and so to go, when guided, into the better pursuits. The graver matter is the great body of boys and girls forced by present factory conditions into monotonous occupations that dull the brain and leave them incapable of study. For these there must be classes in which instruction is so given as to answer the imperative need for excitement that is the natural recoil from days of deadening labor.

From the point of view of school management, Jesse B. Davis, in *Vocational and Moral Guidance*, has developed a plan for giving systematic information on vocational subjects, especially in connection with the English work of the high school and the upper grades. This book should be of particular help in schools that are groping out of the academic ruts. *The Young Woman Worker*, a pretty book of counsel for girls, in the naïve manner of certain mid-Victorian moralists, is offered by Mary A. Laselle. She accepts at his own valuation the employer's estimate of human relations. There is no suggestion that the young worker has rights as well as duties. Also with no challenge to the gods of things as they are, Eli W. Weaver and J. F. Byler in *Profitable Vocations for Boys*, yet approach the problem from the point of view of the boy at school, and take cognizance of the fact that some employers are much less desirable than others. They place the emphasis on wise choice of occupation and of employer, and on the cardinal virtues lacking which so many drift into "the present day industrial slavery." Over thirty groups of occupations are described in terms of general conditions and requirements, prevailing earnings and extreme "opportunities."

In a pathetic little book, *The Unheard Cry*, J. F. Sullivan pleads, out of his own experience, for special training for cripples to fit them for life which, while it must be sorrowful, need not be, as it now is for the many without means, menaced by helplessness and want. In answer to this comes from the Russell Sage Foundation *The Care and Education of Crip-*

If a Giant Cut the Wires

Suppose all telephones were silent, and that for forty-eight hours you could not even call a telephone exchange anywhere in the Bell System to ask what the trouble was!

Imagine the confusion which would prevail—with personal visits and messengers substituted for direct, instant communication; with sidewalks, street cars and elevators jammed; with every old-fashioned means of communication pressed into service and all of them combined unable to carry the load.

The instant contact of merchant with customer, of physician with patient, of friend with friend, would be severed; the business man and the housewife would lose the minutes and hours the telephone saves them. The economic loss would be incalculable.

There would not be time enough to do the things we are accustomed to do, and social as well as business life would be paralyzed.

Such a condition is almost inconceivable. The Bell System has developed telephone service to the highest degree of usefulness and made it so reliable that its availability is never questioned. It has connected cities, towns and the remotest places from coast to coast, and has taught the people the advantages of nation-wide telephone facilities.

Plans are made, buildings built and businesses run with Bell Service taken for granted, and yet we have to imagine what it would mean to be entirely without telephones before the great value of this ever-present service can really be appreciated.

DOMESTIC SCIENCE

The Housekeeper's Handbook of Cleaning, by S. J. MacLeod, answers very practically the many questions that arise in the daily household care of attic and cellar, refrigerator and stove, silver and linen.

Harper. 50 cents.

HOW TO STUDY THE PIANO

The value and methods of training coordinately the *Ears, Brain and Fingers* in the study of the piano are helpfully explained and illustrated in a text-book for piano teachers and pupils by Howard Wells. It will prove to be a serviceable hand-book and guide in such instruction.

Ditson. $1.25.

HUMAN SPEECH

Professor Leonard Bloomfield of the University of Illinois has performed a real service in putting into good form for the reader and student a summary of what is known of the nature, origin and development of language. His *Introduction to the Study of Language* seeks to do for the present generation what Whitney's books did for the public some fifty years ago.

Holt. $1.75.

A MANUAL OF COMPARATIVE LITERATURE

A reprint has just been issued in a less expensive form of *The Evolution of Literature* by Professor A. S. Mackenzie. The author regards "the study of literary art as simply one of the subdivisions of anthropology, the science of man." The songs, dances and stories of primitive races are traced, continent by continent, until the reader is able to correlate them in certain definite groups of literature.

Crowell. $1.50

BLACK BEAUTY REINCARNATED

The whole duty of an author, in Marcus Heaton's opinion, seems to be to provide some sort of thrill on every page. He must be allowed time to launch the story—all he wants in fact—but once started things must happen. Pat and his mistress were both *Bred of the Desert* both beautiful but the horse a bit over-philosophical, the girl somewhat goody-goody, the romance rather sentimental, so what's the use?

Harper. $1.50

A TEXT BOOK IN GOVERNMENT

The need for a work that would explain the organization and operation of the governments of the chief nations of the world will be satisfied by an *Introduction to the Study of Government* by Captain Upton Hall of the United States Military Academy. The work has a definite place in the library of modern text books. The source material consisting of statistics, tables of customs, statutes and constitutional provisions appended to several chapters is a valuable feature of the book.

Macmillan. $2

INDIANA

VALPARAISO UNIVERSITY

Accredited Founded 1873

VALPARAISO, INDIANA

Group of Valparaiso University Buildings, including the Departments of Medicine and Dentistry Located in Chicago

One of the Largest Institutions of Learning in the United States

Thorough Instruction at Lowest Expense

Valparaiso University was founded with the idea of giving to every person, whether rich or poor, a chance to obtain a thorough, practical education at an expense within his reach. That it is performing this mission is indicated by the numbers who avail themselves of the advantages offered.

This Institution was founded with 3 departments, 4 instructors, and an annual enrollment of 210 different students. Now there are 21 departments, 218 instructors and an annual enrollment of more than 5000 different students.

The reason for this growth is in the fact that this University constantly increases its facilities, strengthens its courses of study, and offers additional advantages without making the expense to the student any greater.

Departments Preparatory, High School, Primary Methods, Kindergarten Methods, Commerce, Phonography and Typewriting, Review for Teachers, Education, Arts and Sciences, Engineering, Architecture, Manual Training, Agriculture, Expression and Public Speaking, Music, Fine Art, Domestic Science, Pharmacy, Law, Medicine and Dentistry.

While the expense in all of the Departments is exceedingly low, it has not been made at the sacrifice of a high grade of instruction, but by applying business principles to

"The Cost of Living" so that the most satisfactory accommodations for board and room may be had at from $3.00 to $11 per quarter of twelve weeks. Tuition $20.00 per quarter, or $65.00 if paid in advance, for a year of forty-eight weeks. If the entire tuition is paid in advance for the year it includes all the departments, excepting Medical, Dental and private lessons in Music.

The total expense of board, tuition and furnished room for the regular school year (thirty six weeks), need not exceed $183, or for forty eight weeks, $247. Free Catalog address

New England CONSERVATORY OF MUSIC

George W. Chadwick, Director

Year opens Sept. 16th, 1915

BOSTON, MASS.

The Largest and Best Equipped School of Music

Located in the music center of America. It affords pupils the environment and atmosphere so necessary to a musical education. Its complete organization, its imposing Conservatory Building, splendid equipment, and the Residence Building offer exceptional facilities for students.

Complete Curriculum. Courses in every branch of Music, applied and theoretical, including Opera.

Owing to the practical training in our Normal Department, graduates are much in demand as teachers.

The free privileges of lectures, concerts and recitals, the opportunities of ensemble practice and appearing before audiences, and the daily associations are invaluable advantages to the music student.

A Complete Orchestra offers advanced pupils in voice, piano, organ and violin experience in rehearsals and public appearances with orchestral accompaniment.

Dramatic Department. Practical training in acting.

Address RALPH L. FLANDERS, General Manager.

The Chautauqua Idea

A young man and his wife started from the East in the days when it was common to hear the advice: "Go West, young man, and grow up with the country."

They stopped off in Iowa long enough to earn a team and wagon, then moved on to the prairie lands of Nebraska.

They settled on their farm to rear their nine boys and girls.

This farmer and wife were not college-bred, but they recognized things worth while. When they heard that there was to be a Chautauqua at Crete, Nebraska, they decided to give their children the benefit. They hitched up their team, put in their baskets of provisions and their bedding, and went to the Chautauqua to camp out for the session.

Every one of the nine children became college men and women, Christians, engaged in some kind of constructive work. And the one boy who said at this Chautauqua, "This is the work I am going to do when I grow up," is the J. R. Ellison who has now 110 Chautauquas along the Pacific coast, in California, Oregon, Washington, Idaho, Utah, Nevada and Montana.

The Chautauqua at Augusta, Georgia, was held on the Richmond Academy baseball grounds where President Woodrow Wilson often played while a lad. Across the street from the Chautauqua grounds is the First Presbyterian Church of which President Wilson's father, Rev. Joseph R. Wilson, was pastor from 1858 to 1871. On another corner, opposite the church and the Chautauqua grounds, is the historic old parsonage where the Wilson family lived for many years. On a visit to Augusta a little over two years ago President Wilson, then Governor of New Jersey, sought a small story-and-a-half brick building to the rear of the parsonage, climbed a flight of steep stairs and recalled the many days spent in his little workshop in the loft. Most of the Chautauqua committee at Augusta were schoolmates of Mr. Wilson at the Richmond Academy. He lived in Augusta from his ninth year until he entered Princeton, and his return visits have been frequent. The church and the academy are now more than 100 years old.

Chemistry Teachers' Week and Rural School Education Week, the latter conference program supplemented by sessions of the Texas Rural School Assembly, are red-letter features of the Summer School catalog of the University of Texas.

1915

Atlantic Mutual Insurance Co.

Atlantic Building, 51 Wall St., New York

Insures Against Marine and Inland Transportation Risk and Will Issue Policies Making Loss Payable in Europe and Oriental Countries

Chartered by the State of New York in 1842, was preceded by a stock company of a similar name. The latter company was liquidated and part of its capital, to the extent of $100,000, was used with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with a bonus and interest at the expiration of two years.

During its existence the company has insured property to the value of	$27,964,578,109.00
Received premiums thereon to the extent of	287,324,890.99
Paid losses during that period	148,820,874.99
Issued certificates of profits to dealers	90,801,110.00
Of which there have been redeemed	83,811,450.00
Leaving outstanding at present time	6,989,660.00
Interest paid on certificates amounts to	23,020,223.85
On December 31, 1914, the assets of the company amounted to	14,101,674.46

The profits of the company revert to the assured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such dividends, certificates are issued subject to dividends of interest until ordered to be redeemed, in accordance with the charter.

THE INDEPENDENT

The Market Place

A WILD STOCK MARKET

On the New York Stock Exchange last week there was wild speculation in what are called the war stocks. While the fluctuations were severe, there were net gains at the close, the most notable being 54 points for Bethlehem Steel (after losing 20 points from its highest, 275) and 23 points for Crucible Steel, which rose to 83 and fell back to 68 on sales of 558,000 shares. A prominent officer of the company recently informed the public that he could not see a dividend on Crucible Steel for many years to come. Railroad shares advanced from 1 to 3 points, partly on the rumors that permission to increase the Western rates would be granted by the commission, but in comparison with the war stocks they were neglected.

This great activity made a total of $5,388,866 shares for the week, with two million-share days, 1,131,400 on Wednesday and 1,422,350 on Thursday.

THE GREAT FAVORABLE BALANCE

We now have all the official figures for the foreign trade of the United States in the fiscal year that ended with June. They show that Secretary Redfield was well within bounds when, some months ago, he predicted that the "favorable trade balance," or excess of exports over imports, would be more than $1,000,000,000. The excess was $1,094,442,792. This is greater by $428,000,000 than the largest excess (1908) in the past. But it was due in part to a reduction of our imports by $219,700,000. June added $110,855,459 to the growing favorable balance. It is noticeable that the total of imports and exports was $4,442,864,272, or $164,000,000 above the previous high record, altho imports declined. A glance at the reports for 1875 shows how our foreign trade has grown. In that year the total was only $1,046,000,000. Now it is more than four times as much. In those days, also, there was an annual excess of imports. But the tide soon turned.

In the first month of the great war there was an import excess of $19,000,000. Our shipments of cotton and other products were restrained, and the time for war orders had not come. But there was an excess of $17,000,000 on the other side in September, and thereafter the balance rapidly increased,

ROYAL

You will buy the Royal to keep—not to "trade-out"

The Royal Typewriter ends the two great evils of the typewriter business—*excessive repairs* and *"trading-out."*

No *wonder* the greatest business organizations in America are adopting Royal equipment. Big business demands *results* with *value*—the Royal passes that purchasing test.

The Royal you buy today keeps right on *being* new and *working* new. It *doesn't* wear out. The men who invented and who build it simplified its mechanical construction; they lessened friction and wear; they harmonized its movement from key to roller escapement—the Royal is an *investment*, not an *expense*.

Get the facts. Know the Royal. Telephone or write any of our branches or agencies for a demonstration. Not the slightest obligation on your part. We are glad to have the Royal prove itself.

Write today for these free booklets

"Better Service" and "One Problem Solved" tell how to cut the cost of typewriting. Letters—even operations' time—give more service—purchase "class." A postal brings them now.

J. W. HURLEY, Manager

reaching its summit, $174,000,000, in the short month of February. The excess has been due very largely to greater exports of foodstuffs, which show an increase of more than $450,000,000. Shipments of ammunition and arms have not accounted for it. The large exports of such war supplies are yet to be made. There has been, however, a notable increase of the exports of horses and mules (the value of these having been more than $65,000,000), aeroplanes, motor cycles, automobiles and auto trucks. With the foodstuffs must be counted those sent for the relief of the Belgians. While the total was rising we were losing in certain classes of exports, including agricultural implements, sewing machines, lumber and furniture.

STEEL CORPORATION REPORT

Those who study evidence concerning the condition of business and general trade are accustomed to consider with care the quarterly reports of the great Steel Corporation, and especially those parts which show the company's net earnings. In the closing quarter of last year the net gains were less than $11,000,000, and in the first quarter of the present year they were only $12,457,000. But the report issued last week shows a decided advance for the second quarter, which ended with June. The net earnings rose to $27,950,000. This is an encouraging change from the earnings of the March quarter, which involved a deficit, after obligations, including the dividend on the preferred stock, had been satisfied. And the gain in the recent quarter was progressive, for there was an increase of about $2,000,000 in each of the three months, June's earnings having been at the rate of $34,000,000 for a quarter. The Corporation's mills, as a whole, are working at ninety-three per cent of capacity.

War orders given directly to the Corporation do not account for this marked improvement, for it has received none. Mr. Morgan, the fiscal agent of two of the Allies, is regarded as a friend of the Corporation, as his father certainly was, but the Corporation has taken none of the contracts which are under his control. Russia's large order for rails was given to two of the independent companies. But the orders for war supplies, wherever they are placed, as a rule, make a market for many of the Corporation's crude products. It is estimated that at the present time from twenty to twenty-five per cent of the output of our steel mills is going into war supplies of one kind or another.

The favorable character of the quarterly report affected the price of Corporation shares in the stock market. Last week 1,958,454 common shares were sold. The price rose to 68⅞, and a decline to 66⅞ left a net gain of 2⅞

Insurance

Conducted by

W. E. UNDERWOOD

W. H. R., North Olmsted, Ohio—The Presbyterian Ministers' Fund is an old line life insurance company, one of the oldest in the United States and well managed in the interests of members. Its policy contracts are fair and liberal. Assets, December 31, 1914, $6,106,157; net surplus, $623,951. The company had insurance in force on that day $20,643,914.

H. S. A., Salem, Ohio—The John Hancock Mutual ranks in the first class of American companies. You seem to have monthly income policies, guaranteeing to your beneficiary after your death a certain specified income every month for twenty years certain or during her lifetime if she lives longer. It is an excellent plan. As to answers to your questions 3 and 4, if you cannot secure the information from the policies themselves, ask the agent in your locality or write the company. You may place implicit reliance in any statement the company makes.

C. W. M., Houston, Texas—Any system of life insurance which does not provide adequate reserves with which to meet increasing obligations growing out of the advancing age of insured persons, resulting in a constantly increasing death rate, is a failure. Fraternal orders have ignored this essential for years. A few of them are now accumulating a small reserve on new members and such old members as are willing to pay higher rates. Your son's occupation makes it difficult to secure old-line insurance in mutual companies, altho there are a few companies which accept such risks at a slightly advanced premium rate. Stock companies transacting a non-participating business write them more freely. I suggest that you consult O. S. Carlton, Houston, Texas, president of the Great Southern Life Insurance Company.

K. Y., Provo, Utah—You are offered two kinds of policy contracts by three companies. The first company you name offers you a policy under which it makes an annual accounting to you in the matter of dividends and if you wish them will pay them to you as declared. But if you prefer to leave them the company will use them in accelerating the maturity of your policy, while you retain the option of taking any or all the dividends in cash. The other companies offer you a policy which exempts them from accounting to you until the end of the contract period and there is a provision that if you die before that period is completed, or if you lapse your insurance, your title to dividends is automatically cancelled. The policy first described, as well as the company, is far superior to the others.

C. E. B., Baltimore, Md.—You do not state in your inquiry that you have dependents, but assuming you have, your present age would indicate a necessity for all the protection for which you can afford to pay. Under such circumstances, I suggest that you secure from the company in which you are carrying the thirty-five year endowment, an ordinary life policy for $2000, the annual premium on which would be $65.20. The cash value of that policy at the end of twenty years would be $782, to which are to be added the dividends for the period. From the same company you can get a fifteen-payment life policy for $1500 at a premium of $70.56, the cash value of which at the end of the term would be $885, plus dividend. If permitted to remain twenty years (no premiums payable after the fifteenth) the cash value would be $976, plus dividends.

Duro Guaranteed Shirts $2.50 a Box

FROM STATE TO STATE

ALABAMA: As a result of the recently increased interest in stock-raising in the South, and especially in Alabama, the Montgomery Chamber of Commerce is making a study of stockyards and packing houses thruout the country with a view to establishing one or the other, or both, in Montgomery. The opinion of a majority of the investigators seems to favor the packing house over the stockyards. It is pointed out that with low freight rates on packing house products, and ample water, fuel and labor supply at hand, Montgomery offers many advantages for such a plant as is proposed. It is believed the project will be carried out, and soon.

ARKANSAS: Two important decisions were recently rendered by the Supreme Court of Arkansas concerning the state common school fund, which amounts to $1,250,000 a year and is raised by a special tax. In one of the cases it was contended that, since the last Legislature made no appropriation from this fund, the State Auditor could not lawfully issue warrants against it. The court held that the distribution of this fund is provided for by the constitution, and that legislative appropriation is not necessary. The other case was to prevent the distribution of $50,000 from this fund among certain high and normal schools named by the State Aid High School Board. The court held that every high school is a common school and entitled to a share of the fund, and that it is unlawful for the board to discriminate in favor of certain schools.

FLORIDA: Two important improvements under way in this state are the drainage canals in the Peace Creek and the Elkton districts, contracts for which have been recently awarded. The Peace Creek canal proper is to be twenty-two miles long, with a bottom width of eight feet at the upper end and fifty feet at the other. The fall will be about twenty-seven feet for the entire distance, and there will be branch canals and lateral ditches bringing the aggregate length up to 142 miles. It is estimated this will reclaim and perfectly drain nearly 50,000 acres. The Elkton canal will be nearly five miles long, with a bottom width of from twelve to twenty-four feet and a depth of from three to five feet. It will drain many thousand valuable acres near St. Augustine.

GEORGIA: The Savannah Automobile Club has started a movement for a paved boulevard from Savannah to Jacksonville, Florida. As a first step the commissioners of all the counties between Savannah and Brunswick have been called together, and it is likely that they will cooperate in the work. The fact that the Georgia commissioners of the Dixie Highway must select the eastern route from the state not later than August 31 is stirring the several counties to special efforts at this time.

IDAHO: Last season's forest fires in this state left an enormous quantity of dead timber which must be cut soon to prevent its utter loss by decay. The leading three companies of the Clearwater country have already cut so much that it is estimated they will have 150,000,000 feet ready for shipment by fall. But then they will face the difficulty of getting this timber out, since it will be necessary to build twenty-two miles of railroad in order to reach Elk River. It is hoped that the promise of large shipments will tempt the Chicago, Milwaukee & St. Paul Company to extend its St. Maries-Elk River line to the Clearwater country in time to save this timber.

ILLINOIS: The Dixie Highway from the southeastern states to Chicago having been laid out in Illinois from Danville north, it is now proposed to build a great highway from the southwestern states. In Illinois the route, as planned, will parallel the Wabash Railroad for 320 miles, from St. Louis to Danville, there connecting with the Dixie Highway. It has been ascertained by surveys and investigation that this route will give a better roadway at smaller cost, and be only twenty miles longer than the present direct route from St. Louis to Chicago.

IOWA: Estimates made by Census Director Swan from the figures of this year's state census indicate that the population of Iowa is only about five per cent greater than was shown by the United States census of 1910. In the last five years the rural districts have practically stood still, most of the increase having been made in the larger cities, including Des Moines, Sioux City, Davenport, Waterloo, Cedar Rapids, Dubuque and Mason City. The last named city led in growth with a fifty-three per cent increase. Director Swan is making a card index for every county in the state. It will contain the name of every citizen of the county, alphabetically placed, together with the information included in the census report.

MAINE: The construction work of the new granite, steel and concrete viaduct and bridge to connect Portland and South Portland is already so far advanced that it is safe to say the structure, when completed will be one of the most strikingly beautiful municipal improvements in New England. The State street viaduct, a considerable portion of which is practically completed, runs upon a series of graceful arches in a long, sweeping curve suggestive of a giant stadium, and gives to the poor old Clark street viaduct, which it will soon supersede as a highway, an appearance of almost pathetic ugliness.

MARYLAND: Baltimore music lovers have begun a series of community concerts which they hope are but a beginning of a general movement for folk singing thruout the country. They assert that there is no such thing as American music because the nation has not found its voice; that a few sophisticated persons are familiar with complex forms of composition, largely imported and generally appealing to the intellect, but that we have no music in which the great body of Americans take interest. They maintain that we, as a nation, have taken up operatic, orchestral and chamber music without going thru the preparatory stage of folksong, as the leading musical nations have done. Hence these concerts, where the words of good songs are thrown upon a screen and everybody sings.

MICHIGAN: It is probable that the people of Detroit will soon own the street railway system of that city. Three weeks ago the officers and directors of the Detroit United Railways offered to sell its lines to the city. The Street Railway Commission, to whom the offer was officially made, gave the company until August 2 to secure the ratification of its stockholders and bondholders. The assent of both these bodies is said to be assured. The terms of sale provide for a vote of the people on the question, and that being favorable to the purchase (as it is said it is sure to be), the price to be paid by the city is to be fixed by the Circuit Court, sitting in chancery.

NEW YORK: Having failed, after a campaign lasting three years, to force some of the property owners along the shores of Jamaica Bay, in Queens Borough, to drain their land of stagnant water and thus destroy the breeding places of mosquitoes, the Health Department has issued an order to Borough President Connelly of Queens to have the work done. The order calls for the drainage of 3500 acres of salt marsh land by the construction of open ditches from ten inches wide and twenty-four inches deep to main channels thirty-six inches wide and thirty-six inches deep, as well as culverts twenty-four inches square.

NORTH DAKOTA: The farmers of this state have ceased to look with suspicion on the agricultural experts sent out by the Great Northern Railway Company and the International Harvester Company to lecture upon and to give demonstrations of improved methods of farming. The old criticism that these companies were working merely for their own interests is now supplemented by appreciation of the fact that these interests are best served when the farmer is made more prosperous. The result is that these experts, working together, are greeted by practically the entire farming population as benefactors. For weeks now the experts have been traveling about the state in automobiles, giving lectures at community centers, visiting individual farms and helping to solve the problems of crop production and more profitable marketing.

OHIO: The Greater Dayton Association, familiarly known thruout the state as the G. D. A., is one of the most efficient citizen organizations in the United States. It has more than 7000 members, including mechanics, clerks and laborers as well as business and professional men. Any reputable citizen of Dayton who will pay $5 a year dues and leave his politics outside is eligible. It has absorbed practically all the old civic bodies, such as the Chamber of Commerce, charitable institutions and city improvement organizations. It pays its secretary $10,000 a year and maintains a large force of clerks. It has thirty-six big committees working on a program laid out for the next three years, a part of which is to push to completion a flood-protection plan which will cost Dayton and its immediate vicinity from $17,000,000 to $20,000,000.

OREGON: Portland is at last to have its long-expected $600,000 public auditorium. The plans have been prepared and the work of construction is soon to begin. The plans indicate a very beautiful exterior, with flexible interior arrangement designed to fit the needs of large and small conventions, expositions, social functions, theatrical productions and the exhibits of the City Museum and the Oregon Historical Society. The large hall will have a seating capacity of 3600 for theatrical performances, etc., while for convention purposes it can be made to seat 5500 or more. Other rooms for smaller gatherings are on a level with the theater stage, and by means of removable partitions and flooring all may be thrown together into an enormous flat-floor hall.

SOUTH DAKOTA: A large number of tracts of Indian inheritance lands are to be sold on the Cheyenne River Reservation August 14, when bids will be opened. The lands are in tracts of from thirty to 480 acres, and are appraised for sale at from $3 to $20 an acre. The sale of these lands is intended to scatter white farmers over the reservation in order that their examples of thrift may be instructive to the Indians.

UTAH: What is known as the Deseret State irrigation project, in the southern part of Utah, has reached a point where actual work is to begin at once. It [illegible] to [illegible] [illegible] bids [illegible] [illegible] 140 feet [illegible] [illegible] stream side by [illegible] and canals of [illegible] concrete. The spillway has been designed so that [illegible] of water can be passed [illegible] without a rise in the [illegible] [illegible] [illegible]

INDEPENDENT OPINIONS

On the letterhead of the Winfield *Evening Free Press*, which carries at its head this modest expression of local pride: "Winfield is a college and railroad town of 8000 prosperous people, the county seat of Cowley County, which has a population of 35,000, with thirty-two rural routes," comes a report of the results of the Kansas Model Town Contest described recently in our pages. Mrs. Anderson is very careful to explain that Winfield "does not like to be called a model town—odious claim to perfection that the term implies," but one will hardly quarrel with her evident conviction that the "8000 prosperous people" would find it hard to discover a place where they would be better off.

I read with interest the article by Mr. C. M. Harger entitled "What Makes a Model Town?" in your issue of July 12. The contest mentioned by Mr. Harger was decided and Winfield was given the Stubbs prize of $1000 for being the best town in Kansas (under 18,000 population) in which to rear children. . . .

Three judges were sent by the child welfare department of the State University, two of whom came heralded, were entertained and were shown the town's good points. The third came as a "mysterious stranger" looking for the evils to be found in every city. In Winfield he found no commercialized vice, no sales of intoxicants or cigarets.

Winfield, with her work in community music and drama, her two colleges of liberal arts; her excellent public school advantages, including domestic science, manual training and agriculture; her Chautauqua, third in excellence in the United States and now in its thirtieth year; and with her community house, the town's greatest asset for all the year among large schools, tho of larger size.

How we will count the [illegible] when we have a number of such towns [illegible] not been decided, but the contest for a municipal swimming pool seems to point to that direction.

Max [illegible]
Winfield, Kansas

The President's last note to Germany appeals to most Americans as being a more statesmanlike handling of a delicate problem than any plea based on Mr. Bryan's views of the matter, but a friend in West Virginia who thinks that "when passion and prejudice have subsided . . . Mr. Bryan's address, 'The Real Issue,' will be regarded as a classic," believes that even the sinking of American citizens on the high seas should have been referred to arbitration. But would Germany have agreed to suspend such methods of warfare while a tribunal deliberated?

It seems to me that we should have unhesitatingly agreed to submit our differences with Germany to arbitration, the enemy agreeing to suspend methods of warfare complained of by us until the leaders of her arts should have been determined by a competent tribunal, and if such tribunal should decide against Germany, then such acts to cease absolutely. Such an action on our part would have made certain the law, beyond equivocation, and would have been the means to the ends we seek. Of course, all other questions over which we disagree, but none of which are remotely liable to cause war, would have been submitted.

What else could we ask? What else can we hope for? By thus acting we and the world would get the benefit of the moral lesson, and at the same time secure without quibble or delay the very purposes we are seeking. Homer Watkins

Keyser, West Virginia

On the other hand, a professor of Latin in Denison University believes that the note was not only the right thing under the circumstances but a constructive step toward bettering international relations:

The fundamental demand of this note, which but repeats in stronger terms the substance of that which has twice before been asked of Germany, is simply respect *for law* in the widest sense of the term. Leaving Germany out of the question for the moment, the deeper significance of the note is its revelation of what is to be the attitude of our Government in the international conferences and special diplomatic intercourse which must follow close upon the conclusion of the present war. It is evident that if President Wilson is at the helm when this time comes, the influence of our Government will be thrown heavily into the scale for the following principles: (1) That treaty obligations must be held as sacred, entirely apart from the strength or weakness of the nation to whom they have been incurred. (2) No nation shall be considered as justified in a self-alleged "military necessity" in any act which violates the principles of international law as against a country. (3) No new military inventions shall be permitted as impairing in the least such safety of life and freedom of action as are guaranteed to any class of persons under existing international law. (4) The President's words show clearly that he will demand that the law of humanity be considered in the future, as it in the past, as underlying the principles of international law. The President's policy is right and it will win.

ACTION AT LAST

AT last something is to be done about Mexico. No longer are we to watch and wait while a hundred and fifty thousand lawless fighters impose anarchy, pillage and starvation on fifteen millions of their helpless compatriots.

We have called upon All America to join us in the task. In conference with the President and the Secretary of State are the representatives of the three great A B C powers of South America and of three other Spanish American countries, Bolivia, Uruguay and Guatemala.

What is wanted from such a conference is a plan of action. For nothing but action can solve the Mexican problem. We have tried watching—and we have seen things get steadily worse. We have tried waiting—and nothing has turned up. We have tried action just once—and stopped before we had got anywhere. We have tried advice—and nobody listened. We have tried warning—and nobody heeded. Now we must really act, with full appreciation of what we are entering upon, but with unswerving determination to see it thru to the end.

What Mexico needs first is a provisional government. It must be of such a character that the United States and the other American powers will be willing to recognize it. It must be strong enough to restore order. It must be responsible enough to attract financial support.

The first task of such a government will be to subdue the lawless bands into which the revolutionary movement that opposed Huerta has degenerated. There is no longer a revolution in Mexico. There is anarchy and brigandage and guerrilla warfare.

In this work we must be ready to give our assistance. This does not mean that we must send an army across the border. That may not be necessary—or it may. But we can help by recognition of the new government; by encouraging the loaning of money to it; and by cutting off the supply of munitions of war from the government's foes. There seems little reason to doubt that an administration in Mexico backed by the moral support of the United States would have no difficulty in borrowing money. That, of course, is the first requisite. It is practically certain that with the supplies of arms and ammunition from this country cut off the guerrilla fighting would speedily flicker out. Reliable report declares that the fighting today is being done with munitions received last week.

When order has been restored, measurably if not completely, will be time to consider how the next step is to be taken—the establishment of a government selected by the people of Mexico. That, of course, must be the ultimate aim, for that is the American ideal. But it must be sought not rashly and precipitately, but deliberately, a step at a time. Each step must be determined not in accordance with a stereotyped plan laid out in advance, but by the conditions that actually exist when the time comes to take the step. We must be opportunist, doing each day what that day shows to be best. But—and this is the most important thing to be remembered—we must keep on doing. Once we have assumed the task, our time of watching and waiting must be over till the task is done.

It is a matter of deep congratulation that we are to have the counsel, the cooperation, and perhaps the active assistance of the Spanish-American powers. The responsibility is primarily ours, for we are Mexico's next friend; we are her nearest neighbor; we are the logical leader of international affairs in the North American continent. But we are naturally subject to suspicion from our southern neighbors both because of our size and because we are not Spanish-American. We know that our motives are pure. We know that we covet no territory; that we plan no exploitation across the Rio Grande. But does the rest of the Americas believe it? In particular, do the Mexican people believe it?

We can do little to help them while they suspect us. The coöperation with us of six Spanish-American countries should help to allay the suspicion. It should increase our influence in Mexico. It should make easier a task that can be none too easy at the best.

This enterprise we are entering upon should have more far-reaching results. It means a revised Monroe Doctrine; not weakened nor abandoned, but expanded into a Pan-American doctrine. It should make for All American understanding and solidarity. It should furnish an admirable object lesson in collective action among nations.

JOHN SOBIESKI'S HEART IS CAPTURED

AT last the Germans have taken Warsaw from the Russians, who took it from the Poles, who took it from the Austrians, who took it from Napoleon's Duchy of Warsaw, which had it from Prussia, which took it at the Third Partition from the Poles, who had long since lost control of it to Russia, after they had thrice recovered it from the Swedes, who thrice took it from the kings of Poland, who had it from the extinct Dukes of Mazovia, whose name in its German form clings to the Mazurian Lakes of bitter memory to Russia.

The Prussians—long the foes and once the vassals of Poland—have now captured John Sobieski's heart, and what could be more truly a Polish talisman than that? It is buried in Warsaw's Church of the Transfiguration,

which the great John himself, King of Poland, built as a thank-offering for his glorious victory that saved Vienna from the Turk in 1683. But Sobieski, hero that he is, was faithless to Poland in his youth and a thorn in the flesh of his predecessor on the throne. By turns reckless anarchist and brilliant soldier, he sums up in his own person much of Poland's story.

It was probably from Warsaw, the seat of Conrad, Duke of Mazovia, that seven hundred years ago permission went to the Teutonic Order to settle in the Baltic marches and subdue the wild Prussians. There these knights helped to build up the Prussian power that now sweeps back—not for the first time—to the old city on the Vistula.

"The capital of Poland's decay," more recently the residence of Russia's "Governor-General of the Provinces on the Vistula," Warsaw is no stranger to the clash and mingling of nations. As capital of Poland she was a compromise between Polish Cracow and Lithuanian Vilna. In Napoleon's Duchy of Warsaw the elements were so mixt up that they past into a proverb: "Warsaw duchy, Prussian money, Polish army, Saxon king, French code." The prey in turn of every one of her neighbors, what reason has Warsaw to regard her latest conquerors as more than a passing brigade in a procession centuries long?

QUITE RIGHT, MR. ROOT

ELIHU ROOT believes that for a generation the government of New York State has been about "as representative as that of Venezuela." He has set forth this view with vigor to his associates in the task of revising New York's Constitution. He declares that the Constitutional Convention must afford the people of the state relief from this condition in order to save them from the worse fate of the adoption of the initiative, the referendum and the recall. The chief remedy which he urges is the short ballot.

With Mr. Root's diagnosis every careful observer must agree. New York, with brief intervals of sanity, has been persistently boss-ridden. Of the states of the Union it has been one of the most loth to adopt the modern machinery of popular government. Its conversion to the direct primary, for instance, was belated and half-hearted. Even now there is a strong inclination to backslide to the convention system of the dark ages of American political history. For years the boss and the Bourbon have largely controlled New York's political life.

Mr. Root has also hit the mark fairly in choosing a remedy. The short ballot is a prime instrument of really representative and truly popular government. Any man with more than rudimentary intelligence can vote intelligently for a governor. We defy any man to cast an intelligent ballot for a governor, a lieutenant governor, a secretary of state, an attorney general, a state controller, a state treasurer, and a state engineer.

How many voters, between elections, could even name this list of elective offices? Where would you find even one who could, six months after casting his ballot, tell the name of the treasurer, the controller and the engineer? Who among the rank and file cares who is lieutenant governor?

This long ballot is the stronghold of the machine. It puts a premium on unthinking partizan loyalty. It discourages intelligent voting. It diffuses responsibility. It encourages inefficiency.

The Federal Government gets along very well with but two elected officers outside of the legislative branch; it would get along even better if there were but one. For a vice-president is a ridiculous institution. To elect a man merely to sit around and wait for another man's shoes—which he will probably never be called upon to put on—is an absurdity.

New Jersey does better yet. It elects a governor and lets it go at that. There is your simon-pure short ballot. There just across the line should New York look for its example.

LIGHT ON AN OLD BOGY

THERE are some movements we cannot understand —and one of them is that against vaccination. In face of the overwhelming testimony of the medical profession and of the cumulative experience of mankind, they must be hardy folk—foolhardy were perhaps the better word—who continue to oppose the use of this simple protection against a once dread scourge.

If they were only fair and honest in their methods of opposition it would not be so bad. But there is now cause for gratification that one of their horrendous bogies is once and for all put to rest.

Lockjaw never springs from vaccination. Thirteen years of patient experiment by the Public Health Service have proved it conclusively. In that time enough vaccine virus to inoculate more than two million persons has been tested; and not once have tetanus bacilli been found in the virus. The report of the director, Dr. John F. Anderson, is unequivocal. Every authentic case of tetanus after vaccination was found to be due to subsequent infection of the wound.

So the anti-vaccinationists must, if they would be honest, shift their ground.

You may be vaccinated to your heart's content, and, if only you use the slight care necessary while the wound is healing, snap your fingers in the lockjaw specter's face.

TWO GREAT GAMES

FRANCIS OUIMET, the young American amateur who performed the remarkable feat three years ago of winning the American open golf championship from two of England's most seasoned professionals, has let us into the secret of his achievement. It will be remembered that the three, Ouimet, Vardon and Ray, had tied for first place and that the younger man went calmly on and beat the veterans on the play-off.

And this is how he did it:

In that match, I had made up my mind to play my own game without regard to theirs, which is the best thing a golfer can do at almost any time. In this match I turned my back on their shots, so that I would have no impression of what they had done and what I must do.

Another youthful champion in another game, Maurice E. McLoughlin, has recently given us a hint of how he goes about beating one of his most formidable rivals. He writes of his match with the great Australian tennis player, Norman Brookes, in 1909:

After discovering in the first few moments of play that Brookes' service was dangerous, not in its width or break,

but in speed and placement. I bent my whole mental energy toward discovering something in the action or bearing of the Australian that would give me an inkling as to where he would place the ball. I found to my dismay that his physical action differed not one whit when he sent it close to the center line from that when he sought to catch me out of balance by serving to the outer line. In both instances, too, his standing position was the same. I watched the direction of his gaze and found that, regardless of where his thoughts were centering, he would look far off to the right or left. Eventually I detected that almost at the moment of contact between racket and ball he would shift his glance to the direction which he wished the ball to take. From that time on I watched his eyes up to the last possible instant of time left me—watched sometimes too long, in fact, and was caught out of balance for a clean ace. A match with Brookes resolves itself at once into a battle of intuition with one to whom this faculty is a birthright and whose sphinxlike face betrays no secret of the mind.

These confessions suggest a prime distinction between the vigorous rivals for popular favor, golf and tennis.

Golf is played side by side, tennis face to face. In golf you match your score against your opponent's, in tennis you match your playing, stroke by stroke, against his. In tennis each time you hit the ball—except on the serve—your problem is determined by what your opponent has just done to the ball. In golf—except on the drive—your problem is determined by what you have just done yourself. In tennis your opponent may take advantage of your mistakes. In golf you must reap the disadvantage yourself.

Golf is played—as far as the real essence of it goes—*in vacuo*. Tennis is played in company. It is only an accident of golf that you spend perhaps half your time at your opponent's side. It is an essential of tennis that you face him every instant.

In tennis you fight your antagonist; in golf you fight yourself.

Golf is rhythmic, tennis staccato. Golf is subjective, tennis objective.

So the two games demand different qualities. In tennis you must have nerve; in golf you must have no nerves. On the court you need alertness, swiftness, rude power, adroitness, intuition, courage. On the links you need poise, deliberation, calculation, coördination, patience, self-knowledge. Golf needs cool blood, tennis hot. In tennis you must discover your opponent, in golf you must know yourself.

So they are two great games. There is no better game than either—not even the other.

OVERLOOKED OR FORGOTTEN

AUSTRIA has sent to our Government a long protest or argument against our sale of war supplies to belligerents who are her foes. Nothing is said in this protest about the fact that Germany and Austria, having prepared for the war with ample supplies of arms and ammunition, and with great plants for the continuous production of them, have not found it necessary to look beyond their boundaries for such material, while the Allies, having made no preparation of the kind, have been at a disadvantage. We are not considering now, however, the defects of Austria's argument, but would direct attention to certain matters of official record which Austria overlooked or has forgotten.

In our Civil War the Confederacy could not supply its armies from its own factories. It sent agents to Europe, and Austria was easily induced to sell to them large quantities of arms and ammunition. One of these agents was Major Huse, who wrote in a little book about what he had been able to do at Vienna. There he purchased 100,000 rifles, ten batteries of field artillery (fifty guns in all), and a quantity of ammunition. He says that the United States Minister, Mr. Motley, protested and was told that the manufacture of arms was an important industry of Austria, and that the Confederacy was a lawful buyer. His narrative warrants the inference that the seller was the Austrian Government. There is other evidence in the official records of the Confederacy's War Department that such sales were made in Vienna. These records speak of shipments of Austrian rifles, cannon and shrapnel shells, and of about $600,000 worth of similar material to be shipped upon the receipt of the price.

This was overlooked or forgotten, as we have said, by those who prepared and forwarded from Vienna the note of protest recently received at Washington. But it deserves to be considered in connection with that note, being not wholly unrelated to the questions involved.

OUR SEAL HERD

IN 1911 the United States, Great Britain, Japan and Russia signed an agreement to stop killing all seals on the high seas for fifteen years. This ought to have settled the "seal controversy," which has been waged throughout the country for twenty years. Unfortunately it did not.

Such reputable men as Dr. David Starr Jordan, Dr. C. H. Townsend, Director of the New York Aquarium; Dr. B. W. Evermann, Director of the Museum of the California Academy of Sciences, and other members of the Advisory Board of the Fur Seal Service, have been stigmitized as "scientific prostitutes" and "hogwash experts" because their efforts to conserve the seal industry on the Pribiloff Islands in Alaska did not suit certain interests whose profits depended on killing seals.

At last we have an exhaustive report on the whole seal situation by the New Seal Commission, appointed by the Bureau of Fisheries. The long continued pelagic sealing had greatly reduced the herd, the Commission reports; it now contains 294,000 animals, of which 93,250 are "mature breeding cows."

In 1912, a year after pelagic sealing ceased, the herd numbered 215,000 animals; in 1913, 268,000, and in 1914, 294,000. The Commission attributes this increase entirely to the discontinuance of pelagic sealing with its waste of females and not to the discontinuance of the land killing of surplus males. The records show that nearly a million seals—mostly female—were taken at sea between 1880 and 1911, and, as many more than those taken sank after being shot, the total loss "can never be known." Land killing of males was by comparison insignificant. As the male seal is a highly polygamous animal and the sexes at birth are equal in number, it follows that there can be no advantage in saving the surplus males, especially when by such a course the Government faces a minimum loss of $2,700,000 in failing to take and market the skins at the proper time. The Commission states that the reserve of breeding males now meets all possible demands of safety to conservation. The herd is in excellent physical condition, and the Commission strongly advises

both from the standpoint of economy and welfare of the herd that the commercial killing of the surplus males be begun at once. Moreover the blue fox herd on the islands, normally yielding $50,000 a year, is reduced to small proportions as a result of the failure to kill the surplus males, whose carcasses, abandoned after being skinned, have hitherto furnished the bulk of vulpine food.

One who has followed the fortunes of the great governmental seal farm in Bering Sea will find this report interesting. Any one with a love of natural history will find it fascinating.

Dr. Jordan and his associates on the Advisory Board will derive some satisfaction, even at this late date, in having their recommendations relative to the seal islands upheld.

To serve intelligently without salary and receive abundant abuse is often the lot of the public spirited citizen. It is not, however, always good for his patriotism.

RAILROAD FATALITIES AND ACCIDENTS

THE Pennsylvania Railroad, which many consider the best managed in the country and which has the proud record of carrying 180,000,000 people last year without killing one in a train accident, is engaged in a commendable publicity campaign "to inform its patrons as to facts and problems of importance to the railroad and the public."

Bulletin No. 8 is a poster in red and black ink that gives the public a vivid warning not to trespass on the tracks. "Do you realize," it begins, "that more than 5000 people are killed every year in the United States while trespassing on railroad tracks, that trespassing causes a greater loss of life on American railroads than all other causes put together, that fatalities to trespassers while classed as railroad 'accidents' are accidents for which the public alone is responsible?"

All these are true statements. Surely the public should be kept off the tracks, and the railroads should not be blamed for accidents to trespassers. Nevertheless, there is another side of the question. Are the railroads doing all they can to prevent fatalities and accidents to those whose business on and with the roads is perfectly legitimate? While it is true that railroad trespassing "causes a greater loss of life than all other causes put together," it is only a trifle greater, while accidents to passengers, employees and non-trespassers are about thirty-two times as great as to trespassers.

According to the latest figures at our elbow, we find that 5434 trespassers were killed and 5687 trespassers were wounded in 1912. The table for non-trespassers for the same year is as follows:

	Killed	Injured
Passengers	270	14,291
Other persons (not trespassing)	1,198	5,023
Employees (on duty)	2,968	51,215
Employees (not on duty)	716	969
Employees (industrial accident)	100	92,363
Total	5,151	163,861

These figures show that the public should keep and be kept off the tracks and that the railroads should do and be compelled to do much more than they have ever done before to devise ways of preventing deaths and accidents.

THE SONG WHERE NOT ONE OF THE GRACES TIGHT-LACES

THERE are poems to read by the winter's firelight —sonorous colorful things such as in our day Alfred Noyes is writing; and poems of wanderlust to read in March, songs of young love and old to read in April; and deep-souled poems to read in the early dark of autumn. And there are poems for a midsummer afternoon.

They must be light and easy and musical, these summer songs. For the heated days one craves something cool and effortless. It is the time when one turns from opera with its hard-breathing tenors and orchestras with their busy bowing to band concerts or roof gardens, where the music drifts lazily thru real or simulated greenery. It is the time when we will not breast our way thru Browning, or stride magnificently thru blank verse, or wander uneasily in the wayward footsteps of *vers libre*. Rather we will read those fragmentary lays

> Where the verse, like a piper a-Maying,
> Comes playing,
> And the rime is as gay as a dancer,
> In answer.

Call it *vers de société*, or light verse, or familiar verse —so it be brief, brilliant and buoyant, as Brander Matthews says—it is the fare for the summer season. Read it where you will—in the warm stubble of a New England hillside meadow, in the fragrance of a California garden, or on a shaded veranda by the lakes, where the tinkle of ice and the dancing sparkle of the waves coquet with the rhythm as you read. Of course you are reading aloud; summer is no time for bookish seclusion. Could anything be more refreshing than the double rimes that skip thru a song of Dobson's, or crisper than a last line of Prior's or a pun of Locker's, or easier and friendlier than Praed's "Every-day Characters"? Love is a fancy and life a whimsical jest with these versemen. One need not go as far as does sharp-tongued Mat Prior:

> The World Agrees
> That He writes well, who writes with Ease:
> Then He, by Sequel Logical,
> Writes best, who never thinks at all,

but in August at least we are content not to have our poets think too soberly. Then, if ever, it is true

> That many people read a song
> Who will not read a sermon

And if now and then tripping Fancy flouts the realities which the colder days will bring back to us,

> 'Od's life, must one swear to the truth of a song?

Truly there is nothing in rime and little enough in reason that fits better into the mood of these sun-filled days than such trifles. If you do not care to wander thru your Dobson and Locker and Praed and Prior and Herrick and Holmes and Thackeray and others of that "jocund company," you may take your *Lyra Elegantiarum* and your *American Familiar Verse* and do the same thing, and more, anthologically. But you must not forget that some of the most charming light verse ever penned was written after these collections were made. It has not yet ceased to flow, indeed, to quote again from the little poem of Dobson's that says far better all we have said here:

> It will last till men weary of pleasure
> In measure;
> It will last till men weary of laughter
> And after!

THE STORY OF THE WEEK

THE GREAT WAR

August 2—Russians prepare for evacuation of Riga. Germans gain trenches in Argonne with use of flame projectors. Allied airships bombard Strasburg.

August 3—Bavarian troops back in new defenses of Warsaw. Germans attack British at Ypres. Italians repulse Austrian attacks.

August 4—Russian army evacuates Warsaw. Italians bombard defenses of Goeg. French bombard Turkish Anatolian ports.

August 5—Bavarian troops under Prince Leopold enter Warsaw. Germans capture a hill in the Vosges. Austria sends 40,000 fresh troops to the Italian frontier.

August 6—Austrians and Germans take Ivangorod. Italian dirigible bombards Pola, but falls and is captured. Germans fail in an attack on the Meuse heights.

August 7—Russians determine to sustain a siege at Novo Georgievsk. Germans attack Kovno and Osowetz. Italians storm Monte Michele.

August 8—Germans capture fortress of Serock. Many German attacks on western battle line repulsed. Russia rejects German offer of peace.

The Fall of Warsaw

The fall of Warsaw dominated the news of the first week of the second year of the Great War. Linked with it and far more important from the military point of view, tho perhaps less spectacular to the public mind, was the retreat of the Russian army from the jaws of the German trap. These doings involved the most tremendous performances which the war has yet seen. More than three million men were engaged on a battle front extending on a serpentine line more than six hundred miles from the foot of the Carpathians to the shore of the Gulf of Riga—say, from the Chesapeake Bay to Chicago! The third city of the Russian Empire was the immediate object at stake; the ultimate object was the fate of a Russian army larger than an aggregation of all the armies at the high water mark of our Civil War.

The capture of Mitau on August 2 brought the Germans within striking distance of Riga, the chief Baltic port of Russia, and threatened a turning of the right of the new Russian line of defense which might compel the abandonment of Kovno. On the Narew and on the Vistula, just north and south of Warsaw, the Teutonic armies closed in upon the doomed capital. At almost every point the Russians retreated, but in stubborn rear guard actions made the Germans pay dearly for their advance. At Orz the Germans were hurled back with fearful losses, and at Ivangorod they were held for a time in check. But on August 3 a part of the Ivangorod forts were captured by the Austrians; at Blonie, on the west front, the Bavarian troops drove the Russians back upon the inner defenses of Warsaw; and in the north the Germans reached Kupreshki, only fifty miles from the railway to Petrograd.

The end came on August 5. Prince Leopold of Bavaria drove his forces thru the Russian rear guard, and entered the City of Warsaw. He found it an empty shell, from which the kernel had been taken. The Russian army had withdrawn, taking with it all its stores and leaving practically nothing that could be of value to the victors. Also the Russians have destroyed the three bridges across the Vistula, so as to impede the further progress of the Germans. A German government was at once set up in Warsaw, and preparations were made to unite Russian Poland with Galicia and to give the whole autonomy under a mixt Polish-German and Austrian government. Thus Germany hoped to win the popular favor of the Poles and to draw them away from Russia.

Ivangorod was captured by the Austrians on August 6. On the same day and the day following, at the far north, Russian lines upon the inner defenses of Warsaw, and in the north the Germans reached Kupreshki, only fifty miles from the railway to Petrograd.

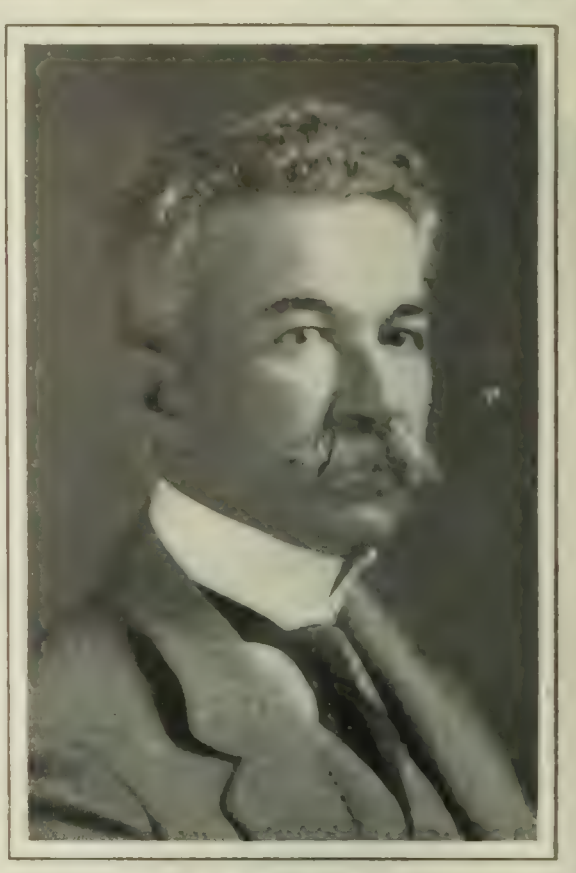
THE GREAT RETREAT OF THE RUSSIAN ARMY



Except for a narrow salient culminating in Praga, the suburb of Warsaw on the eastern bank of the Vistula, the Russians have fallen back almost to the Kovno-Grodno-Brest-Litovsk line. The shaded territory, including Kovno, is still in their hands. The principal trunk railroads running out of Warsaw are indicated.

Activity in the West

While great deeds were being wrought in the East, the war in the West by no means failed. As if to dispel the notion that their strength had chiefly been shifted to the Russian line, the Germans assumed the aggressive in Flanders, France and Alsace. The "flame projector" devices which had prevailed against the British at Hooge were employed against the French in the Argonne, near Marie-Therese, on August 2, and some trenches were thus captured, but were in part retaken by the French. On the same day a flotilla of Allied aeroplanes flew over Strasburg, the capital of Alsace, forty miles from the border, and dropt many bombs.

Still greater violence marked August 3. A German assault was made upon the British lines at Ypres, developing into the third hard battle for the possession of that strategic point. The British held firm, however, and the Germans made no gains to repay them for their heavy losses. In Artois, in the Argonne, and in the Vosges of Alsace, there was fierce fighting at many points with no material gain for either side. So strenuous was this day that on August 4 both armies were glad to remain in comparative quiet, tho the Germans did make two attacks in the Argonne, which were repulsed. But that night the Germans made a tremendous artillery attack upon the French position on the crest of Lingekopf, in the Vosges, and the next day they captured it with a resolute infantry charge. This victory, synchronous with the capture of Warsaw, nerved the Germans to further efforts on August 6. The Crown Prince's army made vigorous attacks at both sides of Verdun, while others were made in the Argonne, and on the hights of the Meuse River, all of which were ultimately repulsed by the French. An all-night attack by the Germans at Souchez was also baffled. The French made unsuccessful efforts to retake Lingekopf. German aviators bombarded Fraize, in the Meurthe Valley, and German guns discomfited four French air craft, one of which was destroyed and one was captured.

Two more attacks were made by the Germans on August 7, directed against the French at Schratzmannele, in the Vosges. One was repulsed by a cross fire of French artillery and the other by a dashing counter charge of the French infantry with set bayonets. A German attack in the Argonne penetrated the first line of French trenches, but was then driven back. In Flanders the heavy German artillery compelled the Belgians to retire from some of their positions on the Yser, south of Dixmude. German attacks were made at numerous points along this line on August 8, but were all repulsed.

In the Alps and Adriatic

The brilliant achievements of the Italian mountaineers in the Carnic Alps compelled the Austrians on August 2 to take steps for the abandonment of their first line of defense along the Isonzo Valley. Advantage was taken by the Austrians of a dense fog to make an attack upon the Italian lines between Scarbitz and Monte Cristallo, but they were repulsed with considerable losses. A similar fate was suffered by another Austrian attack on the Carso Plateau. Meantime in the Tyrol the Italians made a further advance upon Roveredo, thirteen miles southwest of Trent, their advanced siege guns getting within range of the outer defenses of the city. Two Austrian railroad trains, one laden with troops and the other with munitions, for the supply of Roveredo, were fired upon by an Italian mountain battery and both were destroyed, nearly all the entrained soldiers being killed. Heavy guns were carried by the Italians on August 4 and 5 to the neighborhood of Görz, and the bombardment of the outer defenses of that place was begun.

Further progress was made by the Italians on August 6 on the Carso Plateau; tho at Montfalcone they were held in check by heavy Austrian artillery. It was reported that Austrian guns had wantonly destroyed the historic castle of Lissani, where Dante lived in exile. On August 7 the Italians made an irresistible attack upon Monte San Michele, on the Doberdo Plateau, and captured that vantage point overlooking Görz, from which it was said that their artillery would be able to cover their infantry's advance upon the Austrian stronghold. On August 8 some progress was made by the Italians in the Tyrol, in the Sexten Valley, and on the Isonzo River.

The Italians were also busy in the air. On the night of August 3 and 4 one of their dirigible balloons flew over the Austrian port and naval station of Pola and dropt a number of bombs. On starting to return, however, it got out of control, collapsed, and fell into the sea, where its six occupants were rep-

tured by the Austrians. That same night another dirigible bombarded the Austrian encampment at Lake Doberdo, and returned in safety, tho made the target for Austrian guns. A third dirigible bombarded "with great effect" the important railway junction of Opcina, northeast of Triest, and returned safely after an exciting encounter with an Austrian sea plane. An Italian submarine was, on August 7, reported to have been sunk by an Austrian submarine in the Adriatic Sea.

The Turkish Campaign

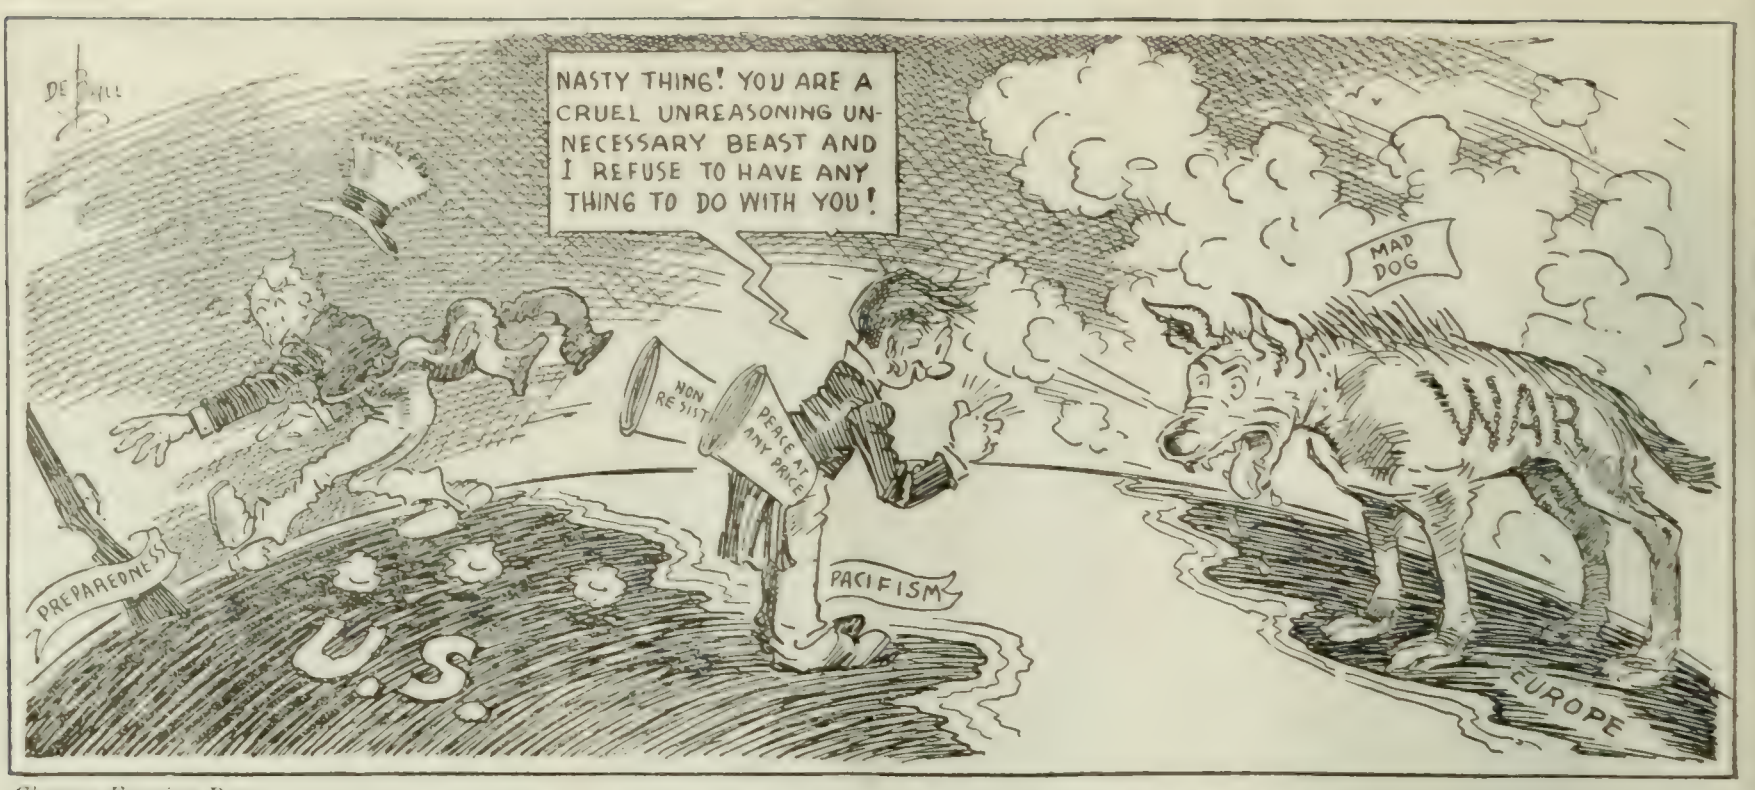
Australian and New Zealand troops again distinguished themselves on August 2 by storming a network of Turkish trenches and winning the crest of the ridge on the Gallipoli Peninsula. The action comprized the bombardment of the Turkish position, the explosion of mines which had been constructed beneath it, and finally a bayonet charge. The result was materially to improve the position of the Allies. A few minor operations of little effect filled out the week's record on the land.

A French squadron, consisting of a cruiser, torpedo boats and hydro-aeroplanes, on August 3 and 4 attacked Sighadjik and Scala Nova, on the Anatolian coast. On the first day the custom house and some of the fortifications of Sighadjik were demolished. On the second day the fortifications and the Turkish quarter of Scala Nova were bombarded, and the village of Spelia, supposed to be a supply station for Turkish and German submarines, was destroyed.

A British submarine destroyed a Turkish steamer in the Sea of Marmora, and Russian vessels continued their campaign against Turkish shipping in the Black Sea. It was reported on August 4 that down to that date nearly nine hundred Turkish vessels had been sunk or burned. Most of these were small sailing craft, for coastwise commerce, tho there were several large steamers and a dozen large sailing ships. But even the small craft were of value to the Turks in carrying supplies to Constantinople from the eastern part of the coast of Asia Minor, and their destruction meant increasing distress in the capital. There were several engagements during the week in the Caucasus, with indecisive results, and word came on August 3 of extensive Turkish massacres in Armenia.

The French Government on August 6 appointed General Serrail to the chief command of the expeditionary forces on the Gallipoli Peninsula and in the East generally, to replace General Gouraud, who had been in command since May but who had lost an arm and had both legs broken in battle.

The Wavering Balkans



Uncertainty continues to prevail in the Balkan States. Bulgaria, however, inclines more and more toward the German-Turkish side. The Prime Minister, Mr. Radoslavoff, was quoted on August 2 as saying that the country was seeking solely its own advantage and the realization of its own rights, and that all negotiations were proceeding satisfactorily. Nevertheless the Turks are reported to be refortifying the Tchataldja lines, as if to guard against another attack from Bulgaria. The increasing intimacy between Germany and Bulgaria was further indicated on August 2 in the announcement that a syndicate of German bankers was arranging to take $50,000,000 of the Bulgarian gold loan of 1914 and to redeem $24,000,000 of Bulgarian treasury notes.

Meantime on August 4 Count Reventlow warned the German government that Rumania's neutrality had become malevolent, with an unmistakable tendency to enter the war as an ally of Germany's foes.

The Ministers of Russia, France, Great Britain and Italy in Serbia made on August 6 another effort to reconstruct the Balkan League so as to sesure the mustering in of Rumania, Bulgaria and Greece by the side of Serbia in aid of the Allies. The good offices of Mr. Pachich, the Serbian Prime Minister, were sought to that end. The effort served the interesting purpose of marking a closer coöperation than had before been observed between Italy and the Allies. The Serbian government was so impressed by the representations of the Allies that it indicated a willingness to make some concessions to Bulgaria in Macedonia. Mr. Gounaris, the Prime Minister of Greece, however, declared that Greece would not think of ceding any Macedonian territory to Bulgaria.

Operations at Sea

The week's record of naval operations was unusually full. The British Admiralty on August 2 reported that its submarines had sunk two war vessels, a transport, and a fourth enemy's steamship. The transport was a large

Chicago Evening Post

WOULD YOU CALL THIS FELLOW BRAVE, OR JUST PLAIN CRAZY?

German vessel, in the Baltic, the loss of which was acknowledged by the German Government. The others were Turkish vessels in the Sea of Marmora. On the same day three British steamers were reported sunk, one of them certainly and the others probably by German submarines. A Russian torpedo-boat destroyer was sunk by some unknown means in the Black Sea. The sinking of another British steamer by a German submarine was reported on August 3, but the locality of the incident was not disclosed, the Admiralty having adopted the prudent system of not letting it be known in what waters German submarines were operating. A Belgian steamer was torpedoed by a German submarine on August 4; two British steamers and a trawler were sunk on August 5; and six British trawlers and a Danish steamer were destroyed on August 6.

The German Government on August 5 apologized to that of Norway for the sinking of a Norwegian steamer under the supposition that it was British, and offered to pay a full indemnity. Two American steamers, the "Llama" and the "Wico," laden with petroleum and bound for Stockholm, were seized by the Germans and taken into Swinemunde.

The British Government has now succeeded in stretching a steel net fence across the Channel west of Dover and also across the northern entrance to the Irish Sea. These effectually prevent the passage of submarines. The result is that German submarines in order to reach the British Channel or the Irish Sea must make the voyage clear around the British Isles, a distance of 2500 miles, or more than half their entire radius of action. Thus it is expected the activities of those vessels in those waters will be largely if not entirely prevented.

Among the Nations

The British nation observed the anniversary of the beginning of the war, on August 4, with a service of prayer. At noon all business and industry ceased for an hour, while cathedrals and churches were thronged with interceding worshipers. Secular meetings were also held during the day to confirm the people in patriotic resolution. A British Order in Council was issued on August 3, prohibiting after August 30 the shipment of coal from the United Kingdom, excepting to British possessions and protectorates. Shipments had already been restricted to British possessions and protectorates and Allies. The new order will cut off supplies to the Allies, which may be a serious thing for France, seeing that her coal mines are chiefly in the hands of the Germans.

The French Chamber of Deputies marked the anniversary of the beginning of the war on August 5 with an extraordinary demonstration of patriotic devotion, in which it was made clear that Frenchmen of all political parties and social creeds were joined in a "sacred union" for the inexorable prosecution of the war to an end which should comport with the interests and honor of France. The Chamber voted an appropriation of $24,000,000 for the purchase of wheat and flour for the civil population.

The German Emperor celebrated the anniversary of the war with a proclamation justifying his course in beginning the war, and insisting upon the winning of a lasting peace on conditions satisfactory to the German Empire. This was approved with enthusiasm by practically the entire German press. A little later the empire was filled with exultations and rejoicings over the capture of Warsaw. The German Minister of War on August 2 reported that during the preceding week 120,000 prisoners had been taken. The total of Russian prisoners taken to date by Germany, he said, was 1,784,469, and by Austria-Hungary 1,249,733, a grand total of 3,034,202.

The fall of Warsaw, which had been fully discounted, did not discourage Russia but rather seemed to strengthen the determination to prosecute the war with renewed vigor to a triumphant end. The Duma on August 3 unanimously adopted a resolution declaring it to be the unshaken purpose of the empire, without distinctions of race, language, religion or politics, to continue the war until complete victory was attained. It was reported on August 8 that Germany, thru the King of Denmark, had made to Russia an offer of peace, separately from the other Allies, on the basis of the cession of Galicia to Russia and of western Poland to Germany. The proposal was said to have been rejected as unworthy of consideration.

American Interests

The British Government on August 2 and 3 made reply, in a series of three notes, to the American protest against the Order in Council declaring a blockade of neutral European ports. The gist of the reply was a denial of the American contention. In support of its policy the British Government cited as a precedent the practise of the United States itself during the Civil War, and argued that under international law commerce with an enemy could not enjoy exemption from blockade and seizure merely by the expedient of passing thru an intermediate neutral port. It was suggested that if the United States could not secure satisfaction in the British courts it would be free to carry the matter before a tribunal of arbitration. This reply was not satisfactory to the United States Government, which immediately began the preparation of a rejoinder; with the expectation that in the end the whole matter would have to be referred to arbitration.

The German reply to the American note of June 24 on the sinking of the American ship "William P. Frye" by a German cruiser was received on August 2. It was to the effect that the German Government held the act to have been quite legal, and that the question of indemnity must be settled by the German prize courts. The American contention had been that the sinking of the ship was illegal and that the jurisdiction of a German court could not be recognized. Both countries are apparently willing to have the dispute arbitrated, and that disposition of it will probably be made.

A French prize court on August 4 approved as legal the seizure of the

American cotton ship "Dacia" early in the war. The ground of the seizure was not that the cargo was contraband but that the "Dacia" was a German ship which had been transferred to American registry after the beginning of the war in order to escape being seized as an enemy's vessel, or compelled to intern. It is not expected that the United States will acquiesce in this decision of the French court without further protest.

Despite the efforts of alleged German agents and others to cause a general strike in arms and ammunition factories in this country, American shipments of war materials continue on an extensive scale. The steamer "Adriatic" sailed for Liverpool on August 4 with what was said to be the largest cargo of such goods ever shipped.

The War Orders

Italy has been buying American horses for several months, but she sought ammunition for the first time last week, when an order for $5,000,000 worth of cases used in making shrapnel was given to a company in Chicago.

In the four months ending with June the exports of war material and food supplies from our northern ports on the Pacific, mainly to Russia, were as follows: Seattle, $10,000,000; Portland, $4,000,000; Tacoma, $2,300,000. They included cartridges, arms, barbed wire, horseshoes, aeroplanes, automobiles, dynamite and powder.

Very large orders from Russia for shrapnel are said to have been placed within the last few days. It is said that the Canadian Car and Foundry Company's original order of $25,000,000 has been increased to $114,000,000. Reports say that France intends to give an order in this country for $50,000,000 worth. An order for munitions taken by Baltimore manufacturers requires the construction of three additional buildings. Russia has sent agents to buy here the rolling stock required for her new railroad from Petrograd to Kola, a port not far from Archangel, and the first order is for 7000 cars. An American engineer is making the railroad.

Sinking of the "Eastland"

At the end of last week the federal and state grand juries engaged in the inquiry about the sinking of the "Eastland" in Chicago adjourned for a few days. The coroner's jury had already finished its work. This jury declared that the boat had been improperly constructed and was improperly loaded. There was no evidence that the passengers had been "guilty of any unusual act that contributed to the disaster." It was recommended that six persons be held on a charge of manslaughter. These are William H. Hull, general manager of the company that owned the boat; Harry Pedersen, the captain; Joseph N. Erickson, chief engineer; Walter K. Greenbaum, general manager of the chartering company; Robert Reid and Charles C. Eckleff, federal steamboat inspectors at Grand Haven, Michigan. Reid officially reported a few months ago that the boat was safe and in good condition. He also gave permission for an increase of the number of passengers allowed from 2500 to 3500.

The testimony showed that when the boat pulled over and went down there was no water in her ballast tanks, although it was greatly needed for the safety of so topheavy a craft, and a naval architect had advised her owners that the tanks should always be kept full. The officers asserted that only 2408 tickets were sold, but 3500 have been found. This number did not include the many children, the youngest of the age of seventy-two days. There are indications that about 3000 persons were on board. The latest report is that 991 lives were lost. Of the 549 bodies recovered, 528 have been identified.

Indictments from the two grand juries are expected. General Uhler, supervising inspector of the federal department, told one of the juries that the disaster was due partly to the failure of Congress to act in response to the department's recommendations that the regulations should be made more stringent and the inspections more searching. The Board of Inspectors which has been making an inquiry under the direction of Secretary Redfield recommends in a preliminary report that there shall be a board of naval architects to pass upon the plans of merchant vessels prior to construction, and to exclude such vessels from service until their safety has been tested to the satisfaction of the board.

THE LAST VETERAN IN SERVICE

Col. John L. Clem, U. S. A., who reached the retiring age on August 13. He has been for two years the only man still in the service who took part in the Civil War. Col. Clem was a drummer boy at the age of twelve and was said to be the youngest enlisted man in the war

A Plan for Mexico

It became known on the 2d that our Government had sought the coöperation of Brazil, Argentina, Chili, Bolivia, Uruguay and Guatemala in support of a plan for a restoration of peace and the establishment of a good Government in Mexico. The Ambassadors and Ministers of these countries were invited, on June 30, to attend a conference at Washington. On the 5th the first session of the conference was held. In the course of two hours the condition of Mexico was described and the purpose of our Government set forth. There had been ample time for communication with the home Governments of the conferees, and the movement had their approval. At the second session, on the following day, an agreement was reached as to the general terms of an appeal which is to be sent to the faction leaders. Each Government will send an appeal of its own, but all will be of the same character. Another session is to be held in New York.

While the plan has not been fully developed, the substance of it is that the faction leaders shall be asked to lay down their arms and agree to support a provisional President who was a member of Madero's Cabinet. Our Government would name Vasquez Tagle, formerly Minister of Justice, the only member who did not resign. The exportation of arms and ammunition to those refusing to support him would be forbidden. Tagle might, after a time, retire in favor of the head of his Cabinet, and this head might be Eduard Iturbide. The great obstacle is Carranza, who asserts that he himself is entitled to recognition, and who opposes Tagle, saying that the latter would represent Villa. Carranza has sent to each of the conferees a letter setting forth his objections. They realize that if he remains obstinate it might be difficult to support a Government which he and his army rejected. It is understood that Villa and Zapata accept the plan and that Tagle is their candidate.

Villa, retreating, has come northward to Chihuahua. Obregon, Carranza's military leader, was at Monterey last week. When he captured Aguascalientes he got possession of large stores of Villa's ammunition. In Chihuahua, Villa confiscated the goods of American merchants who refused to take his currency at 30 cents on the dollar, the current rate being only two cents. He put to death thirty-three Mexican railroad men who asked to be paid in American currency, with seven Mexican, Spanish or Chinese merchants who would not take his notes at his own valuation. At Vera Cruz, Carranza's currency has fallen to about five cents on the dollar.

In Texas, along the border near Brownsville, Mexican bandits have been raiding American ranches. They have killed several Americans. Two of our cavalrymen have lost their lives while attacking them. More than twenty of the bandits have been shot to death. Calles, Carranza's commander on the Arizona border, persists in attacking Nogales, and General Scott has undertaken to procure a renewal of the border neutrality agreement.

Our Forces in Hayti

American marines now control and hold the capital of Hayti and the port of Cape Haytien. The number landed is about 1400 and they are to be reinforced by 850 who are now on their way to the island. A small force of French marines was landed at the capital, after the consent and approval of Admiral Caperton had been obtained. In seeking his consent the French Minister virtually acknowledged the superior interests of the United States. At the capital our marines promptly took possession of a fort that dominates the town and also of the barracks, the port offices and a Haytian gunboat. In the course of these proceedings one Haytian was killed by a marine's gun. At Cape Haytien the revolutionist army was warned to refrain from entering the town. When they showed an inclination to disregard this warning it was emphasized by a few shots from an American gunboat.

It is expected that possession of the two cities will be retained by our forces until a decision is reached by our Government as to its policy. Admiral Caperton sent to Cape Haytien a commission. A naval officer was chairman, but all of his associates were prominent Haytians. Among them was an ex-President and an archbishop. The commission urged the commanders of the two factions to lay down their arms and to attend a conference at the capital. Both refused to do this. Dr. Bobo, the revolutionist leader, started for the capital, saying he would disarm his forces there. Blot, the Government leader, fled to Santo Domingo. At the capital the Congress planned to elect a President on the 8th. Admiral Caperton thought, however, that such action would be inopportune and the election has been indefinitely postponed. The president of the Senate sent a complaint to Washington, objecting to our occupation of the capital. The Haytian Minister was assured by our Government that no permanent holding of territory nor any impairment of Haytian sovereignty was intended. The people of the bankrupt country are in a deplorable condition. There is danger of famine in several towns.

THE LONGFELLOW HOUSE, NOW PUBLIC PROPERTY

The Craigie House, where Longfellow lived, in Cambridge, Massachusetts, has been left to the public, in the name of those families by Mrs. Barbara Henry Thomas. It is proposed that it be opened to the public as a specimen of the best colonial architecture in and maintained as a historical monument to the association of the house, by George Washington during the siege of Boston in the Revolutionary War and as a memorial to Mrs. Thomas's grandfather

FROM STATE TO STATE

ARIZONA: Dean Byron Cummings of the school of arts and sciences of the University of Utah, has declined some tempting offers in the East in order to identify himself with the University of Arizona. For many years he has headed expeditions into the archaeological fields of southern Utah and northern Arizona, with the result that the University of Utah has one of the most important museums of archaeology in the United States, and Mr. Cummings is recognized as a leading authority in that study. Since leaving Utah he has been doing field work in Arizona with a view to establishing a museum for the university of that state before taking up his regular work.

COLORADO: A committee of expert agriculturists from federal and local institutions is making a farm management survey of the several counties of Colorado. The aim is to increase the efficiency of farm management by visiting each farm, obtaining information concerning its management and then, after expert consideration, sending to each farmer a written communication suggesting how he may improve his methods of economical production and profitable selling. At first the committee encountered some opposition from farmers who did not understand why they should tell their private affairs, but this has been practically overcome by the real help that has been given. It is estimated that five years will be required for completing the survey of all the counties.

DISTRICT OF COLUMBIA: The old stone steps at the front of the National Capitol, on which many Presidents of the United States have taken the oath of office and delivered their inaugural addresses, are being removed, to be replaced by new granite ones. Mr. John R. McLean, the publisher, has purchased the old stones and will use them in the construction of a sunken garden at his beautiful country home, which is one of the show places of the District.

INDIANA: Superintendent L. J. Montgomery of the South Bend High School favors a course in Bible study for his pupils, and expects to put it into effect this fall, conducting the work according to a plan laid down by the State Board of Education. This plan permits groups of pupils of any denomination to be instructed by teachers of that denomination at a place provided by them. The courses must be in accordance with those approved by the state board, and before credit will be given, the students must pass examination under the supervision of the school board.

KANSAS: In a recent letter to the new Civil Service Commission of this state Governor Capper laid down the rule that no man who takes a drink of intoxicating liquor can work for the State of Kansas. In discussing the matter later the Governor said this rule should have been applied many years ago. Kansas has had prohibition laws for thirty-five years, and this is the first time a test has been put upon the law of upper by its supporters. Indeed, it is said never before to have been applied to the employees of any state. There are about 3000 persons on the Kansas payroll, and the use of liquor by any of them will be deemed sufficient cause for dismissal.

MINNESOTA: Thus far this year one real estate agency has sold 119 farms in the vicinity of Bemidji, in the northern part of this state. Not any of this land went to speculators. It was all bought by actual settlers, seventy-nine of whom have already begun improvements on their places, while the others are to do so soon. Diversified farming will be the leading occupation of these new comers, the many will operate poultry ranches and some will establish dairies. The average price paid for the 119 farms was about $15 an acre.

MISSOURI: With the opening of the Panama Canal the people of this state are beginning to see great shipping possibilities in their two great rivers—the Mississippi along the eastern border and the Missouri crossing the state centrally and forming nearly one-half of its western boundary. New Orleans is providing docks, elevators and other means of transshipping from river craft to ocean vessels, and many lines of freighters are organizing along the Mississippi and its tributaries. For the first time in twenty-five years river freight is passing between Kansas City and Omaha. It is not very heavy as yet, but is regarded as a good start toward revival of river traffic. A cement company at Hannibal, Missouri, which has maintained a fleet of barges for carrying its own products down the Mississippi, has announced regular sailings from Hannibal and St. Louis downriver, handling all classes of freight.

MONTANA: The first natural gas supply ever found in Montana was recently located two miles east of Havre. A well 947 feet deep has a daily capacity of 15,000,000 cubic feet, according to the United States Government rules for computing gas measurement. The largest gas well in the world, in Pennsylvania, measures 30,000,000 feet; the second largest, at Bow Island, Canada, measures 19,000,000, only four million feet more than the Montana well. Experts who have been working on the ground for a long time say that the northern part of Montana is likely to develop into one of the richest gas and oil fields in the world.

NEVADA: In the matter of agriculture Nevada has never taken herself very seriously. Want of irrigation has made farming in many parts of the state a rather melancholy joke. Now, however, under the leadership of the University of Nevada, she is beginning to come into her own. C. P. Camp[illegible] of the municipal engineering department of the university has succeeded in reducing some of the land already to paying production by making [illegible] and running ditch that has proved enough to irrigate seventy acres of alfalfa. Some [illegible] with sorghum have been made with surprisingly good results. At Indian Springs a moist-bearing stratum was found at twenty-two feet. At Las Vegas several wells have given the irrigation problem and abundant crops are assured.

NEW HAMPSHIRE: The citizens who voted the new code of New Hampshire, go to have control of the state institutions, began their duties in July. These officials described as "representative New Hampshire business and professional men whose services could not be secured for money," have no fixed salaries and receive nothing from the state but their bare personal expenses while actually performing state duties. As an example of what may be expected from them, the fact is cited that the law permits them to appoint a business manager of state institutions at a salary of $4000 a year and a purchasing agent at a salary of $3000, but one of their first official acts was a decision that the business manager should perform the duties of both offices and save to the state the salary of a purchasing agent.

NEW JERSEY: The State Water Supply Commission purposes to develop the Wanaque watersheds with a view to selling ample supplies of potable water to Jersey City, Elizabeth, Newark, Harrison, Nutley, Orange, East Orange, Passaic, Paterson, Glen Ridge and Montclair. It is planned, if the cities accept the proposition, to build a dam 1400 feet long and forty-eight feet high at Midvale. According to preliminary surveys, this would create a lake about six miles long and nearly a mile in average width, which would impound approximately 11,000,000,000 gallons of water. The state would guarantee a supply of at least 50,000,000 gallons daily to each of the municipalities entering the project. The cost of the improvement is estimated at $6,000,000.

NORTH CAROLINA: Interest in several large tracts of waahoo timber in this state has been excited by inquiries recently made by a Massachusetts manufacturer as to the extent and condition of this wood. No operations have been conducted on these tracts for many years, but now that there is a demand for waahoo, which is used in the manufacture of wooden spindles, many almost forgotten stands of it have been located in North Carolina. One large tract along Big Ivy Creek in the northern section of Buncombe County is to be cut at once, and others are expected to follow soon.

OKLAHOMA: [illegible] was granted an [illegible] to [illegible] that the usual [illegible] purpose there has been [illegible] its laws on a free [illegible] [illegible] and what to [illegible] for [illegible] the [illegible] has now declined to abandon the [illegible] of land and [illegible] land of [illegible] has [illegible] Muskogee a [illegible] of $1,000 [illegible] and the [illegible] [illegible] [illegible]

REASONABLE PREPARATION

BY LINDLEY M. GARRISON

SECRETARY OF WAR

HOW should the American people view the problem of national defense? Circumstances force this question upon our attention whether we will or no. Every citizen worthy of his privileges must give it full and free consideration and not rest until it has been settled to his satisfaction. It is not merely a matter of selfish interest to each citizen, tho that aspect should enter into his consideration. A great nation like the United States of America owes a duty to its citizens in the protection of their lives and property, but it has also undertaken the solemn obligation of handing down unimpaired those principles of government which were obtained by the heroism and enlightened intelligence of our forefathers. If it be true, as we like to think it is, that our type of government, which allows the fullest, freest opportunity to the individual citizen, is the greatest advance yet made along the line of civilization, then our obligation is immeasurably increased, because of the imperative necessity of preventing that type of government from being overthrown and its beneficial results lost.

It becomes necessary, therefore, for each one to ask himself this question: Has this country, in the light of all that should be considered, taken proper military precautions?

To those whose judgment is determined by preconceived convictions, the answer is of course a simple one and reasoning is futile. If one is convinced that man is never justified in the use of force to defend or protect himself or otherwise when circumstances would seem to require it, then no argument or reasoning or other considerations will prevail. Likewise to those who feel justified in trusting to luck or chance, reasons and facts are useless. But to the great mass of men who look upon this matter from the standpoint of reason, common sense and duty, there is a very live, real question which calls for their best efforts to solve properly.

It is interesting to observe that even those who shrink from taking military precautions constantly refer to the defensive possibilities possest by the country in its undeveloped, untrained personnel. In other words, they recognize that in the world as it exists today force may become necessary to preserve the most sacred and essential elements of life, but they prefer not to prepare for this possibility, and assume or state

Harris & Ewing

SECRETARY GARRISON

that when the emergency arises we can develop the resources to meet it. I do not feel that this is an intelligent way to deal with this great question or that it will appeal to a reasoning mind. So long as force is used in the world, those against whom it may be used must reckon upon the possibility, and if they are wise men and intelligent men and courageous men, they will prepare themselves therefor. There must be a clear decision between no preparation and proper preparation. Words have such an unfortunate way of accumulating meanings foreign to their essence that I prefer the words no precaution and reasonable precaution. To many people the use of the word preparation conveys the idea of getting ready to do something which one wishes to do, whereas the word precaution more nearly describes the state of mind of those who are getting ready to ward off or deal properly with what may come, but against their will and not because of it. Intelligent, clear thinking minds conclude that reasonable precaution should be taken.

Some, however, refuse to accept this conclusion, their contention being that if this nation takes reasonable precaution it fails to avail itself of the opportunity to set an example to the rest of the world. They argue that we should set this example, and justify themselves in leaving the nation helpless, by the great benefits to mankind which they see in this course. An all-sufficient answer to those who voice such sentiments is present before our eyes today. This nation has surely set just the example desired for the 139 years of its existence. A less militaristic nation has scarcely, if ever, existed upon the face of the earth. At all times when not actually engaged in warfare, the military precautions taken by this country have been absolutely negligible. What is happening upon the Continent of Europe does not seem to have been a happy outcome of our example any more than does what has just happened in the Far East. If our example is to have no more effect than is exhibited upon the opposite side of the two oceans, then it seems to be the hight of foolishness to leave ourselves helpless because of the supposed benefit of our example. Across the Atlantic the effect of our example has been negligible, unless we are to claim proudly that those nations which almost lost their national existence because of lack of military precautions did so because of our example, and unless we are to claim proudly that across the Pacific our example was responsible for the condition which led the President of a great republic to say:

> Our rights and privileges in Manchuria have suffered enormously. We are shamed and humiliated, but our own weakness invited insult. Let all the people unite and work harmoniously for the supreme object of saving the country.

Even upon that side of the question which does not appeal to the finer emotions and sense of duty, but concerns itself with the material or financial aspect of the question, the reasons which make for proper precaution are just as cogent. We have always maintained the minimum of military preparation, with the result that whenever we have engaged in war we have suffered the maximum of loss in life and money. In payment of bounties and pensions and other necessary results of the lack of proper preparation, we have met with the inevitable results of improvidence. A tithe of the amount

trained and ready for military service, would have made these enormous expenditures unnecessary.

Those who approach the subject reasonably must therefore look upon the question of preparedness for national defense from the point of view of necessity. We recognize certain constitutional obligations resting upon the nation to preserve the republican form of government, to suppress disorders and to repel invasion. Part of these obligations can be met and always have been met by us with a small military force permanently set apart for such duty from the rest of the citizen body. And with such a force we may control, as for several years we have done along one of our borders, a situation which might otherwise endanger the national peace. For such a purpose the Executive must have at his command a small but highly trained and highly disciplined force that can be relied upon to obey his will as unerringly as a piece of mechanism obeys the will of the engineer. It is too little realized how much the avoidance of trouble along our southern border has been due to the perfect discipline and highly proficient training of the men of the regular army. The possibilities of widespread conflict, leading perhaps to warfare between two countries, were inherent in the situation and required calmness, firmness, tact and thoro discipline to avoid.

What, then, is reasonable to do by way of preparation under the circumstances? It is not difficult to determine what must be the strength of the small permanent force that is needed to enable the Executive to perform the first two of the constitutional obligations, because we have ample experience to guide us. But it is a more difficult matter when we try to determine in advance what additional preparation a free state must make to perform its supreme function of repelling a hostile invasion of its territory. It is true that in this case, too, we have had experience, but it has been under such widely divergent conditions that much study is required in order to draw safe conclusions for meeting the conditions of the future. One thing, however, is certain. The experience of the past has demonstrated to any reasoning mind the absolute necessity of proper preparation, whatever may be our individual conclusions as to what is reasonable. We have tried the minimum degree of preparation and our history is full of its unhappy lessons.

In our first war we enrolled 400,000 untrained men. But while we had to endure the cost of maintenance of this very large percentage of our then population and suffer the corresponding loss in useful production, we were seldom able to muster more than about 30,000 men to meet the invader in all parts of our territory. A far smaller, well-trained and reliable force under Washington would undoubtedly have won independence with much less waste and loss of life and money. And the pensions subsequently paid to the great number of ineffective and useless men were a very considerable part of the total debts recognized by Congress and the states at the close of that war.

In our second war we enrolled more than half a million men. Notwithstanding this reckless extravagance in men the largest force that our enemy ever opposed to us was about 16,000 strong. A thoroly reliable and trained force one-twentieth of that which we actually enrolled should have decided the war in its early months and prevented all the loss that followed.

In our third war the early part was successfully carried thru by a force of 2100 thoroly trained regulars. The second part was carried thru by another such force which at no time exceeded 13,400 men, while the enemy's capital was captured and the war ended with a trained force of less than 6000 men. Nevertheless, the total number of men enrolled for the war was over 104,000 men.

In the Civil War we enrolled nearly three million men; and this takes no account of the great number enrolled on the other side in that unhappy struggle. Making all due allowance for reenlistments the number was still enormous in comparison with the number actually engaged in the campaigns of any one year. Of course in such a war it is difficult to conclude what would have been the result had the Executive had at his disposal at the outset a vastly smaller well-trained force. But if we must draw any conclusion it is that such a force in the beginning, insignificant in comparison with the ultimate total, might have accomplished the same result in far less time with correspondingly less loss of all kinds.

In our latest war we enrolled 275,000 men, of whom the total number actually employed for any useful purpose during the war did not exceed 60,000 men. The remainder furnished the death and disease roll in camps where troops lived as a useless burden on the Government.

Now, from the point of view of a business man we naturally ask ourselves the cost of all this extravagant expenditure made necessary by the absence of previous reasonable preparation. Statistics on this point are not at hand, but it can be said that the cost of the war between the states, on one side alone, has been estimated as approximating six billion dollars; this is exclusive of its resulting pensions, and our total pensions to date amount to a trifle less than five billion dollars. There should be no doubt of the choice, from the business point of view, between no preparation or the *minimum* preparation on the one hand, and reasonable preparation on the other.

And so we come again to the question: What is reasonable preparation and how are we going to determine it? There are some who have a dread that even reasonable preparation—which they admit to be necessary—will set us well on the road to militarism. But it has been shown that the permanent military force needed to enable the Government to comply with most of its constitutional obligations can be relatively very small. And, at the most, a comparatively small increase in that permanent force is all that is necessary to enable it to perform its all-important function—that of training a citizen soldiery. For, it must not be forgotten that the one great lesson of all our wars is that they must be carried to a conclusion by citizen-soldiers and these citizens must be *trained*. To thrust untrained citizens into the field is nothing short of death by governmental order.

Men who have studied this subject with care, think that a well-trained body of four to five hundred thousand citizen-soldiers, immediately available together with our permanent force in the regular and militia establishments, will give us reasonable guarantee against hostile invasion of our territory. In reaching this conclusion due weight must be be given to the coöperation of our navy and our land cost defenses. The latter—with the reasonable improvements necessary to keep up with the progress in invention—will amply protect all important harbors, all exposed centers of population and industry, all terminals of railroads giving access to the interior. The former will make it very difficult but not impossible to land on other parts of the coast. But it is fairly safe to say that no enemy is likely to attempt to land unless our fleet should be driven from the sea. Reasonable preparation practically consists in being ready to meet this latter contingency, and to meet it a force of this size is believed to be necessary.

Hundreds of young men are eagerly coming to our student camps of military instruction. They are there

Paul Thompson

FIFTY-FIVE HUNDRED MILITIAMEN AND REGULARS CAMPAIGNING AT FISHKILL, NEW YORK

New York City-bred troops had a splendid opportunity to apply in the field what they knew of the science of fighting, which at best can be but inadequately learned from the "Book" or on the armory floor. They dug trenches, made long marches with full equipment and engaged in remarkably interesting and realistic sham-battles. The "citizen soldiery" studied modern fighting with the aid of machine guns, field telephones, pontoon bridges built by the men themselves, an aeroplane and many other inventions of modern warfare

Paul Thompson

TARGET PRACTICE AT FORT TOTTEN, ONE OF THE FORTIFICATIONS GUARDING NEW YORK HARBOR, USING A GREAT MORTAR

learning no undemocratic or militaristic ideas, they are taught nothing inconsistent with the manly virtues of free citizens of the republic, but simply how to render in the most effective way the last full measure of devotion which free citizens may have to give to preserve freedom for those who come after them.

We must find a way to impart proper military instruction to a relatively small number of our young men to provide this citizen force of between four and five hundred thousand. I am very hopeful that reasonable suggestions to this end will meet with the practically unanimous approval of the people of the country.

The one great lesson of experience is that reasonable preparation in time, for a people who seek only to defend themselves against aggression, makes unnecessary unreasonable preparation afterward—when, perhaps, it comes too late. And the wise man will bear in mind that reasonable preparedness is not the cause, but the antidote of militarism. Let us always, as the result of our failure to be ready, wrest from us by violence a part of our domain, and it is certain that we will go to the other extreme. And for such a consequence the anti-preparedness advocates will be entirely responsible. To justify himself, the wise anti-militarist should be the most earnest advocate of reasonable precaution.

Washington, D. C.

THE CITY OF DREADFUL NIGHT

BY ADRIANA SPADONI

"I DON'T *want* to kill him."

"No. I understand, Karl. You really love him."

"Yes. I love him very much. More than anything except the mother. But he is so small and hot and he comes so close."

The gray-haired woman nodded. "I understand. You try to get as far away in the bed as you can, but he follows."

The big boy nodded. His blue eyes lost their fear for the first time since he had tapped timidly on the door of the head worker's private office. "It frightens me. Maybe some night—"

"Come, Karl. Let's talk it over. There must be a way. There is *always* a way."

The woman led the way along the cool, dim hall to the big library at the end. Here it was very still. The noise of the crowded street outside, the rumble of heavy wagons, the shriek of hundreds of children came softly muffled. The woman dropt into a deep chair and let her hands lie restfully in her lap. The boy sat on the edge of a chair twisting his cap in his heavy, broken hands.

"Come, tell me all about it."

While he talked the woman looked from broad, patient face to the broken hands, and out thru the closely-drawn curtains to the street. As he talked she heard them, all the millions of people everywhere, pushing, beating, tearing a way thru life.

"Four years ago we come from Bohemia. There are ten of us, eight children and the old folks. We have four rooms, little rooms and one without any window. In winter it is not so bad. Then with three in a bed we keep warm. It takes no coal at night. But in summer—God! All day I work making caps. I sit in front of a machine. I press with my heels, The power comes on. At twelve o'clock I press with my toes. The power stops. All day I watch the point of the needle. Sometimes I think it is in my eyes, it is so sharp and bright. All day the floor shakes and the machines—I don't know how you say in English—the machines talk like animals when they are hungry. All day it is like that, shake and roar, roar. I must not move. If I move perhaps the needle goes thru my finger. Sometimes the girls move. Then—zip—the nurse comes and cuts out the needle. Sometimes I try to think of the old country, where we lived on a little farm. But I cannot see the farm, I can see only people, thousands of people all making caps. Now I do not try to think of the old country. I think of nothing, only watch the needle and make caps. I am very quick. The work is steady . . . sometime all the caps in the world are made. Yes? Then they give me something else to stitch! At twelve o'clock I go out in the street and walk very far. But there are always people. Nowhere in New York can I find a place without people. Thousands, thousands of people and children, so many children. Some day they will be big and will have children and those children will have children and then—the world will never stop!"

The boy half rose from his chair in terror. Then he dropt back.

"Sometimes I walk by the East River. But it is the same. There are the boats and all the boats have people. And I can see them running about and the whistles scream. Even on the river there is no peace. Sometimes I think the boats are trying to get away from each other. But they can't. Yesterday I saw a little boat running after a big boat. The big boat was trying to get away, but the little boat was always there, waiting for a little room to get in.

"It is like that at night, when the little brother follows me across the bed. One night I got out and tried to sleep on the floor. But the room is very small and Nils sleeps on the floor. He snores and so I got back into bed. The snoring of Nils made me think of the machines. In the next room the four girls sleep and little Peter with the father and mother in the other room. When the doors are open I can hear them all snoring. They all make different noises. It is like—a cage with animals in it."

The boy stopped. He seemed to be listening in the stillness of the library to the strange noises of the crowded rooms at night.

The woman turned away and looked out of the window. "How long is it, Karl, since you have heard—these animals in a rage—more—you have felt—that funny feeling in your hands—when—they touch—your little brother?"

"Three—months."

"And it gets worse, Karl?"

The boy nodded. "It gets worse."

"There is no other way? No place else? He *must* sleep with you?"

"Always he sleep with me. He is afraid in another place. He loves me more than the father. And I love him. He is so small, and he has such nice blue eyes. You have seen Little Joe?"

The woman nodded, putting her hand to her throat.

The boy's face brightened. "He is very pretty, yes? I tell mother he is prettier than the girls, but she laughs. She says Anna is prettier, but it is not so. He is so funny too. He says many things to make me laugh. Only at night . . . he creeps so close and he is so small and hot. Sometimes I want to get up in the night and carry him away, somewhere, just for a week, where it is cold and there are no people. . . ."

"You *can't* do it, Karl?"

"Last week the father lost three fingers in the machine. It was his fault, the boss says. He gets no money. He cannot work for a month. Now there is only me and Nils and maybe Mary, she is fourteen. At night I think, all night, when Little

Joe follows me in the bed." The woman stood up as if she could breathe better so. "Karl, do you want to come and sleep every night here on the settlement roof? I will have a bed sent up. You can come and go as you like."

The boy stared. Very slowly the idea penetrated. "Here? On this roof? *Outside?*"

Then he, too, stood up as if the better to breathe. "*Here.* Out—under—the night?" Slowly his eyes filled with tears. The woman held out both her hands blindly. The boy's came clumsily and rested in them.

"After a little while, perhaps you will like to bring Joe. He can have a little bed beside you."

The tears rolled silently down the big boy's cheeks. "He—will like—that! He—loves—the stars—that Little Joe! We can see—one—from the bed! He says—always—'Big Karl, there is the star.'"

The boy brushed his sleeve across his eyes and smiled. "With so many stars he will be crazy."

The woman followed the boy back along the cool, dim hall. As the street door opened the sound rushed in. The boy stood with his head bent, listening.

"You hear? It is terrible. No?"

The woman laid her hand on his arm. "You can come tonight, Karl. It will be ready."

The boy turned slowly and looked at her. "I think—you also hear it sometimes, that—madness! It is terrible—when we hear it once.—No?"

New York City

CAPTURING THE WORLD'S MOTOR MARKETS

BY BRONSON BATCHELOR

A WORLD market for American automobiles!

Within the grasp of motor-car manufacturers today are opportunities such as have seldom come to American business men. The fortune which has attended the motor industry since its beginnings smiles again at the moment it is most needed. Just as domestic markets have begun to reach a saturation point with one out of every sixty-five persons in the United States possessing an automobile and with the supply for the first time tending to equal the demand, new fields for expansion are made available. Just as the need of additional outlets for an annual production of nearly half a million cars is beginning to make itself felt, the virgin trade territories of the world are thrown open to receive them.

Nor have bitter struggles against foreign competition attended the opening of these new motor markets. They are not the results of commercial conquests such as the typewriter, the adding machine and the reaper have made abroad. They have been obtained not thru the efforts of American manufacturers but by the desertion of their former owners. For years foreign automobile makers have had them carefully fenced in as their own special preserves, which they were to develop exclusively. Now the war has called these companies to beat their ploughshares into swords, and the fences have been swept away. American competition will make it very difficult to rebuild them.

Certainly, from the point of view of the American motor-car manufacturer, apart from sentiment, those prospects ought to be encouraging. At one stroke the whole motor equipment of France, Belgium, Germany, Austria, Russia, and to a large extent that of England, has been practically wiped out. So far as peaceful industry is concerned, it has ceased to exist. Every available pleasure car and truck has been "requisitioned," with a promise that the government will "return" it at the end of hostilities. But the destination that awaits most of the cars thus taken is not their owners' garages but the scrap-heap.

To the same scrap-heap, also, will go many of the shops, and their skilled workmen, neither of which can be replaced in a day or a night. The twenty factories of Belgium have been largely destroyed, and every worker of military age driven into refuge or carried off. The whole machinery of production has been reversed; cars are manufactured not for commerce but to feed the armies and care for the wounded.

Even to the task of compensating for the attrition of war, foreign makers have proven unequal. The huge orders for motor trucks which have been placed in America show the strain put upon their depleted finances, labor ranks and stores of material. When the war is over will they be any more able to restore the equipment needed for industry and commerce?

In supplying the belligerent gov-

CLEARING THE WAY FOR THE AMERICAN MANUFACTURER—EUROPE'S CARS ON THE SCRAP-HEAP

Underwood & Underwood

AMERICAN TRUCKS FOR THE RUSSIAN ARMY—A BIG CONSIGNMENT BEING LOADED AT NEW YORK

ernments alone American automobile exports are already rivaling the records of peaceful times. Last year we sold abroad cars and parts to the value of $34,000,000. The shipments of October, 1913, were 1716 automobiles, valued at $1,663,716. Last October, in the third month of the war, we exported only 1404 cars, but their value was nearly a million dollars greater, amounting to $2,286,964. During November and December the totals rose still higher. In each month since the exports have grown $1,000,000 at a time.

Most of the present exports, of course, are military trucks, going to serve the European battlelines. Before the war practically the only thing we sold abroad was the medium-priced pleasure car; now it is the motor truck. Companies that before had few foreign customers are now finding ready sales. And the orders are coming from countries where before it has been hardest for the American maker to compete. France, which before the war led the world with automobile exports of nearly $50,000,000, is now buying American cars. Great Britain, despite her sixty factories, has not been able to get trucks rapidly enough. During the month of May 4,036 cars alone with a value of $5,895,000 were exported to the United Kingdom. France, Russia and Italy also are buying American trucks in enormous quantities. Indeed, so vast has this export of motor vehicles become that, were May with its total of $10,555,395 to be taken as an average, the volume for the year would considerably exceed $100,000,000 — more than a 300 per cent increase over 1914!

The life of the war automobile is necessarily short. Manned with inexperienced crews and forced to travel under conditions no longer pertaining to civilization, these cars are subject to strains that the best of mechanisms cannot long endure. In the field it is impossible to keep them in proper condition, and when they are disabled the only alternative is to drive into the ditch and abandon them. In their retreat from the Marne the Germans left behind solid miles of trucks, burned and abandoned, along the roads.

To a similar ruin the whole motor equipment of Europe will eventually be consigned. Paris and London motor busses, tho they have figured in the dispatches, are not alone at the front. With them have gone the 93,000 cars of Germany, the 100,000 of France and a large part of the 240,000 of the British Isles. It is inconceivable to think that after the war these will not be replaced. Having proven their superior utility in the field, they will be the more needed for reconstruction.

With the motor cars have gone, also, most of the animals of the Continent. Horses and wagons have disappeared. Yet there are farms to be ploughed, grain and produce to be transported, manufactured products of all kinds to be distributed. In Germany and France women and children have gone into the fields. Irvin Cobb tells of going thru Belgium without seeing a single horse, except those old and worn-out, not in German hands. And the life of the war-horse is much shorter than that of the military car. For every man killed, three horses on an average have been lost.

Nor need there be any fear as to how Europe is to pay the bills after the war. There have been many gloomy predictions of bankrupt and stricken lands to follow in its wake. The interdependencies of trade, international finance, the staggering costs—all were to prevent it, and yet they failed.

After the Franco-Prussian War Bismarck levied an indemnity on the French of thirty milliards of francs, in the belief that the resultant eco-

nomic prostration would keep France forever from again becoming Germany's rival. But France is still a powerful nation, and its citizens are still the richest, per capita, in the world today. After the present war —especially if necessity compels it— they can confidently be expected to go on buying automobiles.

Even before the close of ancient history, July 31, 1914, American companies had already made record progress in motor exports. Absorbed in the exploitation of home markets, they were late in entering the foreign field compared with European makers. In 1909 the exports were only 4686 cars, with a value of $6,889,031. By 1911 they had quadrupled with 15,807 machines, worth $15,924,361. Last year 26,889 cars, valued at $27,029,451, excluding parts, were sent abroad. Only France, with $40,924,705, exceeded us.

For both France and the United States Great Britain was the chief customer. France sent across the Channel automobiles to the value of $10,621,543, while from the United States cars were shipped worth $5,111,008. To Germany France sold in cars $3,115,309 as against our $799,552. Brazil and Argentina both bought from French makers more than $5,000,000, whereas our total in the whole of South America was $2,619,212. Buenos Aires alone has imported no less than 12,000 cars, of which eighty per cent are of French manufacture. In other neutral countries France sold more than $12,000,000; the United States $5,000,000.

In many of the neutral countries the United States was already in the lead. Out of the 131 cars imported into Spain by sea in 1912, 128 came from the United States. Italy is becoming an increasingly heavy purchaser. Both are capable of enormous exploitation. Madrid, with a population of 600,000, has only 2000 automobiles, about one-third of the entire number in Spain. Sicily, with more than 3,700,000, has only 600 machines, of which one-third are American made.

All thru the East there has been the same increasing interest in the motor, and especially in the American car. Even far away Java last year imported 1260 automobiles, of which 250 came from America. Sales in India increased thirty-seven per cent in 1913, and of that our share was $195,925. Bombay has over 3000 machines; Manila 1200; even the desert Arabian city of Aden boasts twelve cars, of which four are American, four British, two French and two Belgian. Tokyo and Hongkong both operate American taxicabs.

This progress has been made in spite of many mistakes and very great disadvantages. One American company, for instance, began its sales campaign in France with a circularization of English catalogs, its measurements all set out in feet and pounds, and the price carefully indicated in dollars!

But it did not take the shrewder makers long to see that the easier way was to cater to the customs of foreign buyers. Depots were established in different countries, so that orders for cars and parts could be filled promptly. Managers and competent mechanics were installed to render *service* as well as *value*, and the local styles or preferences carefully followed.

Standardization, especially, has been a big asset in foreign markets. The average Continental looks upon the motor car as a more permanent investment than the American. He does not expect to exchange models every one or two years; he intends to keep his machine as long as it will run properly. For that reason the solidly built European car has been preferred. Here also the American maker now excels. To durability he has added lightness of construction. Thanks to his large-scale production and improved methods, the American manufacturer can duplicate part by part for $2000 a French car costing $3000.

It is such advantages that afford a firm basis for the future of our foreign trade. Against the American scale of production and machinery it is almost impossible for the foreigner to compete in terms of price and quality. The weekly output of any one of several American manufacturers equals the entire production of the largest of the foreign makers, while the annual product of one American factory alone exceeds their combined totals. Against our four hundred and fifty companies engaged in the motor-car business, England can oppose sixty, with a production of 27,000; France can oppose between thirty and forty factories that turn out every year approximately 20,000 cars; Germany a little more than half that of France; Italy, fifteen workshops making 8000; Belgium, twenty factories (now mostly destroyed) producing 3650 cars; while Russia has two small shops, and Spain one.

Is it any wonder that the American motor-car manufacturer is a habitual optimist? He sees before him one of the most magnificent tasks in all the history of man's struggle to subdue the earth. To motorize a world! And his is the opportunity.

New York City

ASSOCIATION

BY IVAN SWIFT

Beyond the shore-guard pines the beach of sand
Stretched off as warm and yielding as your hand
That northern summers past had laid in mine;
And yet the place had set no moving sign
Within my heart. So I had said no spell
Attached to this of import to compel
My song; tho we had lived a thousand days
And grown to comradeship and mutual ways
Within its keeping. Thus when love was young
And you were by my side no song was sung.
The silent shade and your sweet gladness —
These were enough. Somehow the poet madness
Comes not of soft content and troths unbroken,
And of such perfect peace no words are spoken.

Today I am alone, for my offense—
Alone and penitent and wondering whence
This golden light and gold green of the lake,
The waves' dull symphony, the dunes awake
With laughing spirits of the happy dead
Whose cast off pains our birth inherited
The dancing trees lean down with precious gifts
Of perfume; every tiny plant uplifts
Its tendrils to my touch and points to skies
Of essent opal where the free gull flies
To meet his mate beyond some blessed isle.

Would I, as he, to mine might fly the while
Or she to me — yea, thou to me — and *here*
Where days that are departed are twice dear
And every twig and leaf bears memories
Like faint, far bells across the midnight seas.

Alone I wait I know not what strange word;
Alone I pray I know not what vague sign!
But where we met and your sweet voice was heard
Has been God's temple and shall be my shrine.

THE CHAUTAUQUA IDEA

"THE MOST AMERICAN THING IN AMERICA"

CONDUCTED BY FRANK CHAPIN BRAY

THE newly elected president of Chautauqua Institution, Mr. Arthur Eugene Bestor, has been officially identified with the work of administration for the last ten years. He has been Director since 1907, and his promotion fitly recognizes experience and active service to the Institution. He is the son of a Baptist clergyman, was born at Dixon, Illinois, and was graduated from the University of Chicago in 1901. For the next two years Mr. Bestor was professor of history and political science at Franklin College, Indiana. Then he became a Fellow at the University of Chicago, and thereafter lecturer on political science in the Extension Division of the university. Aside from his Chautauqua duties he has continued to be in demand thruout the country for extension, lyceum and circuit Chautauqua lectures, and has been president of the International Chautauqua Alliance.

Presidential duties involve responsibility for educational and administrative policies of all branches of the Institution, summer assembly, summer schools, home reading courses, and a physical plant at Chautauqua, New York, appraised at $1,200,000. For the maintenance of leadership in methods of popular education Mr. Bestor has Chautauqua experience, appreciation, sympathy and vision.

President George E. Vincent, of the University of Minnesota, president of Chautauqua Institution since 1907, now becomes chancellor of the Institution, and his father, Bishop John H. Vincent, one of the founders, becomes chancellor emeritus.

"The idea of all going to school together is a miracle to the foreign-born children and to their immigrant parents. They don't know what it is; they sum it all up in the expression: 'it is worth more than bread to us.' The amazing power of democracy to make citizens of all classes of men is a real thing to us who come from far away; and we come to find it in the life of the American people chiefly in the American schools. After all we do have a state church. It is the public school. The things foreigners notice about American schools are the mystical things which mean America to us. The private schools miss them entirely. That peculiar something which gives the child the distinctively American stamp is not in the private school. It is a vision, a notion of democracy which the child can get only in the public school. There they meet all sorts of children from every nation in the world. Their sympathies are widened; they learn the language of the suffering human heart. That is what a child should learn first—what life means to others. We expect to see the entire American nation standing as a bodyguard around the vision of democracy. It is the teachers who are the guardians of that ideal."—*Mary Antin, author of "The Promised Land," speaking at Chautauqua.*

"On January 1, 1916, Colorado will be dry. The mother who sees her family and home disintegrating, who because of the saloon or wine room, helplessly watches her boy or girl, in whom are wrapt all her hopes and ideals, on the road straight to the penitentiary or the house of ill fame, does not forget on election day. All mothers know the danger. The state in safeguarding and preserving the health and morals of the young is but doing a mother's work. We need the blending of the mother heart and the masculine judgment and will to sustain and guard our homes. You will never realize the value of this blending until you have tried it. If the question arose again the vote would be ten to one to retain woman suffrage."—*From a Chautauqua address by Governor George A. Carlson, of Colorado.*

"The differences between East and West are not of the elemental mind but the conditions under which men have developed. At bottom men are the same in Japan or India or China as in America. There is no greater heresy than to teach there is an impassable barrier between Americans and Japanese. We must take the attitude of sympathy and learn to understand them. Distrust and hate are fatal to friendliness and justice. It is an impertinence to pray for peace unless we are willing to do justice. Until we can go into the Highest Court of the universe with white hands we have not done our duty to the Orient." *Hamilton Wright Mabie, of "The Outlook," New York, in a speech at Chautauqua.*

"The school house in America is taking the place of the cathedral of mediæval Europe. It is fast becoming the art center of the community for the same reason that the old cathedral did. The rich man still has his private collection, but the school houses are becoming the center of the art of the community as a whole. The movement began with school room decoration. Beautiful reproductions of masterpieces, made possible by photography, were brought into the school room. The movement spread to the school hall and the school corridor. In this larger sphere the school principal saw the possibility of grouping and thus the entire building became a part of the plan. It next spread to the grounds outside the school, and today a school ground is not complete unless it has its flower beds and shrubbery as well as its athletic field. Finally came the introduction of loaned exhibits, of private collections. I have never met a wealthy collector who was so wrapt up in his possessions that he would not lend them so that the children could enjoy them. Moreover the graduating classes are getting into the habit of giving reproductions of art masterpieces to their schools. Individual graduates are beginning to consider what they can do to make that art center richer. All thru the country memorials are beginning to pour into the public schools just as they did into the cathedrals of old; and they are coming in a tasteful form."—*Henry Turner Bailey, Editor of the School Arts Book, speaking at Chautauqua.*

"When our public school officials appreciate the fact that a school day and its program should be given over one-half to formal book and class room work and one-half to vocational training, direction in play and youthful contests and the more natural exercises in the education and development of the child, it will then be discovered that the summer is the most important and worthwhile time of the year for the education of our boys and girls. Summer vacations, resort education and seashore abnormalities are enemies to safe and normal education of American childhood."—*From a Chautauqua speech by O. F. Benson, Director of Club Work, United States Department of Agriculture.*

"Our forefathers decided that the divine right doctrine was a fable; they overthrew the existing organization of society and instituted a system of government founded on the proposition that all men should have equal opportunity—and that is the essence of our democracy. Then politics was supreme; now industry is supreme. Then democracy in politics was the all-important thing; now democracy in politics without democracy in industry is the apotheosis of futility because the ruling power is in the hands of industrial rulers."—*Professor Scott Nearing [illegible] of the University of Pennsylvania, in an address at Chautauqua.*

ARTHUR EUGENE BESTOR, PRESIDENT OF THE CHAUTAUQUA INSTITUTION

THE WORLD OVER

Relief for Hay-Fever

Have you been vaccinated for hay-fever? You have been drugged and you have been shifted about from seashore to mountain and back again—but have you been vaccinated? From present outlook that would appear to be the only rational treatment for those who are susceptible to this very disagreeable departure from the normal way of carrying on the affairs of life.

It seems that suffering from hay-fever depends upon a peculiarity of the blood combined with a particularly penetrable skin. On account of the latter it becomes possible for the microscopic pollen grains of various plants to irritate the mucous or the skin and thus introduce certain substances into the system. On account of the former, these introduced substances result in developing a condition of hypersensitiveness to more irritation.

Two American experimenters have announced the results of an investigation, which promise relief by a process that is practically a vaccination before the opening of the hay-fever season. There are two seasons for this disorder, one in the spring and one in the autumn. To determine whether a person is susceptible to hay-fever, or to find out which species of pollen is particularly offensive to a person, Dr. Gottlieb and Dr. Oppenheimer experimented with injections of the pollen extract and the pure dry pollen. Some patients were found to be susceptible to more than one kind of pollen.

Experiments with other diseases on guinea pigs and other animals showed that the development of sensitiveness after the introduction of one of these peculiar protein-poisons could be prevented by introducing in advance of the second infection certain of the substances formed in the blood in the course of the development of the sensitiveness. Finally the experimenters found successful treatments of the patients' suffering from "pollinosis" by one of two methods; either by injecting a quantity of serum from an immune person (or animal) during the attack, or by injecting very small amounts of pollen extract at intervals of ten days or less, thus raising the patient's resistance.

Because of its simplicity the second method would seem to be the most promising. Of eleven patients treated in this way last year, five were cured, four were improved and two were not helped at all. But in these last two cases there were other complicating circumstances.

BULLET-PROOF ARMOR

A war-automobile, with port holes for rifle fire, which mounts a Colt automatic and carries rope and windlass apparatus for dragging the car out of a ditch or up a steep embankment

On the whole the outlook, as judged from these experiments, would seem to be hopeful. The experimenters expect the most favorable results to come from the administration of pollen extract at regular intervals of about a week, beginning about ten weeks before the opening of the season. It is too early to tell whether the effects of these vaccinations will be permanent.

Dangerously Good

The excellent condition of the stretch of Lincoln Highway just west of Fort Wayne, Indiana, has presented a new problem to the police of that city. The smooth, clean, concrete surface attracted every child who owned a pair of roller skates and the case of rink versus road was hotly contested.

Since city speed limits do not apply on this particular stretch, accidents occurred with alarming regularity. And the only remedy as yet would seem to be individual heed to "Safety First" and a little less enthusiastic appreciation of the good road.

Taking the University to the People

University Extension service is assuming some unique forms, as the idea of "taking the university to the people" spreads. Iowa State College, for instance, is giving automobile institutes, sending an expert out who organizes three and five day classes for the owners of cars and gives the people of the state information on such essentials as carburation, lubrication, and the care of tires. Illustrating his lectures by means of various parts of machines, charts, lantern slides and moving pictures, the university automobile man is trying to teach the 115,000 car owners how to run their machines economically. The Iowa experts have estimated that fully twenty per cent of the state's bill for fuel, oil and tires can be saved when the owners of cars understand the correct principles of operation The university professor who leaves his platform to grovel beneath an automobile in some distant corner of the state may not conform to the popular notion of academic dignity, but he is performing a service that will cause many a taxpayer to look with greater favor upon higher education.

Iowa's institutes for painters and decorators are proving a practical means of serving a more limited class. The school for telephone plant men was one of four held in different sections of the state Given free of charge, this practical instruction is within the reach of the majority of workers whom it seeks to benefit

UNITED STATES MILITARY MOTOR

The [illegible] of the Northwestern Military and Naval Academy, under the command of Col. Davidson, on route from Chicago to San Francisco. It consists of eight cars equipped for use with wireless, balloon [illegible], kitchen and hospital [illegible], containers and accessories for [illegible]

Rubbish Cart Missionaries

"Clean-up Week" is a familiar institution in many American cities, but the biggest of them all has begun a campaign to make Clean-up Week a perpetual affair. Not since Commissioner Waring put the street cleaners into "White Wing" uniforms has the Department of Street Cleaning adopted such a promising device for encouraging municipal cleanliness as Commissioner John T. Fetherston has recently introduced.

Five hundred paper wagons, working in Manhattan, the Bronx and Brooklyn, are carrying advertising signs urging the householder and the man in the street to do his or her part in keeping Father Knickerbocker tidy. The illustration shows one of the posters, which sounds almost audacious to those who are still under the impression that New York is hopelessly corrupt and misgoverned. The same sober determination to be municipally self-respecting is seen in another sign:

LET US WORK TOGETHER
FOR A CITY THAT IS
Beautiful Healthful
Decent
Orderly Safe
DON'T LITTER THE STREETS

A shrewd appeal to the housewifely instinct of New York women is carried in a poster that reads:

IT IS *YOUR* STREET IN *YOUR* CITY. KEEP IT AS CLEAN AS YOU DO YOUR ROOM IN YOUR HOUSE

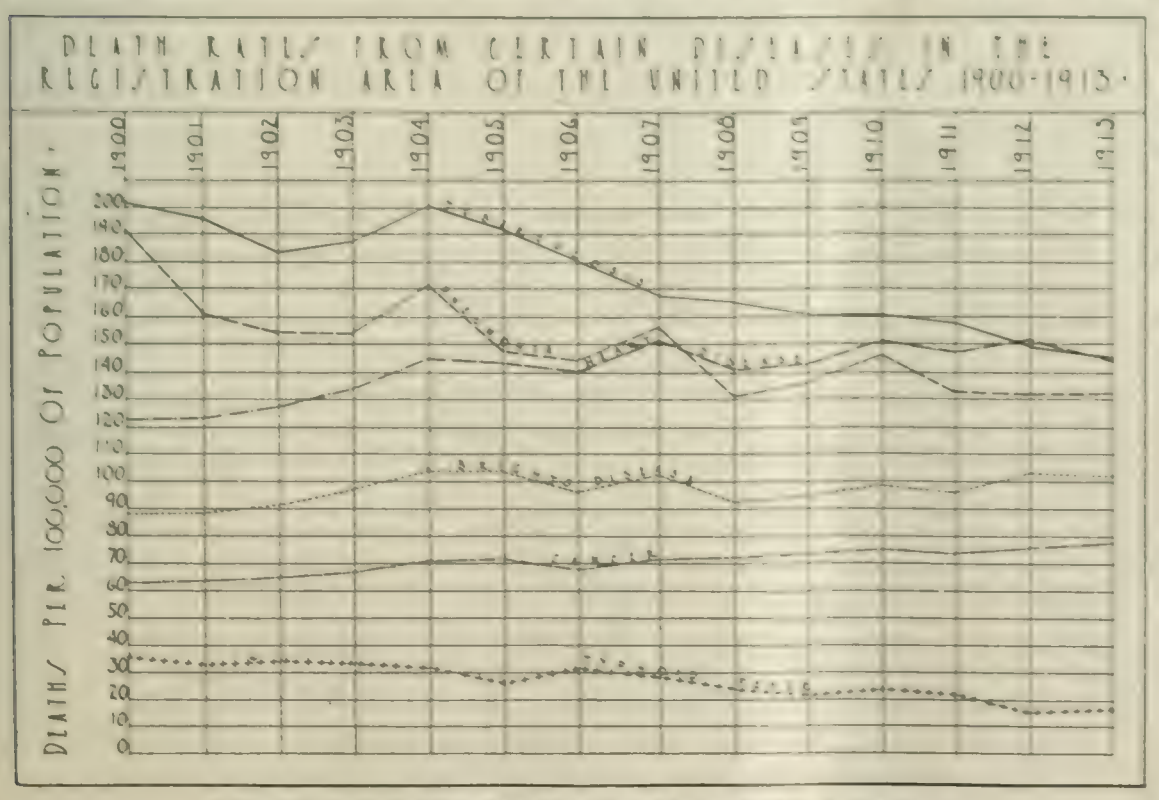
Everyone knows how clean men keep their rooms, but even the unregenerate male is likely to be tickled by a light-minded jingle such as this:

PUT OUT YOUR RUBBISH
EVERY DAY
THIS WAGON WILL COME
AND TAKE IT AWAY

CLEANING UP NEW YORK

These are only samples, but like Commissioner John T. Fetherston's other slogan, "Bone-fighting," introduced last winter, they suggest the energy and spirit of the campaign and show that New York has a new kind of government—an enterprising forward-looking government that is not above appealing to the public by clever advertising schemes—and they mean that the greatest city will grow cleaner and cleaner even if it never reaches the pinnacle of Spotless Town perfection.

Wisconsin Cheese



Approximately one-half of the nation's cheese is made in Wisconsin. But between the dairy in which it is made and the pie with which it ultimately joins forces stretches a long line of middlemen's profits to be added to its original cost. By standardization of all the state's cheese product Wisconsin hopes to make its manufacture more directly profitable to the farmer. To establish a well-known brand which will make a ready market for itself is the plan now under way. About two-thirds of the state's output has been known simply as American cheese and the remaining third as foreign—principally "Swiss" or "Limburger."

Profit and Loss in Our Health Balance

The death rate from all diseases per 1000 population in the registration area of the United States has fallen from 17.6 in 1900 to 13.9 in 1912. This is certainly encouraging and shows the extent of the gain which we have already made in our warfare against disease.

But it must be noted in this connection that although we have succeeded in reducing very materially the death rates from certain infectious and acute diseases, we are confronted with an increase in the mortality rate from certain degenerative diseases. We have reduced the mortality rate from tuberculosis and pneumonia over twenty-five per cent since 1900 and we have halved the rate from typhoid fever. Diphtheria we have reduced from 43.5 per 100,000 in 1900 to only 18.8 in 1912. On the other hand for organic heart diseases, Bright's disease, and cancer the rate is considerably higher in 1912 than it was in 1900. It is, of course, difficult to distinguish clearly between the acute and the degenerative diseases, but there is, nevertheless, an important general difference.

We seem to have been much more successful in reducing the death rates from diseases which are due to contaminated water supply, impure milk, meat and vegetables. As a result of sanitary precautions, we have all but eliminated certain diseases such as typhus and yellow fever. The increase in the mortality from degenerative diseases is due rather to the manner of life we lead, the kind of house we live in, the amount of exercise we take, the sort of food we consume. The drinking of intoxicants and excessive smoking undoubtedly contribute to the increase in the death rate from degenerative diseases in adult life. No one would desire to have our boards of health pay less attention to safeguarding our food supply and preventing the spread of infectious diseases, but it is time that the fact was brought home to every citizen that if the decrease in the total death rate is to continue, the efforts of the health authorities must be supplemented by the personal efforts of the individual. With the mortality from certain diseases decreasing while the mortality from others increases, it is going to be difficult to reduce our total death rate every year.

THE CHANGES IN MORTALITY RATE OF SIX DISEASES

THE NEW BOOKS

EMOTIONS AND THE BODY

WE have known empirically much that Professor W. B. Cannon tells us in his *Bodily Changes in Pain, Hunger, Fear and Rage*. But there is a great deal more that we can know only from the researches that he and his colleagues have made on the effects of our emotions upon various physiological processes, and on the effects of various processes upon our emotions.

Starting with the classical experiments of Pawlow on the relation of hunger and appetite and the emotions to the process of digestion, we are brought up to date with a consideration of suitable substitutes for war, from a physiological point of view. Every informed person now knows enough to abstain from food when deeply agitated. But we do not all know the meaning of "second wind," or how to draw upon our reserves of energy in time of need.

Most of the book is devoted to a description and discussion of the studies on the secretion of the curious "glands" that lie just above the kidneys. This juice, "adrenin," has come to be used in medicine to produce certain specific effects, even before its potentialities are fully understood. The nervous mechanism by which these glands are stimulated to throw their products into the blood has been definitely identified, and its connections traced to the viscera on the one hand and to the cerebrospinal system on the other These studies reveal a profounder significance in our *moods* than is commonly appreciated, and will before long find their applications outside of medicine in education and statesmanship, in the management of business and in our everyday intercourse.

It is not clear just how fear and anger differ from each other on the physiological side. Both lead to the liberation of increased quantities of "sugar" (glycogen) from the liver into the blood stream; the more rapid clotting of the blood; and a suspension of all activities in the digestive system; and both may increase the blood pressure. Both do these things by increasing the amount of adrenin in the blood, and this has the additional virtue of neutralizing the so-called "fatigue poisons" which accumulate as a result of active work in any of the organs. We can see from this how these strong emotions make possible unusual exertion. There is apparently a real physiological gain from activities that thus intensify and unify the visceral processes, as well as a "moral" gain from experiencing human emotions and learning to control them and to draw upon them Fighting seems to possess the double physiological and moral advantages in this respect. But after considering the mechanization of modern warfare, with its minute subdivision of work and the separation of the soldier, for the most part, from his enemy (and, one might add, from a real grievance), Dr. Cannon elaborates on the importance of cultivating athletics on a large and dignified scale as a worthy substitute for more primitive forms of personal conflict.

Bodily Changes in Pain, Hunger, Fear and Rage, by Walter B. Cannon. New York: D. Appleton & Co. $2.

A HIATUS IN LOCKE

To those who remember warmly the charm of the first meeting with *The Beloved Vagabond*, *Septimus*, and the moralizing *Marcus, Jaffery*, the newest creation for the Locke world, is apt to be disappointing. Not that Mr. Locke has lost any of his vividness or the power of always writing entertainingly, or that he has sacrificed any of his dexterity or gracefulness in handling plot. These are, if anything, better done in *Jaffery* than in many of his preceding novels. But Mr. Locke's hold has been different from that of other novelists. He has not had to bend his energies to the mere telling of a story. Indeed the story, the mere thread of incident, is its least important part. The fundamental charm that has won Mr. Locke his public lies in the characters he has created for this topsy-turvy world. Like great unspoiled children who have grown up, carefully protected from disillusion, Septimus, Marcus and the whole happy company have marched across the pages, delighting a sophisticated world with their naïve pranks, their ingenuous outlook on life. Added to this have been the author's shrewd epigramatic insights, and a Celtic wit capable of rapier play. Both of these essentials to the Locke enthusiast are here missing. Somehow the characters, even Liosha, the impetuous Albanian Amazon civilized with the veneer of the Chicago stock-yards, and big-hearted, impulsive Jaffery, are grown-folk for all their attempts at child-play. Nor will the pages add many to the next book of Locke epigrams. One runs on no such pockets of brilliants as fill earlier books. As in *The Fortunate Youth*, there is evidence of the American vice of hasty writing, a perhaps pardonable desire to capitalize the popularity into which the author has latterly come. But for Mr. Locke's own sake, as well as for the high art of which he is capable, despite Arnold Bennett's opinion to the contrary, *Jaffery* should never have passed its author's own censorship

Jaffery, by W. J. Locke. New York: The John Lane Co. $1.35

AMERICA!

America of the Americans, by Henry C. Shelley, is one of a series of books covering fifteen different countries, each by a different author and not one in three written of by a native. Why? Mr. Shelley covers a wide field from politics to science, but has been less well informed concerning the three arts of literature, painting and the drama than he has been on some other topics. It is well to say "been informed," for it would be unfair to assume that Mr. Shelley has gained his data from personal experience. His compliment to the *World Almanac* is so sincere that one wonders whether he depended upon that and that alone.

Of a totally different type is *America and Her Problems* by M. Paul H. B. D'Estournelles de Constant. The first edition of this work was written in French in 1913. The present or American edition has not been revised but has been brought up to date by amplifications and footnotes dating from March of this year. There is also a most interesting preface.

The author has made a number of visits to this country less for the purpose of pleasure than to spread peace propaganda and to come in touch with our educational system, in which he is much interested. He has been brought into close contact with our public men in almost every line of endeavor and has studied our problems with a sympathetic understanding. His principal concern is with educational and political problems. Co-education, a new feature to him, meets with his hearty praise. There is much in our political system to condone and much to hope for, but in some ways we lead the world. He praises highly our peaceful tendencies, but he also deplores the fact that America made no protest at the violation of Belgium's neutrality.

The work is comprehensive and scholarly in tone, but never tedious. At each stroke it cuts well beneath the surface and the American who reads it will know more about his own country than he ever has before. The author is revealed as a man of sound judgment whose praise must be a gratification and whose advice is to be at least carefully weighed.

America of the Americans by Henry C. Shelley. Charles Scribner's Sons. $1.50. *America and Her Problems* by Paul H. B. D'Estournelles de Constant. The Macmillan Co. $2

PUBLICITY

Writing an Advertisement, by S. Roland Hall, is a study of the principles that underlie successful advertising, for if publicity be not an art it is a science with certain well-defined rules

Houghton Mifflin. $1

A STORY FOR BOYS

Any boy might be pleased to know *The Young Rival Inventors*. They have their little faults and make their little mistakes, but these only lead greater realism to a story whose plot is at times too exaggerated. Gardner Hunting has created a very enjoyable tale that holds the reader's interest even between the numerous adventures.

Page, Little, Brown. $1.

AFTER BRIEUX

Louis Joseph Block is the author of *The Judge*, a play published in *The American Dramatists' Series*. The story is of a judge whose daughter is brought before him as a capital charge. The point stressed is the harshness of man's law and the need of a higher influence to adjust the imperfections. The setting is in America and the influences

of the Austrian dramatist Franzos is apparent. The result cannot be called a success, the type of play being that in which Russia alone has established a worthy criterion.

Boston: Badger. $1.

COUNTRY CHILDREN

A series of attractive stories for very young children in *Peter and Polly in Spring*, by Rose Lucia, which pleasingly entertain the adventures of two children in the town and in the fields and woods.

Am. Book Co. 50 cents.

TO BOYS AND GIRLS

The chief substance to the Junior Congregation, *Fifty-two Story Talks to Boys and Girls*, are each based on an acceptable story or incident from the personal experience of Hezekiah J. Childlee. They are interesting, pointed, suggestive, models of their kind.

Doran. 75 cents.

SWEETS

Candy making is an attractive enough occupation as it stands, but it becomes a fascinating and skilled business when aided by directions interspersed with clever illustrations and verses such as fill *When Mother Lets Us Make Candy*, by Elizabeth and Louise Bache.

Moffat, Yard. 35 cents.

A NOVEL FROM A PLAY

Harry Leon Wilson and Booth Tarkington spent a winter together in Capri and collaborated on *The Man from Home*, a play which achieved great success. This is a novelization of the play, but it is not hack work. Mr. Wilson gives it literary finish, and while the story is identical with that of the play, the charm and humor of the author's style gives the novel an added attraction.

Appleton. $1.35.

DAYS OF BLACK MAGIC

Peregrine was not of the stuff of which jesters are made and the inherited motley sat but ill upon him, for beneath it was a man. But one day disgrace gave him freedom and then began his wanderings in search of Peace, symbolized in his vision as a "woman with quiet eyes." It is a quaint bit of medievalism, this tale of *The Jester* by Leslie Moore, full of old-time whimsy of phrase and thought.

Putnam. $1.35.

FLOWERS BEYOND THE ROCKIES

No more attractive book relating to the Pacific slope has come from the season's presses than Margaret Armstrong's *Field Book of Western Wild Flowers*. It is a mate to Matthews' more general *Field Book of American Wild Flowers*, the best popular guide we have, but the need for this volume is evident since few of the myriad western flowers wander east of the Rockies. The plates are beautifully colored and there are 500 illustrations in black and white.

Putnam. $2.

MYSTERY AND ADVENTURE

Lovers of the detective story the world over know Arthur Stringer. His latest book, *The Hand of Peril*, is the tale of a remarkable counterfeiter and his beautiful daughter and of a long chase that at its close revealed many things. To flood the world with spurious money and so ruin the financial system of the earth was the endeavor of this master-craftsman. The story is an excellent example of its type and Mr. Stringer has lost none of his ability.

Macmillan. $1.35.

A NEW VERSION OF CATULLUS

Miss Mary Stewart, in the preface to her translation of *Selections from Catullus*, defines her work as an experiment in translation. If so, the experiment is thoroly successful. The translations are not literal, but have been thrown into modern English verse form and so for the first time Catullus can be really enjoyed not only as a satirist but also as a poet—and this by the general public. Miss Stewart has done a splendid piece of work.

Boston: Badger. $1.

This picture is all wrong!

Yes—but it's a real picture of offices where they still cling to the inefficient, wasteful, costly, shorthand system.

Business men everywhere are fast waking up. They find it's mighty poor business to write letters twice—once in shorthand and once on the typewriter, to say nothing of expense and wasted time. They don't pay for shorthand lessons at some man's desk, with other men waiting to dictate. They don't pay for typewriting machines standing idle a good part of the day. They get their money's worth—steady production of finished typewriting—with dictators dictating when they want.

They dictate to the Dictaphone.

Just reach for your phone—now—while you think of it, and arrange for a demonstration. If you do not find that name in the book, write to the

A Pure Romantic Novel, by Leona Dalrymple

Author of "DIANE OF THE GREEN VAN"

The Independent as a Weekly Periodical Acceptable to Students

Some of the following must have some definite relationship to the work done in the school that a good weekly periodical will be a most valuable aid in increasing the usefulness in the teaching of English in the grammar grades. It is necessary to consider what material shall be used. The daily paper, however excellent in many ways, yields a mass of useless perishable material, much of which is poorly arranged and much of which is not even fit reading matter for the school room. Magazines are published for entertainment or for some special purpose, little or nothing of purely literary value. The excellence of paper, the quality of paper used, and the necessary economy of space forbidding much artistic effect, do not make the reading attractive to the eye. Many excellent magazines deal largely with topics and treat them in a manner above the heads of pupils of grammar grade years. Hence, while parts of many periodicals can be used with profit, the entire publication is rarely adapted to the needs of the grammar grades. Other publications are filled with valuable matter for supplementary reading, but contain so much that is of no value that the time required to select the desirable material is prohibitive. Others give news and comment on current topics of interest, but omit articles of permanent literary value. The best publication for introducing pupils to the work of the teacher of English will be exclusive of many lines of interest. It will contain history, poetry, general articles of various kinds, the most important news of the world, editorials and short and thoughtful comment, given in a spirit of optimism, good will toward all mankind, as well as interest and stimulate the children.

Many teachers testify that The Independent is a paper of this high type. That is borne out with the approval of students as shown by its wide circulation in schools and colleges throughout the country. In the Stuyvesant High School, where the patronage of each newsstand is carefully counted, on the days of every student. The Independent is dropped by vendors one thousand of the students, who say that their number is an index of the paper's popularity somewhat above newspaper. A class system of the school could be based upon it, it would be a change from The Independent to another periodical, many pupils declare that it proposed to continue the use of The Independent.

Professor Hiram Law, A.M., Ph.D.,
Head of the English Department, Stuyvesant High School, New York.

1915

Atlantic Mutual Insurance Co.

Atlantic Building, 51 Wall St., New York

Insures Against Marine and Inland Transportation Risk and Will Issue Policies Making Loss Payable in Europe and Oriental Countries

Chartered by the State of New York in 1842, was preceded by a stock company of a similar name. The latter company was liquidated and part of its capital, to the extent of $100,000, was used with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with a bonus and interest at the expiration of two years.

During its existence the company has insured property to the value of	$27,964,578,109.00
Received premiums thereon to the extent of	287,324,890.99
Paid losses during that period	143,820,874.99
Issued certificates of profits to dealers	90,801,110.00
Of which there have been redeemed	83,811,450.00
Leaving outstanding at present time	6,989,660.00
Interest paid on certificates amounts to	23,020,223.85
On December 31, 1914, the assets of the company amounted to	14,101,674.46

The profits of the company revert to the assured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such dividends, certificates are issued subject to dividends of interest until ordered to be redeemed, in accordance with the charter.

AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the METROPOLITAN LIFE INSURANCE COMPANY, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of $5,000 by a man aged 67 would provide an annual income of $618.35 absolutely beyond question or doubt. The Annuity Department, METROPOLITAN LIFE INSURANCE COMPANY, New York, will give advice as to the return at any age, male or female.

Good men, whether experienced in life insurance or not, may make direct contracts with this Company, for a limited territory if desired, and secure for themselves, in addition to first year's commissions, a renewal interest insuring an income for the future. Address the Company at its Home Office, No. 277 Broadway, New York City

GET THE SAVING HABIT

The habit of saving has been the salvation of many a man. It inspires his self respect and makes him a more useful member of society. If you have not the habit begin to-day. It is not too late. Some one has truly said that the most successful step to accumulating a sufficient sum to secure the future is the first dollar saved. Why not begin by opening an account with the Home Life Insurance Company of New York. This will give you a much larger return than can be obtained from any other guaranteed income investment. Just a postal will do.

THE MARKET PLACE

IRON AND STEEL

The pig iron output and the condition of the steel industry are two trade barometers. In December last the pig output was only 1,515,752 tons. In no one of the eight months that ended with February last was a total of 2,000,000 reached, and the average for those months was about 1,700,000 tons. For some time past, however, the monthly product of the furnaces has been growing, and now we learn that the July output was 2,563,420 tons. This was a gain of 180,000, and it was the largest output since June, 1913. At the beginning of August the daily output, continually increasing, was at the rate of 32,000,000 tons a year. The Steel Corporation's furnaces have almost reached their maximum capacity.

This increase of output is due mainly to war orders. There are steel rail mills that are now turning out large bars for shrapnel shells. Prices have been rising, notably those for bars and plates. Several mills are refusing bar orders which call for delivery this year. It is on account of the improved condition of the steel industry that Steel Corporation stock shows so much strength in the securities market. On sales of nearly 600,000 shares last week the price rose above 73 and there was a net gain of 4¾ points. In six months there has been an advance of about 40 points. The recent quarterly report, with a consideration of present conditions, has led some to expect a resumption of dividend payments.

WAR ORDER STOCKS

Last week's stock market, which showed a long list of net gains, was characterized by a continued and active upward movement in what are called the war order shares, altho there was some revival of interest in railroad securities.

The most sensational advances in war stocks were those gained by Bethlehem Steel, Crucible Steel, and two motor companies. Shares of Mr. Schwab's steel company rose by leaps and bounds, until these securities, which have been paying no dividends, were selling at 311. There was a reaction in the closing days of the week, and the final price was 290. In four weeks 147 points have been added to the price, and the upward movement in nine months has been from 26 to 311. It was in April that Mr. Schwab said there was no sure prospects of dividends, because profits would be needed for extensions of plant. Crucible Steel, on sales of 236,000 shares, rose to 92¾, but closed at 85½, showing a net addition of 14½. Before the price had passed 51, some weeks ago, a prominent officer of the company publicly warned buyers, pointing out that the corporation (which has never paid a dividend on these common shares) owed $7,200,000 in accumulated dividends on its preferred stock, and saying that he could see no reason why the common stock should be able to pay a dividend for a good many years to come. But the buying continues, and the price rises. It was only 22 in May last.

In the outside, or curb, market, the price of shares of the Electric Boat Company was raised to 430. Some warrant for the great advance appears in the formation of a new company, the Submarine Boat Corporation, which, it is understood, is to take over the present company. Its capitalization is about ten times the capitalization of Electric Boat, which has $8,000,000 issued and outstanding, and it is expected that the exchange will be made at the rate of ten for one. It is reported that the great Vickers Ordnance Company, of England, is interested in this project. Electric Boat has large orders from the British Government for submarine machinery and fast motor boats. Within a short time the price of its stock has advanced from 22 to 430.

The shares of copper companies have been affected unfavorably by a continued decline in the price of the metal, which has fallen from 20½ cents a pound to 18¼. Current output at the mines is large, and a revival of demand is expected.

RAILROAD VALUATION

Estimates of the cost of making the required physical valuation of the railroad property in this country have been growing ever since the valuation law was passed. They have risen from a few millions to $50,000,000 or $60,000,000, and recent experience indicates that they must again be increased. The New Haven Company has had a dozen experts searching the real estate records of four states, and making certified copies of deeds, some of which go back eighty years. Others have been compiling the histories of more than 200 companies which preceded the present corporation. At the present time 114 persons are employed on this valuation work by the New Haven, and their task will not be completed in two years. On certain roads the cost will be about $300 a mile, of which the Government will pay less than half, and probably the total will be not less than $15,000,000. It is not expected now that the results will be serviceable as a basis for regulation of rates, or that as a rule they will show excessive capitalization.

PEBBLES

Woman—What is your very best butter? Grocer—Our very best, madam, is butter.—*Judge.*

"Messenger boys have no dress uniforms, have they?" "No. Doing so strictly a fatigue uniform."—*Baltimore American.*

British Prayers Excite Tyndt.—*Headline.*

Finigan—Ah, Gilth, an' she's worse'n that—she's a flattron woman.—*Chicago Sunday Herald.*

"I have just been reading the Constitution of the United States."
"Well?"
"And I was surprized to find out how many rights a fellow really has."—*Pittsburgh Post.*

Hart (on country road)—Look at those toughs ahead of us. I shouldn't wonder if we were held up.
Smart—It's not unlikely. By the way, here's that dollar you lent me this morning.—*Boston Transcript.*

"I believe," said the impatient man, as he put aside the telephone, "that I'll go fishing."
"Didn't know you cared for fishing."
"I don't. But it's the only chance I have of getting a line that isn't busy."—*Washington Star.*

A Londoner was showing some country relative the sights of London one day recently, and was pointing out a magnificent old residence, built years ago by a famous and rather unscrupulous lawyer of his time. "And," the Londoner was asked, "was he able to build a house like that by his practise?" "Yes," was the reply, "by his practise and his practises."—*The Argonaut.*

An arrogant and quarrelsome old farmer impudently turned his horses loose in the churchyard and refused to take them out again. High words ensued with the vicar, who so far forgot himself as to call the farmer "a broken-down old mule." Off went the farmer on the instant and crashed noisily into the village lawyer's office. "Mr. W., the vicar, has just called me a broken-down old mule," he bawled. "What am I to do?" Now the lawyer had once received a severe rebuff from the farmer and had waited years for a chance to repay it. Here was his opportunity, and he seized it with both hands. "Don't come to me about that," he said coolly. "I can't patch you up. I'm no veterinary surgeon!"—*Kobe Herald.*

Diet and Digestion

This is the most original and most important book I have ever written. J. H. K.

Dr. Kellogg is the world's greatest authority on matters of diet. He is the inventor of many delicious foods. For nearly forty years he has been Superintendent of the great Battle Creek Sanitarium—leading diet institution of the world. Here, Dr. Kellogg has had opportunity to observe, treat and prescribe for thousands of cases of indigestion and the other ills which indigestion leads. Therefore, Dr. Kellogg writes from the standpoint of practical experience. He deals with facts—not theory only.

If you suffer from any type of indigestion or its attendant ills, you will do well to read Dr. Kellogg's latest book, "Colon Hygiene." It explains the causes and methods of relief. Indigestion may be permanently relieved only through natural means. This Dr. Kellogg makes plain. His book is easily understood by anyone. As he explains, nearly all natural methods will more quickly bring results in some cases than others. The book explains easily and inexpensively. Illustrations, folding and movable charts, etc., explain your body. Price, cloth $1, Library Paper 50 cents postpaid. Order today. You take no risk. If not satisfied, your money will be refunded on return of the book. Send order to—

Insurance

Conducted by

W. E. UNDERWOOD

This department of The Independent will undertake to furnish on the request of readers any information respecting the business of insurance and the companies transacting it which we have or can procure. We cannot, however, pass upon the debatable comparative differences between companies that conform to the requisite legal standards set up for all, except in so far as the claims made by any of them seem to be inconsistent with the principles of sound underwriting. Address all communications on insurance subjects to the editor of the Insurance Department.

SPECULATING WITH THE RESERVE

An admirer of the work this department of The Independent is doing, a Kansas banker, tells me he has heard that if a man would take insurance in the Modern Woodmen and invest the sum of the difference between its cost and that of an old line endowment policy in the stock of a building and loan association, the financial result at the end of ten or twenty years would be superior to that attained if the insurance and investment were combined in the old line endowment.

As Shakespeare wrote somewhere, there is much virtue in If.

For example: if we knew positively what the actual cost of the insurance would be during the whole period of twenty years in the Modern Woodmen, we could commence the calculation. But we don't know; and until that Society bases its rates on a reserve that is mathematically correct, we never will know. Again, if a man would find a building and loan association which he knew would last twenty years, and which would be properly conducted during that period; and if, having satisfied himself on those points, he would faithfully invest hte money every year for twenty years; and if he would, under the pressure of any circumstances, leave it there to accumulate, he might emerge with a few dollars ahead of the results attained under an old line endowment. Let us speculate on the matter, we can't be definite.

Suppose $1000 of insurance in the fraternal, commencing at age thirty-five, will cost during the twenty years not to exceed $12 a year. I am of the opinion that the average will be much greater. An endowment at that age for the same amount in one of the best old line companies will cost $49.85 a year. The dividends, first and last, under the latter will average twenty per cent of the premiums annually. If the fraternal certificate is taken instead of the endowment, the insured will have $37.85 a year to invest in building and loan stock. I don't know what this will yield,

but let us put it at five per cent, compounded for the term. At the end of twenty years he will have an accumulation of $1,314.11. We will treat his payments to the fraternal as an expense, charging no interest on them. In twenty years he has invested $240 in his insurance and $757 in the building and loan stock, a total of $997. He gets $1,314.11, the surplus being $317.11.

For an endowment of $1000 in the old line company one would pay $49.85 a year and receive in return, at twenty per cent, a dividend of $9.97, which if deposited in a savings bank at three and a half per cent interest would aggregate at the end of the period $291.82. Add the face of the endowment to this and he would have a total of $1,291.82. He has invested $997 and his surplus is $294.82. Comparing the two surplus results we find that the difference in favor of the certificate-building and loan venture is greater by just $22.29.

Now, I ask, who would take all the chances I have indicated—those represented by the ifs—for $1.11 a year? Any one with a knowledge of human nature is certain that not one man in hundred would persist in the combination scheme for twenty years. At least ninety-nine of them would finish the task with nothing in the shape of results. Again, I am certain that the cost of $1000 insurance, unsupported by an adequate reserve, will greatly exceed a total of $240 from age thirty-five to age fifty-five. In conclusion, my advice to those who think they should make their own investments in this connection is that they buy a twenty-year Term policy from an old line company, and deposit the difference in a savings bank. In this combination they will at least be on firm ground. But, as between that and an endowment straight, at age thirty-five, I recommend the endowment.

C. H. R., Pittsburgh, Pa.—The Provident Life and Trust of Philadelphia is one of the best and is recommended unreservedly.

H. C. B., Windsor, Conn.—There is no company located in Boston of the name you mention. Perhaps you mean the National Life Insurance Company of Montpelier, Vermont. If so, I can assure you that it is first class in every particular.

J. H. V., State College, Neb.—Such reference books as are at my command do not contain the name of the company you mention, probably because it is of minor importance. Make inquiries of Hon. L. G. Brian, Insurance Commissioner, Lincoln, Nebraska. His office has full particulars.

H. G., Hardwick, Mass.—The European war will have no effect one way or the other on the interests of American policyholders of the company you name. As you are a policyholder in the company, you doubtless received at the beginning of this year a copy of its president's annual address; and by consulting that you will find that up to the time he was writing the normal mortality of the company had not been appreciably affected. There has been so little change since, that we are justified in saying that, covering the whole period of the war to date, the effect is negligible. The management of the company expect that the end of the year will show a mortality record slightly under that experienced in 1913 and 1914. There is not the slightest cause for apprehension.

EFFICIENCY QUESTION BOX

CONDUCTED BY EDWARD EARLE PURINTON, DIRECTOR OF THE INDEPENDENT EFFICIENCY SERVICE

Questions on health, work, business, home and everyday life will be answered by Mr. Purinton, in so far as may be possible, thru the Question Box or by personal letter. Please confine questions to one sheet. When books, institutions, manufactures, and other aids to efficiency are mentioned, they are not necessarily endorsed. The Service, being a clearing-house of information, assumes no responsibility for others.

115. Mrs. D. R. W., Michigan. "What are the most healthful drinks for children in warm weather? Should they be allowed to have ice-cream soda in large quantities? What about ice cream itself?"

The best summer drinks are combinations of acid fruit-juice, and pure spring water, with perhaps a trifle of sugar. Lemonade, orangeade, grape juice or its derivatives come first. Among the soda fountain drinks of special innocence and refreshment are ginger ale, root beer, sarsaparilla, buttermilk, malted or soured milk—but these must be guaranteed pure.

Ice-cream, certified, is an excellent warm weather food. It should be eaten, however, only at the close of lunch or dinner, or a couple of hours later; and when taken between meals should be ordered clear—not mixt, as in the form of nut or fruit sundae. Be sure that you know where and when your children buy soda, candy, ice-cream and other confections. Many stores and fountains are likely to be unsafe, and your chief responsibility is to find a dealer whose wares you know to be pure. An interesting editorial on the subject of summer drinks will be found in The Independent for July 5, 1915.

---

116. Mrs. A. M., Washington. "My son, almost thirteen years old, shows excellent methods in study of subjects that interest him, and he *thinks* better than the average adult. But I fail to make him understand the real necessity of mastering subjects that are uninteresting (such as spelling and grammar), and he begs to be taken out of school so he can have time to study what he wants to learn. I believe he needs the discipline involved in set tasks, and would ask your advice in regard to a school or book teaching efficient methods of study."

What does your boy want to learn? Let him learn it, help him learn it. Providence is likely to ordain his success along just that line, and no other. But can you not show him how a thoro mastery of such groundwork studies as spelling and grammar underlies efficiency in the work where his heart lies? A poor speller and faulty grammarian disqualifies himself in almost any trade or profession worth entering. Put your "discipline" thought into his destiny plan, then watch both improve.

An article on "Learning to Study" appeared in the *School Review*, volume 22, number 6, published by the University of Chicago Press. Dr. Frank McMurry's book on *How to Study* should give you valuable suggestions. For the name of such a school as you require, apply to the secretary of the American Schools Association, Times Building, New York.

---

117. Mr. R. L. T., New York City. "I am just starting out in the world, and getting very modest pay. Nevertheless, one should form the habit of saving, no matter how meager his salary. My savings are earning about 5%. Where can I get literature which will make me efficient in investing my earnings? What would be the best way of obtaining efficiency in such a matter?"

You would probably find good suggestions in *Ways of Thrift*, published by the American Society for the Promotion of Thrift, First National Bank Building, Chicago. Look over the announcements of various banks, investment brokers and savings institutions appearing in reliable magazines such as The Independent. Write for descriptive matter of each concern, study it all carefully, decide which offers the best combination of safety, revenue and convertibility—then *don't* invest without consulting a friendly banker or other conservative man of experience in the money market. You should realize more than three per cent on your savings. There are good industrial stocks and city bonds yielding four per cent, some offering five per cent with comparative security. Find where and what these are, but choose three per cent returns with safety to five per cent with a shadow of a doubt therein.

---

118. Mr. L. H., Michigan. "What is the best way to learn to read, so you can remember what you have read?"

Why do you want to remember? And what—facts, news, figures, dates, poems, editorials, business ideas, or something else? Over and over we have asked our inquirers to be explicit and concrete, still we are crippled in our work of reply because questions are too vague and general.

Most memories are junk-baskets instead of storage-batteries. To memorize less and utilize more is the ideal for the majority. Read less—think and act more, on what you read. Let your stomach be empty when you read the most valuable things—a full stomach renders the brain heavy and inert. Make marginal notes as you read and new ideas come to you, or keep a pocket notebook for this purpose. Get a friend to discuss with you items particularly memorable. Secure a set of files and organize a clipping-bureau of your own, then make a habit of inserting extracts, articles, memoranda, etc., along your line of thought, and go over the files occasionally to refresh your memory. Buy a standard book on memory-training and study it in spare time.

---

119. Mr. C. P., New Jersey. "Is it possible to take a course in calculus by mail from a reliable correspondence school? Where are the headquarters for the Chautauqua Courses, books, and other educational features?"

We do not know of any reliable correspondence school giving instruction in higher mathematics. The general aim of correspondence schools is to promote industrial and commercial efficiency, and the assumption is that a topic so theoretical and abstruse would not be profitable to teach or to study.

For information concerning the Chautauqua features, apply to the Chautauqua Editor of The Independent.

---

120. Mr. J. S., Virginia. "I am an insurance agent, responsible for a few sub-agents; like my work, want to advance along technical and practical lines. Please tell me how to fit myself as a thoro insurance man from agent to president of the company."

Hurrah for your ambition. It is, however, a rather large order to expect a complete commercial education in a dozen lines of a magazine column. We can only start you.

Obtain from all the prominent life insurance companies whatever literature they publish, for clients and for possible agents. Compare all these documents, act on the good suggestions, work out better ones, also get the annual statements of leading companies, read and ponder and digest. Write for copies of all the magazines on different phases of the subject, a few being *The Insurance Age*, *The Spectator*, *Best's Underwriter Insurance Almanac*, *The Insurance Index*, *Insurance Intelligencer*, *The Insurance Times*, *Life Insurance Independent*, *Insurance Monitor*, *Insurance and Commercial Magazine*, all of New York. Consult the libraries of the largest New York companies (or get a friend living here to do it for you) and learn which are the best books, one standard work be-

ing Hudnut's *Studies in Practical Life Insurance*. Write the University of Pennsylvania and other state colleges for particulars of the courses they offer. Above all, consult the higher officials of your own company. Don't say you want to be president—they might get scared. But describe the rest of your ambition.

---

121. Prof. J. P. T., Ohio. "Can you give me the address of any high-grade employment agency covering the eastern and middle western parts of the country, and placing men with professional training, or with special business training? I shall be glad if you can accommodate me in this way."

Inquire of the National Employment Exchange, 30 Church street, New York.

---

122. Mr. H. C., New York. "What do you think of the no-breakfast plan for an underweight neurasthenic? No organic trouble, just a bad case of nerves. Have taken lots of medicine—phosphates, iron, malt, etc., and am now taking a course in physical culture by mail—with little or no improvement. Have long hours as bookkeeper, nervous rush all day, only thirty minutes for noon lunch. Cannot afford to quit work and take a rest. Cannot study, have chronic brain-fag. What *can* I do?"

Lots of things. You can live in a quiet place, keep your bedroom thoroly ventilated, sleep nine hours every night, drink three pints of pure water every day, avoid extremes of heat and cold, make yourself move slowly and calmly, analyze and organize your work so as to banish the "nervous rush," form the habit of an erect posture at your desk and a consequent improved digestion. All this will help.

You can read books on sane habits of life—such, for example, as Dr. H. Lindlahr's *Philosophy and Practise of Nature Cure*, or Dr. J. H. Kellogg's *Neurasthenia*. You can cultivate peace of mind, which in your case underlies power of body.

As for the no-breakfast plan, we do not approve it in your condition—with but thirty minutes for noon lunch, when *do* you eat? Better rise a half-hour earlier, take a simple, nerve-building breakfast, of perhaps whole wheat toast, soft-boiled or poached eggs, cocoa or chocolate, and fresh fruit. Eat slowly and rest completely twenty minutes afterward. Then at noon, some such food-drink as koumys or lactated buttermilk, or malted milk, would be sufficient. A generous course dinner would thus be relished in the evening.

---

123. Miss E. R., New York City. "My last vacation was a miserable failure due to poor location, facilities and surroundings. I came back to work so tired and ill that I lost another week in building up my health. Is there no way for a self-supporting girl to plan her short holiday in a wholesome, sensible manner?"

Consult the Vacation Committee, 38 West Thirty-ninth street, New York City. Young women readers from other cities may write the National Vacation Committee, 105 West Fortieth street, New York City. Under these auspices a movement is well under way to teach American girls how to save money for a good vacation, then to show where it may be had.

INDEPENDENT OPINIONS

F. G. Feaster of Barr, South Carolina, calls our attention to a misleading note in "The World Over" for June 28 which implied that the growing of tea in this country was a complete novelty. While the experiment is apparently unprecedented so far as California is concerned, there are a hundred acres planted to tea at Summerville, South Carolina, where Dr. Charles U. Shepard, in cooperation with the Bureau of Plant Industry of the Department of Agriculture, has succeeded in raising about 12,000 pounds of dry tea each year. The department reports that the climate of the southern and gulf states is in general admirably adapted to the cultivation of the tea plant, and that the many other attempts which have been made thruout this region to raise tea have lapsed because the growers had not been taught how to pluck and cure the leaves rather than because of difficulties in cultivation.

Our editorial of July 5 on "The Rights of Professors and Students" inspired one correspondent to send us a clipped newspaper editorial in which free speech in the colleges is entertainingly coupled with the Holt-Muenter case.

Professor Lovejoy of Johns Hopkins, secretary of the American Association of University Professors and a member of the committee of that organization which investigated the Utah case, writes us as follows:

The very pertinent and timely editorial on "The Rights of Professors and Students," in The Independent of July 5, contains a comparison between the position taken by the Regents of the University of Utah and that reported to have been taken by the Trustees of the University of Pennsylvania, which does some unintentional injustice to the former body. It is true that the Board of Regents at Utah has repeatedly and peremptorily rejected petitions of the alumni, faculty and numerous local organizations, for a thoro investigation, by some body empowered to summon and interrogate witnesses, into various recent acts of the president, into the relations of the university administration to the present state administration, and into general conditions in the university. The regents have by their utterances and still more by their acts, effectually denied the right of the Utah public to full information as to the administrative methods and policies of the institution. They have not, however, taken so extreme a position as that ascribed to the Pennsylvania trustees, and in particular to Mr. J. Levering Jones. The charges against the professors dismissed from the Penn[illegible] [illegible] [illegible] [

—and the Cadillac "Eight" stands all alone

Do you wish to know how good a car this new Cadillac is?

Follow your own thoughts.

You will find that you are thinking what the nation is thinking.

Look back a little bit.

A few years ago the storm raged around the Cadillac.

A dozen or more cars sold at approximately the same price.

All claimed equality with the Cadillac.

The Cadillac field was the coveted field—because it was a quality field.

These dozen or more cars struggled to find a place in it, because they were eager to share in Cadillac success.

And, now, how do things stands?

A limited market above the Cadillac in price—and a large market below.

And in the center, as solid as a rock, the great Cadillac clientele—greater, and stronger, and more solid than ever.

When you search for a car to compare with the Cadillac do you look downward?

It is not likely.

And yet many a man in past years has thought that he was buying a car as good as the Cadillac, because he was paying an approximate price.

He cannot think that now, because these cars have removed themselves from the Cadillac field.

The storm that once raged around the Cadillac still rages,—but it is in another zone. The Cadillac is out of it, and above it.

In its own great quality class the Cadillac stands alone—all alone.

The Cadillac owner does not believe that its equal exists.

And if ***you*** are looking for its equal—where will you look?

You must first find a car of equally fine construction.

If you search for equality with the Cadillac, where else will you find such workmanship?

Again—in your search for a car equal to the Cadillac, you must find a car of equal experience in V-type engine construction.

The Cadillac has brought the V-type principle to a state of comparative perfection in the building of 13,000 V-type eight cylinder cars.

Where will you look for a like experience—for equal certainty—for such positive insurance?

What is the utmost you desire in a car?

Your friend who owns a Cadillac already has it.

He cannot think of any respect in which its efficiency could be improved.

In freedom from gear shifting, in ease of control, in swift acceleration, in hill climbing ability, in comfort and luxury, in all the things which contribute to ideal motoring, the Cadillac owner will tell you that he has them in superlative degree.

In his mind—in your mind—in the mind of the nation—is not the standing of the Cadillac absolutely fixed?

In all the things that constitute quality—the highest known quality—is it not universally accepted as a standard?

Your choice therefore, is rendered simpler than ever before.

You are freed from the distraction of many claims of equality which may once have confused you.

You know what the Cadillac offers:

—engineering pre-eminence,

—and social pre-eminence,

—unequaled V type experience,

—the enthusiastic endorsement of 13,000 owners,

—mechanical construction representing the highest type of fine manufacturing extant,

—and an established record of luxury, long life and endurance.

We repeat—you ***know*** that you get these qualities in the Cadillac

Where else could you get them?

VOLUME 83 AUGUST 23, 1915 NUMBER 3401

ARE THE GREAT FOUNDATIONS PERILOUS?

THE chairman of the United States Commission on Industrial Relations has made up his mind about the great foundations, and he speaks it forcibly in the article on another page. His arraignment has the straightforwardness of direct action. The philanthropic trusts are a menace to the welfare of society as he sees them. Even if they should confine their work to the field of science, they are not, in his judgment, a good thing. He puts his reasons forward clearly and courageously. A great many of his readers will be convinced by his argument. We hope that it will be read as carefully by the men whom it will not convince as it will be by those whose prepossessions are antagonistic to the big charities.

That great charitable trusts are dangerous to the state has been held by able jurists and declared in decisions, English and American, since the days of the conflict between church and state in England. Publicists of democratic leanings have always been suspicious of them. The organized wage earners of the United States are undoubtedly hostile toward them. Mr. Walsh very fairly represents their attitude.

Much of what he says may be admitted without discussion. Probably if Mr. Charles W. Eliot reads the article he will admit that one statement after another is not debatable. The money which supports the great philanthropies is invested in industrial enterprises. Men who administer the foundations are here and there interested, as directors or other officers, in industrial, transportation or financial corporations. To be biased is human, and men who are responsible for the conduct of industrial operations and for financial transactions would be more than human if they never carried bias into their deliberations upon the affairs of the benevolent foundations. When conflicts arise between industrial corporations and their employees men who are trustees of the foundations may find themselves denying the claims and opposing the demands of the wage earners. That in so doing they may be acting wrongly and against the best welfare of society is quite within the bounds of possibility. That scientific research workers and educators employed by the foundations may subtly be influenced by the relationship is an obvious corollary of the most familiar psychology.

ALL of these facts are buttresses of what the socialists are pleased to call the existing social order: this too is undeniable. To the extent that this order is built on privilege these facts are obstacles in the path of an equalizing democracy. To the extent that capitalistic profits are wrung from an exploited proletariat the foundations not only derive income from exploitation, but they add difficulty to the task of ending exploitation. Neither individual nor trust can wage war against the interests from which it or he draws sustenance.

These admissions, which we presume more than one trustee of the Rockefeller Foundation would make without hesitation, Mr. Walsh, and those who think as he does, will doubtless say are quite enough to damn the foundations. But that is where Mr. Walsh and those who share his view, are wrong. The facts admitted not only do not damn the foundations, they do not seriously inculpate them.

WE are not living in an age of economic or moral *laissez faire* in which the individual or the corporation is unchallenged by organized society. We are not living in a socialistic state wherein collective ownership and collective authority reign supreme. We are living in a society in which the forces of individualism and of collective control are both strong, and in which, therefore, all manner of compromises and adjustments are being made.

Perhaps it is a transitional society. It is highly improbable that the collective conscience, the collective wisdom, the collective authority will be so inactive or so ineffective that private fortunes comparable to those of the present age can be accumulated in the future. The wise disposition of those that have been accumulated hitherto has engaged the thoughtful consideration of intelligent men in all ranks of society, and of none more seriously than of the men who have the fortunes to dispose of. To an extent that could hardly have been predicted thirty years ago, they have put the solution of the problem into the hands of men who, human tho they are, biased tho they inevitably must be because they are human, command the confidence of their fellow men. If integrity and sound judgment exist, and if they can be found, they have been put in charge of the destinies of the great foundations. And to make assurance doubly sure, the great foundations, by the terms of their incorporation, are subject to Congress, and, therefore, to the public will. They have been made the creatures of a democratic sovereignty which can call them to account if their deeds are evil.

If we were creating a society to our own liking we should not create one in which the great foundations would have a place and function. If it were "up to" us to devise an agency on the whole better adapted to mediate the transition from a social system in which many things have been wrong to one in which we hope many things will be better, we should find it difficult to discover or to devise one all in all more promising than the great foundations.

THE FIRST STEP

THE note of the seven American powers to the several leaders in Mexico has a fine tone of disinterestedness and friendship. Its last paragraph has an even finer undertone of firmness and determination. Replies from each of those to whom the note is addrest are called for within ten days. This demand for a speedy reply ought to set the act of sending the note in proper perspective. It is strongly to be hoped that it is not to be the beginning of endless diplomatic correspondence and artful fencing. It should be the first step in a decisive course of action. Apparently that is the purpose of the signers.

Mexico needs one thing and needs that at once—a strong provisional government able to restore order. If such a government can be secured by conference of the factional leaders in Mexico, well and good. If not, it must be brought about in some other way.

The Pan-American Seven have taken the logical and sensible first step. They have given the fighting factions a chance to get together for the good of Mexico. They have intimated that the agreement must be promptly brought about.

Such a voluntary agreement among men who have shown themselves unmitigated self-seekers does not seem probable. What then?

We cannot turn back. The Conference of the Seven must go ahead and see to it that that provisional government is established and is supported in whatever way is necessary to its success—or the United States must do it alone.

THE WESTERN RATE CASE

FORTY-ONE railroad companies—all the roads west of the Mississippi, with additional mileage east of it—asked the Interstate Commerce Commission for rate increases on certain specified products, including grain, live stock and meats. These increases would have added $7,604,000 to their annual gross revenue. Those which the Commission granted amount to $1,632,000. The addition sought was a very moderate one. Two members of the Commission say it should have been given to the roads. They were outvoted.

We are not favorably imprest by parts of the argument in the majority's opinion. Admitting that there was available no really sufficient evidence for an estimate of the value of the companies' property, the Commission assumes that they are earning a fair rate on a reasonable valuation. Admitting that the prices paid by the roads for capital, material and labor have been increasing, the opinion assumes that they must expect to suffer on this account as other industrial enterprises do. And there is much said about such mismanagement as was shown in the Rock Island and Frisco systems, altho it is admitted that the general level of rates was not affected by it. Our rail transportation industry is a very great one. We have about two-fifths of the whole world's railroad mileage. In so great an industry there must be some black sheep. At present, we think, the number of them is small. The entire industry, with its hundreds of thousands of stockholders, and the public that is affected by its condition, should not be punished for their sins.

For a few years past the railroads have not been enjoying prosperity. Their expenditures have been largely increased by outside forces. Wages have been raised by arbitration proceedings in which the Federal Government indirectly participated. Their taxes have been growing. Some of them have been burdened by unjust full crew laws, others by passenger rate reductions which the Supreme Court recently annulled. It is well known that there has been a marked decline of their net earnings. They have felt unable to make such purchases of equipment as were regarded as necessary in former times. Their condition has tended to discourage fresh investment in their stocks and also such investment as is required for extensions or new lines.

The roads are entitled to revenue enough to yield a fair return on the money invested and to uphold their credit. To this they are entitled in the public interest. It is unwise to withhold from them what they ought to have. In this Western rate case we prefer the dissenting opinions of Commissioner Daniels and Harlan to that of the majority.

NO EMBARGO

THE American reply to the Austrian note asking for an embargo upon shipments of munitions of war from this country puts our categorical refusal on sclid ground.

The obligation to establish such an embargo is denied upon these grounds:

It is unknown to international law.

It would make the novel demand that the advantage gained to a belligerent by its superiority on the seas should be equalized by the establishment by neutral nations of a system of nonintercourse with the victor.

It would force upon all nations a militaristic program thru the necessity of heaping up in time of peace vast stores of arms and ammunition sufficient to last thru any possible war.

These reasons are conclusive. An embargo upon munitions imposed now would be an outrageous violation of neutrality.

The general adoption of such a practise as an international custom would be a direct encouragement to militarism.

THE RETURN OF ARMOR

THERE are fashions in military affairs as well as in feminine costume. The "grenadiers" of this generation are resuming their forgotten art of throwing hand grenades. Arrows are again raining from the sky. And soldiers are beginning to put on the armor which they discarded with contempt three centuries ago. Armor was abandoned because, when it was made heavy enough to be bullet-proof, it was too cumbersome for marching. Mobility was more desirable than invulnerability. But there has not been much mobility of late in the western seat of war. The soldier is rarely called upon to charge. For the most part he stands in the trenches, subjected to the fire of guns anywhere from twenty yards to ten miles away. Many of the wounds, even of the fatal wounds, are superficial, caused by spent or deflected balls and small fragments of burst shells. A British naval surgeon reports that motor goggles are often sufficient to save the eyes and a linen collar may prevent the cutting of the carotid artery. Stories of our Civil War tell with surprizing frequency how a mother's testament carried over the heart stopped a bullet, and

the G. A. R. men say that a pack of cards in any other pocket affords like protection to some equally vulnerable the less vital part. It may well be expedient, then, to provide some kind of partial protection, altho to cover the body with steel of sufficient thickness to withstand the modern rifle ball would be impracticable. According to the Sheffield experiments, a German Mauser bullet fired from a distance of eighty yards may be stopped by a toughened steel plate three-sixteenths of an inch thick, and this weighs seven and a quarter pounds to the square foot. But armor of this weight is too heavy to be borne, and the speed of the modern bullet is so great that, even if the breastplate were not pierced, the wearer would be knocked down and badly bruised.

The last piece of armor to be discarded, the helmet, is the first to be readopted. In fact, the helmet has never altogether gone out of use, altho it was retained, like the cuirass, more for show than service. An attempt was made a few years ago to introduce in the French army a leather helmet designed by the battle painter Detaille, but when a company wore them in a 14th of July review the Parisians laughed at them because they looked like the "Pickelhauben" of the Germans. It was also street jeers which stopped the French soldiers from adopting a khaki uniform in place of their conspicuous red trousers and blue coats. This leaving of the selection of a uniform to the taste of the public may be democratic, but it has cost many thousand lives.

Head wounds form thirteen and a third per cent of all wounds, according to a report to Paris Academy of Medicine. In a narrow, deep and partitioned trench the body is protected, but in watching the enemy, sighting a rifle or throwing a bomb the top of the head must often be exposed. Two forms of helmet have been introduced into the French army; one made of heavy steel with a wide sloping rim, the other a light steel skull cap shaped like the *calotte* worn in European churches by Roman Catholic priests. The picture on another page of this issue shows the metallic *calotte* in use by French soldiers in the trenches.

The Germans have tried breastplates of thin steel scales mounted on wire gauze, but abandoned them because the wounds, tho rarer, were worse on account of the laceration caused by the fragments. The modern bullet usually makes a clean, straight and sterilized wound. The army surgeon may say to the soldier, as Sir Lucius did to Bob Acres, and much more truthfully, that "a ball or two may pass clean thru your body and never do you any harm at all." But any kind of armor, padding or even clothing may bring on gangrene, tetanus or other infection.

Smooth, thick steel plates so bent and arranged that they present only glancing surfaces, such as we see in the specimens of the golden age of armor, afford the only complete protection, and it is not impossible that something of the kind may be again made use of. The weight of a complete suit would not be more than is borne by the modern soldier. According to Charles ffoulkes, Curator of the Armories in the Tower of London, a serviceable half-armor weighs about thirty pounds, and allowing fifteen more for clothing and arms would make altogether forty-five pounds, while the modern soldier has to carry nearly sixty pounds. The warhorse of the late fifteenth century carried about 350 pounds, including horse armor, saddlery, rider, rider's armor and arms. The horse of the German cuirassier carries 334 pounds.

Portable shields are being used on both sides for creating a zone of fire or putting barbed wire entanglements. Sir Conan Doyle suggests that the shields should be mounted on wheels and fitted so as to link and overlap like the ancient Roman *tortoise*. So farmer readers recall, and, if the heavy commanding on those historic battlefields should rouse from their graves any one of the warriors who lie so thickly buried there, he would not find himself too badly behind the times. If one of Cæsar's legionaries, he could at once fit his shield in the front rank of the *testudo*. If a Knight of the Black Prince he would find himself better protected against shell and shrapnel than most of the combatants.

AN AMERICAN PROPHETESS

IT is the distinction of our days that the American Church has enjoyed the teachings of two prophetesses. The first century of our Colonial history gave us Ann Hutchinson. In old times prophets were stoned, and Massachusetts banished her first prophetess to Rhode Island, and from thence she wandered to the Dutch colony on the Hudson and was killed by the Indians near Hell Gate. Our two later prophetesses, Mrs. Eddy, founder of the Christian Science Church, and Mrs. Ellen G. White, leader and teacher of the Seventh Day Adventists, lived and died in comfort and honor, surrounded by their admiring followers. Many of Mrs. Eddy's disciples believed she would never die, and Mrs. White hoped to be one of those who would be taken up alive to meet the Lord in the air. But the Lord delayed His coming, and she entered into rest, just as others do, at the age of eighty-eight, and her burial took place a few days ago at the Advent headquarters at Battle Creek, Michigan. Her husband, Elder White, shares with her the honor of founding the Seventh Day Advent Church, but she was its one prophetess.

Ellen G. (Harmon) White, born in Gorham, Maine, was a very religious child, and when thirteen years old, in 1840, in the midst of the Millerite excitement, heard the Rev. William Miller preach on the speedy coming of Christ and she was greatly affected. At the age of seventeen she had her first vision, and was bidden, she believed, by the Holy Spirit to proclaim the speedy advent of Christ to glorify his saints and destroy his enemies. She dreaded the duty, but was given strength to accept it, and was rewarded with a long succession of revelations thru her life. Before she was twenty years old she married Elder White, and their following began to grow. Her revelations were in the nature of instructions to their disciples, mostly aimed at their spiritual life, not forgetting to forbid the sins of custom and fashion. Thus women were forbidden to wear hoopskirts, and required to abjure corsets and wear loose dresses. A vegetable diet was required, and even eggs were not allowed, and only two meals a day, breakfast at six and dinner at twelve. Saturday was the Sabbath; and the Lord's coming was close at hand, but the time set had to be put off thru misunderstanding of Daniel's prophecy. At first the children were taken out of school to devote themselves to preparation for the advent, but after a while they learned patience, and established schools of their own, and entered on a great missionary

propaganda, which took Mrs. White for years to Europe and Australia.

Of course, these teachings were based on the strictest doctrine of inspiration of the Scriptures. Seventh Day Adventism could be got in no other way. And the gift of prophecy was to be expected as promised to the "remnant church," who had held fast to the truth. This faith gave great purity of life and incessant zeal. No body of Christians excels them in moral character and religious earnestness. Their work began in 1853 in Battle Creek, and it has grown until now they have thirty-seven publishing houses thruout the world, with literature in eighty different languages, and an annual output of $2,000,000. They have now seventy colleges and academies, and about forty sanitariums; and in all this Ellen G. White has been the inspiration and guide. Here is a noble record, and she deserves great honor.

Did she really receive divine visions, and was she really chosen by the Holy Spirit to be endued with the charism of prophecy? Or was she the victim of an excited imagination? Why should we answer? One's doctrine of the Bible may affect the conclusion. At any rate she was absolutely honest in her belief in her revelations. Her life was worthy of them. She showed no spiritual pride and she sought no filthy lucre. She lived the life and did the work of a worthy prophetess, the most admirable of the American succession.

WAR AND RELIGION

IN a booklet entitled *War and Religion*, the Abbé Loisy, condemned by the late Pope for heresies charged, turns, as any Frenchman might, from his studies of Church History to consider present problems; and he denounces the Germans for worshiping *"un dieu anthropophage,"* a god who devours men. He is not the Heavenly Father of all mankind, God of the Gospels. Just as Assyria had a god Assur named after the country, or as Babylonia had its tutelary god Merodach, and as Sennacherib boasts, "Under the protection of Assur my lord I marched against the land," so says M. Loisy Germany claims a special national god who is her protector and foe to her foes. Did not Cæsar say of the Germans that they paid no honor to any god who did not visibly help them in war?

If it be true that William II and his court preacher, Dr. Dryander, and his chief theologian, Professor von Harnack, have made special claims to the protection and favor of God in the present war, yet all the nations at war have made their appeals for help to the God of all mankind, and each nation claims to be carrying on the war under the law of justice and mercy. When M. Babert, a venerable French preacher, wrote to the head court preacher at Berlin suggesting that Christians of all nations at war should sign a common statement declaring that their national loyalty must not make them forget that God is the God of all nations and all men, and that Jesus is their common Savior and requires love of all men, whether in war, friend or foe, that they should therefore banish all hatred and show all possible humanity, and hasten the return of a just and permanent peace. Dr. Dryander replied that he and his associates could not sign a paper which could even seem to imply that it was needed, since they fully knew that these principles animated the entire army (then in Belgium), and that "on our side the war is conducted with a discipline, a conscientiousness and a gentleness of which all history hitherto perhaps offers no example."

The New Testament nowhere justifies war or any of its horrors; but compared with the Old Testament wars this boast is justified. No one of the present combatants in capturing a city has made it a rule, as a command of God, to massacre all the men, women and children. This is what Joshua did to Jericho and Ai and Makkedah and Libnah and a multitude of other cities, for Joshua, the historian tells us, "utterly destroyed all that breathed, as Jehovah, the God of Israel, commanded." Bad as this war is, things have improved. We do not kill all that breathe, and we have learned that no nation has a special god of its own, and that Jehovah never commanded and does not now approve such massacres. Perhaps one of these days the cruelties of this war will seem as inhuman as the wars of Joshua now appear to us. We know God better than did the old historian, to whom it seemed a perfectly natural thought that his god should be the god of his nation only, and therefore to all his nation's foes *"un dieu anthropophage,"* all, even infants, to be devoured by his sword.

ON BEHIND!

THE Safety First Society of the City of New York is unwearied in well doing. It has recently suggested that the Board of Aldermen should pass an ordinance "making it a misdemeanor for any person to 'hitch on' or trespass upon a motor-truck or horse-drawn vehicle unless employed by the owner of such vehicle."

It is a melancholy fact that if safety comes first sport must come second—and sometimes there is no second. Nobody of sound mind can object to such a prudent law. Nobody who ever hooked on can contemplate a generation which is prevented from so doing without a passing sigh of pity.

There were so many ways of borrowing motor-power. Sometimes you just hooked on—climbing to the cart-tail of a leisurely express wagon or hospitable dray by a series of maneuvers which terrified lady passers-by. Once there you were comfortable—well, at least as comfortable as the pioneers in their prairie schooners—and you saved leg-power and had leisure to meditate the business in hand.

Or if you lived on asphalt streets you used to roller-skate frantically after the speedier wagons—or motors in these latter days—and with a grimy arm for tow-line let yourself be whirled along the smooth pavement, swinging gloriously around corners and dropping off conveniently where the "fellers" were playing shinny four or five blocks down the street. The most daring and magnificent hooking-on came when you had your bicycle pretty well trained, and, sitting erect in the saddle with a lordly air, you rested one hand on the rail of a wagon that seemed worthy such an honor, or even—acme of peril and privilege—on the dashboard of a street-car whose conductor was busy with his fares.

"On behind!" you shouted in joyous malice if it was the other fellow and not you who hooked on. Then it was merely a piece of friendly everyday enmity thus to warn the driver. Hereafter the cry will take on the ignoble aspect of a criminal charge. It will summon the minions of the law, it will carry threats of jail and disgrace; it will compel the American boy to walk—just walk. What ignominy!

THE STORY OF THE WEEK

The Conquest of Poland

With this week the German conquest of Poland is virtually complete whether it is permanent or not. The retreating Russians in the south have been pursued to the Bug River, which marks the eastern boundary of old Poland, while in the north the German troops have advanced beyond the Polish frontier and entered Russia proper. The Russians, following the same tactics that they used against Napoleon a hundred years ago, have laid waste the country as they retired. The grain fields on which the Germans have relied to carry them thru next winter have been burned. Even the grass and pasturage has been destroyed by spreading hay over the land and setting it on fire. According to the German account the towns have sometimes been set on fire by the Cossacks as they left, but the Germans have entered quickly enough to save part of the buildings. All food has been removed from the evacuated towns and the factories and machine shops are wrecked by the Russians.

Before the Russians evacuated Warsaw they destroyed as far as possible its usefulness to the enemy. The copper wires of telegraph, telephone and trolley systems were taken away, for Germany is in dire need of copper for munitions. The grain warehouses on the Praga side of the Vistula were burned. Warsaw, however, has not suffered from any bombardment except by the aeroplanes. Prince Leopold of Bavaria, who took possession of the city, issued a proclamation calling upon the people to maintain order, and prominent citizens were seized as hostages to prevent molestation of the troops. General Baron von Scheffer-Boyadel, commander of the Eleventh Army Corps and a veteran of the War of 1870, has been appointed Governor of Warsaw. At the suggestion of the citizens' committee he has freed all the political prisoners confined in Warsaw.

In all of these Polish towns the Jews form a third to a half of the population and the German military authorities have taken pains to have them represented in the civil government together with Russians and Poles. The Polish delegates of the Austrian Reichsrath and the Galician Diet have issued a manifesto demanding the reestablishment of the Kingdom of Poland under the suzerainty of the Hapsburgs. This proposal is regarded as premature by the Germans, who evidently have other plans for the disposition of Poland. In the Baltic provinces, where the aristocracy and large landowners are mostly of German origin, the advance of Hindenburg's army toward Riga is generally welcomed.

The Grand Duke Nicholas is to be congratulated in effecting his retirement from the Vistula to the Bug without having any large part of his troops cut off and captured. On the 13th General von Scholz reported taking 900 prisoners and General von Gallwitz 6500, but the bulk of the Russian army has evidently slipt intact from between the jaws of the German steel trap. Some are left behind in the fortresses of Novo Georgievsk and Ostrolenka which are under siege. Kovno, the chief fortress on the Niemen, successfully repelled the first attacks of the Germans, and they are now getting their big Krupp guns on their concrete foundations to effect its reduction by bombardment across the river. But it seems that the Russians have little hope of its holding out long, for they are already removing not only from Kovno but also from Vilna, an important railroad center sixty miles in the rear of the fortress.

The Dardanelles

Six months ago the combined British and French forces undertook the reduction of the forts at the strait of Dardanelles in order to open the way to the Black Sea. The grain of

THE GREAT WAR

August 9—Germans take the Russian fortress of Lomza. British gain trenches at Hooge near Ypres.

August 10—Austrians invade Italy by Carnic valley, but are driven back. Germans take trenches in Argonne forest.

August 11—Germans take Lukow, Poland. Austro-German troops invade Italy in Trentino.

August 12—Germans attack Kovno, Poland. United States replies to Austria reaffirming right to ship arms to belligerents.

August 13—Germans take Siedlce, Poland. Bombardment of Belgrade renewed.

August 14—Germans take outpost of besieged fortress of Novo Georgievsk. Petrograd Russians report gains in the Caucasus.

August 15—Germans report capture of 10,000 Russian prisoners in Poland. Allied aeroplanes drop bombs on Constantinople.

THE KAISER: "OH, IF I COULD ONLY QUIT NOW"

IS IT TIME FOR THE WAR TO END?

Underwood & Underwood

GERMAN ROADS THRU RUSSIAN POLAND

The tremendously effective German sweep thru Poland has been made in spite of the lack of railroads and good highways. Temporary tracks for horse-car transport have been used in some sections by the Germans

southern Russia which ordinarily flows out thru Odessa for the feeding of western Europe was being held back when it was most wanted. On the other hand, Russia was in dire need of ammunition which her Allies might have supplied and for lack of which Galicia and Poland have since been lost. It was generally expected among the Allies that both these conditions would be remedied within a few weeks, for many of the Dardanelles forts were known to be antiquated and almost any of them could be reached by the guns of the superdreadnoughts standing in the outer sea. Turkey had been ignominiously defeated by Italy, Bulgaria, Serbia and Greece. Her government was unstable and her army disorganized by reason of the change from the old regime to the new. Her navy was too inefficient to take any active part in either of the two previous wars. A Russian fleet was crossing the Black Sea to attack Constantinople from the north and it was a question whether it would not get thru the Bosporus before the Anglo-French fleet got thru the Dardanelles.

But the sanguine expectations of the Allies were doomed to disappointment. The shells rained upon the peninsula were mostly wasted. Fortifications that were "silenced" proved not to have been "reduced." On the other hand, the fleet suffered so heavily from mines and submarines that it was withdrawn to the shelter of Imbros, which, altho it is a Greek island, has been freely used as a base of operations. It is said that at the time when the naval attack on the Dardanelles was launched Greece had promised to support it by a land force, but the overthrow of Premier Venezelos and the opposition of the pro-German King of Greece left the fleet to act alone.

This deficiency was made up by a force of Australasian troops combined with French and Senegalese. This was landed at the tip of the peninsula four months ago, but has not got more than five miles from the coast at any point. The fighting at once took on the same character as in France and Belgium, trenches coming within a few yards of each other at places, mining and countermining, hand grenade throwing and bayonet charges, terrible losses for small gains.

The Allies, outnumbered, have at times been in danger of being swept off the peninsula. Now, however, they have received reinforcements, said to number fifty thousand men, and their prospects of being able to advance are brighter than they have been at any time before. It is reported that an Italian army of 150,000 will soon be sent to Gallipoli and it is hoped that Greece, now that Venezelos has come back into power, may take a hand.

The Balkan Problem

The Balkan States whose conflicts brought on the Great War now hold the key to the situation. The fate of Constantinople lies with them for they can, at will, cut off or connect the Teutonic Powers with their Ottoman ally. So long as German and Austrian arms and officers could be sent to Gallipoli the task of forcing the Dardanelles was difficult if not impossible. But Turkey, isolated and thrown upon its own resources, could doubtless be soon brought to terms.

The Balkan States, realizing and indeed exaggerating the importance of their position, have negotiated with both parties, but held back from any decisive step, for as the war wore on the competing bids for their assistance became higher and higher. The difficulty with making a bargain is that the demands of any one of them cannot be satisfied without offending the others for each wishes to expand at the expense of its neighbors. The two successive Balkan wars, the first with Turkey and the second with one another, left behind them a legacy of hate and suspicion because of the treachery and brutality which marked them. Bulgaria, which did most to defeat Turkey, got the least out of it, for Greece, Serbia and Rumania combined to take territory from her. Bulgaria now demands back from them the territory she lost by the Treaty of Bucharest, but none of them is willing to consent to the cession of any of her gains even at the urgent insistence of the Allies. The mere rumor that Premier Venezelos had promised the Allies to cede to Bulgaria the part of Kavalla on the Aegean, which she had acquired with Bulgarian aid, was sufficient to drive him from office, altho he is the most popular man in Greece. In the new Parliament opening August 16 he commands a majority, but it is a question whether he will now be able to carry out his policy in opposition to the King, whose sympathies are with Germany.

Rumania has put a stop to the transportation of arms across her territory to Constantinople. The German Government threatens in retaliation to put an embargo on the importation of Rumanian grain and cattle which would deprive Rumania of her most profitable markets, Austria and Germany. The hesitation of Rumania to take sides in the war is largely due to the fact that her desires conflict. On both sides there are lands inhabited largely by Rumanians which she wants to annex. Transylvania and Bukowina on the west and north belong to Austria-Hungary, Bessarabia on the east to Russia. Russia is willing enough to cede the Austrian territory and Austria-Hungary the Russian, but neither will sacrifice its own to secure Rumanian support. When Russia took possession of Galicia and Bukowina, Rumania was almost ready to join in the attack on Austria-Hungary, but now, when the Russian armies have withdrawn from both and an Austro-German force is massed on her frontier, Rumania is less disposed to espouse the cause of the Allies.

Serbia, it is understood, positively refuses to cede Bulgaria that part of her Macedonian acquisition to which, according to the terms of the Balkan League, Bulgaria was entitled. The Allied Powers have endeavored in vain to obtain from Serbia any concessions that would satisfy Bulgaria and relieve the Balkan situation. This seems a poor return for all the help which the Allies have given to Serbia in the way of loans, hospital supplies, munitions and military aid. The gunboats on the Danube defending Belgrade are said to be manned by British marines.

Ever since the ignominious expulsion of the Austrian forces from Serbia there has been a halt upon hostilities between the two countries. It is said that Austria has refrained from further attempt at an invasion of Serbia, but on

much for fear of another defeat or because of her preoccupation elsewhere but because of Italy's threat that the renewal of hostilities against Serbia would bring her immediate intervention. Now that Italy is in the war this obstacle is removed and the Austrian guns have again opened on the Serbian capital. A large force of Austrians and Germans has been massed opposite Belgrade, with the determination to hew their way thru to the sea.

Austrian Offensive Against Italy

The progress of Italy is discouragingly slow. After three months of hard fighting all along the frontier the Italian forces have not penetrated more than ten miles anywhere into Austrian territory. At most points they are from three to five miles inside the Austrian boundary. Their possession of this strip along the frontier is, however, of importance since it serves as a protection against a sudden invasion of Italy by the Austrians, a movement which may now be expected at any time since the expulsion of the Russians from Galicia has freed Austria-Hungary of any immediate danger from that quarter. In fact it is reported from Rome that troops are already being brought from Galicia to the Italian frontier.

On the eastern side the first aim of General Cadorna, the Italian commander-in-chief, was to gain possession of the Isonzo River, which runs parallel to the boundary line, three to ten miles from it. The chief towns on the river are Tolmein and Görz, to call them by their Austrian names instead of their Italian, Tolmino and Gorizia, until they are taken. The Italians have succeeded in crossing the Isonzo River above, below and between these two points, thereby severing the railroad, but the towns themselves are still uncaptured. It was announced a month ago from Rome that Görz had been evacuated, but if so the Italians have not yet occupied it. The bridgehead at Görz continues to hold out against them.

North of Görz, near Plava, which stands in a bend of the Isonzo River, three miles from the border, the Italians have lately made some gains and are holding them against Austrian attacks. The Austrians are also making strong but so far fruitless efforts to regain Monte Nero from one of the southern peaks of which, 4500 feet high, the Italians are able to bombard the outer forts of Tolmein, only three miles away. General Cadorna has announced that he will not undertake any further offensive for the present but confine his attention to making secure the territory now held. On the western side the Austrian offensive has been directed at the corner of Italy between the Tyrol and Switzerland.

British Gain at Hooge

Attention is again turned to the region about the old Flemish town of Ypres, which has been the bone of contention between the German troops on one side and the French, British and Belgian troops on the other. The line dividing the opposing forces sweeps in a semicircle around the town to the east and only about three miles away, a most unstable situation to all appearance since there is nothing in the lay of the land to account for this peculiar kink, but neither party has been able to straighten it out.

East of the town is the village of Hooge and southeast is Hill 60, which have figured in the dispatches for many months. Both were retaken by the Germans in July and the British are trying to get them back again. On Sunday night, the 8th, they concentrated their artillery on the German lines at Hooge and so demoralized the enemy that over half a mile of trenches were carried by storm at daybreak with slight losses to the assailants. Three officers and 124 men were taken as well as two machine guns. On the following day the German artillery fire drove the British out of the southern part of the trenches, but the most of their gains, including the western half of the ruined village, they still retain.

Elsewhere on the western front there is little to report except an increased activity in the Argonne forest, west of Verdun, where the Württemberger troops under the Crown Prince captured some French trenches by the aid of asphyxiating shells. On the following day the French regained all except the first line of trenches.

A great deal of dissatisfaction prevails in France over the failure of the army to make any advance during the spring and summer. This feeling found voice in the Chamber of Deputies in a violent attack upon the Minister of War, M. Millerand, by the left or radical wing.

The War on the Sea

The chief naval movement at present is that about Riga. The army of General von Hindenburg is within a few miles of the port and the Russians have apparently abandoned hope of holding it for they are removing the machinery, art treasures and governmental archives into the interior. The British Consul has left Riga. That is one of the most important of Russian ports on the Baltic, both from a naval and commercial standpoint, and its possession would be of the greatest service to the Germans if, as has been surmised, they seriously contemplate so daring a movement as an advance upon Petrograd. An army from Danzig landed here would be already half way to Petrograd, which lies 400 miles to the northeast. The German fleet, hitherto

© International Press Exchange

FIGHTING WITH FIRE

Among the new weapons introduced by the Germans to meet the new conditions of warfare is the stream of burning petroleum. The burning oil runs down the trenches and into the dugouts while the suffocating smoke spreads with a favorable wind over a considerable area. This resembles one of the "Greek fire," probably also petroleum, which was employed by defenders of the Byzantine empire

DRILLING A SQUAD IN THE MANUAL OF ARMS

Not all of them know what to do with their hands or their guns. They are part of the 1100 business and professional men in the "United States Military Instruction Camp" at Plattsburg, New York, where they are devoting a month to training at the hands of officers of the regular army which will prepare them in some degree to serve as officers of volunteers if war should come

unemployed, might be used to force the Gulf of Finland.

There are conflicting reports as to the recent naval operations at the mouth of the Gulf of Riga. According to the Russian version the Germans made an attack in force with nine battleships, twelve cruisers and many destroyers but were repulsed with damage to a cruiser and two destroyers. The Germans claim that it was merely a reconnoitering expedition and that the only vessels lost were two mine sweepers. The German Baltic fleet has made its base at Libau, sixty miles south of the Gulf of Riga. The coast between Libau and the Gulf was shelled by the German warships and the seaside resorts and villas destroyed.

The British auxiliary cruiser "India" was torpedoed by a German submarine on August 9 as she was about to enter Restfjord, Sweden. Eighty of her crew were saved. The same day the British destroyer "Lynx" was blown up by a mine in the North Sea. Twenty-six of her crew were saved. Two British merchantmen and seventeen fishing vessels were sunk during the week ending August 12, according to the Admiralty announcement. On the following day three British steamers and two trawlers were sunk, and on the 14th two more steamers.

An Italian submarine attacked and sunk the German submarine "U 12" in the Adriatic on August 10 while an Austrian squadron was bombarding coast towns.

The German papers publish a list of sixty-six naval vessels they claim the Allies have lost up to July 26. The list includes twenty-two battleships of which sixteen are British, sixteen battle cruisers, ten of them British, and eleven British protected cruisers. Not all of these losses are admitted by the British Admiralty.

The Right to Ship Arms

The note which the Secretary of State despatched to Vienna, August 12, may be regarded as a reply not merely to Austria-Hungary but also to American critics of the Administration because of its policy of permitting the exportation of arms. Mr. Lansing denies the Austrian contention that all or even most authorities on international law hold that the exportation of contraband is unneutral. He shows that both Germany and Austria-Hungary sold explosives, arms and shot in large amounts to Great Britain for use against the Boers in 1899-1902. He argues that a neutral power is under no obligation and has no right to compensate for the lack of sea power on the part of one belligerent by refusing to sell munitions to the other.

But the point on which Secretary Lansing lays chief stress is that a refusal to supply belligerents with arms would increase the power of militarism. We quote the passage in full:

> But, in addition to the question of principle, there is a practical and substantial reason why the Government of the United States has from the foundation of the republic to the present time advocated and practised unrestricted trade in arms and military supplies. It has never been the policy of this country to maintain in time of peace a large military establishment or stores of arms and ammunition sufficient to repel invasion by a well equipped and powerful enemy. It has desired to remain at peace with all nations and to avoid any appearance of menacing such peace by the threat of its armies and navies. In consequence of this standing policy, the United States would, in the event of attack by a foreign power, be at the outset of the war seriously if not fatally, embarrassed by the lack of arms and ammunition and by the means to produce them in sufficient quantities to supply the requirements of national defence. The United States has always depended upon the right and power to purchase arms and ammunition from neutral nations in case of foreign attack. This privilege which it claims for itself it cannot deny to others.
>
> A nation whose principle and policy it is to rely upon international obligations and international justice to preserve its political and territorial integrity might become the prey of an aggressive nation whose policy and practise it is to increase its military strength during times of peace with the design of conquest, unless the nation attacked can, after war had been declared, go into the markets of the world and purchase the means to defend itself against the aggressor.
>
> The general adoption by the nations of the world of the theory that neutral powers ought to prohibit the sale of arms and ammunition to belligerents would compel every nation to have in readiness at all times sufficient munitions of war to meet any emergency which might arise and to erect and maintain establishments for the manufacture of arms and ammunition sufficient to supply to the needs of its military and naval forces thruout the progress of a war. Manifestly the application of this theory would result in every nation becoming an armed camp, ready to resist aggression and tempted to employ force in asserting its rights rather than appeal to reason and justice for the settlement of international disputes.

Machinists and Munitions

Union machinists are pushing their campaign to get for themselves a larger share of the profits which war orders are bringing to American manufacturers. Results on the whole favor the employees. Under the direction of the officers of the International Association of Machinists employers thruout New England are being asked to grant an eight hour day. William H. Johnston, the union president, has declared in favor of peaceful negotiations as the first step in all cases, but many strikes have been called where the men's demands were refused. In the Locomobile Company's plant at Bridgeport, Connecticut, where motor trucks for the Allies are being manufactured, a strike of 3500 men was averted by the decision of the company to withdraw its profit sharing plan, to which the workers objected as being an uncertain and temporary advantage.

and to grant the eight-hour day. Strikes of smaller proportions have been called at Hyde Park, Massachusetts, where Governor Foss is interested, at Ansonia, Connecticut, and at Woonsocket, Rhode Island.

In New York the center of interest is the Garvin Machine Company strike. Seven hundred men have been out since August 2. Here the Machinists' Union is flatly opposed by the Metal Trades' Association. An effort to reopen the shop was made on August 17, and the company claims that 110 men returned to work. But the men as a whole refused to work until the eight-hour day was given.

Letters published by the New York *World* indicate that German agents have been endeavoring to foment strikes in munitions factories, and that the Imperial German Embassy had knowledge of such underground activity.

Rate Decisions

The Interstate Commerce Commission, Mr. Daniels and Mr. Harlan dissenting, has responded to the application of forty-one Western railroads for permission to increase rates on certain commodities by refusing an increase for grain, live stock, meats and fertilizers, but allowing the proposed addition for rice, fruits, vegetables, hay, straw and bituminous coal. The rejections covered about four-fifths of the desired increase of revenue, and the grants amount to only $1,641,000 a year. All the roads west of the Mississippi share in the small sum. In his dissenting opinion, Mr. Daniels sharply criticised the majority. The question considered is the 5 per cent case, whether the revenue (owing to increased cost of operation) was too small for the public interest, he said, had been avoided in this decision.

The commission has also ordered a considerable reduction of freight charges for the transportation of anthracite coal from the mines to tidewater and to interior points. It is estimated that this will reduce the receipts of the carrying roads by $8,000,000 a year. One effect has been a marked decline of the shares of these roads on the Stock Exchange. Mr. Harlan dissented, holding that the ruling was not consistent with the commission's recent action in support of an increase for other traffic in the same territory.

An Appeal to Mexicans

The note appealing to the leaders of Mexican factions was forwarded from Washington last week and published here on the 15th. It is said to have been written by Ambassador Da Gama, of Brazil, and the signatures are those of Secretary Lansing and the representatives of Brazil, Argentina, Chile, Bolivia, Uruguay and Guatemala who attended the recent conference. At the beginning "the Mexican people" are informed that the note has been sent to "many prominent persons in Mexico who possess political authority or military power." The text of the note is reprinted entire on the following page.

It will be observed that there is no intimation that *force* will be used. It is understood, however, that if there should be a conference at Mexico, and if one faction should oppose it, that faction would no longer be able to buy arms or other supplies in this country. Comments of the South American press show that the South American countries would not give their approval to armed intervention. The attitude of European governments has been ascertained. They approve the Washington plan, but say the proposed provisional government should undertake to recognize damage claims presented by an international tribunal.

Carranza continues to oppose the plan vigorously. He has sent long notes of protest to each of the South American governments represented in the conference here, and to President Wilson. To the President of Argentina he said that by giving the plan his support the latter might be an accomplice in a crime that would cause war between Mexico and the United States. Villa is willing to attend the proposed

meeting, but Carranza refuses to have any communication with him. Six states —Sinalon, Durango, Tepic, Oaxaca, Guerrero and Chiapas—have declared, thru their military governors, their intention to favor no faction but to insist upon peace. Two of these states have been controlled by Carranza and two by Villa.

The hostile attitude of the people of Vera Cruz toward Americans caused our Government to send three warships to that port last week. Street orators were urging the people to kill resident Americans. Carranza has removed the mayor who permitted this. There have been many raids by Mexicans on ranches north of the boundary, in Texas, and troops were sent to drive the bandits away. It is said that forty were killed. Evidence has been found, it is asserted, that these invaders even planned the capture and annexation of a part of Texas. We now have 17,000 soldiers on the border. General Hugh L. Scott has had an interview with Villa, who promised that American merchants and mine owners should no longer be annoyed by forced loans and the confiscation of their property.

Hayti

The election of a President in Hayti, to succeed Guillaume Sam, who was dragged from a foreign legation and killed by a mob on July 28, took place on the 12th with the consent and under the protection of Admiral Caperton, commander of the American forces which now control the capital. A revolutionary committee of safety had ordered dissolution of the Senate and House, asserting that the members had been put in office by a dictator and did not represent the people. This committee called for the election of a new Congress, a revision of the Constitution, and a provisional Government. The Admiral decided, however, to protect the existing Senate and House. At a meeting on the 11th, Captain Beach, commander of the Cruiser "Washington," told the members that the United States would ask for effective control of the customs revenue but sought no territorial grant and was working for the benefit of the Haytian people. There were placards in the streets declaring that our Government's aim was to get possession of the harbor of Mole St. Nicholas.

On the day of the election our marines guarded the Senate and House with field pieces and machine guns. They also erected barricades in the streets. But there was no disorder. General Dartiguenave, president of the Senate, was chosen, having 94 votes out of a total of 116. Only 3 were cast for Dr. Rosalvo Bobo, the leader of the revolutionists who opposed President Sam. The new President publicly exprest his appreciation of the support given by our forces, without which, he said, a free election could not have been held. It is asserted that he could not retain the office for a day if these forces should be withdrawn. Our course has the approval of France.

It is said that our Government will begin negotiations with the new President for a fiscal protectorate and for a treaty authorizing the United States to intervene for the suppression of disorder. We now hold the custom houses. Bobo has ordered his followers to lay down their arms, but some of them are looting plantations and villages. Many Haytians are in danger of starvation. The American Red Cross has published an appeal for supplies.

THE JOINT NOTE TO MEXICO

THE MESSAGE WHICH IS NOW BEING CONSIDERED BY ALL THE MEXICAN LEADERS

WASHINGTON, AUGUST 11.

THE undersigned, the Secretary of State of the United States, the Ambassadors Extraordinary and Plenipotentiary of Brazil, Chile and Argentina, and the Envoys Extraordinary and Ministers Plenipotentiary of Bolivia, Uruguay and Guatemala, accredited to the Government of the United States of America, acting severally and independently, unanimously send to you the following communication:

Inspired by the most sincere spirit of American fraternity and convinced that they rightly interpret the earnest wish of the entire continent, they have met informally at the suggestion of the Secretary of State of the United States, to consider the Mexican situation to ascertain whether their friendly and disinterested help could be successfully employed to reëstablish peace and constitutional order in our sister republic.

In the heat of the frightful struggle which for so long has steeped in blood the Mexican soil, doubtless all may well have lost sight of the dissolving effects of the strife upon the most vital conditions of the national existence not only upon the life and liberty of the inhabitants, but on the prestige and security of the country. We cannot doubt, however, no one can doubt—but that in the presence of a sympathetic appeal from their brothers of America, recalling to them these disastrous effects, asking them to save their motherland from an abyss—no one can doubt, we repeat—that the patriotism of the men who lead or aid in any way the bloody strife will not remain unmoved; no one can doubt that each and every one of them, measuring in his own conscience his share in the responsibilities of past misfortune and looking forward to his share in the glory of the pacification and reconstruction of the country, will respond, nobly and resolutely, to this friendly appeal and give their best efforts to opening the way to some saving action.

We, the undersigned, believe that if the men directing the armed movements in Mexico—whether political or military chiefs—should agree to meet either in person or by delegates, far from the sound of cannon, and with no other inspiration save the thought of their afflicted land, there to exchange ideas and to determine the fate of the country—from such action would undoubtedly result the strong and unyielding agreement requisite to the creation of a provisional government which should adopt the first steps necessary to the constitutional reconstruction of the country—and to issue the first and most essential of them all the immediate call to general election.

An adequate place within the Mexican frontiers which for the purpose might be neutralized should serve as the seat of the conference, and in order to bring about a conference of this nature the undersigned or any of them will willingly, upon invitation, act as intermediaries to arrange the time, place and other details of such conference, if this action can in any way aid the Mexican people.

The undersigned expect a reply to this communication within a reasonable time, and consider that such a time would be ten days after the communication is delivered, subject to prorogation for cause.

ROBERT LANSING, Secretary of State of the United States.

D. DA GAMA, Ambassador Extraordinary and Plenipotentiary of Brazil.

EDO. SUAREZ MUJICA, Ambassador Extraordinary and Plenipotentiary of Chile.

R. S. NAON, Ambassador Extraordinary and Plenipotentiary of Argentina.

I. CALDERON, Envoy Extraordinary and Minister Plenipotentiary of Bolivia.

CARLOS MARIA DE PENA, Envoy Extraordinary and Minister Plenipotentiary of Uruguay.

JOAQUIN MENDEZ, Envoy Extraordinary and Minister Plenipotentiary of Guatemala.

FROM STATE TO STATE

CALIFORNIA: The new two-story $57,000 Longfellow grammar school, which will be ready for the fall term this year, is one of the show buildings of Fresno. The exterior finish is in red prest brick and square pillars running from the ground to the roof beams add greatly to its appearance. Unusual conveniences for both teachers and pupils include a large dining room and well equipped kitchenette as a solution of the warm lunch problem; shower baths to be kept open after school hours for the use of both boys and girls engaged in athletic and outdoor games, and an open-air corridor running the full length of the building on each floor to serve for connecting the class rooms and as a means of getting fresh air during recesses as well as of easy escape in case of fire.

FLORIDA: Pensacola is making great preparation for welcoming the 10,000 Woodmen of the World who are expected to attend the annual encampment of the order there from August 30 to September 4. The uniform rank of the order will be instructed by a regular army officer assigned to the duty by the War Department. The encampment will be at Bayview Park, a tract of thirty acres facing Bayou Texar. The city is erecting all the buildings for officers' quarters, mess halls, baths, etc., and the people are counting on giving their guests a memorable week of entertainment.

IOWA: A truck farm of some thirty acres operated by five Bulgarians has become one of the attractive show places of Waterloo. The Bulgarians, with the intensive system which they learned in their native country, are making the earth yield such crops as were never before seen in that vicinity. These farmers make all their own tools, down to the baskets in which they carry their products to market, and have made themselves independent of weather conditions by installing an irrigation plant of their own. It is said they are making more money than any other farmers in that part of the state.

KENTUCKY: The annual report of the Bureau of Vital Statistics of the State Board of Health, recently completed, shows that one child in every seven born in Kentucky fails to reach school age; that 42½ per cent of all the deaths in the state are due to preventable diseases; that typhoid and other disorders arising from unsanitary conditions—largely due to lack of proper sewage disposal on farms and in towns—cause the greatest number of deaths, and that, while the annual death rate from all causes in the United States is only 128.6 in every 100,000 of population, the rate in Kentucky from tuberculosis alone is 201.8. The remedy suggested is the appointment of a sanitary expert in every county to inspect food and water supplies, market conditions, etc., and give his entire time to improving them.

MASSACHUSETTS: About a half-mile from the village of Blandford, on what is locally known as the Barton domain, Mr. F. R. Dunlap, the present owner, has made a lake entirely at his own expense for the pleasure of the villagers and their summer visitors. After cleaning up the entire railroad built a concrete dam 107 feet long and twelve feet high across the outlet, flooding about eighteen acres and giving a depth of water at the dam of more than ten feet. A bathing beach, boats and boathouse and a pavilion for picnic parties form a part of Mr. Dunlap's plan. There are three islands in the lake. Two are small, but one is a half-acre in extent and with its forest, its ledges and bowlders, adds greatly to the beauty of the lake. The waters abound in rainbow trout, and Mr. Dunlap intends to stock them further with other fish.

MISSISSIPPI: Early this summer the General Education Board, one of the Rockefeller philanthropies, announced that it had completed plans for a new departure in educational work and had selected a county in Mississippi for the experiment. The plan is to build up a model county with an agricultural college to serve as a social center, the whole establishment to be on lines so general that any agricultural county can imitate it and so solve the problem of making farm folk contented away from city pleasures. Since the announcement omitted the name of the county selected, people in every part of the state are hopeful, and many counties have chosen committees to urge their claims for consideration in the matter.

NEBRASKA: Bridgeport is a small town in the western part of this state, but an exceedingly live one. Besides a large pickle factory which has just been established there, it is soon to have a very large sugar plant. A recent careful survey showed fully 60,000 acres of excellent sugar beet land available in that region, and options were taken on many hundred acres near the town. Now the plans are about perfected for the erection of the factory. The town recently voted, practically unanimously, to build a $35,000 schoolhouse. According to the United States 1900 census Bridgeport's population was 178.

NEW MEXICO: The great dam at Elephant Butte in this state will, when completed next February, create the largest reservoir for irrigation purposes in the world. The flood waters of the Rio Grande will be backed up for fifty miles, and no less than 115,700,000,000 cubic feet of them will be impounded. These waters, it is estimated, will more than supply ample irrigation for Las Palomas Valley, six miles below the dam; Rincon Valley, twenty-four miles below; Upper Mesilla Valley, sixty-nine miles below; Lower Mesilla Valley, eighty miles below; El Paso Valley, 120 miles below, and furnish for lands on the Mexican side the 1,000,000 cubic feet called for annually by a treaty with that country.

PENNSYLVANIA: John Wanamaker celebrated the semi-centennial anniversary of his birth by opening a subway at Jekyll Gold for his employees. It is located on the roof of his Philadelphia store, 250 feet above the city's busiest street, and is a full block in extent. A safety high parapet surrounds the roof, and along the sides are seats for spectators. In front of the seats is running track in half-mile and beside it are tennis courts, outdoor gymnastic apparatus and space for many kinds of games.

SOUTH DAKOTA: The question of leasing the duck hunting and fishing grounds in this state to men of wealth has become a general cry of late for persons of smaller means have been able to enjoy these sports. Now the South Dakota Supreme Court has decided, in substance, that the owners of land adjoining lakes and rivers cannot interfere with the rights of the public to hunt and fish along such bodies of water, nor, on the other hand, can the general public interfere with the use of such land by the owners for other purposes, such as farming and pasturing.

TEXAS: After two years of experiment it has been found that crushed oyster shells mixt with ground silica and alumina make an excellent quality of Portland cement. With millions of tons of suitable shells easily accessible in Galveston Bay and large deposits of silica and alumina near by, the manufacture of this cement bids fair to become one of the important industries of Texas. Already a very large plant is in operation in Dallas and now another is to be erected at Harrisburg.

VERMONT: What seemed to be a new form of disease among cattle in the neighborhood of Cambridge baffled the local veterinarians for several weeks. After many valuable Holsteins and other cattle had died, State Cattle Commissioner Davis and Dr. J. C. Parker of St. Albans made post-mortem examinations and, with the aid of the State Laboratory of Hygiene at Burlington, reached the decision that the disease was hydrophobia. It is now remembered that two local dogs were recently bitten by a bulldog accompanying some visitors to that section and died soon afterward. This seems to solve what has been a perplexing and expensive mystery.

VIRGINIA: Plans for a railroad to connect Richmond with the Rappahannock River near the bay, which have been discussed for many years, are now likely to be consummated. The region of the lower Rappahannock and the Northern Neck, naturally a very rich section, is commercially tributary to Baltimore because it relies wholly on water transportation; and the distance, together with uncertainties of winter steamboat schedules, has greatly hindered its development. Rich-

WASHINGTON: Seattle has the largest [illegible] city in the United States. Already one of the most progressive [illegible] largely indebted to its women's clubs. Also a small city, it has built a club for women, the pavement of city [illegible] and a [illegible] club with committees devoted to public health and hygiene. These committees established parks and playgrounds, attend to the sanitary inspection of schools and other public institutions, cooperate with the city health authorities for pure food and market inspection, light flies, bring art collections to the city for study and generally security public and private grounds. For example, one of these committees recently bought and planted several thousand rose trees throughout the city.

WEST VIRGINIA: A number of the largest natural gas interests in this state has been effected, and it is announced that this gas will be piped under high pressure to the Atlantic seaboard, to be used for heating and lighting purposes in Washington, Baltimore, Richmond and other cities. The price of natural gas in the West Virginia fields ranges from ten to thirty-five cents for 1,000 cubic feet. It is believed it can be piped to the seaboard and profitably sold there and at intermediate points at from fifty to sixty cents. It is expected the work of construction will take at least a year, since the lines will traverse considerable mountainous territory.

WISCONSIN: When the present plans for building and improving highways have been completed, Milwaukee County will be largely [illegible] concrete road, leading out from the north side, serving the county like [illegible] every main thoroughfare and entering the city from the south. Most of the work on the loop is now under way, but it will be at least two years before the entire boulevard can be completed. Then Milwaukee will have one of the finest metropolitan highway systems in the country.

WYOMING: One of the largest sales of wool of the largest ever made in Wyoming was recently consummated by the Swan Land and Cattle Company. A clip of [illegible] pounds was sold to W. R. Adams of Fremont, Nebraska, an independent buyer, for $127,000—twenty-two cents a pound. The Swan Company, better known as the "Two Bar Outfit," is one of the old-time big cattle companies. A few years ago it added sheep raising to its cattle industry and is now one of the largest holders of sheep in the state, tho it continues to handle many cattle.

WHAT A WAR NURSE SAW

BY MARY MASTER NEEDHAM

Mary Master Needham is the widow of Henry Beach Needham, the American war correspondent, a contributor to The Independent, who was killed when flying with the brilliant young British aviator, Lieutenant Warneford. She herself was at the front, and while there wrote with telling vividness of her experiences as a nurse in the early days of the American Ambulance Hospital at Neuilly.—THE EDITOR.

"DON'T worry about me or about the children!" I heard the voice near me in the crowd and turned to where a woman was bidding her soldier-husband goodbye. Around them stood three children—boys aged, I should say, about five, seven and twelve years. A mist covered my eyes. It was almost more than I could endure, the farewell of these soldiers to their families. But there was no mist in the eyes of the woman. Rather a light!

"Don't worry about the children," she repeated. "I'll bring them up, and bring them up to fight for their country, too. You—you think of 1870! Remember father in 1870! I'll remember the children!"

Here was a woman's courage unsurpassed. She was doing her part, and with what a spirit! I determined to do mine. I would not return to America, as I had planned. For three years I had lived in France. For three years this country had been my friend. And now I would be its friend. I would offer my services as a nurse.

WHEN I spoke to the head surgeon of the American Ambulance Hospital in Neuilly, whom I knew, he said that they were going to take a certain number of "auxiliaries," as he called them—women untrained, who were to work under the direction of the trained nurses.

"You are sure you want to come?" he questioned me.

"Yes—sure."

"But you know, as yet, we have no extra beds for the nurses."

"But I have one in my apartment," I said.

He gave me another searching look, then replied: "Well, I advise you to get that this afternoon. Listen!" I did. Far in the distance we could hear, faint but unmistakable, the booming of the guns of battle. "The Germans are within fifteen miles of Paris. Tonight, I think, the gates of Paris will be closed. It is well—if you wish to come—to come immediately."

I waited for no more. I hastened to my apartment, miles away in another quarter. I packed my suitcase. I called a fiacre. We strapped my cot on the side, together with my few things. We rode thru the gates of Paris—the gates that were closed that night!

I saw my bed carried up into a medium-sized room in which there were eight other cots, and that was the only furniture. No chairs, no tables, no bureaus, and certainly no mirrors. For weeks I slept in this room with the other eight nurses, using our suitcases as chairs and tables and chests of drawers. Since that time there has been a place fixed in the other part of the building for nurses' quarters. We even have a bathtub, which was a personal gift from a good friend of the hospital. The nurses who come now don't appreciate it. But those who are left of the sixty who had five tin basins to wash in—to bathe in—we appreciate it!

"In a little over a week we must be ready for wounded." The order came from the head nurse standing almost ankle-deep in the débris that covered the floors, for the building had never been used, and shavings and plaster and mortar had to be swept out and mopped up—and I had to help do it, on my knees. Beds were moved in for the wounded, but no bedding. We had ordered dozens of blankets. But we couldn't get them. We expected twenty-five dozen chairs. We got four dozen. We were short of money; we were short of help; but we were long on hope. The hospital grew almost in a night to meet the needs of the Great War, but its growing pains were great and many. Still, it proved the stuff of which we were made. On the personnel of the hospital was an American woman whose name is socially prominent in many countries. Associated with her were friends. To many of them, I imagine, this was the first essay out of a drawing-room atmosphere. And they made good—most of them. I take off my hat to the American woman whose sense of organization, of bringing order out of chaos, is born in her, or is absorbed from her organizing husband.

Finally, in some way or other, we did get ready, and the word went around that we might expect the wounded that night.

The moments were tense. They were so tense we were fairly hysterical. Hour passed hour. Finally we heard the sound of the ambulance coming into the grounds. We rushed—one over the other—down the stairs to the receiving room. We met the stretcher as it was being brought in. I say *the* stretcher, for there was only one. Our first patient! His wound? There wasn't any. Only an attack of heart trouble, due to fear.

Now I can laugh about it. But *then*—I can't tell you the pain of that disappointment. I suppose it was due to the last glimmer of that romantic tradition which made me look forward with beating heart to that first moment.

But the wounded began to come in hundreds. Many from the Battle of the Marne that had decided the fate of Paris—from the Field of the Five Thousand Dead. They came with shattered faces—some with half faces; with frozen feet dropping off them; with fractured legs and arms and brains. Oh! such sights—such sights! And not only did I have to look at them; I had to care for them. Heaped into days I got years of training. Carefully directed by the trained nurse over me, and by the surgeons, I looked after some of these men.

I REMEMBER especially one afternoon, two weeks after the hospital opened. The head nurse was in the operating room. I was alone in the ward with ten wounded men—I with my two weeks' experience.

One was an Irishman, with the humor and grit of the Celt. He had just come in from an operation for a fractured arm. And he wouldn't keep covered.

"Sister," he said in his semi-consciousness, "Sister, where be I?"

"In the hospital," I answered.

"Sister—sure, an' if I had a wife, what would she say if she could see me now?"

As I looked up to answer, I caught sight of Pierre in the far corner. He was trying to get up. I dropt the blankets of the Irishman and rushed to him. I knew he was in a critical condition, and delirious. In his skull was a hole as big as a dollar from which his brain protruded. He thought he was again on the battle line, and was arising to meet his enemy.

As I persuaded him to return to his bed, the door opened. The orderlies brought in an operation case—a Frenchman, whose jugular vein, lacerated by a bullet, had been sewed. Was I ready for him? they asked. I had to be, regardless of Pierre and my raving Irishman. But as I laid his head on the pillow I saw on the

pillow of Pierre a red spot—a bright, spreading spot. The cerebral hemorrhage that we had feared had come.

I opened the door—called, signaled for a doctor. I bade one of the convalescents whose arm was in a sling care for the Irishman, while I rushed to Pierre. The door opened again. The nurse came in with a patient whose leg had just been amputated.

This was what war nursing meant, and I had been a nurse two weeks!

YET, curiously enough, we had lots of gaiety, due to the wounded. They are seldom deprest. And they can't understand the surprize of the visitors to find them gay. Too, they are eternally bored by the usual question: "Do you want to go back to the trenches?" Most of them do.

It was during the first days that I made the acquaintance of the English "Tommy"—that unquenchable spirit of bravery and bravado. No one can be sad with Tommy in the ward. The first one I had was Sergeant Walker. He came in with his leg off.

"Where was it amputated?" I asked.

"Sure—and in the field, miss," he answered.

"In the field?" I exclaimed, astonished. "Who did it?"

"I did."

"You? What do you mean? Tell me about it?"

"Well, you see, miss, I was ordered to 'old a position with me men. And, sure, while we was a 'olding of it, waitin' for reinforcements — for some of us had to be sacrificed if the retreat 'ad to come, and it 'ad to, miss—along came one of those whizzin' shells and 'it me in the leg. But I 'ad orders to stick to me post, me and me men, an' we stuck, until there was only three of us left. Then we started to retreat. And, sure, miss, as I started, I felt 'ampered in me goin'. I looked down and there was me leg a hangin' by a piece of flesh. Well, now, miss, I was never one to be 'ampered. So I outs with me jackknife, and I cuts the piece of flesh and dropped me leg. Then I hobbled along as far as I could, in a dash for safety—a dash, miss," he laughed.

He hadn't bled to death for the simple reason that the stump of his leg had been seared by the heat of the obus. He was awarded the Victoria Cross—and he couldn't understand why!

Few of us got any sleep during the first weeks. I can still see the face of the surgical nurse as she rushed from the operating room on the first floor, which came to be known as the "clean" operating room, to that on the third floor, known as the "dirty" operating room. Which merely meant that some of the men were so dirty when they arrived—so covered with gangrene and filth—that it was not safe to take them to the operating room for fear of infection. So another room without any appliances had to be opened in another part of the building. This building, which is a block long and half a block deep, has no elevator, so the nurse had to carry her bandages and instruments up and down stairs from one room to the other. She deserves a medal. I wonder how many lives she saved.

"Where is the thermometer?" was a frequent cry, for there was only one then.

"Why, ward 232 had it last, I think."

I went to 232. "Thermometer," I cried.

"Just gave it to nurse in 370."

I rushed up another flight of stairs,

"Give me the thermometer quick," I demanded.

"Can't—using it now," came back the reply.

"You'll give me that if it's at the point of the bayonet," I insisted, and I meant it, too. "I've got a boy down there with hemorrhage temperature, I think." I took the thermometer and rushed back to Antoine. He had developed high temperature, as I found by the thermometer. Before I could tell the doctor, the hemorrhage came. There was no way that I knew to stop the blood, for one couldn't put a turn-gat on his back where they had taken a bullet from his spine. I had to think fast, I knew. I sat down by him and thrust my hand into that wound—it was that large—at the same time sending one of the convalescents for the doctor. I was covered with blood to my elbow—but we saved Antoine's life.

NOT many died in our hospital because of our superior surgical staff, altho, for the same reason, we got the most severe cases. However, that is a curious thing—when a man dies in the ward it affects the other men in the ward; it affects the whole hospital for days. They don't get over it. They don't forget it.

"But you've seen soldiers die and soldiers killed by the hundreds," I said to one of them who was brooding over the death of the man in the cot next to his.

"Yes, I know," he answered; "but this is different." They seem to feel that when they are in action they are not so impotent against death.

I could understand when I saw my first "death." Always I had been spared that. I was afraid of death.

"You are to go to the room on the fourth floor—the isolation room—there is a man dying with gaseous gangrene." They were my orders. I said nothing, but as I closed the door of the ward, I had only one impulse. It was to run. Then I thought of the man there alone—and went to him.

HE was lying on a bed near a window. He opened his eyes as I came in. They were wonderful eyes, brown and soft and questioning—haunting eyes. But he said no words. For three hours I sat by his side and watched death creep up. They were the longest hours I have ever spent. He opened his eyes again. "Wife," he murmured, then "Children." I understood. "Yes," I answered. "I will write to them."

The door opened. The rector came in. In his hand was the English prayer-book. I stood up. Again the soldier opened his eyes and listened to the beautiful words of the prayer. And as he listened he held out his hand toward mine, reaching out at the end for some touch. It almost overpowered me, that groping at the last for a human touch. I had never seen him before. He had never seen me. But we drew together in that hour, and so we stayed until his hand relaxed.

As I closed the door and staggered to my room I thought ludicrously enough of a conversation I had heard of two young girls who had come to France to nurse. They had made a great fête of it. Before they left America they gave "tea" to their society friends and sold their party dresses for the benefit of the soldiers. They were coming to be nurses! To hold officers' hands and comfort them! Did they know that this was what it meant?

But I'm afraid I'm giving a wrong impression. For it's not all sad, as I have said. There were always the soldiers to cheer one. Most of our patients were French—not such French as you know or as I knew. There is a new spirit. The traditional mask of their frivolity has been discarded—the fiber of their spirits has been uncovered. Mingling with them are Senegalese and Arabs, many of whom can speak little French.

One Arab I remember particularly well. He had been wounded in the head and for weeks he scarcely spoke a word. But gradually he gained confidence in me, and began to talk with the few French words he knew. One day when we were alone he said:

"What's the war all about, nurse? Is it about a king? And is the king in Germany or in France?"

He had been a shepherd of the

hills and knew nothing of worldly things. As simply as I could I tried to tell him, and he seemed satisfied.

When I see the fineness and the courage of "my" soldiers I wonder how I could ever have lacked faith in humankind—in the godliness of the most simple, yes, even sometimes the most evil—of men who are purifying themselves in this war.

"Greater love hath no man than this" kept ringing ever in my ears as they told me that Jean couldn't live thruout the night. We knew he had to die, but we couldn't speak of it. He had been brought to us three days before—a hero. Jean was a gunner. In one of the attacks of the enemy his comrades had been forced slowly to retreat because of their inferior numbers. But Jean stood by his gun. Regularly, unflinchingly, he kept his gun shooting. He was hit in one leg—but his hands were all right and the gun went on. He was hit in the other leg. Still his hands were all right, and the gun went on. The enemy, hearing, meeting that incessant, regular fire, thought that reinforcements had come, and withdrew. Alone and unaided Jean won that engagement.

Jean had been sent to us. All we could do was to make his last hours as comfortable as we could. His wife was sent for. She came and sat by his bedside. The next day the colonel came to pin on his breast the *medaille militaire*, the highest honor that can be given to a soldier of France.

"I want to kiss it first," whispered Jean. He took it in his hands and reverently touched his lips to it. And then the colonel pinned it on his breast.

And now they told me Jean was dying. I took some roses which were on my table and went to him. His wife was weeping by his side.

"I've brought a brave man some roses," I said.

"Oh, nurse, I'm afraid he's past knowing or caring now," she answered, sobbing.

"Then I give them to you—the wife of a brave man."

"Yes—I know. But at what a price! What a price I have had to pay for it!" But even as she spoke—and again when I caught the gleam of the *medaille* pinned alone on the black curtains of the carriage that bore Jean to his last resting place—I thought what it would mean to her; of what it would mean to her children; of what it would mean to the small village where he lived—to the children who would gather around it—this emblem of great love.

Did I ever regret that I—an American girl—came to the French wounded? No, never. For it is by such bravery—such spirit—that we catch enough light to rise.

WAR SONGS FOR THE NEW ERA

BY WILFRID WILSON GIBSON

THE RETURN

He went, and he was gay to go;
And I smiled on him as he went.
My boy, 'twas well he couldn't know
My darkest dread, nor what it meant—

Just what it meant to smile and smile
And let my son go cheerily—
My son . . . and wondering all the while
What stranger would come back to me.

MANGEL-WURZELS

Last year I was hoeing,
Hoeing mangel-wurzels,
Hoeing mangel-wurzels all day in the sun,
Hoeing for the squire,
Down in Gloucestershire,
Willy-nilly till the sweaty job was done.

Now I'm in the 'wurzels,
In the mangel-wurzels,
All day in the 'wurzels 'neath the Belgian sun.
But among this little lot
It's a different lot I've got—
For you don't hoe mangel-wurzels with a gun.

THE FATHER

That was his sort.
It didn't matter
What we were at
But he must chatter
Of this and that
His little son
Had said or done;
Till, as he told
The fiftieth time
Without a change
How three-year old
Prattled a rhyme,
They got the range
And cut him short.

THE QUIET

I could not understand the sudden quiet
The sudden darkness—in the crash of fight.
The din and glare of day quenched in a twinkling
In utter starless night.

I lay an age and idly gazed at nothing,
Half-puzzled that I could not lift my head;
And then I knew somehow that I was lying
Among the other dead.

NEW-OLD WARFARE IN THE TRENCHES IN FRANCE AND FLANDERS

FRENCH GRENADE THROWERS, USING VARIOUS FORMS OF THE SMALL SHELLS WHICH GAVE THEIR NAME TO THE GRENADIERS OF THE FRENCH AND ENGLISH ARMIES IN THE SEVENTEENTH CENTURY, AND WHICH HAD SUPPOSEDLY BECOME "OBSOLETE." THESE GRENADIERS WEAR STEEL HELMETS AND BULLET-PROOF WAISTCOATS AND MASKS TO NULLIFY THE EFFECT OF POISON-GASES. AN EDITORIAL ON THE USE OF ARMOR WILL BE FOUND ON ANOTHER PAGE

PERILOUS PHILANTHROPY

BY FRANK P. WALSH

CHAIRMAN OF THE UNITED STATES COMMISSION ON INDUSTRIAL RELATIONS

MR. JOHN D. ROCKEFELLER recently favored the people of the United States with his views concerning great philanthropic foundations, notably his own, and on efficiency in philanthropy. The article was striking because it exprest the views of the world's richest man, who is also the world's greatest philanthropist, and because it can be considered an adequate statement of the philosophy that seeks to justify our existing economic and industrial régime, and the relation of the great foundations thereto.

The wisdom of permitting a man to accumulate huge fortunes has often been challenged. From the knowledge I have gained in my work as chairman of the Federal Commission on Industrial Relations, I go further and challenge the wisdom of giving public sanction and approval to the spending of a huge fortune thru such philanthropies as that of the Rockefeller Foundation. My object here is to state, as clearly and briefly as possible, why the huge philanthropic trusts, known as foundations, appear to be a menace to the welfare of society.

© *International News*

CHAIRMAN WALSH PRESIDING AT A COMMISSION HEARING

THE ARBITRARY POWER OF WEALTH

The possession of an enormous fortune means arbitrary power over the lives and destinies of other men. Nothing is clearer than that the world's striving for democracy is now expressing itself in the economic field, even more than in the political field, and we are fast coming to realize that the forms of political democracy avail nothing when the lives of the many are controlled by the few who wield arbitrary economic power.

So, at the outset, thinking democrats resent the very possibility of philanthropy on a huge scale, because this philanthropy is predicated on the possession of enormous fortunes, and, therefore, of arbitrary power over men, women and children.

Even if the great charitable and philanthropic trusts should confine their work to the field of science, [illegible] where temperament, point of view, and economic theory cannot enter, many of us should still feel that this was work for the state, and that, even in the power to do good, no one man, or group of men, should hold the monopoly.

But when a great foundation, with a rapidly growing fund of more than $100,000,000, enters the economic and political field, no such fundamental objection need be admitted in order to convince thoughtful men of the possibilities of danger that lie in such an enterprise.

EXPLOITING WORKMEN AND SUBSIDIZING SCIENTISTS

Let us take the Rockefeller Foundation, the most active of all, to illustrate the potential danger of such institutions to democracy in America. Mr. Rockefeller is taking money obtained from the toil of thousands of poorly nourished, socially submerged men, women and children, and spending these sums, thru a board of personal employees, in such fashion that his estate is in a fair way not only to exercise a dominating influence in industry, but, before many years, to exact a tribute of loyalty and subserviency to him and his interests from the whole profession of scientists, social workers and economists.

There are literally thousands of men in these professions receiving subsidies, either directly or indirectly, from the Rockefeller estate, who cannot take any step toward effective economic, social and industrial reform without running directly counter to the interests of their benefactor. No sensible man can believe for a moment that research workers, publicists and teachers can be subsidized with money obtained from the exploitation of the workers without being profoundly influenced in their points of view and in the energy and enthusiasm with which they might otherwise attack economic abuses. And there can be no question that the income of the Rockefeller Foundation comes, in large part, from the exploitation of wage earners.

Before the complete exposure of the Colorado situation, but with thousands of his fellow citizens charging him with responsibility for the Colorado strike and its attendant horrors, Mr. Rockefeller employed an expert, Mr. W. L. Mackenzie-King, former Minister of Labor of Canada and a distinguished citizen of the Dominion, to advise him regarding the labor problems in industries where Rockefeller funds are invested, and also to make a comprehensive, world-wide study of industrial relations for the benefit of the public. This is one of the many apparently innocent and useful projects of the Rockefeller Foundation. But when the announced purpose is compared with the actual performance, there appears a glaring discrepancy.

WHAT DID MR. KING DO?

Mr King undertook to act as Mr Rockefeller's advisor on industrial relations as long ago as last August. His first act, after joining the Rockefeller staff, was to write a letter to Mr. Rockefeller, suggesting, in effect, that the arbitrary, undemocratic policy of the Rockefeller Coal Company in Colorado need not be greatly modified under pressure from labor, because unemployment and distress resulting from the European war would weaken the power of labor and force labor to take about what the employer saw fit to give it.

707

It is the author of this letter to whom the world is asked to look for a way out from the problems which have arrayed employer and employee in hostile front. It is Mr. King whom we are asked to take as our guide in working our way to a consummation of that full measure of human liberty and economic democracy on which the heart of the world is set.

THE STRIKE AT ROOSEVELT

Mr. King was in New York last winter during the hearing of the Industrial Relations Commission when employees of the American Agriculture Chemical Company at Roosevelt, New Jersey, a suburb of New York, were on strike because they could not support their families in comfort and decency on a wage of $1.60 per day. Twenty-one of the company's former employees were shot down by deputized gunmen for peacefully protesting against conditions that meant privation, suffering, disease and even death for themselves and their families. Altho the Rockefeller Foundation, then busily engaged in an effort to justify itself before this Commission, held one-half million of the bonds of this company, apparently it made no attempt to investigate the situation at Roosevelt. Its executive officer, Jerome D. Greene, when questioned on the stand, was not prepared to discuss the fairness of a wage of $1.60, and agents of this Commission who followed the situation closely could find no evidence that Mr. King, or any other representative of the Foundation, had visited Roosevelt or made the slightest effort to wipe out this particularly outrageous social morass into which its roots reached.

Not only was the Foundation itself a holder of securities in the company which expected Americans to bring up families on $1.60 a day, but one of the directors of the Rockefeller philanthropies, Mr. A. Barton Hepburn, was both a director and a member of the executive committee of the company. And Mr. Hepburn testified that his sole information regarding conditions in the company's plants was obtained thru telephone conversations with one of the company's officials, and thru a chance meeting with this official at a college alumni dinner at Delmonico's restaurant.

Mr. Mackenzie-King, in his testimony at the Washington hearing recently, declared his investigation, in so far as it included the Rockefeller industries in Colorado, to be a secret one, and challenged the authority of the Federal Government to compel him to declare how much money was being expended or the character of the information which he was obtaining, closing this portion of his evidence with the declaration that it was not at all necessary that the American people be enlightened as to the facts in Colorado, but that the conscience of Mr. John D. Rockefeller, Jr., in his opinion, was more powerful than any other force that could be brought to bear in Colorado at the time he was giving his testimony.

In the light of the record in Colorado and at Roosevelt alone, such philanthropy as that of the Rockefeller Foundation can justly be characterized as an attempt to present to the world, as handsome and admirable, an economic and industrial régime that draws its substance from the sweat and blood and tears of exploited and dispossessed humanity.

THE MEN IN OFFICE

Just the list of directors in the various Rockefeller philanthropies shows the enormous power that may be exercized by men financially interested in perpetrating unjust industrial conditions. In the list is the president emeritus of our greatest university, shown by the inquiry of this Commission to have been personally interested in the publicity bulletins issued by the operators of Colorado to influence the public mind against men who are risking their lives to lift Rockefeller employees up from economic subserviency, and to vindicate the supremacy of the laws of that state. This gentleman apparently concurred in branding the denial of the right to bargain collectively in Colorado and the use of gunmen and venal militiamen which followed, as "The Struggle for Industrial Freedom in Colorado."

Included also in the list of men holding places on boards controlled by Rockefeller millions appears the name of the president of our greatest southern university, the university that, before all others, has molded opinion in the southern states; the commissioner of health of our greatest northern state; the United States Commissioner of Education; the surgeon general of the United States army; a Cabinet officer; a high officer of the international Y. M. C. A.; an American ambassador; the president of another great university, and an influential magazine editor. I do not mean to imply that many of these are not high-minded and disinterested men. I believe they are. I believe that many of them share the fear of the influence of such a huge philanthropic trust when it turns to the economic field, and that more than one of them may have accepted places on the board because they felt they might prevent dangerous tendencies. But we have seen how the scholar of the greatest repute of them all apparently drew no line, in lending his cooperation, between the Rockefeller philanthropies and the Rockefeller exploited industries. No argument is needed to convince a sensible American of the subtle and pervasive and irresistible power that is wielded autocratically by men who control the disbursement of huge sums of money. It is a power that goes straight to our instincts, to our points of view, to the raw materials of which our opinions and judgments are made.

THE MEN IN CONTROL

But how much, as a matter of fact, can we rely on the presence on the Rockefeller board of these men? It was admitted before the Commission on Industrial Relations in New York that practically all of the important decisions and the routine work of the charities, and, above all, the disbursement of moneys, are administered by a finance committee composed of Mr. Rockefeller, Jr., and of the personal employees of himself and his father. These salaried men reflect the points of view of their employers and carry out the Rockefeller will. They not only administer the Rockefeller philanthropies, but they sit in council with the Rockefeller agents who denied industrial justice to the Colorado miners, and on the witness stand, as representatives of the Foundation, they speak bitterly of the Colorado unions in the same breath they declare that they are conducting a scientific, unbiased investigation of the labor problem. They admitted that, even had Mr. King so far forgotten his loyalty to the Rockefeller interests as to urge recognition of the union, they would have differed with him and resisted such a policy. According to the testimony of Mr. Jerome D. Greene on the stand in New York, Mr. King is an adviser whose advice may be freely rejected, and there would be no friendly reception for recommendations which conflicted with the policy of Mr. Rockefeller—not Mr. Rockefeller, the philanthropist, but Mr. Rockefeller, the industrial overlord.

WHERE THE MONEY COMES FROM

It should be remembered that the Rockefeller Foundation, in protecting its own hundred millions of securities, will give similar protection to the vastly greater fortune still held by the family in purely private ownership. The list of the securities held by the Foundation contains the names of most of the corporations in

which the family fortune is invested. In a day when society sees it as a burning wrong that one man can levy tribute on the right of millions of other men to live and to work, Mr. Rockefeller could find no better insurance for his hundreds of millions than to invest one of them in subsidizing all the agencies that make for social change and progress.

The wealth of the great foundations is wealth created by the many. Even were those directly concerned in its making accorded a decent wage and a voice in determining their conditions of employment, the surplus should still be available for the work of scientists and scholars, in such form that these devoted men could pursue their studies for the benefit of mankind without wearing the uniform of Rockefeller and the others. Already there are thousands of eager young scholars and scientists who know that some day, for the sake of their work, they may be drawn into the retinue of the foundations. It will become increasingly bad form for a man engaged in social betterment work to speak ill of Mr. Rockefeller, Mr. Carnegie, and the other men who have amassed fortunes in industry, and the universal instinct of self-justification will inevitably lead them to seek excuses and justifications when the cry of exploitation or of tainted money is raised.

THE PERIL OF THIS PHILANTHROPY

Most dangerous of all, to me, seems the attempt by the Rockefellers, especially, to become molders of public thought on the subject of industrial relations. Every precaution that can be taken to give the seeming of impartiality to this inquiry can only make it the more dangerous. Perhaps the most fortunate thing in connection with the Rockefeller industrial inquiry is that the quality of Mr. King's mind has already been shown, as well as the fact that the public control of this inquiry rests in the hands of the same men who sustain the Rockefeller policy in Colorado.

But, to my mind, a still greater menace to industrial democracy appears upon the horizon. Mr. John D. Rockefeller, Jr., declared, in a public statement, that in the industrial department of his foundation he was securing the coöperation of many labor leaders in his effort to bring about "permanent peace" in Colorado. Will not the same glamor of great power and limitless resources, which has attracted diplomats, statesmen and educators, make its appeal to these men? When Mr. Rockefeller testified at Washington, he was asked to name the labor leaders with whom he was coöperating in Colorado, but admitted his inability to do so. Nevertheless, if labor leaders should thus be induced to coöperate, I cannot see how the inquiry could help having a tremendous effect in taking the edge off the fearlessness and disinterestedness of labor's leadership. I cannot imagine any greater catastrophe than for the subtle influence of the millions of these masters of industry to pervade even the labor movement itself. With labor coöperating in aggressive and whole-hearted fashion with the great movement toward industrial democracy, we could view, without serious alarm, the chloroforming of our economists and social workers. But if the influence of these millions once began to circulate thru the organism of labor itself, this great forward movement of our time might be seriously retarded, if not destroyed. I believe, on account of the thoro airing which this proposed Rockefeller industrial inquiry has received, together with the note of protest from President Samuel Gompers directed against the whole Rockefeller investigation into industry, that organized labor will continue to remain sternly aloof and to view this new activity with stedfast distrust.

Chicago, Illinois

WHAT OUR CITIES DO WITH THEIR MONEY

BY WILLIAM B. BAILEY

ASSISTANT PROFESSOR OF POLITICAL ECONOMY IN YALE UNIVERSITY

WHAT are you, Mr. City Taxpayer, buying with the money which you surrender to the tax collector? How is each of your dollars divided between the various businesses which you have entrusted to your commission or council to conduct for you?

It is not a small matter, this city business. During the year 1911 193 cities with a population of over 30,000 expended $1,647,707,380. The principal items of this expenditure were as follows:

Administration	$56,000,000
Police Department	54,000,000
Fire Department	44,000,000
Sanitation	39,000,000
Highways	56,000,000
Charities	31,000,000
Education	141,000,000
Recreation	18,000,000
Water Supply	28,000,000
Interest	101,000,000
Sinking Fund	68,000,000
Bonds Retired	454,000,000

For 146 cities statistics have been kept for the ten-year period from 1902 to 1911 and during this decade it was found that the ordinary expenses of municipal government had increased from 272 millions to 449 millions, or from $13.02 to $16.62 per capita. In 1911 the value of the assets of all cities over 30,000 was 4.1 billions. Against this should be placed a gross debt of 2.6 billions. A considerable proportion of this debt, however, was offset by sinking funds so that the total net debt was only 1.9 billions, or a per capita net debt of $65.84. From the fact that municipal bonds to the amount of 454 millions were retired in 1911 we might be led to think that the cities were rapidly paying off their debts, but on the contrary during this year the net debt of the cities in this group increased about 148 millions. Of the total indebtedness of 2.6 billions over 450 millions was incurred in providing water supply systems for the cities and upon this indebtedness a reasonable return can be expected.

OUR MUNICIPAL EXPENSES

The other items for which the largest debt was incurred were

Highways	$455,000,000
School buildings	270,000,000
Sewers	165,000,000

Most of the cities are increasing the valuation of their permanent property and public improvements faster than their debts, but when we consider that the indebtedness of the United States is only $10.84 per capita, while that of 146 of our largest cities is $67.31, it is time to consider municipal economy.

PLEASE BUILD US A PLAYHOUSE

Photographs from James Ulysses Seaks and Mary H. Northend

IT SHOULD BE WELL BUILT, NOT LUXURIOUS—IT MAY BE GARAGE, CASTLE, AND ENGINE HOUSE BY TURNS

FINE FOR INDIAN FIGHTS

A TREE HOUSE IS THE MOST DELIGHTFUL OF ALL PLAYHOUSES

A LUXURY—BUT GREAT FUN

WHAT was your playhouse—a cave, or a tent, or a big packing box, a log cabin, or a snug little building with real windows and doors? Did it have a dug-out fire-pit in front of it—with a bit of gutter-pipe for chimney (tho the smoke never *would* go where it ought), or did it have a real fireplace indoors where *Fräulein* made a fire for you? In any case, you felt the responsibility of ownership and the dignity of a castled knight and if somebody was wise you learned how to keep your "things" in order and formed rudimentary habits of self-respecting proprietorship. Perhaps you even began to acquire that enviable possession—social poise—at your own delightful imitations of grown-up tea-parties. At any rate, build a new playhouse for the youngsters. Build it simply, put it where the occupants can be inspected at prudent intervals, and make it a place where noise is normal and nobody ever has to wash his hands!

THE CLOSER THE PLAYHOUSE IS TO THE TREES AND FIELDS THE BETTER

IN THE JAWS OF THE TEUTONIC TRAP

THE STRATEGY OF PRESENT OPERATIONS IN POLAND

"THE most aspiring and in some ways the most brilliant piece of strategy that this war has yet produced," this is the manner in which an enemy critic, the military expert of the London *Times*, characterizes the German movement that has resulted in the capture of the Polish capital and in the overthrow of the first Russian line of defense. Whatever may be the final outcome of the war, the operations of these last three months in the eastern theater will furnish a theme for discussion to students of military science for years to come, and every history of Europe will have to devote a page to the map of Galicia and Poland on which this campaign has been developed.

It is easy to understand by reference to a map what has occurred. We see first that Poland projects from Russia like a great peninsula into the Teutonic sea, or perhaps a German caricaturist would prefer to picture it as a big nose sticking into what was none of its business. Looking at it this way, the German's impulse would be either to smash it in or bite it off. This in short is what he has been trying to do for the past year, first one way, then the other, until now Poland has at last been bitten off between the upper jaw of East Prussia and the lower jaw of Galicia. Whether the morsel can be swallowed and digested in the Teutonic stomach remains to be seen.

Or if this simile is too grotesque let us compare the campaign to the game which comes nearest to war in its tactics and the number of its casualties. On the football field mass movements resolve themselves essentially into two, rushing the center and running round the end. In war it is the same. But in the present war bucking the line has proved frightfully expensive and resulted often in gains of a few yards only, while end runs were mostly made impossible by keeping the end on the side lines. The Russian line-up on the start extended from the Niemen River on the north to the Dniester River on the south. Three times the Teutonic forces tried a center rush on Warsaw and failed. Three times they tried a run around each end, and the third time succeeded in getting around both.

It is interesting to note the dates of these successive attempts. The first was around the south end. An Austrian army of 350,000 under General Dankl, striking north from Galicia between the Vistula and the Bug, got within eleven miles of Lublin by the first of September, when it was driven back by the Russians.

The second attempt to get behind the Russian line was made at the other end by the Germans. General von Hindenburg, by his great victory at Tannenberg, had driven the Russians from East Prussia, but when he tried to carry the war into the enemy's country he was checked at the Niemen September 25.

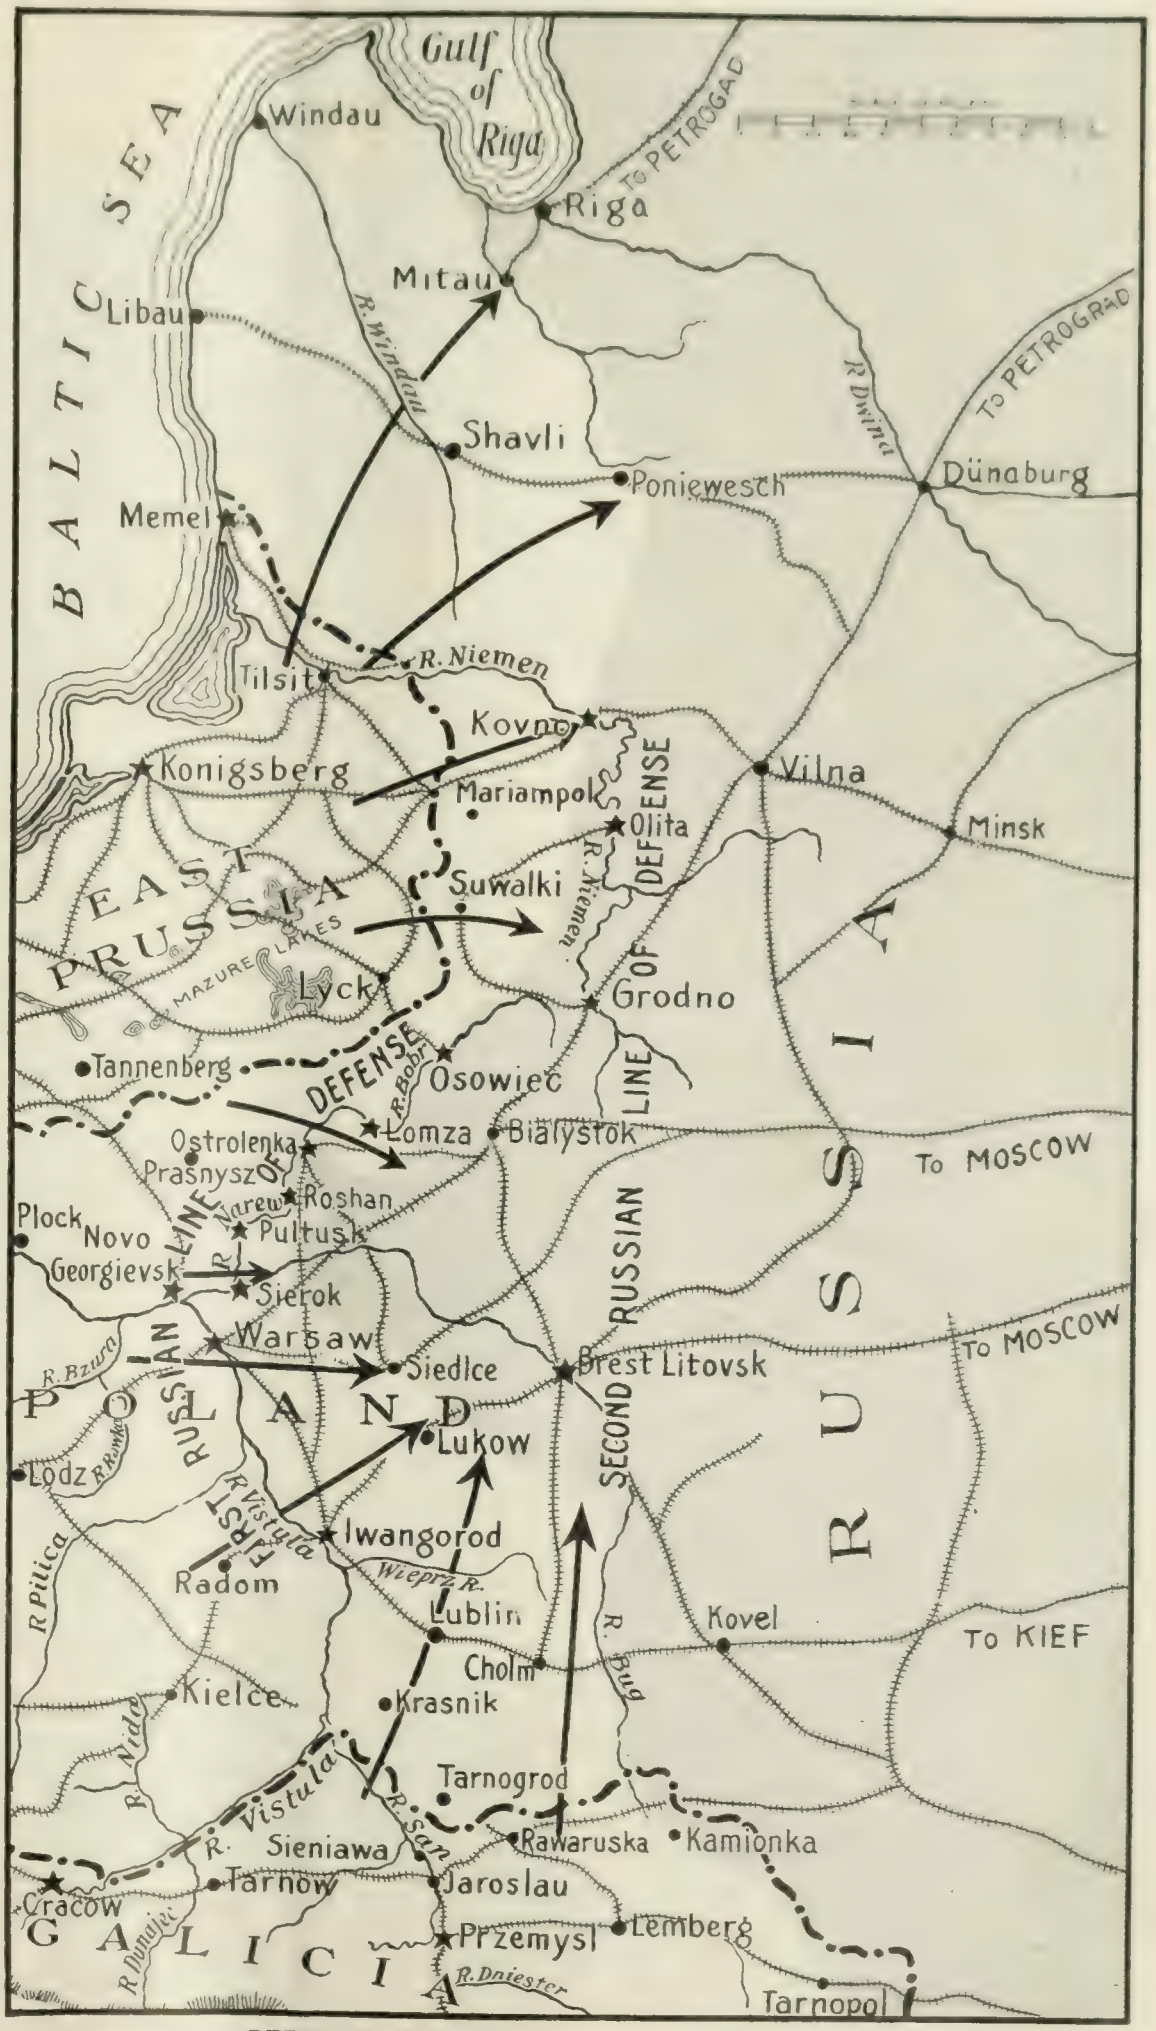
Two days later Hindenburg, in command of the combined German and Austrian forces, began a direct attack on the Russian front all along the line, but with Warsaw as its main objective. This came within an ace of succeeding. In fact, it is one of the inexplicable mysteries of war why Warsaw was not captured, for on October 7 the Germans were within seven miles of the city, and it was practically undefended at that time. The Russian authorities no less than the Germans believed that the city would be evacuated. The British residents, by the advice of their consul, had left. The bank had withdrawn its funds to Moscow. Trains were ready to carry away the officials. The German cannon, having come within range of the suburbs, had ceased firing, probably because the city was regarded as virtually taken. Elaborate preparations had been made for a triumphal entry of the Polish capital, when, it appears, the ancient kingdom of Poland was to be reëstablished and the king of Saxony was to be seated on the throne which his ancestors had occupied at intervals in the seventeenth, eighteenth and nineteenth centuries.

But Hindenburg "came back," as he has a knack of doing. By the middle of November he had collected a new and larger army, and again advanced along the southern bank of the Vistula toward Warsaw. But this time the Russians were ready for him and put up a stout resistance. Lodz, which before had fallen into his hands without a struggle, now cost him some 50,000 men. The Kaiser had to relinquish his ambition of spending a merry Christmas in Warsaw, for the German advance was definitely halted at the Bzura and Rawka Rivers about thirty miles west of that city. Here the winter and spring were spent in trench fighting at close range, much like that in Flanders. During the first week in February the Germans made desperate attempts to break thru the Bzura-Rawka line, but the sacrifice of thousands of men gained them nothing.

While Hindenburg was making his first drive at Warsaw in October the Austrians also advanced in Galicia, but they only got as far as the San and were driven back in November. In February, when the north country was covered with deep snow, Hindenburg made another attempt to outflank the Russian line at this end. While part of his force advanced south of the Mazurian lakes, another made a wide sweep around by the north, and between the two he came near catching the Russian army in East Prussia. But a swift retreat thru the forest of Suwalki saved most of it, and when the Germans came to the fortress of Osowiec and the Niemen River they halted. Why they should have ceased their activity in this direction was not at the time clear, but now it appears that they were waiting till the Austrian advance in Galicia should come up with theirs, so the two could act in harmony. We come then to the final movement of the northern and southern armies which has resulted in the conquest of Poland.

We will take up first the southern campaign. At the end of January the Austro-German drive in Galicia began. It was accomplished by the lavish use of the arm in which the Germans are particularly strong and the Russians particularly weak, that is, artillery. The Austro-German army advanced swiftly, pushing the Russians back from Cracow, driving them out of the Carpathian passes, recapturing the fortress of Przemysl, regaining the city of Lemberg. But it did not stop with the recovery of lost ground. Reaching the Bug River east of Lemberg the Austro-German forces ceased their eastward movement and marched north between the Bug and Vistula rivers. This brought them in the rear of the first Russian line of defense, which is on the Vistula. The fortress which stands at the southern end of this line is Ivangorod, but this had to be evacuated as soon as the invading army had cut the railroad in its rear at Lublin and Cholm.

The Austrian and German armies under the command of Archduke Joseph Ferdinand and General Mackensen are advancing northward as rapidly as possible in order to intercept the Russians who are retreating from the Vistula to the shelter of the Bug. On the left of the Archduke is another army under General von Woyrsch, which crost the Vistula above Ivangorod and is in pursuit of the Russians who evacuated that fortress and are now trying to reach



Brest Litovsk. On his left is the army of Prince Leopold of Bavaria, who passing thru Warsaw has now reached Siedlce.

All these advance movements, as will be seen by the map, come to a focus at Brest Litovsk, which is not only the chief fortress of the second line of Russian defense but, what is more important, the railroad center of the line to Moscow. If the Germans succeed in penetrating farther into the interior they will be able to cut the communications between Moscow and Petrograd, the spinal cord of the Russian empire.

So much for the lower jaw of the steel trap; now for the upper. The northern line of the Russian permanent defenses consists of a chain of fortresses along the Niemen, Bobr and Narew rivers to the Vistula, where Novo Georgievsk forms the apex of the angle with Warsaw thirty-five miles below. This line has now been broken at two points by the capture of the fortresses of Lomza and Sierok, and this allows the Germans to get at the railroad line connecting Warsaw and Petrograd which runs parallel to the river fortifications and about twenty miles behind them. The Narew River was crost on July 25 between Ostrolenka and Pultusk by the forces under General Gallwitz. One of the ring of forts surrounding Lomza was stormed by the troops of General von Falcke on August 9. The strongest of this chain of defenses is probably the fortress of Novo Georgievsk, which was constructed by Napoleon in 1807 and stands upon a promontory between the Narew and Vistula, which here run together. This fortress has been surrounded and may stand a siege like Maubeuge or Przemysl, tho it certainly cannot hold out as long as the latter. No one of the half dozen fortresses of the Narew-Bobr line is capable of retarding the great tidal wave of German troops now pouring into Poland.

The first line of defense has completely collapsed at the end of a year —must we say, of the first year?— of the Great War. The Russians count themselves lucky to have withdrawn their troops without serious losses. They may now reform behind the second fortified line of defense, which runs straight north and south along the Niemen and the Bug rivers. The chief strongholds of this line are Kovno, Olita, Grodno and Brest Litovsk; the first three defending the road to Petrograd and the fourth the road to Moscow.

But even if this second line should hold against a frontal attack the Russian empire is not safe, for Hindenburg is likely to get around its northern end where it rests on the Gulf of Riga. The movement in this direction, which Petrograd at first derided as a mere foraging raid, may prove to be one of the most stupendous operations of the war. The Field Marshal himself is in charge of it and he is said to have twelve army corps, or some 450,000 men, under him. Libau has been taken and made a naval base for the German fleet. Riga, now attacked by land and sea, may soon fall. And then? Will the Kaiser be content with that or has he ambitions to surpass Napoleon the Great by marching on to Petrograd?

BETWEEN THE JAWS OF THE TEUTONIC TRAP

The armies from East Prussia on the north and Galicia on the south are closing in on Poland and have met behind Warsaw. The Russians have abandoned their first line of defense along the Vistula and have withdrawn to their second line along the Niemen and Bug rivers. The chief strongholds in the second line are Brest Litovsk and Kovno. The latter is under bombardment by the Germans

THE NEW BOOKS

WHERE IS THOMAS ARNOLD?

One would think the Headmasters of England would rise in a body to protest against the pictures of English schools for boys given in various recent novels; of a life at once brutal and ineffectual; the rough tenderness of real school boys barbarized into something cruel and unclean. One of the worst is "King's School at Tercanbury," delineated in *Out of Human Bondage*, by Somerset Maugham, a novel which marks the entrance into fiction of an author who has won laurels as a writer of successful plays. The novel is too long, 648 pages. If Gissing and Galsworthy and, it may be, Rolland, had never written, there would have been no *Out of Human Bondage*. It is prolix, splits easily into three novels: one devoted to the youth of the unheroic hero who is the fashion of these days—Modred instead of Arthur or even Launcelot; another to his life as an art student in Paris; and the third to his career as a medical student in London. And its ethics are frankly pagan, even the betrayal of innocence being glossed over, after various nauseating adventures in the sordid underworld of London. Unhappy childhood always is a bid for sympathy, but little Phillip grows up into an insufferable egotist and cad. One longs, after reading these novels where spineless men and women yield without a struggle to the forces of evil and are overwhelmed by the world, for the ringing shout of the stout apostle, Paul: "I have fought a good fight . . . I have kept the faith!" or the nobler voice: "I have overcome the world."

Out of Human Bondage, by Somerset Maugham. George H. Doran. $1.50.

NEGROES AND SECESSION

More than fifty years since the emancipation of the slaves and the end of the Civil War, it is proved by the number of books on the subject that the Negro question is not yet settled, and, if we may believe some who attempt to teach us, it never can be settled. Equally history has not yet agreed as to the Reconstruction period in the former slave holding states. Powell Clayton was an officer in the Civil War, then settled in Arkansas, and was Governor of that state from 1868 to 1871, and then United States Senator for six years, and he lives to tell the story of the *Aftermath of the Civil War in Arkansas*[1] from the point of view of one who hated slavery and believed in the equal rights of white and black. He shows the ruin caused by the Ku Klux, the recovery of peace by the use of martial law and the recovery of prosperity with the establishment of a public school system, state aid to railroads, and the funding of the state debt. In 1860 there were only twenty-five free schools in the state supported by public funds, while in 1870 there were over a hundred thousand children in the new schools. The book is full of documents, and we advise its careful reading by those who have been led to believe that the Reconstruction period was a period of corruption.

Prof. Annie H. Abel, head of the department of American History in Goucher College, covers a neglected page of the history of the Civil War, that of the *American Indian as Slaveholder and Secessionist*.[2] We see from the documents quoted how general was slaveholding among the wealthy Five Tribes of the Indian Territory, and how readily all of them but the Cherokees were persuaded to cast in their lot with the Confederacy. It was their able chief, John Ross, who so long held back that strongest tribe during the earlier part of the war, when the Union armies were defeated. The fulness and impartiality of our author's study of this neglected passage in the history of the war will make it indispensable to future historians, and full of interest.

Of two volumes published simultaneously, one is entitled *The White Man's Burden*,[3] and the other *The Black Man's Burden*.[4] The former volume is a sort of Utopia in which a white man is dropt down into the center of Africa thirty centuries hence, where he finds the Negro people raised to an almost inconceivable hight of civilization, science and social culture. It was all a dream, but the lesson was that "the white man's burden is himself."

The Black Man's Burden is not fiction but a story of fact. The Utica Normal Institute, at Utica, Miss., is the child of Tuskegee. Mr. Holtzclaw is the principal. His work covers even the establishment of volunteer courts to settle disputes among the Negroes of the neighboring counties, thus keeping the Negroes out of the state courts and saving their money. They have a Black Belt Improvement Society with ten degrees. The first requires a desire to improve one's condition, and the tenth the ownership of a thousand acres of land.

If the laws of the slave states forbade the education of slaves, yet not a few Negroes before the Civil War had been taught by their masters, and despite opposition, schools for Negroes were carried on in various northern states. The story of *The Education of the Negro Prior to 1861*[5] is told by Mr. Woodson in full detail with references to authorities, and includes education by the Friends in Philadelphia, and the opposition from New Haven to a college for Negroes.

Professor Du Bois gives to a small volume the title *The Negro*[6] and makes it a text-book of the history of the race, mostly in Africa. The solution of the large Negro problem he finds not in ethics or religion, we regret to say, but in economic forces, and particularly in the common interests between white and black labor, for "so long as black laborers are slaves, white laborers cannot be free."

In a yet thinner book, *The Independent Negro*,[7] Wade H. Harris tells of North Carolina before the war. Then follows a chapter on the sufferings after the war,

THE WAR FROM MANY SIDES

The Cause of the War, by Charles E. Jefferson, is an illuminating little volume, as thought-provoking as it is eloquent. It gets right down to the fundamental philosophy of the war and drives home its ideas with force and courage.

Crowell. 50 cents.

The German Enigma, by Georges Bourdon. A Frenchman's calm estimate of the character and aims of the German people. An unusual book on this subject, because it is constructive in aim and free from violent prejudice and rancor.

Dutton. $1.25.

In a French Hospital—Notes of a Nurse, by M. Eydoux Demians. A vivid record of the human side of the war—touching little tales of the wounded and their nurses, told simply, but with dramatic force.

Duffield. $1.

The German Tragedy and Its Meaning for Canada, by President R. A. Falconer of the University of Toronto, states England's case against Germany and discusses the new Canada that will emerge from the war.

University of Toronto Press. 50 cents.

The Soul of Germany, by Dr. Thomas F. A. Smith. An intimate study of German life, based on twelve years' residence in Bavaria as an English professor. The author persistently tries to show the evils of Prussian autocracy and "Kultur."

Doran. $1.25.

Austria-Hungary and the War, by Ernest Ludwig. Attempts to justify the dual monarchy's position in the conflict. Not without partizanship, it aims to explain and defend Austrian diplomacy, especially in relation to Serbia.

New York: Ogilvie. $1

War's New Weapons, by Baron Hrolf von Dewitz, analyzes the machinery and strategy of the war. Stresses aircraft, wireless, and submarines. Preface by Hudson Maxim.

Dodd, Mead. $1.50

The World in the Crucible, by Sir Gilbert Parker, is an interesting if somewhat partizan, account of the origins and conduct of the Great War. It defends England and denounces Germany—hardly scholarly history.

Dodd, Mead. $1.50

The World Storm and Beyond, by Edwin Davies Schoonmaker, is a masterful discussion of the war and its social consequences. Eleven richly suggestive essays on subjects ranging from the future of Russia to the collapse of the Church.

Century. $2

The Holy War—Made in Germany, by Dr. C. Snouck Hurgronje, analyzes the causes and results of the proclamation of a Holy War by the Sheikh-ul-Islam of Constantinople. It treats especially of Germany's interests in Turkey.

Putnam. $1

when Negroes were emancipated and house servants ran away without notice and a nurse-girl complained to the military authorities if the mistress slapt her, and when the Ku Klux "summarily punished" offending Negroes.

It is like coming into another world to turn to Bulletin 129 of the last census, devoted to the *Negroes in the United States*.[8] We learn that in 1910 we had ten million, of whom over seven million lived in rural communities, practically all born in this country, and two million of them pure black. In 1909-10 there were 1,670,690 Negro children in school, and of the Negroes over ten years old seventy per cent could read or write. The worst conditions as to illiteracy are in Louisiana. In the Southern States 430,149 Negroes in 1910 owned their homes, while in 1900 only 327,537 were so fortunate—an immense increase in ten years. The age of the schoolhouse has replaced the age of the Ku Klux. Conditions are not yet ideal for the Negro, but there is no occasion for pessimism.

Yet Dr. Mecklin in his study, *Democracy and Race Friction*,[9] regards this problem as insoluble because of diverse "race traits." The writer is a long resident of the South and has drawn his material from that section, and from the conditions in Jamaica and South Africa. But no conclusion can be reached which fails to consider the relation of the races in Spanish, French and Portuguese countries. The author's solution is "the complete subordination of the Negro to the will of the white," as in Jamaica. The Negro is to him "a backward and inferior race." He writes before the late unanimous decision of the Supreme Court on state amendments and laws to limit suffrage, and he declares that the previous decisions have demonstrated "the bankruptcy of the old theory of natural rights." He is an oligarchist, and frankly admits it.

A NORTHERN GIRL BEFORE THE WAR

The Evolution of a Teacher, by Ella Ives Gilbert, tells of a New England youth, Mr. Holyoke of the 60's, the Chicago fire, and such notables as Alice Freeman Palmer and Frances E. Willard.

Boston: Pilgrim Press. $1.

A HISTORY OF THE EMPIRE

The fourth volume of *England and the British Empire* is just issued. This includes the years from 1802 to 1914 and completes the valuable work of Arthur D. Innes reviewed in The Independent August 3, 1914.

Macmillan. $1.60.

SEE AMERICA FIRST

Yellowstone Park is the Mecca of many vacationists this year, for the recent decision of the United States Department of the Interior to open it to automobiles gives the tourist added opportunity to enjoy its natural wonders. A detailed and authoritative description of *The Yellowstone National*

GALSWORTHY

has written a new novel

THE FREELANDS

It is a romance of boy and girl love.

A black-haired, straight-as-an-arrow boy, loving liberty and wanting it for the world; full of thoughts for the betterment of mankind.

A girl who is the very embodiment of youth, groping for world-knowledge and learning fast, loving the world and keenly sympathetic with its sufferers.

Incidentally a brilliant commentary on one of the social questions of the day which is absorbing all thinking people.

$1.35 net, postage extra.

CONTINUOUS BLOOM IN AMERICA

WHEN, WHERE, WHAT TO PLANT. With Other Gardening Suggestions. *Illustrated.* 4*to.*

This volume will supply what has long been wished by gardeners—a comprehensive scheme for continuous bloom, presented from the point of view of one aiming to give in the simplest, briefest way the necessary information for beautifying a garden. The entire volume is so ingeniously arranged and equipped with indexes, catalogues, etc., as to be exceedingly convenient for practical use; and the peculiar quality of the author's style make it a pleasure to read.

$2.00 *net*

SOCIALIZED GERMANY

By FREDERIC C. HOWE, author of "The Modern City and Its Problems," "The City: The Hope of Democracy," "European Cities at Work," etc., Commissioner of Immigration at the Port of New York.

This work is a frank attempt to portray the remarkable program of constructive statesmanship inaugurated by Bismarck and extended by the present Kaiser, which is largely responsible for Germany's unparalleled commercial and industrial progress. The socialism, as described by Dr. Howe, is not the work of the Socialist party. It is not inspired by the labor class, which are excluded from a real participation in the government of the empire and the states. It is rather the work of the ruling classes, who have carried state Socialism further than any country in the world.

$1.50 net.

AUNT JANE

By JENNETTE LEE, author of "The Woman in the Alcove," etc.

Aunt Jane, the benevolent despot of an endowed hospital in a small inland city, is a character of various uncommon attractions and of decided novelty. Things get themselves done in a quiet, unhurried and masterly fashion in her hospital; doctors, high authorities, other nurses, are engineered with exquisite unperceived diplomacy. Aunt Jane is a most delightful person, full of fun and philosophy.

$1.25

THE REAL MAN

By FRANCIS LYNDE, author of "The City of Numbered Days," "The Honorable Senator Sagebrush," etc., etc.

Mr. Lynde's new novel is in the vein which he has made his own of late years, and combines romantic interest at its intensest with a momentous spiritual struggle in the soul of the hero. A young bank cashier in a small town of the Middle West, who is to all appearances and to his own consciousness merely a provincial social butterfly, finds himself suddenly confronted with an accusation of murder. He makes his way as a "hobo" to the Far West, a transformed man with henceforth primitive instead of conventional instincts. The development of his character makes a most thrilling story.

Illustrated. $1.35.

SCRIBNER'S MAGAZINE

Resinol Soap

certainly has cleared my skin

If you want a clear, fresh, glowing complexion, use Resinol Soap at least once a day. Work a warm, creamy lather of it well into the pores, then rinse the face with plenty of cold water.

It does not take many days of such regular care with Resinol Soap to show an improvement, because the Resinol medication *soothes* and *refreshes* the skin, while the pure, alkali-free soap is *cleansing* it. The same treatment does wonders for the hands, arms and neck.

When the skin is in a very neglected condition, with pimples, blackheads, redness of long standing, spots, dandruff, etc., a little Resinol Ointment for ten or fifteen minutes before using Resinol Soap.

Resinol Soap is not artificially colored, its rich brown being entirely due to the Resinol medication it contains. Sold by all druggists and dealers in toilet goods.

For a guestroom size trial cake, write Dept. 12-D, Resinol, Baltimore, Md.

Park, by General Hiram M. Chittenden, formerly in charge of road construction in the park, has been revised to date. It includes an historical sketch and full descriptive information, with fifteen full page illustrations and a comprehensive map.

Cincinnati: Stewart & Kidd. $1.75.

BACK OF THE GUNS

Sir Hiram Maxim's *My Life* opens with the story of a farmer lad's life in Maine, the typical New England life of sixty years ago. It closes amid the courts of Europe. It is vivid, direct, without affectation, and is entertaining as well as interesting.

McBride, Nast. $4.50.

REAL ADVENTURE

Lovers of Cooper and Parkman will enjoy *In the Old West*, a reprint of a series of tales by George Fredrick Ruxton which appeared in *Blackwood's Magazine* of 1848. The author was an adventurous youth who saw and loved the life of the far West in the early forties. "It is written in the form of a thinly veiled romance, but the characters were real, the incidents were real." The descriptive scenes and the frontier conversations are excellent.

Outing. $1.

HYMNS AND LYRICS

To those long accustomed to the yearly gatherings at Chautauqua the *Poems* of Mary Artemesia Lathbury are well known and for these the little volume will have the charm of many pleasant associations. But to a wider audience belong the two hymns, "Break Thou the Bread of Life" and "Day Is Dying in the West," while some of the lyrics and such charming children's verses as "In the Daisy Snow" should find many readers.

Minneapolis: Nunc Licet Press. $1.25.

THE SEARCH FOR FREEDOM

Henry Osborne Taylor follows his essay on the contributions of the different great nations to spiritual thought by a study of the philosophies taught by the great religious teachers from those of Chaldea and Egypt to St. Augustine. Without being a history of religion, *Deliverance* is a thoughtful and sympathetic view of the various theories born of the universal longing for the "freeing of the spirit," and the gradual change and broadening of spiritual ideals.

Macmillan. $1.25.

AFTER PRISON—WHAT?

A thought-provoking book on the problems of the ex-convict is Donald Lowrie's *My Life Out of Prison*. A sequel to *My Life in Prison*, it narrates simply and frankly the tragedies, despairs and hopes of the ex-convict. The book's plea for the reformation of our entire prison system is not marred by sentimentality or "fine writing." It is a plain truthful record of the author's experiences after his release from San Quentin in 1911—a record of devoted service in the cause of prison reform.

Kennerley. $1.50.

CHINA TODAY AND YESTERDAY

Years of residence and the gift of observation and sympathy are necessary to the understanding of foreign civilizations and their cultural forces. H. F. Hedemann's volume of travel and Oriental scenes has been translated by Dr. Reginald under the title of *A Diplomat Scholar in the East*. Vivid descriptions of a journey thru Siberia, the primitive life of the Mongols of Gobi, and the mountains and valleys of Shantung show how swiftly the old order of China is changing.

Dodd, Mead. $2.

ISABELLA AND COLUMBUS

Pioneers, by Elizabeth Millar, is a picturesque and absorbing romance of the siege of Ferdinand and Isabella of Granada and the first voyage of Columbus. The real story in the plates reduce the Moor's last stronghold, the princes, courtly men of arms, the "knightly spirit," the power and prestige of medieval warfare are all portrayed with rich color and remarkable accuracy, and the best spirit of young France of Leon is very human and appealing.

Dodd, Mead. $1.50.

Tusculum College

Beautifully and healthfully located in the valley of the great Smokies of East Tennessee. Founded in 1794, Tusculum is true to the ideals of its founders. The influence of the College has always been Christian. In scholarship Tusculum ranks with the best colleges in the country. Six college buildings, four dwellings, campus of 75 acres and endowment of approximately $400,000. Please visit us or write for full information.

The Market Place

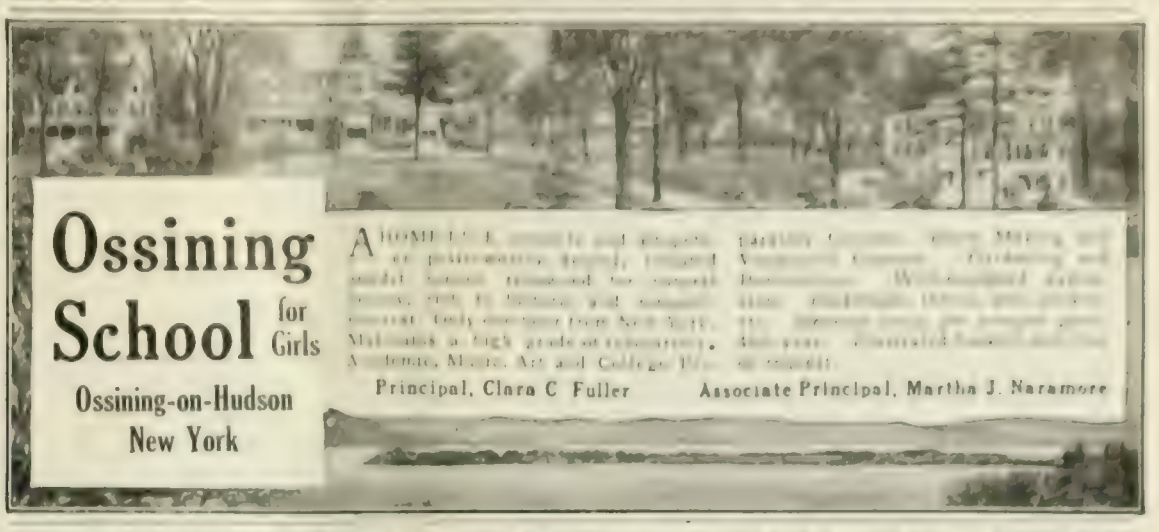
STOCK PRICES

The stock market was affected last week by the Government's favorable crop report, the decisions of the Interstate Commerce Commission concerning Western freight rates and the Eastern rates on anthracite coal, the arrival of nearly $20,000,000 of gold from England, foreign liquidation, reports of new war orders, and a break in sterling exchange to the lowest point reached in forty years. Owing mainly to the rate decisions, a considerable part of the advances made in the first half of the week were lost, but as a rule there were net gains at the close, with several sensational additions for war order stocks.

At the beginning there was persistent buying of railroad securities, due to the crop report and a prevailing belief that the Western rate decision would be satisfactory to the railroad companies. But the decision, when it was announced, was a disappointing one, and it was followed by the order for a sharp reduction of anthracite coal rates. The latter ruling directly affected a large group of roads, among them the Lehigh Valley, Reading, Erie, Pennsylvania and Delaware & Hudson. As has been said, a considerable part of the early advances was lost. Shares of the Western roads receded from 2 to 4 points, but, Union Pacific excepted, showed a small net gain at the end of the week. The anthracite shares did not fare so well. Delaware & Hudson's net loss was 6; Lehigh Valley's was 3½, after a decline of 7 from the summit; an equal decline for Reading left a net addition of 2⅞; and Erie's loss of 3 points left the shares a shade in advance of the preceding week's figures. The decisions caused selling by foreign holders. A continued decline in the price of copper, which is now about 3 cents a pound below the recent high rate, affected copper mining shares unfavorably, and for a similar reason the shares of the National Lead Company showed a loss of nearly 2 points.

There was nothing in the news at home or abroad that could restrain the upward movement of war order stocks. Net gains for four motor companies were as follows: Willys-Overland, 38⅝; General Motors, 18; Studebaker, 15; Maxwell, 3⅜. Bethlehem Steel common, paying no dividend, rose to 307, but fell back to 290. The sensational advances were in the preferred shares. These, with a dividend rate limited to 7 per cent, rose 47 points to

180, and then declined to 154. There were rumors that the shares were to gain something by a special dividend. The largest holder is President Schwab. But there must first be provision for the common stock. Common shares of the Allis-Chalmers Company were selling early in the year at 7¾. For the twelve months ending with December there had been a deficit. Last week the price rose to 46½. The company has been doing work for the Bethlehem Steel Company, and there are reports that it has from the same source an order amounting to $18,000,000. For several other war shares there were moderate advances. The Steel Corporation's stock made a good record, owing partly to its report of unfilled orders. A recession of five points in the general reaction left a net addition of 1½. The prices of steel bars and other forms used in the manufacture of ammunition continue to rise. Rail orders are coming in from our own railroad companies, as well as from Russia and France.



THE GREAT CROPS

At the beginning of last week the Government issued another crop report, and its character was so favorable that the prices of securities on the Stock Exchange advanced on account of it. We may not have 1,000,000,000 bushels of wheat, but the estimated total has been increased to 966,000,000. This exceeds by 75,000,000 the crop of last year, which was the largest known up to that time, and which surpassed the previous record crop by 128,000,000 bushels. More interest was shown in the corn report than in the wheat figures. The corn estimate gained more than 100,000,000 bushels in the month of July, and it is now 2,918,000,000. This great yield has been exceeded only twice (in 1912, 3,124,000,000, and in 1906, 2,927,000,000), and favorable weather may add something before harvest time. It should not be forgotten that this year's crop is worth more than any of its predecessors, owing to the prevailing prices. The value of the wheat and corn crops is nearly $3,200,000,000.

There is a slight increase of the estimate for oats, which is now 1,402,000,000 bushels. Only once, in 1912 (1,418,000,000) has this been exceeded, and last year's yield was less by 260,000,000 bushels. If 1912 be excepted, this year's crop is at least 250,000,000 more than the average for the last seven or eight years. When the latest estimates are compared with last year's harvests, it is seen that there are increases for barley, rye, buckwheat, rice, potatoes, flax, tobacco and hay.

Reported cancellation of orders for 2,000,000 bushels of wheat at Chicago "by the Allies" caused a decline of prices last week. So far as can be learned, the only cancellations were those made by certain buyers, or middlemen, who were intending to sell in Italy, and who saw no profit because the Italian Government, in the interest of consumers, has undertaken to fix maximum prices.

Insurance

Conducted by

W. E. UNDERWOOD

THE NEWER LIFE COMPANIES

Several weeks ago I received an inquiry from a reader, resident in one of the middle western states, requesting information as to the financial condition of a life insurance company located in that section of the country and which commenced business in 1906. It was evident from the tenor of our correspondent's letter that he had heard something about the institution that disturbed him, and he was uncertain as to whether he should continue his policy.

Upon looking up the record, I discovered that the company had been placed in the hands of a receiver last April. Just how it happened that this policyholder had not been notified of the failure is inexplicable, but such seems to have been the case.

The company referred to was one of about 200 which have been organized during the past ten years. Immediately after the investigation of the New York life insurance companies in the fall of 1905, it occurred to the tribe of professional promoters, so numerous in this country, that the life insurance field was a rich one for exploitation. They acted on the idea promptly. In nearly every state, dozens of companies were started, local pride was appealed to, subscriptions to stock at a premium were secured, the companies were made ready for business and turned over to local managements, the promoters took their fat commissions and moved on to the next town or state to repeat the operation.

I have before me a list of such of these companies as have either failed or retired since January 1, 1910. There are sixty-six of them. Of the number, sixty were reinsured in other companies and six became insolvent.

All companies were young and comparatively insignificant financially at one period of their careers, therefore it does not necessarily follow that those are unfavorable factors. Today, however, the new companies are heavily handicapped in the struggle for business with their older and excellently managed competitors. Men want to go into companies which are well established. Life insurance is sold very largely on the record of the company selling it. This condition forces the new companies to spend more money in the acquisition of business than it is worth, a process that has to be prolonged beyond a safe period, with the result that either reinsurance or a receiver must be resorted to if any portion of the equity of policyholders is to be preserved.

There is room for all the newer com-

panies now in existence, provided they are properly organized and are being conducted on sound underwriting lines, and if they would be content to grow slowly. But most of them are not. They are struggling for three or four times as much new business each year as they ought to write. Naturally, it is badly written—the lapse ratio the second and third years is inordinate.

Policyholders in those companies should keep close watch on their operations and see to it, particularly, at each year-end that their financial condition has undergone no substantial deterioration.

P. P. Grinnell, Iowa—A twenty-year endowment policy in the company you name would be an excellent investment. The company is a fine one from every viewpoint and as an earner of dividends is probably the best.

C. A. S., St. Joseph, Mo.—The fraternal order you mention has made a radical change in its methods; and on business written since August 1, 1914, is charging adequate premiums and accumulating a reserve computed on a four per cent basis. Whatever may be the results to members holding its old certificates under its four-groups arrangement in June, 1914, I am inclined to believe that those entering the order since are properly protected.

H. G. W., Lima, Ohio—The annual premium of every properly constituted life insurance company includes a sum which is accumulated at interest called the reserve. This, in the event of lapse or surrender, less such small charge which some companies make for receding from the contract, is the cash surrender value. It is also the basis for a loan by the company. The amount of the loan depends wholly on the amount of the accumulated reserve, and that, in turn, is dependent on the amount of premium paid and the length of time the reserve has been accumulating. No life insurance companies make policy loans except on reserve values and these, as you perceive, must first be accumulated.

S. S. S., North Wales, Pa.—The company which offers the policy is thoroly reliable. But understand clearly that the contract offered is a special combination at what seems to be a small premium. Note well that the protection offered is nearly altogether against travel accident, boiler explosions, burning buildings, earthquakes, freezing, septic poisoning, and forty-nine specified diseases. The protection offered is worth the small price asked for it, but it is not full coverage. From a good company you get what you pay for; there are no "bargains." If you want an accident policy, $5000 in event of death, $25 a week for sickness or accidental injury, you must pay from $25 to $60 a year.

H. P. Philadelphia, Pa.—You have misconstrued my answer. I did not advise my inquirer to give up a 35-year endowment for an ordinary life policy. On the contrary, the effect of my advice, if taken, would add an ordinary life policy in the same company to the endowment. My correspondent explained that he was carrying three policies: a 15-payment life (which will soon mature), a 20-payment life and a 35-year endowment. He wants to continue investing annually the amount of premium the 15-payment life has cost him after it matures, and has considered putting it into a 10- or 15-year term policy. Believing that would be a mistake, I suggested a $2000 ordinary life in the company that issued the 35-year endowment. I might have advised an additional 35-year endowment but for the fact that he wished to keep the cost as near that of the maturing 15-payment life as possible. The cash difference in twenty years, computing the difference in premium with interest, is negligible. My advice is sound and is in his interests.

The demand in unsettled times for good first mortgages indicates their unusual stability.

First mortgages do not shrink in value—they are usually on property worth three times the money loaned. We have loaned over $1,000,000 and not a single cent lost to any investor on a single foreclosure sale made. Write for booklet describing methods and list of loans from $300 to $10,000.

Aurelius-Swanson Co., Inc.
51 State Nat. Bank Bldg. Oklahoma City, Okla.

1915

Atlantic Mutual Insurance Co.

Atlantic Building, 51 Wall St., New York

Insures Against Marine and Inland Transportation Risk and Will Issue Policies Making Loss Payable in Europe and Oriental Countries

Chartered by the State of New York in 1842, was preceded by a stock company of a similar name. The latter company was liquidated and part of its capital, to the extent of $100,000, was used with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with a bonus and interest at the expiration of two years.

During its existence the company has insured property to the value of	$27,964,578,109.00
Received premiums thereon to the extent of	287,324,800.99
Paid losses during that period	143,820,874.99
Issued certificates of profits to depositors	90,801,110.00
Of which there have been redeemed	83,811,150.00
Leaving outstanding at present time	6,989,960.00
Interest paid on certificates amounts to	23,020,223.85
On December 31, 1914, the assets of the company amounted to	14,101,674.16

The profits of the company revert to the insured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such liberal treatment policies are issued subject to the approval of counsel selected by the assured. It is in accordance with the charter

A Number of Things

by

Edwin E. Slosson

Maurice Maeterlinck has always refused to barter his birthright for a chair in the French Academy, and a few months ago when it was proposed that he be elected without having renounced his Belgian citizenship he declined, saying that if it was desired to bestow such an unprecedented honor on Belgium the recipient should be Verhaeren as the elder and better author. Elder but not better, most of us would say, for in spite of the recent energetic propaganda the Verhaeren cult has not yet spread widely and Maeterlinck alone represents Belgian letters to the outside world.

We are, therefore, all interested to see that Maeterlinck has not yet lost that optimistic courage and serene faith which has characterized his later writings. He wastes little time in lamentation over the ruin of his country, but looks forward to its renaissance. I must translate a few passages from a recent article in the *Petit Journal:*

Let us forget the greatest calamity and the most crying injustice of history that we may think only of our approaching deliverance. . . . Tomorrow we shall return to our homes. We shall not weep to find them in ruins. They will rise more beautiful from the heaps of ashes and rubbish. We have known days of heroic misery, but we have learned that misery does not sadden souls which enshrine a great love and which nourish a noble thought. We shall reënter with a high head, regenerated in the midst of a regenerated Europe, rejuvenated by magnificent misfortune, purified by victory and stripped of the pettiness which formerly veiled the sleeping virtues that we did not know we possess. We have lost the things that perish, but they will rise again as easily as they have perished.

In exchange we have gained that which shall never die in our hearts. Our eyes have been closed to many things; now they are open to wider horizons. Our gaze had been confined to our riches, our little comforts, our petty customs. Now it is detached from the earth and raised to summits that we have not hitherto perceived. We did not know ourselves, we did not love one another enough. We have learned to know ourselves in the amazement of glory and to love ourselves in the delorous ardor of the most immense sacrifice that a people has ever accomplished. We had forgotten the heroic virtues, the unhammered thoughts, the eternal ideas that guide humanity. To-day we not only know that they exist but we have taught the world that they triumph over that nothing is lost while faith remains, while honor is safe, while love subsists, while the soul does not surrender; and that the most monstrous powers can never prevail against these ideal forces which are the happiness, the glory and the sole reason of the existence of man.

MAETERLINCK.

The effect of the war on the poetry output has been to cause an increase in quantity and a deterioration in quality. No new genius has arisen and the production of our authors of established reputation has in many cases resembled the posthumous poetry of Shakespeare and Milton as reported by a spiritualistic medium. What is most amazing is that *The English Review*, which has published some of the best modern verse, devotes ten pages to "A Ballad of the War" by Lord Latymer, of which the following are fair samples:

Ireland renewed her fighting fame.
All civil conflict past.
In strong array her young men came
From Dublin and Belfast.

Australia heard the bugles sound.
And Canada replied;*
New Zealand, too, by blood was bound
To fight by Britain's side.

. . . . . .

Then grew the Prussian Eagle mad:
Where was his promised Day?
Why were not Paris, Petrograd,
And London now his prey?

German professors raised a cry
And waved astonished hands
That anyone should dare defy
Great Prussia's high commands;

And grave philosophers declared,
With spluttering and with spleen,
That Britain was for war prepared:
How villainous and mean!

. . . . . .

Tho hard such frenzy to believe,
It is not hard of proof;
Go, see where Rheims and Louvain grieve
For homes without a roof.

But if the Huns on British shore
Should land (which God forbid)
They'd do to us as much or more
Than they to Belgium did.

*Implying also Newfoundland.

A student of the University of Atlantis in talking to me of his professors the other day thus characterized the most renowned of them: "He is really a bromide, but he fizzes so that everybody takes him for a sulfite." This shows more knowledge of psychology than chemistry.

A mason in my street displays a sign which reads

BRICK CHIMNEYS
POINTED UP

This is handy. If ever a cyclone should put my dwelling into the position of the Topsy-Turvy House at Coney Island I should call for his services.

It's a custom of the Authors Club for the members to donate to the library a copy of each of their books as it comes out. These are shelved in cases around the walls so the rooms are getting smaller and the Club is like a mollusk, becoming gradually encysted by a shell of its own secretion. Naturally these volumes are rarely disturbed, for who would read a book when he can talk to the author of it? But in order to avoid any tampering with the bookcases by an unwary guest a big fumigation is hung above which reads

Good friend, for Jesus sake forbeare
To dig the dust enclosed heare.

PEBBLES

"Why do you think you will have any trouble in keeping the engagement secret?"
"I had to tell the girl, didn't I?"—*Puck.*

"Did Bibbs give his wife her new car voluntarily?" "I rather think it was a case of auto suggestion."—*Baltimore American.*

"Another new hat! You should really save your money, with the price of everything going up."
"But why? The longer I save it, the less I can buy with it."—*Passing Show.*

"Pa, a man's wife is his better half, isn't she?"
"We are told so, my son."
"Then if a man marries twice there isn't anything left of him, is there?"—*Boston*

"Here comes Blinkers. He's got a new baby, and he'll talk us to death."
"Well, here comes a neighbor of mine who has a new setter dog. Let's introduce them and leave them to their fate."—*Life.*

"RIMES ARE SO SCARCE IN THIS WORLD OF OURS"

Hear the cannon's thunder deep r-
Esounding o'er this here, now, Ypres.
—*Conning Tower, New York Tribune.*

"Why," asks a Missouri paper, "does Missouri stand at the head in raising mules?"
"Because," says another paper, "that is the only safe place to stand."—*Christian Register.*

Cavalry Sergeant—"I told you never to approach a horse from the rear without speaking to him. First thing you know they'll kick you in the head, and we'll have a bunch of lame horses on our hands."—*Judge.*

First Tramp—You seem very 'appy abaht it. Wot's up?
Second Tramp (reading Mr. Asquith's Guildhall speech)—'Ere's me bin goin' wivout luxuries all this time, an' I've only jus' found out that I've bin 'elpin' the country to win this war.—*Punch.*

Several members of a woman's club were chatting with a little daughter of their hostess.
"I suppose you are a great help to your mama?" said one.
"Oh, yes," replied the little miss, "and so is Ethel; but today it is my turn to count the spoons after the company is gone."—*Chicago Herald.*

REMARKABLE REMARKS

B. HAMLET—Germany makes the rules.

SAMUEL GOMPERS—Employers have some rights.

CORRA HARRIS—The mind of woman is without form.

HENRY FORD—$300,000 is too much to pay for a home.

GEORGE HORACE LORIMER—War is largely a woman's affair.

W. G. CLIFFTSGER—The study which is most neglected is English.

CHRISTABEL PANKHURST—Trust the people and defy the cranks.

PROF. HENRY SEIDEL CANBY of Yale—As a nation we are mediocre.

GERTRUDE ATHERTON—The women of Europe must despise the men.

GEORGE BARR MCCUTCHEON—America is essentially a romantic country.

SENATOR WILLIAM J. STONE—President Wilson will be reelected next year.

H. G. WELLS—Unless Holland intervenes the war will last a long time.

HERBERT KAUFMAN—The only train robbers left are on the Pullmans.

KAISER WILHELM—Before God and history my conscience is clear. I did not will the war.

THOMAS C. BLAISDELL—It is mental training, not information, that should admit to college.

WILLIAM J. BRYAN—To go to war with Germany now would be like challenging a lunatic asylum.

JACQUES LOEB—What progress humanity has made, it owes directly or indirectly to mechanistic science.

DR. WOODS HUTCHINSON—Man is the most unprotected, defenseless-looking creature that walks the earth.

GOUVERNEUR MORRIS—Most people commonly think half thoughts, and need other people to complete them.

JEFF DAVIS, "KING OF THE HOBOS"—Many boys take after father and then father takes after the boy.

JOSEPH SELLERTHWAITE—During the recent high water in Kansas frogs ate all the cherries off my neighbor's trees.

AMELIA BARR—The American woman is older in appearance and ideas at the age of thirty than she used to be at forty.

MRS. PETHICK LAWRENCE—Today it is for the men to stand down and for the women whom they have belittled to take the seat of judgment.

THEODORE ROOSEVELT—We must perform these deeds of blood and valor which above everything else bring national renown.

NORMAN ANGELL—So long as we nurse the worship of this idea of "political greatness," we must expect the worship to take the form of these ignoble wars.

ELIHU ROOT—In the last forty years the government of New York state has been about as representative and responsible as that of Venezuela.

EARL BARNES—Such women as Clara Barton, Susan B. Anthony and Jane Addams have brought gifts of service to mankind far beyond what they would probably have given to their own homes.

AGNES REPPLIER—The only agreeable thing to be recorded in connection with Europe's sudden and disastrous war is the fact that people stopped talking about women, and began to talk about men.

PROF. GEO. F. GUNDELFINGER, PH.D.—The difference between the bodily aspect of the professor and the undergraduate cannot be denied in spite of the fact that they wear the same kind of underwear.

AN ACT OF DELIBERATE UNFRIENDLINESS

ONCE more American lives have been taken by a German submarine. They were only two, but it was no fault of the "Arabic's" assailant that they were not more than a score. The rest were saved by prompt and efficient action and by good luck.

The evidence is strong that there was no warning from the attacking vessel. That there was no command to halt. That there was no pretense of visit and search. That there was no opportunity given for insuring the safety of passengers and crew.

The act, then, was in clear contravention of the rights of noncombatants and of neutrals as established by the usage of civilized warfare. It was an unquestioned invasion of the rights of American citizens upon the high seas. It would have been such an invasion even if no American lives had been lost as the ship sank. For putting life in jeopardy is, in law and morals, only a less serious international wrong than taking life away.

The German Government could be in no doubt as to the view which the American people would take of this act. Unless Germany can show some element of justification which does not appear upon the surface, it is a deliberately unfriendly act. These were the words of solemn warning with which the President closed the third note on the sinking of the "Lusitania." Berlin need await no new word from us to characterize this fresh killing of American citizens.

In face of such an act of deliberate unfriendliness we must all keep our heads cool and our nerves steady. Germany has shown her contempt for words of reasonableness. She forces us to add to our words, action. But as our words have been well weighed and sober, so should our acts be well considered and restrained.

Still must we trust the President. His is the primary responsibility. His is the grave duty of leadership. At this hour he needs the nation's help, he has the nation's confidence.

IF FEUDAL—WHY?

THERE used to be a story in the school "Reader"—that really good old Reader that we used to thumb fifty years ago—about two travelers who had seen the world and returned to their native village. Questioned by friends and neighbors, each told what he had seen. The list of scenes and places was the same in each tale, but one narrator gave it forth in falling accents and the tones of a man much bored, the other enthusiastically and with rising inflections. Using the same subject matter, one pictured the world as a tiresome and disappointing place, the other as a place full of gladness and well worth seeing.

Mr. W. J. Ghent, returning to a consideration of that "Benevolent Feudalism" which he pictured thirteen years ago, still sees the modern capitalistic world as a pretty bad place. The lines and colors that enter into his picture are facts and figures of corporation growth, control and output, of the distribution of annual income, of wages and prices which are taken from those official sources that all of us must accept as the best data on these topics that we possess. Mr. Ghent is no tyro in the handling of sources, and the wise man will not try to escape from the offered conclusion by denying the premises. Neither is Mr. Ghent a reasoner to trifle with. He knows his logic and he uses it remorselessly.

Nevertheless, it is fair to ask whether Mr. Ghent's picture would be any less true to life if looked at in the sunlight of optimism, instead of under the shadows of pessimism. Suppose that it should turn out to be true that the world of human interests is becoming much more highly organized than it was in the days of Benjamin Franklin or even in the days of Franklin Pierce? And suppose that the plan of organization when carefully analyzed turns out to be structurally and functionally so similar to the feudalism of seven or eight hundred years ago that it might well enough be described as in fact a kind of feudalism, more or less benevolent as the case may be. Would it necessarily fol-

THE Associate Editor of The Independent, Mr. Harold J. Howland, sailed for England on the "New York," of the American Line, on Saturday—two days after the "Arabic" went down. It is his purpose to study the situation in such countries as he may visit with special reference to the effect upon their people of the unprecedented upheaval in all departments of life which has been caused by the Great War. A series of articles may be expected which can hardly fail to have keen human interest.

low that the world is therefore a worse place to live in than it was fifty or seventy-five years ago, and altogether worse than it would be if it were organized according to that scheme of politico-industrial socialism, that Mr. Ghent approves of?

We mean, of course, is it a worse place than it would be under Mr. Ghent's kind of socialism—always to be distinguished from I. W. W.-ism, or other syndicalism—the human stuff that we have to deal with being just what it is today, no better, no worse? Mankind is engaged in a rather stiff struggle for existence. It is not only an individual struggle; it is also a collective and organized struggle. Collectively it is carried on by industrial units, municipal units, national and imperial units. The feudal plan of organization has at one or another time prevailed in many parts of the world, and here and there for a very long while. The presumption is that it answered fairly well the purpose of saving alive and making reasonably happy the peoples that lived under it. When it gave way in Europe, and later on in Japan, before other plans, and when in Europe and in America, experiments more or less democratic were tried with a degree of success variously estimated by different minds, we presume that the changes occurred because more liberal systems proved for the time being to be more usable under new conditions that the collective struggle had assumed.

So we ask Mr. Ghent, and we hope he will tell us, whether, if the world is not at present moving toward his socialistic goal, the causes of failure may not be found in the present unfitness of mankind for such highly intelligent and disinterested coöperation as his plan seems to call for. We find it difficult to believe that if mankind were, all in all, qualified for such high emprise it would let the realization go drifting on into a vague and distant future as, we gather from Mr. Ghent's account of things, it is actually doing. And if by chance our surmise is right, and Mr. Ghent should find it necessary to admit that mankind is not as yet quite capable of so big an undertaking, will he answer also one question further, namely: Given the human material as we just now find it, is it quite certain that any other scheme of organization would get out of it a more successful total coöperation in the production and distribution of material goods, knowledge, sanitation, stimulation of thought and emotion, friendliness, and, in some rough sense of the word, happiness, than our more or less benevolent feudalism is producing?

We hold no brief for capitalism, feudal or other, or for any particular brand of democracy, or, indeed, for any specific social form. We are merely curious. We crave knowledge.

ASHTABULA—MUNICIPAL PIONEER

THERE are two ideals in municipal government: complete expression of the public will, and absolute efficiency in carrying out the public will. The two even taken together do not insure good government; that is dependent upon a vigorous, unwavering, intelligent public interest. But any machinery which will bring one or the other ideal nearer is worth using.

Efficiency in administration seems to be more easily attained thru the city manager than in any other way. Complete expression of the public will, at least in the matter of election to office, is more nearly secured by proportional representation than by any other electoral device yet invented.

Ashtabula, Ohio, uses both plans. It is the only city in the United States of which this is true. The campaign for proportional representation, on which we commented on July 26, came to a successful conclusion at the referendum on August 10. Ashtabula's government will be run by a city manager responsible to a commission of seven members elected under proportional representation. That means that no member of the commission receives less than one-eighth of all the ballots cast and not more than one-eighth of the voters throw away their franchise on an unsuccessful candidate. In other words, seven-eighths of the ballots produce results.

Of all the charter changes which the better-cities propaganda has made familiar, proportional representation is the least understood, and at first glance seems the most theoretical. Other cities have now an opportunity to see how the plan works, and the demonstration ought to be fruitful.

GEORGIA'S SHAME

THE murder of Leo Frank by a mob disgraces Georgia and brings discredit on the whole country. There is a difference in murders. A secret murder is bad, very bad, but not so bad as a public murder, deliberately planned and engaged in by a multitude of shameless participants. The secret murderer knows he is doing wrong, and by concealing his crime pays hypocritical respect to the public conscience; but the mob-murderer has lost the sense of right, rests in the approval of his accomplices and is proud of his crime. He is lost to conscience as well as law, and the public he represents is rotten with anarchy.

Thus debased were the members of the mob that plotted the murder of Leo Frank. It was done with deliberation. It was the fruit of no hasty, sudden passion; but was the cool plotting for weeks in many homes and clubs and barrooms of hundreds of willing assassins. The victim was a Jew charged with a girl's murder, convicted in the heat of public passion on the paltry testimony of a negro who claimed to have been an accomplice in the crime, sentenced to be hanged, the sentence commuted to life imprisonment by the Governor, who did not believe him guilty. Then his throat was slashed by a fellow-prisoner sentenced for murder, but who thought the Jew too vile to live. He had not yet recovered from this attack on his life when an organized lynching party in five automobiles speeded to the state's prison, dragged Frank out by force, carried him back a hundred miles and hanged him on a tree near the girl's home. The Governor who commuted the sentence and who had fled the state for fear of his life says that every one of the mob deserves to be hanged, and so say we—if law is not a farce.

This is an unusual case; it had excited the whole country. It was no ordinary lynching. It was done in the sight and in defiance of the whole country. Here accrues the special shame of Georgia.

How can Georgia wipe out the stain? Only by finding out, as can easily be done, who were the "best citizens" guilty of this dastardly crime, and then sending them to prison for long terms.

In this awful affair two things may be observed with

great concern: one, the reversal of the moral sense, in the general calling of good evil and evil good; and the other the terrorizing of the officers of law and of private speech. The lynchers fully believe they have done a solemn duty. In trampling on the law they have executed the law. And now they go further and let it be known that it would not be safe to attempt to discover or punish them, for they are determined men. Cobb County and all Georgia are afraid of them where they are not approved. No jury is likely to convict or even indict them. They think they are safe, and they are as bold, and yet as cowardly, as desperate and as lawless as were the Ku Klux, whose methods they have bettered. The Ku Klux bands frightened negroes; these best business men of Cobb County safely terrorize sheriffs and courts and Governors, tho the clues they leave behind them are as thick as the pebbles in the Chattahoochee. They have committed a monstrous crime; they believe they have executed a great justice, and they feel secure. Georgia law and Georgia justice are under their feet, unavenged and apparently powerless.

THE EFFECT OF WAR ON THE CHURCH

SOON after the beginning of the war, reports from the belligerent nations indicated a large increase in church attendance and a new enthusiasm in religious exercizes and functions. A superficial optimism pointed to these manifestations as a warrant for prophecies that the war would inaugurate a great religious revival. The more thoughtful, however, questioned how it would be possible for a social calamity which ran athwart the great basic principles of Christianity to result in any permanent gain for the Christian religion, either in its spirit or its organized efforts. How could brotherly love, piety and good-will be promoted by strife and hatred? Would there be any opportunity for the ethical side of Christianity to make gains in the face of the floods of violence, deceit, riot and pillage, released and encouraged by war? Was it not necessary that those universal elements which Christianity was seeking to realize in the world should, for the time, be overcome and subjected to the limitations of race, nationality and partizanship?

Such questions on the part of many led to the feeling that Christianity had somehow partially failed in not preventing the war, and that religion would suffer seriously in the confusion and strife that were to follow. These fears seem to have been well grounded. Recent reports from England and Germany show that the initial enthusiasm which filled the churches in the early months of the struggle has been slowly ebbing away, until, in many quarters, it has given place to a reaction which has depleted the churches. Special services have been discontinued in many of the Berlin and London churches which were daily crowded at the beginning of the war, and the regular Sunday gatherings have largely fallen off. Many causes for this change have been alleged, such as the inability of the church to sound a high ethical note, or escape subservience to political control, or the continued engrossment of church leaders with petty ecclesiastical or creedal contentions in the face of urgent world problems and opportunities. Whatever the causes may be, the decline in influence and effectiveness is unmistakable. It is a serious question when and how the tide can be turned. This does not mean the ruin of the church any more than the war means the annihilation of civilization, but it does place a burden upon religious leaders to examine carefully their resources and limitations, and in this period of eclipse to reorganize their forces along still broader lines for the huge tasks that are already assuming form in the mind of Christian seer and prophet.

LIVING ON AIR

WHAT may be done in the way of invention by castaways on an uninhabited island has been the theme of many romances, such as *Robinson Crusoe*, *The Swiss Family Robinson* and *The Mysterious Island*. It is now being tried in stern reality and on the largest scale. To be sure, Germany is not an island, nor is it completely cut off from the rest of the world by its ring of enemies, but it is sufficiently isolated and hard prest to afford full scope to the maternal instincts of Necessity.

The food supply is the most vital problem and of this the chief factor is albumen, the nitrogenous part of our food. The carbohydrates, such as sugar and starch, could be obtained in abundance from beets and potatoes, which make them directly thru the aid of sunshine from the carbon dioxide of the air and the water of the soil. But the nitrogen, altho it forms four-fifths of the air, cannot be used directly by animals and most plants. Even a plant of such a low order as the yeast requires its nitrogen served up to it in the form of ammonia. Consequently the intensive farming of Europe has long been dependent upon fertilizers and especially on the nitrate beds of Chile.

In 1898 Sir William Crookes, a far-sighted English chemist, predicted that these nitrate deposits would be exhausted by 1950 and then the human race would suffer from nitrogen starvation unless some way of utilizing atmospheric nitrogen were discovered. Fortunately, a way was discovered, in fact several ways, in the nick of time to avert the calamity. The waterfalls of Norway and Switzerland are working night and day hitching together the nitrogen and oxygen atoms of the air to provide Europe with the means of life and death, for, sad to say, the nitrates so produced are being used just now for filling explosive shells as well as for fertilizing the soil.

The German chemical firms which had developed this process sold out to the French and Norwegians shortly before the war; why they relinquished so profitable an industry was not understood until it was disclosed that they had something better up their sleeves, namely, a method of combining nitrogen and hydrogen to form ammonia. This, the Haber process, has now under pressure of the war been carried a step further, and the ammonia converted into edible albumen. Sugar is mixt with ammonium sulfate and the necessary mineral salts. Then it is sown with yeast and a strong current of air blown over the fermenting mass. In a short time a yeast cake is produced that makes a good fodder for horses and cattle and may even be used in bread. A somewhat similar method of growing yeast on ammonium salts has been worked out by American chemists who were interested in the improvement of our present wasteful way of making bread, but its employment has been interfered with by some of our overzealous pure food people. Never mind; they will come

around to it in time and then very likely they will want to make it compulsory. That is usually the way.

How much this discovery will contribute to the practical solution of Germany's food problem remains to be seen. The breweries, which supply yeast cake for all purposes and are now running at half capacity, have taken it up and it is to be hoped that they will find it so profitable that they may devote themselves to it after the war. It is at any rate amazing to think that it is possible to take the nitrogen of the air, the most refractory of the elements, hard to get and hard to hold, and within the space of a few hours convert it into a food. It marks an immense step in the conquest of nature by man.

ZEPPELIN RAIDS

WE seem to have learned in this war, so different from any previous wars, that anything is legitimate that will hurt the enemy. The decisions of the Hague Conferences, which tried to civilize war, are mere scraps of paper. Nothing that will kill and conquer is barred, whether bombs from sky or under sea, or, on land, spouting flames or spreading stench. All have done victory good service.

But what good have the Zeppelins done? Thus far their only purpose seems to have been to tease England. Now, teasing is not war; it is preliminary to war. It is provoking; it maddens the adversary; it makes him more determined, more dangerous. It is quite legitimate to drop bombs on a warship, or a camp, or a fortress, but this is not what the Zeppelins are doing. They drop their bombs miscellaneously on undefended cities, and they maim or kill here and there a dozen men and women and children. This does not help the war; it is only maddening. It strengthens the enemy. To be sure, it shows that England's ocean wall and England's supreme navy cannot screen England's coasts against an occasional biting mosquito; but, again, pestering is not war. Thus far Taubes and other scouting airships have done legitimate military services, but Zeppelins have seemed to be only the ministers of spite and hate.

MINISTER RUSSELL'S RETURN

ONE result of the retirement of Mr. Bryan from the Cabinet has been the restoration of William W. Russell to the office of Minister to Santo Domingo, from which Mr. Bryan removed him two years ago, when the place was given to James M. Sullivan. Mr. Russell was a Democrat, and a man of exceptional experience in the diplomatic service. Originally appointed by President Cleveland to be secretary of the legation at Caracas, he had been retained by four Republican presidents. He had been minister in Venezuela, Colombia and Panama, as well as in Santo Domingo. Mr. Bryan's friend Sullivan, for whose benefit Mr. Russell was excluded from the service in which he had labored for eighteen years, was forced to resign a few weeks ago, on account of the report of an investigation made by Senator Phelan at the President's request. Mr. Russell was a Democrat, as we have said, but Mr. Bryan thought that Sullivan was a more "deserving" one.

This investigation brought to light the memorable letter in which Secretary Bryan, writing to the American officer in charge of Santo Domingo's customs revenue, sought places for "deserving Democrats" in the service under this officer's control. This was the letter which led Santo Domingo's Minister of Finance to remark that when the people of his country rewarded political workers they did it with their own money.

The appointment of Mr. Russell should be followed by a restoration of the customs officers who were displaced when Sullivan came in. The United States has lost something in the estimation of good people in the West Indies and Central America by reason of the degradation of the diplomatic service and the accompanying disturbance of the fiscal protectorate's customs service in Santo Domingo during the last two years. Our Government has sought a similar protectorate in Hayti. Those who rejected it pointed to Sullivan, Mr. Bryan's letter, and the quarrels in the American customs service of the adjoining country. There now should be thoro reform in all our relations with Santo Domingo. There could not have been a better beginning of the work than is shown in the return of Mr. Russell to the post from which he was so unjustly and unwisely dismissed.

A DEMAND FOR RELIGIOUS PEACE

ON the whole we now have religious peace in this country. Our Protestant denominations are not fighting each other; indeed, most of our churches are living under the banner of federation. And there is usually truce between Protestants and Catholics, altho within a few years a number of pestilent journals have found it profitable to attack their Catholic fellow Christians. There ought to be no objection to honest and friendly discussion, but on both sides there has been dishonest and malicious abuse.

The city of Buffalo has suffered from such discreditable speech, and the peaceable men in both ranks are disgusted and have resolved to try in a new way to put an end to it. Over 125 of the leading citizens, among whom we note the names of twenty-six Catholic and Protestant clergymen, have signed a remonstrance against such religious intolerance. They applied to citizens of every creed to discourage the reading of publications which contain misrepresentations or vilifications of another's religion, and attendance at any secret or public meetings whose object is to foment religious antagonism. They also condemn the making of religion a test applied to a candidate for public office. The purpose of this public appeal appears in the following paragraph:

> We, the Roman Catholic signers of this appeal, affirm that there is no organization within the Catholic church engaged in promoting the political interest of the church or of any of its members, and that the authorities of the church do not attempt to influence or direct the political action of its adherents, and we respectfully invite the fullest and the freest investigation of the truth of this statement by any person or organization

In a corresponding paragraph the Protestant signers of the appeal ask that any organization that requires a religious test for public office or for any employment be dissolved at once.

We like this appeal. It carries the weight of honored names. It puts the ban of disapproval on language and conduct which have misled not a few honest but not intelligent citizens, and it may silence the mischief-makers. The affirmation of the Catholic signers, denying that the Church is in politics, is one that fairly requires the mischief-makers to prove their charges or keep silence. Let us have peace.

THE STORY OF THE WEEK

The Sinking of the "Arabic"

The largest passenger vessel except the "Lusitania" which has fallen a victim to the German submarines is the White Star liner "Arabic," which was torpedoed at 9:30 on the morning of the 19th. She was bound for New York and when attacked was passing south of Ireland, off Fastnet, that is, not far from the place where the "Lusitania" went down. The news was held up for thirteen hours by the censor and even yet is obscure in details, but it appears that the British steamship "Dunsley" had been shelled by a submarine and her crew was leaving the sinking ship as the "Arabic" passed by, and was struck by a torpedo from an unseen submarine. The vessel was hit on the starboard side near the stern. There was a terrific explosion which killed two women on deck. A column of water was thrown high into the air and the ship sank in eleven minutes. Captain Finch dived from the bridge as she sank and was saved.

The boats had been swung out and life belts distributed in advance. Fourteen boats were promptly lowered and the passengers put into them without panic or disorder, altho some had been in bed and were still in their night clothes when rescued. Several of the boats were smashed or sucked under as the ship went. The other boats were picked up two to four hours later and taken to Queenstown. There were 187 passengers on the "Arabic" and 242 in the crew. Of the passengers 18 were lost and of the crew 43. Among the passengers were twenty-five Americans of whom two were lost: Dr. Edmund F. Woods, of Janesville, Wisconsin, and Mrs. Josephine L. Brugière, of New York.

The excuse given by the German Government for the sinking of the "Lusitania," that she was carrying munitions for the Allies, does not apply to the "Arabic," since she was outward-bound from Liverpool. The "Arabic" had, however, been carrying heavy loads of war munitions for the last few months, a million dollars worth at a trip. When she left New York on her last voyage, July 28, she had the biggest cargo of any supplies that has ever left the port, including 4000 cases of cartridges, 2173 cases of empty projectiles, 503 cases of ammunition and many automobiles and aeroplanes. The White Star liner "Cymric," which preceded the "Arabic," was convoyed thru the war zone by relays of British warships, but the Admiralty states that she was not protected in this way. A passenger vessel under convoy has the status of a transport, and, according to international law, is liable to attack. President Wilson deferred action until complete official reports could be received.

THE GREAT WAR

August 16 British troops landed at Suvla, Gallipoli. Whitehaven, England, shelled by German submarine.
August 17 Germans capture Polish fortress of Kovno. Italians gain trenches near Tolmino.
August 18 Venizelos becomes Premier of Greece, favoring Allies. Zeppelin raid on London kills ten and wounds thirty six.
August 19 British liner "Arabic" sunk by German submarine. British submarine torpedoed on Danish coast by Germans.
August 20 Germans take fortress of Novo Georgievsk, Poland. German fleet loses superdreadnought and three cruisers in Gulf of Riga.
August *21* Italy declares war on Turkey. Cotton made contraband by Great Britain.
August 22 German armies closing in on Brest Litovsk. French Chamber of Deputies investigates conduct of war.

Naval Warfare

The increased activity of the German submarines is indicated by the fact that on the day following the sinking of the "Arabic," London reported the loss of ten vessels in this way, seven British, two Norwegian and one Spanish. During the week preceding the loss to British shipping was thirteen.

Hitherto no British transport has been lost, altho during the year of war 2,000,000 soldiers have been conveyed by the fleet from all parts of the world. But on August 14 the "Royal Edward" was struck by a submarine in the Aegean and a thousand men were lost. The troops were mainly reinforcements of the Twenty-ninth Division which is at Gallipoli, with details of the medical corps, altogether 1382 officers and men besides the crew of 220. Where the submarine came from is not known or not disclosed. But since one *Unterseeboot* has successfully made its way thru the English Channel, the Strait of Gibraltar and the Dardanelles, it is evident that the Mediterranean route can no longer be considered safe.

An amazing instance of the power and daring of the new German submarine is the bombardment of the English coast by one of them on August 15. The towns shelled were Whitehaven, Harrington and Parton, on the Irish Sea near Solway Firth.

The destruction of a British submarine under Danish protection has caused great indignation in both countries. The British submarine "E-13" ran aground on the Danish island of Saltholm and was approached by three Danish torpedo boats which were ready to intern her at the expiration of the twenty-four hour limit if she did not get off before. But a German destroyer came up within three hundred yards of the stranded vessel, discharged a torpedo and shelled her. The crew tried to escape but while they were in the water were fired upon with machine guns and shrapnel and some of them were killed. Then the Danish boats interposed and the German destroyer withdrew.

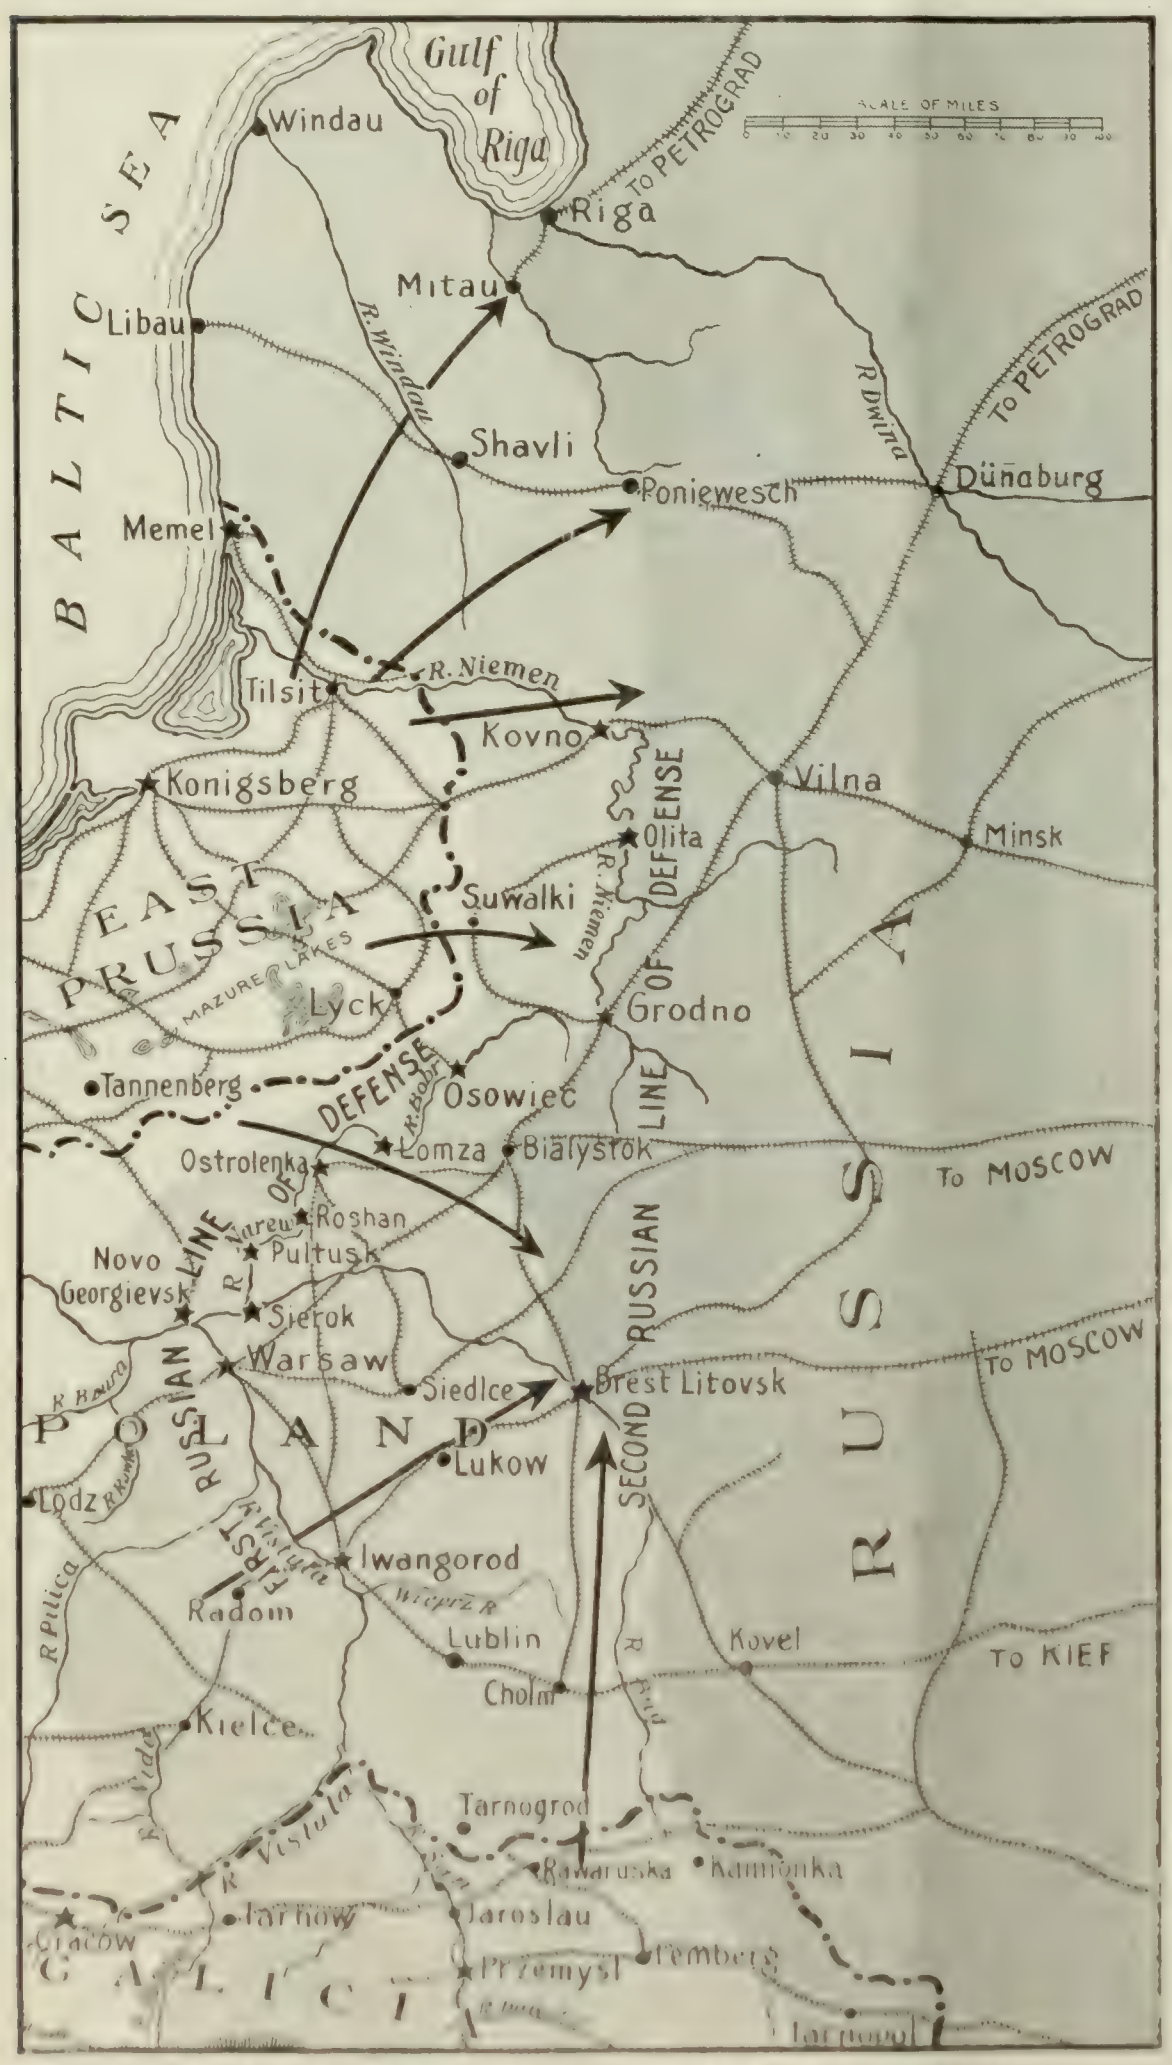
According to Petrograd the German fleet was defeated in an attempt to enter the Gulf of Riga and lost the battle cruiser "Moltke," three cruisers and seven torpedo boats. Four "enormous transports crammed with soldiers" attempting to land were repulsed and the troops are said to have been "exterminated." This is a heavy blow to the German navy, since the "Moltke" was one of the most powerful ships. She was built in 1910 at a cost of $10,491,000 and carried ten 11-inch guns. Her speed was over twenty-nine knots. The "Moltke" was seen in the Hudson in 1912, representing Germany at the Fulton centenary.

Aerial Warfare

The Zeppelin raids on England are becoming increasingly frequent, but how much damage they do cannot be told for the British censor refuses to allow the disclosure of the localities visited and the German airmen can only surmise what effect their bombs have had. At any rate Zeppelins are known to have reached England on the night of the 9th, 13th and 17th. According to the British reports forty persons were killed and more wounded, all civilians, and many of them women and children. A church and many dwelling houses are reported damaged, but no military or naval buildings. According to the German account the Zeppelins reached Harwich and London, and did serious damage to docks, shipping and communications at various places.

The French airmen have been very successful of late in raiding German towns beyond the frontier. A squadron of thirty-two aeroplanes raided Saarbruek, Rhenish Prussia, and dropt 160 bombs of large size filled with high explosives. In Bavaria, Zweibruecken and Sankt Ingbert were visited by half a dozen aeroplanes and eight persons were killed by their bombs.

In an aerial combat between an Austrian and an Italian squadron over the Adriatic, three of the Austrian machines were brought down and their crews killed or captured. An Austrian seaplane dropt bombs in four of the coast forts of Venice. It was attacked by five Italian aeroplanes, but two were forced to land by machine gun fire and the others abandoned the pursuit.



The Fall of Novo Georgievsk

The central fortress in the first Russian line of defense is Novo Georgievsk, situated at the apex of the triangle of fortifications which juts out toward Germany. The taking of Warsaw allowed the Germans to pass to the south of it and at the same time they broke thru the fortified line

of the Narew River to the north of it. The two forces joined east of the fortress and so cut off its garrison from the Russian army which was retreating eastward to the Bug.

The Russians had anticipated that Novo Georgievsk would be isolated and had prepared it to stand a siege of many months. The civilians of the town had been expelled so there were no unnecessary mouths to feed as at Przemysl, which held out nine months against the Russians in spite of a large city population. Petrograd assured the world on August 17 that the fortress was "abundantly supplied with victuals and munitions sufficient to last a year." Three days later it was in the hands of the Germans, altho the garrison outnumbered the besiegers.

Novo Georgievsk was taken by the same tactics which the Germans employed so successfully a year ago against the fortresses of Belgium and France, that is by concentrating the fire of heavy guns upon three of the ring of forts, and when these were broken up charging thru the gap in solid formation. Novo Georgievsk occupies a strong natural position at the intersection of three rivers, the Vistula, the Narew and the Wkra. As the Germans captured the outlying forts they mounted their guns upon the ruins and directed their fire upon the central defenses. The Russians withdrew from the forts across the rivers and then blew up the bridges. The main attack was made on Forts No. 1, 2 and 3, in the northern sector. After a final bombardment on August 20 all three were stormed and carried by the Saxon reserves late in the afternoon. Some of the store houses were burned and magazines blown up, but the advance of the Germans was so rapid that a large part of the supplies which had been laid in for the siege fell into their hands. They report the capture of 20,000 prisoners and 700 guns.

BREAKING THRU THE SECOND RUSSIAN LINE OF DEFENSE

The second line of defense in Poland has crumpled more quickly than the first. Of the two fortresses which stand at the ends of the line, one resting on a chain-guard, Kovno has fallen and the German armies are entering Brest Litovsk from the south and north. The railroad between Eastern and West Lithuania has been cut. The light shading shows territory gained by the Germans in their latest advance, the heavy shading that still held by the Russians.

Second Russian Line Broken

Last week we told how the first Russian line of defense had given way. This week we have to report that the second line, a hundred miles behind, is shattered. The Russian system of defense has long been based upon the four strong fortresses of Novo Georgievsk and Ivangorod on the Vistula, Kovno on the Niemen and Brest Litovsk on the Bug. These constitute the corners of the famous "Polish Quadrilateral." Three of them are now in the hands of the Germans and the fourth, Brest Litovsk, is already under fire of their guns.

Of all the forts in the first line the only one still holding out is Osowiec (Ossowetz), which curiously enough, was considered at the start of so little importance that it does not appear upon many of the early war-maps. But being situated in a swamp where the big guns cannot easily get at it, it has withstood the German attacks for many months, while the historic fortress of Kovno has quickly succumbed. The same surprizes have appeared in the western theater. Namur and Antwerp fell long ago, but Ypres and Souchez are yet untaken.

The siege of Kovno was conducted by Generals von Eichhorn and Litzmann under the personal direction of Field Marshal von Hindenburg. The 42 centimeter Krupp howitzers brought from the west speedily demolished the fortifications upon the left bank of the Niemen River. On the 18th the forts on the southwestern front were stormed. Here the Germans took 4000 prisoners and 240 guns, and on the following day the main fortress fell into their hands with 400 more guns and large quantities of ammunition, which the Russians can ill afford to lose.

THE GOOSE-STEP

The German commissariat has mobilized a large flock of fowl which had been abandoned by the Russian and Polish peasants in their flight before the invaders

the second Russian line of defense and its fall brings the Germans behind the Niemen River. Vilna, the most important railroad center of this section, lies undefended before them. On the south the armies advancing from Warsaw have cut the railroad at Bielsk and the armies which came up from Galicia have crost the Bug River above and below the fortress of Brest Litovsk. The collapse of the Russian defense is so complete that there is serious talk of the Government abandoning Petrograd for the old capital of Moscow, which is not so accessible.

Italy at War with Turkey

The long-expected coöperation of Italy in the campaign against the Dardanelles is now about to begin. The reasons alleged for the declaration of war against Turkey are that the Turks have been inciting the natives to rebellion in Libya (Tripoli), which Italy took from Turkey in 1911, and that the Italian residents have not been allowed to leave Turkish territory. There are some seven hundred Italian reservists in Syria whom Mr. Morgenthau, the American Ambassador, offered to send home on American ships, but the Turkish Government suspecting, doubtless with justice, that they would soon be employed against Constantinople, refused to let them return.

It is supposed that the Italian contingent will be landed somewhere on the Gulf of Saros so as to advance upon Constantinople from the southwest while the French and English force their way up the Gallipoli peninsula on the south. If the report is true that Bulgaria has been induced to join the Allies and has massed 150,000 men on the Turkish frontier ready for another march thru Thrace, Constantinople would be encompassed on every side except the Asiatic and subjected to the simultaneous attack of five enemies, not counting Greece, which is expected soon to enter the war.

On the Greek island of Lemnos there are said to be a hundred thousand more French and British troops waiting to be landed on the Gallipoli peninsula. A landing of some fifty thousand British was secretly effected on August 13. There was no preliminary bombardment as on former occasions, but the transports were rushed to the selected spot, Suvla Bay, during the night and the men were ferried to the shore by five hundred small boats, making repeated trips. They encountered no enemy and had all day to establish themselves. This gave them an opportunity of penetrating four miles inland and also making connections with the Australasian troops who had disembarked at Sari Bahr and Gaba Tepe to the south. The Allied forces now hold a continuous line of about twelve miles along the western coast of the Gallipoli peninsula.

The German Policy

The German Reichstag, which opened on August 19, voted a war credit of $2,500,000,000. The Secretary of the Treasury stated that the five billion dollars which had previously been appropriated for the purpose was insufficient, for the expenditure every month was one-third more than the total cost of the war of 1870.

The opening speech of the Imperial Chancellor, Dr. von Bethmann-Hollweg, was devoted in part to congratulations on the progress of the war and in part to an arraignment of British diplomacy. He said:

> I never have concealed anything from the representatives of the German nation. I have never had anything to conceal.
>
> Since you assembled at the last session great things have happened. Again all French attempts to shatter our western front have failed, in spite of the contempt for death and the reckless waste of human lives of the French.

THE BALKAN TRIANGLE—THESE THREE MEN MAY DECIDE THE FATE OF THE BALKAN STATES AND CONSTANTINOPLE

Italy, our new enemy, who thought that she could easily take her neighbor's coveted goods, has been splendidly repulsed in spite of a numerical superiority, and has made an immense sacrifice in human lives.

Unshaken and unshakable stands the Dardanelles front. We greet our faithful allies and extend special greetings to the exalted ruler of the Danube, the monarch who yesterday entered upon his eighty-sixth year. We ourselves have taken almost all Galicia and a large part of Poland, Lithuania and Courland, and our lines everywhere, far advanced into the enemy's countries, stand like walls. We ourselves have strong armies free at our disposal for new enterprises. Proudly and without fear we look into the future!

He reviewed his efforts to moderate the demands of Austria and to come to an agreement with England before the war and denounced England's commercial policy during the war:

The legitimate commerce of neutral countries has been strangled by England, who forbids neutrals to transport merchandise coming from or going to Germany, even if the merchandise is not contraband. Neutral ships are forced to take English crews on board on the high seas and do as they command. England occupies Greek islands without explanation, because this is convenient for the liberty of the military operations of herself and her allies. She tried, together with her allies, to force neutral Greece to concede territory to Bulgaria because thus she desires to engage the latter nation on her side.

What he had to say about Poland is the topic of much comment as foreshadowing the German policy:

Geographical and political fate has forced Germans and Poles to fight against each other for centuries. Remembrance of this old antagonism has now diminished. I do not imitate the glittering promises of our enemies, but I hope that the present occupation of the eastern Polish frontier means the beginning of a new evolution which will abolish the old-time antagonism between Germans and Poles and lead Poland, freed from the Russian yoke, toward a brighter future in which she will be able to develop and cultivate her individual national character.

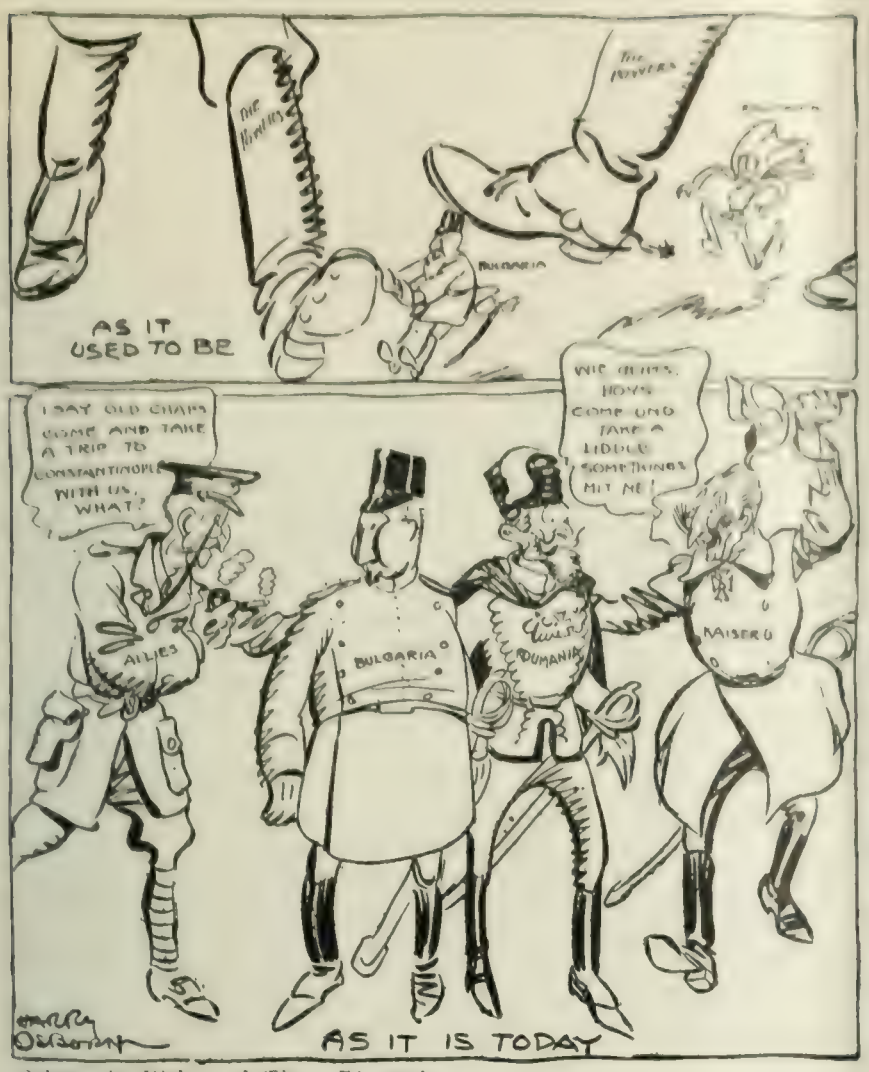
In the Reichstag debates the Socialists urged the Government to declare its intention not to annex any of the conquered territory and its readiness to enter into pourparlers for peace with any of the belligerent nations. The Liberal party, on the contrary, demands territorial expansion.

Interesting Disclosures

There has come into the possession of the New York *World* a large mass of correspondence—letters which passed between various persons and Germany's chief financial agent here, Dr. Albert, Ambassador von Bernstorff, Military Attaché von Papen, and others in authority—relating to many projects for influencing public opinion in this country, controlling the production of certain war supplies and doing many other things secretly in the interest of Germany. Facsimiles of the letters, checks and other papers are published. It is plain that large sums have been expended. The payment to one pro-German weekly was $1750 a month. To a pro-German monthly the Ambassador sent a check for $5000. Control of a press association, to cost $900,000, was considered. There were negotiations for control of a New York afternoon daily. Control of a munitions factory was obtained. New buildings were erected and production will begin in September. Contracts for powder were made, and large quantities of carbolic acid purchased. There were attempts to prevent the exportation of liquid chlorine and to obtain possession of an airship factory. The purpose in some cases appears to have been to impede the shipment of supplies to the Allies. There were discussions about fomenting strikes in great munition plants, and the cost of making a strike at one of them was estimated to be $50,000.

The correspondence, quite voluminous, is appearing in instalments. Only part of it has been printed. It is receiving the consideration of the authorities at Washington.

Storm on the Texas Coast



A tropical hurricane swept over the Texas coast on the 16th and 17th, causing much loss of life and property in Galveston and other neighboring ports. There were losses in the adjacent inland districts. The cotton in central Texas suffered a loss of from fifteen to twenty-five per cent. It is asserted that 12,000 cattle were killed on one ranch in Chambers County. The United States military camp at Texas City was destroyed, and fourteen soldiers lost their lives there. The entire number of the dead at Texas City is fifty-two. At Galveston 300 feet of the causeway connecting the city with the mainland was demolished. Early reports said that 1000 feet of the great sea wall were washed away and that the water entering at the breach was ten feet deep in the streets. Afterward

WILL THE MOUNTAINS COME TO MAHOMET?

ENLISTING THE BALKAN HOSTS

it was asserted that the sea wall withstood the strain. The number of the dead in Galveston is 188, but about 100 more are missing. Lives were lost in Beaumont, Virginia Point, Morgan Point, Laporte, Seabrook, Hitchcock, Sabine and Port Arthur. In a barge forty-three were drowned. The Governor says the total number of the dead does not exceed 300, but there are indications that this is an underestimate. The property loss may exceed $10,000,000. Three or four days later a windstorm with great quantities of rain caused much loss in St. Louis and neighboring towns. In twenty-four hours seven inches of rain fell. Ten persons were drowned in St. Louis. Several small towns on the river were submerged, but the inhabitants had been warned in time to escape.

The Mexican Problem

Several answers to the appeal addrest to Mexican leaders by the United States and six Latin-American countries had been received at the end of last week. Villa accepted the proposition that a conference should be held. He could keep up the fight, he said, but on account of the friendly attitude of the seven countries he was willing to take part in the establishment of a provisional Government. He added that his military chiefs were in agreement with him. It was not known that the appeal had reached Zapata, altho Carranza generals had promised to forward it. There was no room for doubt as to the attitude of Carranza and his men. From Carranza himself no reply was received, but answers from several of his generals arrived in Washington. All of them insisted upon recognition of Carranza's Government as the only solution of the problem. Obregon asserted that the seven powers were ignorant of the Carranza movement and the good work he was doing. Gonzales, commanding at the capital, said that recognition would bring peace in two months. In a public address a few days ago he asserted that intervention would at once cause war. Mexican affairs, he added, should be settled exclusively by Mexicans. Carranza's general at Matamoros remarked that failure to recognize Carranza would be equivalent to a declaration of war. It was clearly to be seen that Carranza and all of his men would reject or oppose the proposition made in the appeal. They are the strongest force in Mexico today, for Villa continues to fail.

He was attacked last week at Torrean. Fierro, whose flying column in the south had accomplished nothing, returned, and was 100 miles south of that city. Desertions in Eastern Chihauhau left Villa with little strength there. Skirmishes were reported near Nogales. Maytorena, Villa's commander there, narrowly escaped assassination by a bomb placed in his room. He put to death Colonel Rojas, of his personal guard, and several soldiers. The Yaqui Indians, raiding and looting, entered Nogales, took from the jail Colonel Murillo and hanged him. At Progreso, on the Texas border, Mexican bandits killed Corporal Williams of the Twelfth American Cavalry. From a jail in a neighboring town Texans took six Mexicans and lynched them. The Mexicans had been concerned in a recent raid and had killed two Texas ranchmen. Two of our battleships arrived at Vera Cruz, where in the streets were many placards denouncing Americans. It was reported that Villa had put to death in Chihuahua City twenty-two prominent men, including two former governors of the state, his purchasing agent and two generals, because they were preparing to desert him. This was denied, but there were several executions.

Hayti

In the southern part of Hayti the people have accepted the plans and control of the American forces, but there is much disturbance in the north, where the rebels refuse to lay down their arms. Therefore more marines will be sent to the ports, and some of them are to be used at interior points. There are now 1800 ashore, and 350 more will soon be on their way to Cape Haytien, with a dozen field guns. A force of marines took possession of St. Marc last week, after some futile resistance.

Dr. Rosalvo Bobo, leader of the rebellion against the late President Sam, was in San Juan, Porto Rico, last week, on his way to Santo Domingo. Without the help of American guns, he said, General Dartiguenave, the new President, could not have been elected, and could not retain his office. "The United States," he added, "has long coveted Mole St. Nicholas [a deep bay and cargo port at the northwestern extremity of Hayti] and the war in Europe gave an opportunity to get a foothold. Haytians will never submit to the degradation of outside interference." He organized his rebellion in Santo Domingo.

THE GENIUS OF CREATION

[illegible]

FEUDALISM AND DEMOCRACY

BY W. J. GHENT

Few articles published in The Independent have aroused more discussion than that which Mr. Ghent contributed to our columns and afterward expanded into the book, "Our Benevolent Feudalism." Our readers did not know what to make of it. Some took it as a joke, some as a satire, some as a prophecy, some as a warning. Now, thirteen years later, it appears to be history, for the author finds in subsequent events the confirmation of his original thesis. He still sees in socialism the only solution to the industrial problem and regards every effort at ameliorating the lot of the working classes as a part, conscious or unconscious, of the capitalistic conspiracy to keep them down.—THE EDITOR.

IT is now thirteen years since there appeared in these pages a bit of social speculation entitled "The Next Step: a Benevolent Feudalism." It was an article which sought to describe certain tendencies asserted to be then at work: the steady growth of a state within a state—the collective power of the magnates of industry; the increasing dependence and subordination of the other classes, and the failure of democracy, even tho it maintained and even extended its forms, to establish any effective control over the power of the combinations. Passing from prognosis to prediction, the suggestion was put forth of the development of a social system in many respects analogous to that of overlord and underling in the England of the fourteenth century.

Yet, tho the essay is well-nigh forgotten, in many minds the more or less vague sense of a coming feudalism persists. The general reaction which now shows itself in the expressions of the press, the pulpit and the forum, and which registered itself in unmistakable terms at the polls last November; the recent investigation of the great Foundations and the revelation of the potency, both for evil and good, that lies behind them; the merciless suppression of labor troubles in West Virginia, Michigan, Colorado and New Jersey; the grant of increased freight rates to the railroads; certain decisions of the Supreme Court and certain recent pronouncements of the President—all these have contributed to bringing again into the common thought the idea of a feudal régime.

It may, therefore, at this time, be interesting, and perhaps profitable, to look over the field and to note what tendencies described a dozen years ago have continued and what results have followed. The intervening period has been big with events.

THE CONCENTRATION OF INDUSTRY

First, there is the matter of increasing concentration. Occasionally, it is true, some eager person inspired with the holy mission of destroying the heresies of the Socialists, appears with a set of more or less ingenious figures intended to show the break-up of the combinations and the diffusion of ownership. This labor is not, however, seriously regarded by even the least informed. The increasing concentration of industry is sensed by every one. It is, moreover, demonstrated by data that cannot be disregarded. In 1904 Mr. John Moody was able to find only about $20,000,000 of corporate capitalization. Returns to the Commissioner of Internal Revenue for the year ended June 30, 1913, show that the corporations then had a capital stock of nearly $62,000,000,000, with bonded and other indebtedness of nearly $35,000,000,000. As the total wealth of the nation, very much of which is quite incapable of capitalization, was then but $135,000,000,000, the degree of combination may be seen at a glance.

In the field of manufactures the most recent census (1909) shows that 79 per cent of the nation's product came from corporations. And if this dominance of the corporate form of industry is not of itself a convincing proof of concentration, other figures in the same census, based on the size of establishments, prove it beyond question. The establishments with a yearly product of $100,000 and more formed but 11.5 per cent of the total number, but they produced 82.2 per cent of the total product. It needs hardly to be said that increasing concentration is something else than a fiction concocted by wicked agitators.

THE CONCENTRATION OF WEALTH

Still, as has been frequently pointed out, the massing of industry is not necessarily a proof of the concentration of wealth. Medium and small, as well as large capitals, are joined in most of the big concerns. Primarily, it is control, rather than wealth, that is centralized. But here again are authoritative data which reveal a concentration in wealth and income quite as pronounced as the concentration in control. They are the figures of the Commissioner of Internal Revenue for the calendar year ended December 31, 1913. We have heard much, from time to time, concerning the marvelous diffusion of wealth in the United States. Yet it appears that out of 100,000,000 inhabitants only 357,598, or less than four-tenths of one per cent, come under the provisions of the income tax. A real diffusion of wealth might be expected to show a large number of incomes in the class ranging from $2500 to $5000. Yet there are apparently only 193,910 of these incomes in the whole country.

That the smaller units in trade and industry persist to a considerable extent is also true. Probably no one will venture to say, however, that their position is stronger today than it was thirteen years ago. As a matter of fact, it is very much weaker. In so-called prosperous times their number increases; in deprest times it decreases. Such units as can be utilized by the larger concerns are by one means or another taken over; such as are in any sense dangerous are usually chloroformed, while great numbers which are without potentiality, from the magnate standpoint, for either use or harm, are allowed a precarious continuance. All the time, however, the pressure of the big concerns becomes more constant, and the scope of the smaller units is restricted within narrower fields. They live, for the most part, only by sufferance.

THE IMPOTENT STATE

As the economic power of the magnate class has grown, so also has its political power. In most respects the political state is weaker today in the face of corporate power than it was a dozen years ago. The extension of democratic forms, such as the initiative, the referendum, the recall and woman suffrage, has had no appreciable effect, except in minor and isolated instances, upon this economic oligarchy. The prosecutions of certain great corporations have resulted only in revealing the impotence of organized society in the face of this great problem. In particular states, such as West Virginia, Colorado and Michigan, it has been shown that the corporations pay no attention whatever to laws that it would be inconvenient for them to obey; while thruout the land it has been shown—what was apparent of old to Anacharsis—that laws are but cobwebs for catching the little fellows. Law is for the trust victim, but not for the trust.

This impotence of the political state in the face of the big economic powers, so evident to the general run of mankind, has now apparently become evident to the national adminis-

tration. The firm determination, often exprest, to "curb the power of the trusts," has given way to an acknowledgment that nothing more is to be done. The latest official pronouncement declares that the depression felt by everyone is merely psychological; that the people are really prosperous; that the stories of unemployment and destitution have been greatly exaggerated, that the campaign of "curbing" is finished, and that the magnates may now go ahead and pile their profits as high as the Rockies. Not with a microscope can one discover that anything whatever has been done by the national Government which in the slightest particular curtails the power of the magnate or relieves the distress of the multitude. Nevertheless, the protest of the magnate and his retainers against "interference with business" has borne fruit, and the melodrama is ended.

The state governments also have largely withdrawn from their one-time "interference with business." A summary, just published, of legislative conditions in thirty-three states for the last eight years, declares that only five of these states have passed or are considering legislation "inimical to business interests." Sixteen states have enacted or are considering more or less "progressive" laws, in the main satisfactory to the corporate powers, while twelve states have merely marked time by clarifying existing laws. In spite of a certain amount of fruitless clamor, which like poverty we have always with us, the growing disposition is manifest on all sides to acquiesce in the rule of big business.

SHRINKING WAGES

How has it been with the farmers and wage-earners? Farm tenantry has increased, so has mortgage indebtedness, and so also, in the predominantly agricultural sections, has the size of farm holdings. Child labor has increased slightly, and woman labor enormously. No torturing of figures serves to obscure the fact that actual wages for the great mass of the workers are considerably lower today than they were in 1902. Thirteen years ago the steel workers received an average of $717. In 1912 they received $857. This higher sum, however, when reduced to the purchasing power of the earlier date, according to Bradstreet's index figures, measures only $643. The Interstate Commerce Commission's tables of the pay of railwaymen, when equated on the same basis, show that no class except brakemen now receive as much actual wages as they received in 1902, and that switch tenders and watchmen receive even less *nominal* wages now than they then received. Professor Scott Nearing's careful computations indicate that three-quarters of the adult males and nineteen-twentieths of the adult females employed in the industries located east of the Rockies and north of Mason and Dixon's line receive less than $600 a year, whereas an income of less than $800 a year is declared by social workers not to permit of a decent standard of living. With this general reduction in the actual wages of the employed is to be coupled the fact that unemployment has been greater during the last two years than at any time since 1873, and that last winter was characterized by an almost unexampled distress.

During the period treated the unions of the American Federation of Labor have more than doubled their membership. Perhaps other unions, not affiliated with the Federation, have also increased their numbers. Organized labor has not, however, been able, except in rare instances, to advance wages in proportion to the increased cost of living. Nor has it been able seriously to hamper the movement for the so-called "open shop"—in reality the shop closed to union men—which has progressed thruout the nation. It is common testimony that the blacklist has been extended and more systematically employed. It is also common testimony that espionage in the unions has become closer and more general. There is a meaningless clause in the Clayton bill which has been hailed as a gain for organized labor; but there is small doubt among observing men as to what will happen to this clause should it reach the Supreme Court. That mighty tribunal, by its affirmation of the judgment against the Danbury hatters and its nullification of the Kansas law prohibiting the discharge of a workman for being a member of a union, has impressively shown organized labor where it stands before the law.

THE WORKMAN AS VASSAL

No doubt, the employing class has considerably increased its "welfare work" among wage earners; new pension systems have been instituted and older ones extended, and the sharing of profits has become more general. In some establishments this benevolence has even taken the form of considerable increases in wages. This benevolence, however, is too incidental to have rendered any appreciable effect upon the condition of the wage-earning class as a whole. It is, moreover, a benevolence which aims at the complete divorce of the worker from his organization and his entire subordination to the establishment that employs him. The endowed worker must hold a prime fealty to his employer; he must accept and welcome an espionage which notes his most intimate habits and conduct and a paternal guidance which in turn admonishes and approves. As an independent economic unit he ceases to exist. His bondage to the job is absolute.

THE EFFORT TO BE FREE

The history of modern democracy is the record of a more or less sustained struggle to extend and improve the machinery of popular rule in order to check the increasing exactions of a dominant economic class.

Any step in the assertion of democratic control is usually followed by the popular conviction that now at last something effective has been done. As yet nothing is quite so easy as to delude ourselves with a belief in the supremacy of democracy. One has only to look about him here in America to note the innumerable evidences of democratic activity and achievement, political, economic and cultural. There is the spread of the initiative, the referendum, the recall and woman suffrage; the change to the popular election of senators, the growth of the civic center movement, the revival of town meetings, the throwing open of school buildings to public gatherings, the extension of night schools and university instruction, the passage of workmen's compensation and minimum wage laws, the doubling of the membership of the unions and the quadrupling of the vote of the Socialist party. Most of this has happened within a baker's dozen of years. It is a record that impresses the average mind with a sense that democracy is steadily advancing and that its implacable foes are hurrying from the field in inglorious defeat.

Yet all this activity and achievement have failed to loosen the grip of the magnate class upon the means of life or to lessen its control of the powers of government. Poverty is more widespread, and the individual economically is ever less free. Much of this activity has served merely to intensify popular delusion, and much of this achievement has made no more than a surface readjustment. Workmen's compensation, for instance, gives greatly increased sums to injured workmen. It has taken this increase, however, not from the masters, who are paying no more than they were before, but from a class of parasite lawyers to whom formerly it went. In spite of the list of accomplished reforms which any one can

chronicle, and which an apologist for the existing régime can stretch out interminably, an increasing share of the wealth produced goes to the master class, and no device so far employed affects this process.

RULING BY DIPLOMACY

It is the business of a ruling class to maintain itself in power and to secure to itself the master's share of production. To every turn of political and economic development it must adjust itself. There were times when such a class maintained itself chiefly by force. The extension of democracy, that cheap and simple method of "counting heads instead of breaking them," necessitates a lessening dependence upon force and an increasing dependence upon cajolery and adroitness. Yet let no one think that force will be neglected when and where it is thought necessary: for every Homestead or Cœur d'Alene or Hazelton of the earlier period, there is a recent Paint Creek, or Calumet, or Ludlow, or Roosevelt, New Jersey. But force, if not a last resort of the ruling powers, becomes at least a reluctant alternative, since its untactful use might awaken too heady an opposition. Rather, the ruling class must practise, by itself and thru its retainers, the politic arts which persuade a people that its best interests lie in resigned submission to the existing régime.

The small slave-holding oligarchy in the ante-bellum South, by a statesmanship perhaps never excelled for finesse, ruled a people without force and almost without opposition. It kept from the common mass of its own race every social and economic good, and yet made them its willing servitors. The instinctive resentment against slavery on the part of those whom the system impoverished was deftly turned by the master class into a resentment against the negro and the abolitionist.

Tho the form differs, our magnate class of today maintains an equal domination. The Southern oligarchs were themselves the governors, senators, representatives and judges of their time. They suffered no middlemen, but bore sway in their own persons. Our present masters rule thru intermediaries. It is not the head of the trust, but one of its counsel, who holds political office. The mode is one happily suited to the higher development of democracy; it aids in maintaining the illusion of popular control and makes for a quiescent electorate.

Thru all the various agencies of popular control—the press, the pulpit, the courts, the schools, the universities, the chambers of commerce, the boards of trade and even the so-called citizens' associations—the magnate class and its employed retainers play constantly, as upon the strings of some responsive instrument, upon the caprice, the prejudice and the ignorance of the common mass. Every possible device for insuring content, or at least submission, is tested out to the full. To fit the varying moods of the populace, new devices must be constantly sought and old ones retried. The "social myth," that alluring good which can be visualized thru the medium of some appealing word or phrase, is continuously employed to keep the mass quiescent. Such terms as "patriotism," "progress," "free competition," "individualism," "democracy," "success" and "efficiency" have all served, or are serving, their turn. The last two, in particular, have played, within recent years, an effective part.

"SUCCESS" AND "EFFICIENCY"

A dozen years ago "success" had been developed into a cult. Its priests were as an army and its devotees as the sands of the sea. As a spur to the flagging, as an allayer of disquiet, the idea which the word enshrined operated like the wand of a magician. To the most exploited worker it promised high place and rich rewards. All it asked was industry and perseverance and an unquestioning acquiescence in things as they are. Even the business failure of the literary high priest of the cult hardly diminished the ardor of its devotees. And yet, after a while, its magic declined. Gradually there dawned upon starved seamstress and weary loom-tender the realization that no amount of endeavor brought them one whit nearer the goal of wealth and position. The spell was broken.

Now we have "efficiency." It promises both more and less than "success." To the average man, not over-illusioned with a sense of his own capacities, it promises, instead of elevation to an unattainable place, the immediate good of a greater product and a greater share. To the exceptional man, or to the one with exceptional belief in himself, it promises more things than Satan, on the Judean mount, offered the Savior. Thus, both as an economic quickener and as a social narcotic, it is far better adapted than was "success" to the varied temperaments and capacities of men. Yet, after a time, it must fail in its powers of illusion, and some new myth must be concocted to replace it.

In every society, however, there will always be those who, skeptical and insurgent, decline to be influenced from above. But against these there can always be employed the device of division. In the trade unions, in the independent bodies of labor, in the farmers' societies, in the Socialist party, the scout and the provoking agent, instructed and recompensed, carry on their work with increasing energy and more disciplined method. New movements, too, which threaten the unity of existing bodies of insurgents, are always, within certain limits, encouraged. Anarchism of itself is rather too old and too preposterous a thing to serve the best purposes. Syndicalism, on the other hand, especially in its earlier phase, offered something worth while. Tho it was and is a hybrid kind of anarchism, its anarchistic features were not too obvious; and it received, in its first stages, a large share of seigniorial patronage. Of course when in any particular place it became a pressing social nuisance, as in the "free speech fights" of the I. W. W., it was forthwith suppressed. It was tolerated and fostered only to the extent that it showed itself inimical to the integrity of the trade unions or of the Socialist party; and when it failed in this threat, was speedily ignored from above. Now that it has spent itself, some new diversion must needs be created.

THE COMPLACENT PUBLIC

Thus there is no tendency mentioned in that article of thirteen years ago which has not since then developed and intensified. True, the attributing of any degree of general benevolence to the emerging order may seem, at this time, faulty in the extreme. It may be remembered, however, that the prediction made was of a benevolence nicely adjusted to the popular demand. A people satisfied with mere husks and leavings from the baronial tables would create upon the ruling class no pressure which would result in the scattering of largess. It was not then thought that a multitude of hungry men, with hungry wives and children, could be quieted by being told that their trouble was merely psychological, or that a pretentious program of "regulation" resulting in nothing but oracular utterances from the chief magistrate would be taken by a great people as the substance of a new freedom. If, then, the degree of benevolence predicted has not been attained, the cause is a popular complacence and love of illusion quite unthinkable a dozen years ago. And if the development of the tendencies then described indicated a régime of overlord and underling, that indication is a hundred times stronger in 1915 than it was in 1902.

BREAKING THE BALKAN BARRICADE

HOW THE GREAT WAR HINGES ON THESE FIVE LITTLE STATES

THAT the smash-up of the Ottoman empire would not be accomplished without bringing on a general European war had been a standing prophecy for more than a half century. But when at the beginning of 1914 the war clouds cleared away from the Balkans the world breathed more freely, for it felt relieved of the ominous outlook. During the two years of conflict involving seven nations, the Great Powers had held aloof, impotent indeed but pacific, like the gods of Lucretius. Africa and almost all of Europe had been by degrees amputated from the Ottoman empire. The operations were successful and the surgeons survived. There remained still the most delicate question of all, the disposition of Constantinople and the partition of Asia Minor, but there was reason to hope that these could be settled by diplomatic arrangement, as England and France had settled their dispute over central Africa, and England and Russia had settled theirs over central Asia.

But just when it was thought that the danger was over a young Serbian assassin fired the shot that was heard around the world. This was done ostensibly out of revenge for the Austrian annexation of Bosnia and Herzegovina six years before. The act of annexation was merely a paper change, for the two provinces had been virtually consigned to the Austro-Hungarian monarchy by the Congress of Berlin in 1878. But the Serbs saw in the formal annexation the deathblow to their hopes of expanding toward the north. So they set about devising means to expand toward the south regardless of the fact that the region they coveted in this direction was mostly inhabited by alien and hostile races. Bulgaria and Greece also coveted Macedonian and Albanian territory, so this aspiration served as a bond of union between the three Balkan states as it was later the cause of their falling out.

The formation of the Balkan League was chiefly the work of two men, Premier Venizelos of Greece and James Bouchier, ex-school teacher and journalist, a red-headed Irishman and one of those born politicians who find in foreign lands a field for their talents which is denied them at home. He, acting as go-between, for in spite of his deafness he talks all the languages of the peninsula, achieved what the official diplomatists regarded as impossible, a union of the four Balkan states which held together long enough to drive the Turk from Europe, tho it broke up when it came to the division of the spoils. Albania, which Greece, Serbia and Montenegro hoped to divide between themselves, was taken away from them by the powers at the instigation of Italy and Austria and was made an independent principality with a Prussian on the throne. To compensate themselves for this loss, Serbia and Greece combined to take from Bulgaria part of what they had promised her, while at the same time Rumania picked her pocket on the other side of Danubian territory. Each party accused the other of treachery and atrocity and, what is worse, proved their charges to the satisfaction of neutral nations. So, sullen, resentful and exhausted, the Balkan states, with the exception of Serbia and Montenegro, remained at peace while the rest of the world has been at war, a curious reversal of the customary order.

The sufferings of Serbia, like those of Belgium, are not due to the malevolence of man or the malignity of Fate but to geography. Serbia, like Belgium, lies in the road and in all wars she has been trampled on. The easiest way thru the Balkans is up the Morava and down the Vardar. This is where the railroad runs between Belgrade and Salonika, connecting the Danube with the Ægean. By this route successive hordes of barbarians swept down upon ancient Greece and medieval Byzantium, and by this route the Turks invaded Europe. The Austrians have long hoped to go thru Serbia to the sea. Twice during the past year they have attempted it, but have been beaten back. Now they have massed their forces against Belgrade for another southward drive.

But this time the Austrians will meet with more opposition than before. The Serbs are not alone. We know that there are British forces in Serbia. There may be more of them than is commonly supposed. If Allied forces have not yet been sent to Salonika they are likely soon to be, for the only way to get reinforcements into Serbia is from the Ægean. It is impossible for troops or supplies in quantity to reach Serbia from the Adriatic because there are no railroads and few roads of any kind leading thru the mountains of Albania and Montenegro. But if Greece joins the Allies the back door of Serbia will be opened to them.

Venizelos, dismissed from the premiership because of his war policy, has come back with such strength in the new Greek parliament that he may be able to withstand his King, or even his Queen. It is she who is held responsible for keeping Greece from entering the war a few months ago, but as to whether she did it by sticking a knife into her husband's ribs or by threatening to leave him and go back to Germany, or by the use of less dramatic measures of domestic control, there is a difference of opinion on the part of those journalists who profess to know all that goes on in the cabinets of kings. From equally unauthoritative sources we learn that the action of Queen Sophie of Greece, whatever it was, was instigated by a telegram from her brother, the Kaiser, couched in language that sounds biblical,: "Wo to him who dares to draw the sword against me," and more recently another reading:

> My destructive sword has crushed the Russians. They will need six months to recover. My brave soldiers have shown themselves invincible in battle against nearly the whole world. The war drama is now coming to its close.

But Constantine, King of the Hellenes, has recovered from his indisposition, whatever it was, and now seems inclined to strike a bargain with the Allies even tho he may have to sacrifice some Macedonian territory to Bulgaria and may have to relinquish his dream of sitting on the throne of his ancestors as Constantine of Constantinople. The fact that his father was a Dane and his mother a Russian does not of course interfere with the dynastic tradition.

He has a rival in Ferdinand, Czar of Bulgaria, who is said to have had his robes already made, Byzantine style, for coronation in St. Sophia, in 1912 when his armies were pursuing the fleeing Turks into Constantinople. But they were mysteriously stopped at the Chatalja lines and the regalia, if it ever existed, is presumably packed away with other lost hopes, for there are more imposing candidates in the field for the throne of Constantine, which, it is well to remember, the Sultan has not yet been persuaded to vacate.

The custom of drawing upon the petty royalty of Germany for wives and for rulers of new principalities has disadvantages in time of war. Greece is not the only Balkan state embarrassed by it. The King of Rumania, Ferdinand I, is a Hohenzollern. The Queen of Rumania belongs, like the King of Bulgaria and the King of the Belgians, to the Saxe-Coburg family. The Queen Dowager of Rumania, known to the reading world as "Carmen Sylva," is the Princess Elizabeth of Wied. Her nephew, William of Wied, was made ruler of Albania by the powers in

1913, but during his seven-month reign he never ventured out of range of the battleship which brought him to Durazzo and now he is back in his regiment of the Prussian Guards.

The King and Queen of Bulgaria are both German, altho on his mother's side he is a grandson of Louis Philippe, who served one term as King of France. In his youth Ferdinand was an officer in the Austrian army and has always been in close touch with the Austro-Hungarian Government. A few months ago Bulgaria accepted a loan from Germany and this was assumed to commit her to the Teutonic cause. But the Bulgarian Premier, Dr. Radoslavoff, announced in a recent interview that Bulgaria is still open to higher bids from the other side. He said:

> The Quadruple Entente can obtain our assistance if it secures from Serbia the restitution to us of that part of Macedonia which is our land and our property, which is the flesh of our flesh and the blood of our blood, and thus close the open wound in our side.

But Bulgaria, not unnaturally considering her experience with Serbian contracts, insists upon payment in advance. Serbia and Greece so far decline to consider any cession of territory, so Bulgaria continues to flirt with Turkey and Germany.

Rumania, on the contrary, has taken the "King's shilling," that is to say accepted a British loan, but still hesitates to enter the war so long as Bulgaria's attitude is uncertain. Her grain crop is held up because the Dardanelles are closed. She cannot sell to Russia, for Russia also has more grain than she can dispose of. Germany and Austria are the only possible purchasers for Rumania's crop and altho they are very anxious for it they refuse to buy unless Rumania will allow the passage of munitions to Constantinople. So Rumania has to choose between financial loss or the German cause.

Even if the Teutonic Powers should succeed in winning over Bulgaria this would not suffice to connect them with their Ottoman ally, for the borders of Serbia and Rumania meet and so shut off Bulgaria from the Danube by a barrier thirty-five miles wide. The efforts of the Austrians to break thru Serbia to the sea have been twice repulsed by the resistance of these indomitable peasants. Now weakened by three wars and wasted by the pestilence they cannot be expected to withstand unaided another invasion, especially since the Austrians have been reinforced and reanimated by the Germans. That is why it is necessary to the Allies to gain over Greece so as to open to them the road from Salonika to Belgrade. But Greece asks for more money than the Allies are willing to give and she also declines to accede to the wishes of the Allies and conciliate Bulgaria by surrendering the port of Kavala, which might be made a rival of her most precious acquisition, Salonika. In the first Balkan war the Bulgars captured Kavala from the Turks about the same time that the Greeks captured Salonika, seventy miles west, but in the second Balkan war the Greeks took possession of Kavala.

This disappointed Serbia as well as Bulgaria, for when Serbia found her hopes of gaining a port on the Adriatic had been frustrated by Austria and Italy she looked to the Ægean for an outlet. Now of course the Allied Powers need give no consideration to Austria's wishes, but Italy, upon whom they are relying for help both in France and Gallipoli must not be offended. Probably the project of the powers of making an independent state of Albania will now be abandoned. The Albanians are reputed to be unconquerable; they certainly seem uncombinable.

The partition of Albania cannot, however, be accomplished without causing disaffection even with Austria, the chief claimant, out of the way. Serbia wants the northern part; Greece wants the southern; Italy wants the whole coast. The port of Avlona, which lies on the Albanian coast nearest Italy, less than fifty miles away from it, has already been seized by the Italians, altho it is in the section which Greece earnestly desires. Serbia, on the other hand, will not consent to give up her Macedonian territory to Bulgaria unless she can get a port on either the Adriatic or Ægean. The Balkan blockade is psychological as well as economic and geographic. That is why it is so hard to break.

A glance at the map will show how ingeniously the Balkan states have been interlocked so neither can move without disturbing the others, like a pile of jackstraws. This has not come by chance. The Balkan puzzle-map is the joint work of generations of European diplomats skilled in the art of preserving the balance of power and blocking each other's moves. What will happen to the delicate structure when the first breach is made in it by the sword, the Lord only knows now, but we are all likely soon to find out.

THE BALKAN PUZZLE MAP

The Balkan States hold the key to the situation and the belligerent powers are striving by pleas, bribes and threats to induce them to enter the war. But their interests are so conflicting that it is hard to come to any agreement. Bulgaria wants Kavala from Greece, Adrianople from Turkey, the strip south of the Danube delta, taken from her by Rumania, and the Macedonian territory now forming the southern part of Serbia. Rumania wants Transylvania and Bukowina from Austria and Bessarabia from Russia. Serbia wants Bosnia and Herzegovina from Austria and a port on the Adriatic from Albania. Greece wants southern Albania and part of the Syrian coast

CALIFORNIA PROGRESSIVISM

AN INTERVIEW WITH GOVERNOR JOHNSON

BY GEDDES SMITH

CALIFORNIA is on exhibition this year. At San Francisco and at San Diego she has gathered up samples of her resources and her prospects. But political California is not to be seen at the expositions, and that is something of a spectacle in itself.

Here is the one state out of forty-eight that still exhibits the Progressive party as a dominant and virile force. Its Governor is the only Progressive in high office, barring a handful of congressmen and a lone senator, in the country. Not only is it Progressive by profession, but its legislative history for the last few years shows a striking parallel with the program of social betterment laid down by the Chicago convention in 1912, altho California's change of heart dates from 1910, when Governor Johnson was first elected in a stirring fight that ousted the Southern Pacific and the reactionary Republicans from control.

So I went to the Governor at the Capitol and asked him to tell me about progressivism in California. I found him still busy with the unfinished mass of nine-hundred-odd bills passed by the Legislature at its 1915 session. Evidently the "bifurcated session"—with its mid-term recess during which the people can quiz their representatives about pending legislation—has not discouraged California's law-makers, and Governor Johnson declares that while it affords him an opportunity to study proposed laws, the people have not taken advantage of their opportunity. I asked him what work of the session just closed he considered most valuable.

"A very important piece of political reform," he replied, "a law making the election of all state officers non-partizan. We shall go to the people on this question, for there is strong opposition and the opponents of the law will force a referendum.

"When I came into office in 1910 after our big fight we felt that one of the principal sources of strength of the men we were opposing was the party system. In 1911 we took the first step to end this by a law putting the election of judicial and school officers on a non-partizan basis. That appealed to the people as being reasonable and did not arouse much opposition. Then in 1913 we went a step further and included the county officers in the non-partizan plan. Today our California cities are conducting their elections almost entirely on this basis, by city charter provisions, and all county officials under the 1913 act are now elected without party designation of any sort. In local elections you never hear the old appeal (and here the Governor flung his hand into the air and raised his voice in mock eloquence) 'Vote for Jim Jones for tax commissioner, and so uphold the hands of our great President at Washington, burdened as he is . . .'—you know how it went. Now there is no more reason for applying this sort of argument to a state surveyor, or treasurer, or even governor, than there is in the city campaign. We went to the people on this issue in 1914 and with their approval we have now taken action."

If the people uphold the new law California's state officers will be nominated by petition and elected after a primary which eliminates all but two candidates for each office, with never a word about party affiliations.

"What more is there to do to carry

Underwood & Underwood

GOVERNOR JOHNSON AT HIS DESK IN THE CAPITOL AT SACRAMENTO

out the Progressive program in California?" I asked.

"Little remains to be done. In the next three years, if I am still here and nothing unforeseen occurs (these suggestive words were spoken slowly and crisply) we shall go on to take action on rural credits and land colonization somewhat after the New Zealand plan. A commission has been appointed to investigate these matters, and a constitutional amendment permitting the state credit to be utilized in such ways is going to the people for ratification. We are dealing as we can with the problem of unemployment. We have a commission on immigration and housing, serving without pay, that is doing fine work. We plan free state labor exchanges to transfer men from one part of this great state to another."

"What, then, will be the future of the Progressive party in the state?"

"Progressivism will go on," the Governor declared. "If the Progressive party should disintegrate tomorrow I am confident that there would be enough progressives in the other parties to carry on the work and to free the Republican party, if need be, from Otis, De Young and Spreckels, its directors, leaders, owners and commanders."

Each word came out sharply. Harrison Gray Otis of the Los Angeles *Times*, Michael H. De Young of the San Francisco *Chronicle*, and John D. Spreckels of the San Diego *Union* and nearly everything else in San Diego, are the reactionary leaders in California politics—the men behind the throne before the upheaval of 1910, the men behind John D. Fredericks, the Republican candidate at the last state election, whom Johnson defeated by 188,505 votes.

"We have not done our work in California on a partizan basis," the Governor continued. "No one man and no one party have accomplished it. In the last Legislative Assembly there were twenty-eight Progressives, but we were able thruout the session to command forty-eight or fifty votes for progressive legislation. The supporters—and opponents—of these bills included men of all parties. Some of our bitterest opponents were Democrats. California is normally a Republican state, and a realignment would probably find it back in that column."

"How about the national Progressive party?" I asked.

"It has done its work, whatever happens," Governor Johnson replied. "There's a new attitude toward popular government thruout the country. No party leaders would dare now to show such cynical indifference to the will of the people as was shown by the Republican leaders in 1912. If they did"—with his voice raised to fighting pitch—"we would smash them."

Victor Murdock, Progressive congressman from Kansas, said some time ago that "the issue in this country must eventually be as distinct as it was when Abraham Lincoln drew big, broad lines between fundamental right and wrong." I asked the Governor if he thought that the Progressive party could hang on until such an issue presented itself.

"As to that I'm very doubtful," he answered, explaining that he had been so busy with California problems that he had not been able to form an intelligent opinion. But—

"Whatever happens the party has been of real service. We can never go back."

Mr. Murdock, in the same interview, had hinted broadly that Hiram Johnson was the man to carry the Progressive standard in 1916, tho any candidate would be a "burnt offering on the altar of principle."

"That suggestion was just made in a friendly spirit," was the Governor's comment on this curious boom. "I hardly think any one is going to offer himself—even if he has nothing to offer but himself. But then Murdock is such a good fellow. Do you know him?"

Whereupon the Governor began to tell what a very good fellow Murdock really was.

THE NEW REALISTS

BY EDWARD EVERETT HALE, JR.

PROFESSOR OF ENGLISH IN UNION COLLEGE

"THOSE autobiographical novels that were popular thruout the third and fourth decades of the twentieth century"—that is what Mr. H. G. Wells says in *The World Set Free*. Perhaps novels will be like that in ten years; even now if we say *biographical*, the phrase will be fairly appropriate to our own time, to the second decade. Certainly a number of the striking things done in English fiction nowadays are of that sort, accounts of men and women; Mr. D. H. Lawrence's *Sons and Lovers*, Mr. J. D. Beresford's three books on Jacob Stahl, and Mr. Compton Mackenzie's *Youth's Encounter* and *Sinister Street*. "If one excludes the mere story-teller," says Mr. Wells in another place, who himself began as a "mere story-teller" and continued as a biographer if not an autobiographer. It will never do to condemn story-telling, and perhaps one will say that there is no story to the life of Jacob Stahl, or of Paul Morel, or of Michael Fane. Of course there is not in the sense in which it may be said that there is no story to the lives of David Copperfield or of Arthur Pendennis. Yet story or not there is keen interest in these chronicles of young England in the early days of our century, more absorbing than otherwise now that the temper of young England is going thru so fiery a trial. Such books will group themselves together in one's mind and with them one would put Mr. Hugh Walpole's *The Duchess of Wrexe*, and also, I think, those three dark books by Mr. Oliver Onions, *The Debit Account*, *In Accordance with the Evidence* and *The Story of Louie*. The authors might be surprized, or even disgusted, at finding themselves bracketed, but probably they are often thought of together.

They all have their say, somehow, on life. One might gather that people nowadays were prejudiced against "drab sociological" or "morbid psychological" studies, but after all sociology (in such a use) means knowledge of men and women in the mass, and knowledge of men and women in the individual. It is hard to think of any one calling that sparkling kaleidoscope of the early days of Michael Fane a piece of psychology; one reads and reads of the way the imaginative boy feels and acts with a hightened and continued sensation. So with *The Duchess of Wrexe;* of course Mr. Walpole did have in mind some generalization about the old order which is changing under our eyes, but the thing is so absolutely personified that it hardly comes to mind till afterward, just as in life itself.

It is true (and somewhat connected with this point) that all these young men are resolute in attacking large things. Single books are not enough; they write trilogies. Mr. Beresford pursues his subject thru *The Early Life of Jacob Stahl, A Candidate for Truth* and *The Invisible Event*. Mr. Compton Mack-

enzie has really a trilogy in *Youth's Encounter* and the two parts of *Sinister Street*. Mr. Onions tells of the same strange crime from three different standpoints. Mr. Walpole has not yet written a trilogy, but he has projected one, and has furnished it with two prologs. Mr. Lawrence remains, as it were, austerely aloof. We look for no continuation to *Sons and Lovers*, altho there seems no reason why there should not be one.

Such writing is a following out of the impulses given by *Clayhanger* and *The New Macchiavelli*. Mr. Arnold Bennett and Mr. H. G. Wells are the two who stand out head and shoulders above the others who have come forward since the great group which ushered in the nineties. Those who can look back to those earlier days will remember the thrills caused by *Soldiers Three, The Prisoner of Zenda, Sherlock Holmes*, not to mention many another wonderful piece of work. What a difference between those books and these of which we have just spoken! Mystery, adventure, romance—those were the watchwords then. There was no talk of "mere story-tellers" in those days. Even Mr. H. G. Wells himself and Mr. Arnold Bennett began with books very different from those whereby they are now best known. *The Time Machine* and *The Grand Babylon Hotel* had adventure, mystery, romance even in the most popular sense. Yet both Mr. Bennett and Mr. Wells have deserted their first fantasies, and with their feet on firmer ground have made their great successes with things very different.

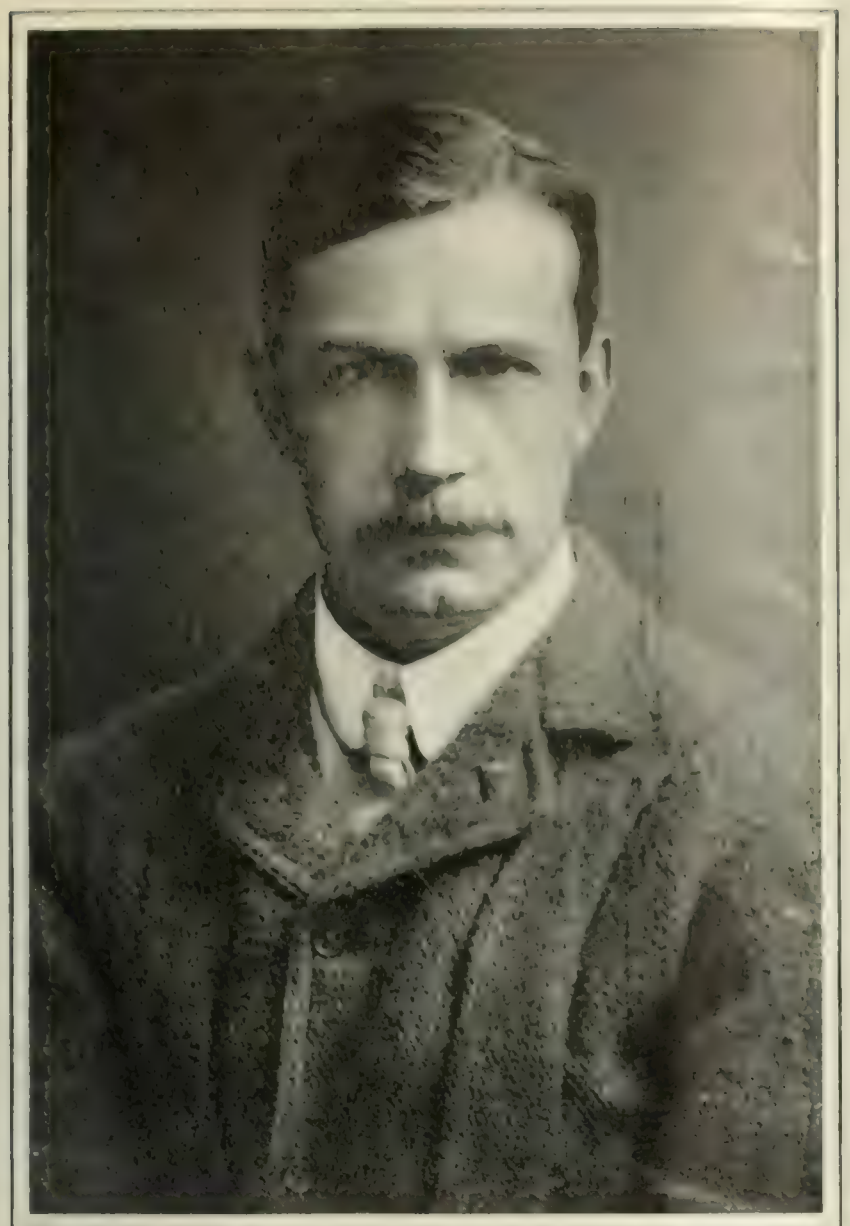
It is not remarkable that most of those who have made a name for themselves since 1900 have done much the same thing. One can hardly think of any English novelist who has really come to the front in the last fifteen years who belongs in spirit to the earlier group. Mr. Jeffrey Farnol, some will say, and others might add Mr. Hewlett, Mr. Conrad, Mr. Locke, Mr. Oppenheim, but all these began earlier. No, whatever we think of it, the best minds of young England of our day, when they turn to fiction, fix their eyes upon the actual life about them, and in conditions and circumstances that are more or less familiar to all they find enough of mystery, adventure and romance.

Save that he is a bit older one would mention here Mr. John Galsworthy. And certainly in the view of all these later men there is one recurrent idea more or less evident, the contrast and conflict between radical and conservative, between the adventurer and the home-lover, the new world and the old, the hierarchies and structures of society and the individual. One rarely forgets that in Galsworthy and one generally finds it in these others. They are all by way of being sons of Ishmael, led in part perhaps by the natural vigor of young strength, in part possibly by the seductions of that little known satirist, Samuel Butler. For whatever reason, there it is, the flaming up of the individual, a strange thing perhaps in a century devoted to social study, work, existence.

Yet such a generalization does no justice to such various spirits as we have here. Like as they are—champions of the new realism which in other phases than fiction is making its effort to break thru the conventional and reach some real comprehension of life—like as they are, their chief interest as one reads comes from things wherein they are different. One need not compare or estimate relative values, but one readily notes the somewhat somber beauty of Mr. Lawrence, Mr.

George H. Doran Co.

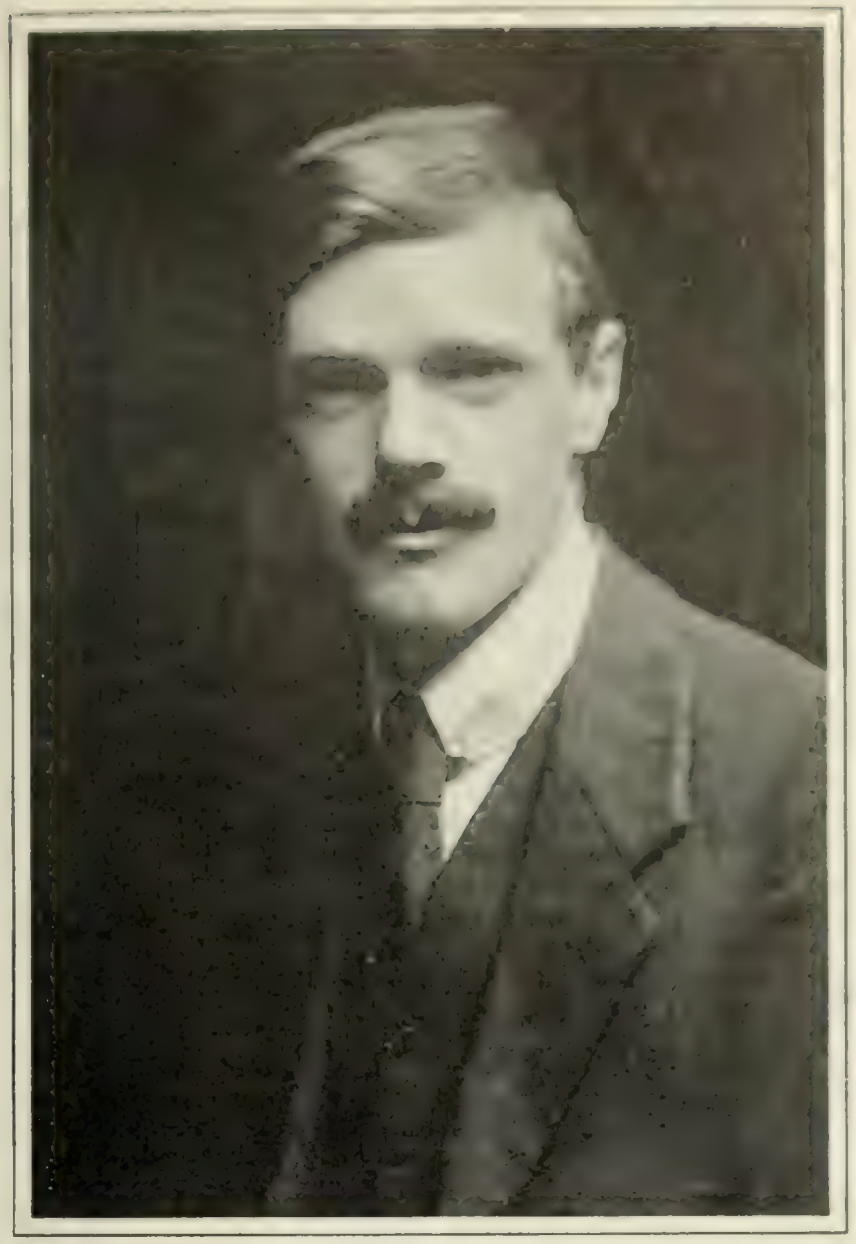
HUGH WALPOLE



The Duchess of Wrexe, The Gods and Mr. Perrin, The Wooden Horse are characterized by a "feel feeling for life and character

George H. Doran Co.

J. D. BERESFORD



He has written a trilogy: *The Early Life of James Nash, A Candidate for Truth, The Invisible Event*, with [illegible]

OLIVER ONIONS

"Sinister intensity" marks *The Debit Account, In Accordance with the Evidence* and *The Story of Louie*

Mitchell Kennerley

DAVID HERBERT LAWRENCE

There is a "somewhat somber beauty" about his books of which *Sons and Lovers* is a striking example

Mackenzie's exhilarated sense of youth and his perfect horn of plenty of fact, the sinister intensity of Mr. Oliver Onions, the full feeling for life and character of Mr. Hugh Walpole, the perfect naturalness of Mr. Beresford. These things and others make reading their books a pleasure, but there is a residuum behind; one wants to do something to comprehend this effort, to define it. That is something not to be done here, in these few words, yet one may compare this phase of realism with that of thirty or forty years ago and perceive a great difference. Philosophically I understand that the realism of today depends upon intuition while that of half a century ago was rational, and (altho they are no philosophers) something the same thing may be said of our novelists. But more important than that is something else, namely that while the realists of those earlier days seemed to love the everyday, the ordinary, even the ugly for its own sake, these later men have lived thru the nineties and feel the need of beauty, of charm, of distinction. Call it "mystery, adventure, romance" if you like, they have the sense of it tho they do not seek it in the exotic sensations of tropical islands nor in the complex intrigues of modern capitals. They seek it in the life about us. And if they can find it there, how much the better for us!

Union College

THE HOUSEKEEPER'S SONG

BY WINIFRED WELLES

Hush, little Sister Neat-of-Heart,
  Your fretting speedily,
Lay off your shining shoes of care
  And barefoot come with me.

I know a place at dreaming's end
  Where we can joyous stand
And gaily watch the Tasks troop by
  Nor ever lift a hand!

There waits for us a little House
  With careless, wide-flung door,
Its shabby roof droops down with age,
  Uneven runs the floor.

I love each window streaked with rain,
  The crooked path I bless,
Where weeds push boldly thru the cracks
  In sweet untidiness.

And pleasant folk, unmended, sit
  Amid the drifting dust,
Who laugh to see the brass grown dim
  And doorlatch rich with rust.

Oh, little House-of-Dreams unswept
  Day after idle day,
From you the great, white, clean, washed world
  Seems very far away!

THE WORLD OVER

Automobiles in Yellowstone Park

With the opening of the Yellowstone National Park to automobiles this summer, the car invades this last remaining stronghold of the horse. Heretofore all traffic thru the park has been strictly regulated by the Government, minute rules being laid down as to the passing of teams, etc., and night travel forbidden. The introduction of automobiles involves the necessity of making an entirely new set of regulations. The general plan is for all travel to take place in one direction, in order that meetings may not occur. In addition to this change, which involves a most careful planning of trips, since there will be no retracing of steps save by a complete tour of the 130 miles which constitute the "loop," automobile travel is prohibited at certain hours of the day, when carriages and wagons are moving; leaving certain other hours open to the automobiles while the horses lie by. As the distances between camps and lunch stations vary from ten to thirty miles, and the geysers and other time-consuming attractions are almost innumerable in certain regions, it is inevitable that this limitation should be a hardship.

The finest scenic highway in the United States, as it has been called without great exaggeration, dedicated to the "benefit and enjoyment of the people," should be made as accessible as possible. If by opening it to automobiles, a larger number of people can enjoy it, much has been gained. Moreover, a great deal of the surrounding country, in which valuable mineral claims are located, has suffered from an isolation to which Government regulations against railroads and motors have contributed largely. Undoubtedly the coming of the motor car will be a boon to many property owners in the vicinity.

But to any one who has traveled thru the park by the picturesque and comfortable stage coach, that more leisurely method of transportation will seem far superior to the kaleidoscopic impression involved in greater speed. Somehow an automobile in the Yellowstone suggests the hustle that "does" Europe in a month. There have probably been many demands for the innovation, but there are thousands of nature lovers who bemoan this further "advance of civilization."

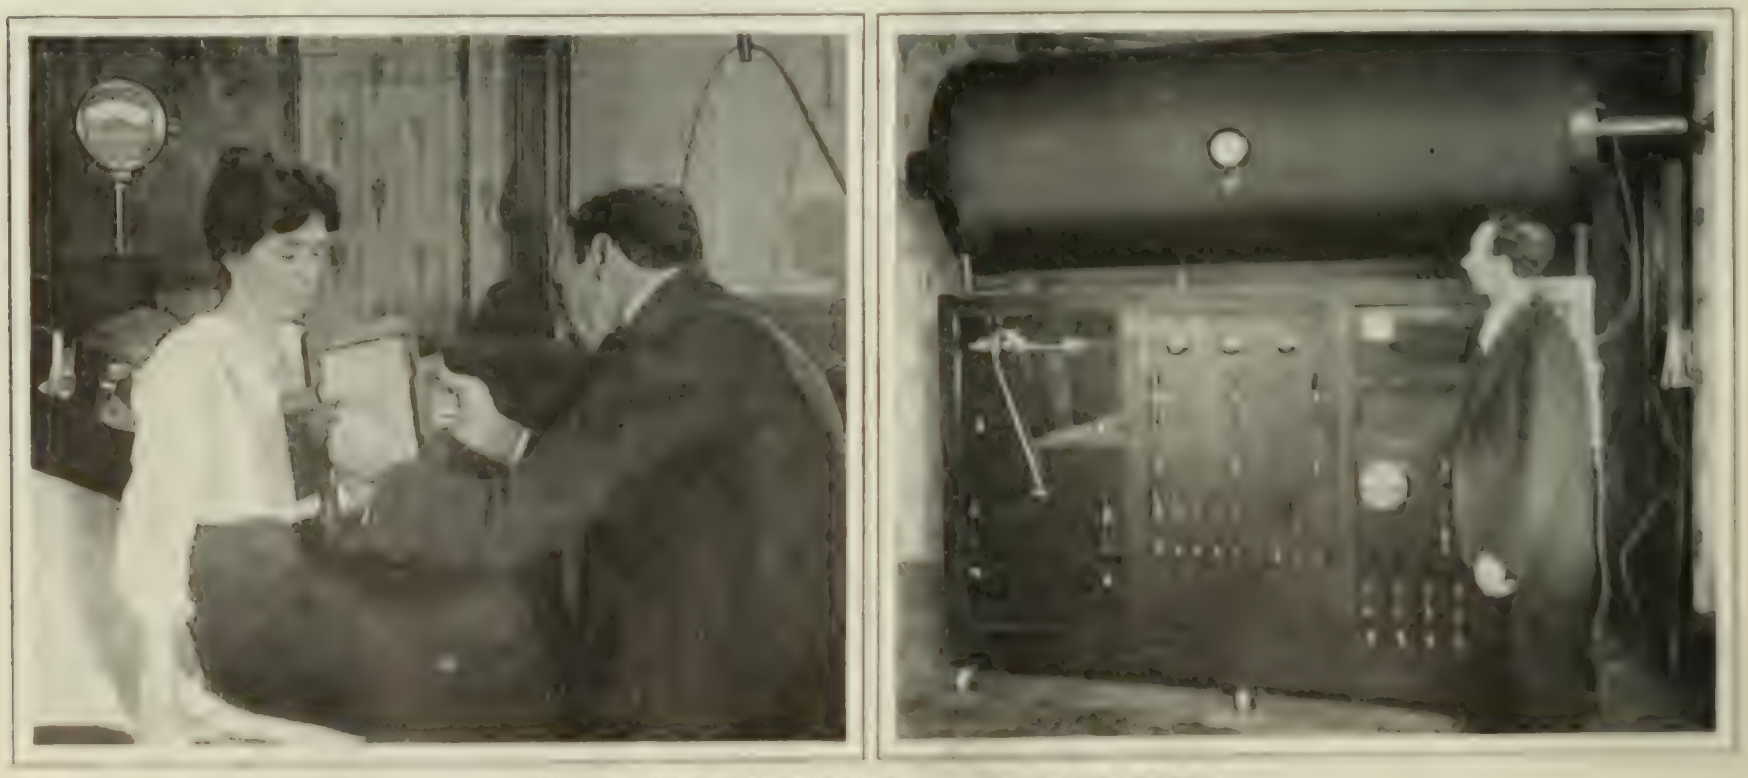
Tin Rations

"We eat what we can, and what we can't we can" may be a time-worn and rather feeble sample of American wit, but at any rate it is a frequent reminder of the importance we place on that particular method of serving vegetables.

145,138 acres of sweet corn are being raised for canning purposes this year, so the United States Bureau of Crop Estimates records. That indicates a four per cent increase over last year's acreage for the same purpose.

Tomatoes are next in importance with 87,654 acres, and 72,544 acres are devoted to peas. Both these crops show a slight decrease in the demand for their canned product since 1914.

A Burnless X-Ray



A New York roentgenologist has perfected a machine which he claims will produce a burnless X-ray. The common fault with X-ray apparatus heretofore has been that the deadly penetrativeness of the rays causes a peculiarly malignant type of burn which results usually in a sore very difficult to cure. For this reason X-ray practitioners are compelled to work always behind a heavy lead screen, as lead is the only substance thru which X-rays cannot penetrate.

The inventor of the burnless X-ray machine has been within the last five years directly in the path of the rays, for hours at a time, yet he has never suffered a burn, nor have any of his patients.

Fundamentally, the new apparatus does not depart radically from the usual X-ray equipment. It differs only in one detail—the quality of the high voltage current which the induction coil produces. According to the inventor all roentgenologists have made the mistake in assuming that X-rays are dangerous whether strong or weak.

The use of an alternating electric current of very high frequency and reversing the relations of its pressure and volume is the key to the secret of the new apparatus. Voltage in the millions and amperage to the tenth decimal place are produced in a gigantic coil. Hence the danger from burns is reduced to an infinitesimal degree.

Aside from the remarkable ability of the new apparatus to produce a harmless X-ray, it is interesting also as an unusual electrical equipment. Enough electricity is consumed in the windings of the induction coil to drive a number of street cars. The voltage produced in the transformation is so great that the resultant current will leap a gap of twelve feet. While the ordinary X-ray equipment will give clear shadowgraphs at a distance of five or six feet, this machine will clearly show the bones of the body at twenty-five or thirty feet; or it will show the heart beating and the lungs rising and falling with a thick wooden door intervening.

THE NEW X-RAY EXAMINATION AND APPARATUS

A fluoroscopic screen in use and the high frequency coil which makes the burnless X-ray possible

A WORD TO THE WISE

A Railroad Safety Campaign

The campaign for safety inaugurated on the Long Island Railroad by James A. McCrea, the general manager, is already well under way. Signs are now being posted at grade crossings all over Long Island. The accompanying illustration shows a typical fifty-foot sign at Broadway, in Flushing. The signs are, however, mostly smaller than this, the common shape being ten feet wide and ten feet high. Some of the signs are lighted at night. Coincidently with the posting of the signs the railroad is conducting an advertising campaign in the local papers. The responsibility of the individual is being everywhere emphasized and the slogan of the railroad is "We are doing our part. Won't you do yours?" Thus it must be a rather reckless automobile driver who can pass a sign reminding him that by heeding it he may save his life, and not be a bit more careful at grade crossings.

A Long Distance Champion

Did you never hear of Dr. Carleton Simon of the United States of America? Then it is quite evident you are not an angler. Dr. Simon, be it said, is the champion fly caster of the world. Seven years ago Dr. Simon began to prepare himself, by dint of hard and continuous practise, for his present exalted position. Today he holds the world's record of having cast a fly 349 feet and 1½ inches. Dr. Simon avers, however, that this record is bound to be surpassed. Within the next few years 375 feet or more will be made.

In summing up the rules for successful fly casting—which, by the way is, under tournament rules, on grass or sand rather than water—the doctor has this to say in a recent issue of that always interesting sportsman's friend, *Forest and Stream:*

"The study of the curve of the lead in the air—the line of trajectory—the initial pressure, and the velocity must all be studied, not only upon paper, but must be assiduously and indefatigably practised with the mastering of the thumbing of the spool, so that no lost motion interferes with the cast.

"Casting for distance requires no special mental qualification or physical ability. It is the 'sticking quality' that helps most, a persistent endeavor that plucks victory out of defeat in the keen analysis of one's faults. Aptitude is a quality that develops in time.

"There is no other sport I know of where the greatest deliberation and planning will prove so futile—by the snapping of line, by the turn of the wind, by atmospheric conditions and by some unforeseen accident to tackle. In contests the spoils do not always go to the strong."

Public School Piano Lessons

In one town in America the public school pupils are given lessons on the piano as a part of their regular school studies. That town is Bruning, Nebraska, a village of 500 people. This innovation was begun about two years ago under the direction of J. A. Crawford, superintendent of the school.

The piano teacher is employed for the full school time just as any other teacher. Any pupil above the third grade may take lessons free. A progressive graded series of lessons is used and the pupil buys his music just as he does his arithmetic book or grammar. One lesson a week is regularly given each pupil. Each has his lesson hour assigned and these periods are arranged so as not to conflict with other classes. Practising is done at home. The lessons are laid out in carefully graded sections with written work and drill in theory, ear training, transposition, history of music and biography. There are weekly written tests and a regular examination every ten weeks. In every respect the pupils receive an up-to-date musical education at public expense. This is the only example of such instruction in the public school anywhere in America, altho the custom is a common one in Germany.

No Umpire Like This

"The only umpire in the world that never makes a mistake and never gets irritated. The pitchers swear by it; the fans never throw pop bottles at it; and its decisions admit of no controversy," that is the way they describe a certain Los Angeles umpire—an automatic device.

By means of an electrical system it records strikes and balls, and it is right to the fraction of an inch. This is how it works. A surface of heavy planks eight feet square is braced upright at the end of a sixty-five foot alley, and upon it is painted the same sort of a target that the pitcher faces in a real game, that is, a batter and a catcher crouching behind the plate. In order to afford practise for both kinds of batters, a left-handed batter is also painted in, and a canvas is arranged to cover the one not in use. The pitcher who desires to perfect his curves stands at the same distance as in actual games, uses the regulation ball and throws at precisely the same mark, namely the field bounded in width by the plate (seventeen inches) and in length by the distance between the knee and the shoulder of the average man, which is three feet and four inches. Just as in playing the game there is no definite outline to throw at, so in using this umpire the pitcher does not see the boundaries of a "strike" field, but they are very definite all the same. In this device there is a panel of the above dimensions set on a pivot which by means of electrical wiring rings a bell when it is struck by the ball.

It is said by western baseball stars to be the best practise device ever developed, and the fans have taken to it as an amusement.

PLAY BALL!

Nature's Great Cleansers

Air and water are natural cleansers. Modern engineering has brought them to the assistance of the housewife to lighten her service and enable her to do her work better. We present guaranteed electrical devices for washing with air—the vacuum cleaner—and for washing with water—the electric washing machine—both made with the skill and high quality which characterize the many household devices bearing the name

Western Electric

Vacuum Cleaner

This is a new model, small and light, but powerful. The experience of 30 years of motor and suction-fan making, is embodied in every part. The rigid frame, different from the usual "broom-handle" design, makes handling easy. The price, $32.50, includes an extension nozzle for cleaning under furniture.

Washer and Wringer

This newest, safest and most thorough laundry outfit is sold and guaranteed by the world's largest distributors of electrical supplies. Cleanses perfectly all fabrics without injury to most delicate textures. The driving mechanism is entirely enclosed. The wringer is reversible.

Both of these labor-saving cleansers can be used in any home where there is electric light. Write for descriptive booklets, "The Home Sanitary" and "Sunny Monday," mentioning the name of your dealer. Ask for Booklets No. 422-BJ.

The New Books

IF PHILOSOPHERS WERE KINGS

Professor Ernest Barker of Oxford University gives the curious student a good idea of how political life would be influenced if it were entrusted to the English philosophers of the present generation in his *Political Thought in England*. His study purports to deal with the period "from Herbert Spencer to the present day," altho the discussion of Spencer is continued to the middle of the book and an account of the Idealist school, including T. H. Green, Bradley and Bosanquet, precedes the detailed consideration of Spencer's theories. The main characteristic of the period treated is the revolt against individualism both in politics and in economics. This revolt consisted in reality of two quite distinct movements: the revival of the aristocratic ideal by Sir Henry Maine and other legal historians and such literary authoritarians as Ruskin and Carlyle, and the advance toward State Socialism led by the Fabians and vainly opposed by belated followers of the Manchester school. But Professor Barker ends his book on quite a different note. It is true that the exaltation of the state which was heresy to the English mind a generation ago is now orthodoxy, but the newly established orthodoxy is in turn assailed by still newer heresies. The contemporary attack on the state is no longer in the name of individual liberties but in that of group rights and it takes the form of Syndicalism or Guild Socialism.

Political Thought in England, by Ernest Barker. Home University Library. New York: Henry Holt & Co. 50 cents.

A NATURE NOVEL

There are two women in American fiction—tremendously successful writers, both—whose recipes for a best seller are similar. Gene Stratton Porter and Frances Hodgson Burnett are apostles of the Impossibly Virtuous. Inevitably their books present at least one character apiece who inherits equally from the peerless knight of the medieval romance and the unsullied hero of the Sunday school story.

The comparison must not be pushed too far. Mrs. Burnett has humor and a gift of portraiture. Mrs. Porter shows an almost pathetic lack of humor, not only in the absurdities of situation and dialog she permits herself, but also in her failure to get results from a really humorous episode. And between lay figures and supernewsboys she succeeds in creating very few genuine people.

But if Mrs. Burnett can tell a story, Mrs. Porter can tell the names of all the birds you are likely to hear in a tamarack swamp. She has no unusual

gift of description, but by a combination of ecstasy and accurate nomenclature she does preach the gospel of the out-doors.

Michael O'Halloran is a young Irishman whose boyish independence and resourcefulness might have made him a really interesting character if he had not been drowned in the syrup of his own virtues. One permits him, at a tender age, to kidnap a crippled orphan and instal her as his protege, but one rebels a little when he tells the city editor of the town's best newspaper how to run his business, reorganizes the household of a God-fearing farmer, thus indirectly leading the entire rural community upward and onward, apparently saves from disgrace the father of the beautiful young lady whose well-meant but injudicious charity he tactfully repudiates, and withal provides enough epigrams to head half the chapters in the book. The other characters —with the exception perhaps of Lily Peaches, the orphan, herself—are jerked about by the heart-strings to show how beautiful is love in a cabin and how loathsome is "society," and to point a few other well-assorted morals.

Michael O'Halloran, by Gene Stratton Porter. New York: Doubleday, Page & Co. $1.35.

THE MAKING OF DELINQUENTS

The Individual Delinquent, by Dr. William Healy, Director of the Psychiatric Institute of the Chicago Juvenile Court, is a masterful analysis of the factors that influence the physical, mental and moral development of the child, from the point of view of *conduct*, which is after all the main concern that we all have in one another. The book is divided into two main parts, the first dealing with the general data and the methods of study employed, the second with "illustrative cases" discussed in relation to types of delinquency and in relation to causative factors. There is an appendix on the organization of the Juvenile Psychopathic Institute, and a bibliography of nearly 400 numbers.

One is impressed with the close adherence of the author to the concrete facts of direct experience. In rejecting the "anecdotal" material that has so frequently served as a basis for theorizing on criminal conduct, Dr. Healy detaches himself both from the sentimentalists and from the legalists. He is scientific and eminently sane.

The emphasis on the importance of catching offenders early is a recognition of the personality as a *becoming*. The same viewpoint is shown by the refusal of the author to classify the data gathered in the course of the studies according to any *a priori* scheme or theory. Mental facts require a different classification from physical, and these one different from the environmental. There is clear recognition of the complexity of the problem of individual development. The large rôle that sex plays in delinquencies, whether in youth or in senescence, is fully recognized; but it is not magnified into the ultimate source of all dereliction. The relation of home conditions or of heredity, the relation

That longing for the rugged health of Youth

"Oh for boyhood's painless play,
Sleep that wakes in laughing day,
Health that mocks the doctor's rules.
. . . From my heart I give thee joy—
I was once a barefoot boy."
Whittier's "The Barefoot Boy"

Alas, the dreams of happy boyhood days profit naught—we are "made to tread the mills of toil." And the nearest we can come to bringing back the sunny days of youth is to make *timely amends* for the heavy overdrafts made by work and worry.

And this you can do with Sanatogen. Sanatogen is a food-tonic combining purest albumen and organic phosphorus in a form so easily assimilated that it is ideal for feeding the blood and tissues with the essentials of body strength and endurance—reviving the vitality—bettering the digestion—imparting a fresh fund of energy and health to a "slowing-down" system.

All this is not *theory*, but established *experience*. Hundreds of famous men and women have written letters fully as enthusiastic as those of John Burroughs and Colonel Watterson—reproduced here—telling us how Sanatogen has helped them. Over 21,000 physicians who have seen the work of Sanatogen in daily practice have written us sincere acknowledgement of the tonic and upbuilding value of Sanatogen.

Sanatogen will earn words of praise from *you*—if you give it the opportunity to *help* you.

Col. Henry Watterson, the famous Editor, writes: "I do not think I could have recovered my vitality, as I have done, without this Sanatogen operating equally upon the digestive organs and nerve centers."

John Burroughs, the distinguished naturalist and author, writes: "I am sure I have been greatly benefited by Sanatogen. My sleep is fifty per cent. better than it was one year ago, and my mind and strength are much improved."

Sanatogen is sold by good druggists everywhere, in three sizes, from $1.00 up.

Grand Prize, International Congress of Medicine, London, 1913

SANATOGEN
ENDORSED BY OVER 21,000 PHYSICIANS

Send for "The Art of Living," a charming little book by Richard Le Gallienne, the popular poet-author, touching on Sanatogen's kindly help and giving other interesting aids in the quest for contentment and better health. A Pure Romantic Novel, by Leona Dalrymple

Author of **"DIANE OF THE GREEN VAN"**

Send us the names of three friends to whom you would like introductory copies of The Independent sent with your compliments.

of alcohol or of physical defect, to criminality are considered in detail; but all the factors are considered as factors, and not as isolated, independent, primary forces.

It may be too much to expect every policeman to become acquainted with the facts and generalizations contained in this book; but it is not too much to expect of every judge and probation officer, lawyer, every physician and teacher having to deal with the individual whose conduct departs seriously from the generally accepted limits of decency or social safety. Sooner or later the law student will use a textbook like this as a matter of course—and probably with much more appreciation of its application than he now has of half of his required work. The same thing may be said of the student of medicine and of pedagogy. The significance of these present studies lies in showing us to what extent the sources of social maladjustment are directly within our own control.

The Individual Delinquent, by William Healy, M.D. Boston: Little, Brown & Co. $5.

A FAMOUS LOVE STORY

William Dudley Foulke has done scholarly and beautiful work in *Some Love Songs from Petrarch*. The life of the poet, prefacing the translations, is an uncommonly delightful biography. Arranged by subject, with connective notes, the songs and sonnets make a complete story, that stands beside the "Vita Nuova" in its tender sorrowfulness, and they are rendered into English at once smooth and forceful. Oxford Press. $1.25.

PLEASANT POETRY

After a silence of fourteen years since the publication of his first book of verse, comes *The Shoes of Happiness and Other Poems*, a collection of recent verse by Edwin Markham. Some of these poems appeared originally in The Independent. They include both narrative and lyric verse, fanciful allegories and spontaneous expressions of emotion. And they record with fearless insight the moral significance of many problems of today.

Doubleday, Page. $1.20.

ESSAYS

One sees why all writers are not essayists. Not all can be, for tho the short story may be business the essay is still art. But why every one does not read essays rather than the average tale is harder to see. Richard Le Gallienne writes always with a silver pen, never with steel and in *Vanishing Roads* he is mostly content to be gracefully amusing, altho as in his enthusiastic appreciation of Pater he can show a purpose deeper than merely giving the reader enjoyment.

Putnam. $1.50.

ACROSS OUR BORDER

Sarah MacNaughton sketches the motley throng who drift into Canada just as they come. The man who succeeds with the man who fails. The pictures as in *Three Englishmen* are deep in contrast—uniform only in their simple black and white treatment which seems to suit these modern moments and the moral angle country in great bold strokes.

Lothrop. $1.50.

MOST UNCOMMON SENSE

Common Sense Applied to Woman Suffrage is an exposition of the address delivered by Mary Putnam Jacobi before the Constitutional Convention of 1894 and in spite of the points of argument presented during the subsequent twenty years it has a surprising freshness and vigor. The fact that another Constitutional Convention is sitting in 1915 gives the book the interest of timeliness.

Putnam. $1.

The Market Place

STOCKS AND THE "ARABIC"

There was plenty of business on the New York Stock Exchange last week, and only the sinking of the "Arabic" prevented a showing of large advances at the close. Transactions amounted to 5,044,935 shares, and there were three million-share days. A drop of five points in sterling exchange, to 4.64, at the beginning, did not depress the market. It was known that prominent bankers were holding daily conferences concerning credit arrangements soon to be made. Until Thursday afternoon the movement was an upward one, with sensational advances in the shares of two air brake companies and two motor companies. The strength of the war order stocks was due partly to our Government's reply to Austria's protest. This reply showed that there would be no interference at Washington with the shipment of munitions and other supplies to the Allies.

In the morning on Thursday the tendency was upward, but after the news about the "Arabic" was received, at about 1. p. m., there was a sharp decline, which continued on Friday. There was danger, it was thought, that diplomatic relations with Germany would be severed, and that unhappy complications would follow. And so it came about that at the close of the week, the war order stocks, almost without exception, showed net losses ranging from a small fraction up to 11 points. The average decline from the summit had been, for sixteen of these stocks, seven points. There was a net loss also for nearly all of the railroad shares. Prices of these had been rising before the "Arabic" went down.

In our list of sixteen war order stocks those of the New York Air Brake Company and the Westinghouse Air Brake Company are not included. Reaction could not deprive the first of a gain of 17¾, or the second of a net addition of 23. On Wednesday, when New York Air Brake shares were selling at about 115½, the president of the company, Mr. Starbuck, at the time when the regular dividend was voted, made a statement concerning the company's business. After saying that orders for brakes indicated a revival of the equipment trade, he added that the company had "undertaken orders for high explosive shells and cartridge cases aggregating $16,581,500, for delivery within the next twelve months, on which substantial payments have

"Time, The Tomb-Builder."

The Time To Take Out Life Insurance Is NOW!

EVERY day the tomb-builder takes his toll: some day we ourselves will hear the swish of the scythe, and then it will be mighty fine to feel and know that those depending on us are protected.

We should take out life insurance, of course, and with as little delay as possible, but we should take time enough to solve the problem satisfactorily, which we can easily do.

Safety comes first, naturally, but we find on investigation that about all legal-reserve life-companies are safe: they *have* to be safe by law and *stay so*.

Next is the *cost* and when it comes to that, we must decide between *agency* and *non-agency* insurance.

If we choose an *agency* company, we ourselves must pay our part of the heavy agency-expense, amounting in the United States alone to *more than one hundred million dollars annually*.

If, on the other hand, we select a *non-agency* company, we get the benefit of the money generally paid to agents the *first* year and *every other*.

Of the four leading non-agency companies in the world, three of them are in England and one in the United States. This latter is pretty well known for it has been more than ten years in business—the

Postal Life Insurance Company

Postal policyholders are well informed regarding insurance because the Company furnishes fullest information. It sends out official statements in black and white, binding on the Company. It tells you how much you will save by insuring direct, averaging 30% of the premium the first year, and in subsequent years, during the premium-paying period, an amount equal to an agent's renewal-commission, 7½%, plus an agency-expense saving, 2%, making

9½%

Guaranteed in Policy

You will also find that in addition to the foregoing savings you will receive your share of the Company's earnings, and you will also be entitled to one free medical examination each year to enable you to detect incipient disease in time to check or cure it.

See What You Can Save At Your Age

Mail the coupon today or copy the same in a letter, and get exact figures for your age on any form of Policy—Whole Life, Limited-Payment Life, Endowment or a Monthly Income Contract.

Sending for information places you under no obligation and no agent will be sent to visit you; the Postal does not employ agents, the resultant commission-savings going to *you* because you deal *direct*.

POSTAL LIFE INSURANCE COMPANY
WM R. MALONE PRESIDENT
THIRTY-FIVE NASSAU STREET NEW YORK

1915

Atlantic Mutual Insurance Co.

Atlantic Building, 51 Wall St., New York

Insures Against Marine and Inland Transportation Risk and Will Issue Policies Making Loss Payable in Europe and Oriental Countries

Chartered by the State of New York in 1842, was preceded by a stock company of a similar name. The latter company was liquidated and part of its capital, to the extent of $100,000, was used with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with a bonus and interest at the expiration of two years.

During its existence the company has insured property to the value of	$27,964,578,109.00
Received premiums thereon to the extent of	287,324,890.99
Paid losses during that period	143,820,874.99
Issued certificates of profits to dealers	90,801,110.00
Of which there have been redeemed	83,811,450.00
Leaving outstanding at present time	6,989,660.00
Interest paid on certificates amounts to	23,020,223.85
On December 31, 1914, the assets of the company amounted to	14,101,674.46

The profits of the company revert to the assured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such dividends, certificates are issued subject to dividends of interest until ordered to be redeemed, in accordance with the charter.

A. A. RAVEN, Chairman of the Board
CORNELIUS ELDERT, Pres.
WALTER WOOD PARSONS, Vice-Pres.
CHARLES E. TAY, 2d Vice-Pres.

AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the **METROPOLITAN LIFE INSURANCE COMPANY**, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of $5,000 by a man aged 67 would provide an annual income of $618.35 absolutely beyond question or doubt. The Annuity Department, **METROPOLITAN LIFE INSURANCE COMPANY**, New York, will give advice as to the return at any age, male or female.

AMERICAN TELEPHONE AND TELEGRAPH COMPANY

Convertible Four and One-Half Per Cent. Gold Bonds

Coupons from these bonds, payable by their terms on September 1, 1915, at the office or agency of the Company in New York or in Boston, will be paid in New York by the Bankers Trust Company, 16 Wall Street.

G. D. MILNE, Treasurer

UNITED CIGAR STORES COMPANY OF AMERICA

PREFERRED STOCK DIVIDEND NO. 17

A quarterly dividend of 1¾% has been declared upon the preferred stock of this company, payable October 1, 1915, to stockholders of record at the close of business September 1, 1915.

The stock books will not be closed.

DATED, August 18, 1915.

GEORGE WATTLEY, Treasurer.

been made." The company was fully equipped, he said, to take large additional orders of the same kind, and negotiations for them were pending. The price of the shares rose that day to 126½, and on Thursday (when the "Arabic" was torpedoed) to 137¾, closing on Saturday at 134¾. There were reports that the Bethlehem Steel Company had received from Russia a new order for $75,000,000 worth of shrapnel and high explosive shells, but the end of the week saw a net loss of five points for the shares. The price, 285, may be regarded as very high, however, for stock that has not been paying dividends. Tennessee Copper shares continued to rise on account of the company's sulphuric acid contracts. In the outside, or curb market, the price of stock of the Winchester Repeating Arms Company advanced from 1800 to 2040, but only seven shares were sold during the week.

FOREIGN DEBTS HERE

Before the "Arabic" went down, it was generally expected that plans for paying the debts of the Allies here would soon be completed, but now there will be delay. The recent shipment of $20,000,000 of gold and about $30,000,000 of American securities from London was inadequate. It did not prevent a further decline of sterling exchange to 4.64. A credit of at least $300,000,000 is needed, and financial authorities in London have been talking about $500,000,000. The British Government is advised and urged there to issue in New York short term bonds for $500,000,000, at five per cent, exempt from income tax. Some say that at the same time there should be shipments of $250,000,000 of gold, and that France and Russia might participate in this. It was proposed that eminent London bankers representing the Government should come to New York for a conference.

One English financial writer assumes that the proposed bonds could be sold here at 4½ per cent. But it should be known—and the leading authorities in London admit it—that the issue could not be successful here with an interest rate less than five per cent, exempt from income tax. England very naturally hesitates about borrowing here at this rate, with such exemption, while in her great war loan she pays only 4½ to her own people, whose receipts are reduced by the income tax. Such action might jeopardize future loans at home and cause present bondholders to complain. Moreover, there may be some doubt as to the attitude of our Government toward a large loan for the benefit of the Allies. The problem is not one that can easily be solved.

The following dividends are announced:

American Telephone and Telegraph Company, common, three (quarterly), 1 per cent, cash, payable September 1.

American Telephone and Telegraph Company, convertible 4½ per cent. gold bonds, payable September 1.

Federal Mining and Smelting Company, preferred, 1 per cent, payable September 15.

United Cigar Stores Company of America, preferred (quarterly), 1¾ per cent, payable September 15.

Insurance

Conducted by

W. E. UNDERWOOD

T. F., Asheville, N. C.—Both companies mentioned are financially sound, but the larger (and not because it is larger) is the better managed. The latter offers advantages the other cannot. If you can afford the higher premium, take the twenty-payment life policy. In doing so, you will be laying the premium-paying burden on the most productive period of your life.

H. B. G., Elm Grove, W. Va.—If the questions you ask are founded on an actual experience, I would advise you to consult a lawyer. I am unable to determine from the meager data contained in your letter whether the notes cover premiums past due or premiums to become due. If the former, then the company has furnished insurance which has not been paid for and, in addition to canceling the contract, it seems to me the payment of the note can be enforced. If, on the contrary, the note is for future premiums and the company has furnished nothing, all it can do is to notify you that the policy is canceled. I am inclined to think that the regular form of promissory note containing no additional conditions and disconnected by its terms to the insurance transaction would be more absolute against the maker than a premium note particularly if thru discounting it got into third hands.

G. P. Q., Chagrin Falls, O.—Financially and managerially the company you name ranks high. It is a stock company wholly in the control of its stockholders and until recently it issued both participating and non-participating policies. For ten years or longer its dividends to policyholders have been comparatively fine. But this result seems to be purely voluntary on the part of the directors, for in the course of a decision by the Supreme Court of Ohio several years ago over some litigation growing out of the use of some of the surplus to increase the capital it was held that the entire surplus of the company belonged to the stockholders. I regard a twenty-year endowment at your age an excellent combination of investment and protection. A convertible term policy is advantageous to the extent that it provides a maximum of insurance at a low rate during the term period, but one would do better to save time and get the permanent contract at the outset if one can afford the cost.

F. S. H., Long Lake, N. Y.—As I understand the matter your endowment of $2500 matured and was payable to you on May 20, 1915; and it was then encumbered with a loan of $568. Therefore, on the date mentioned the company owed you, net, $1932. The settlement was deferred by your request that the company convert the proceeds into a joint-annuity. However, on July 20, you altered your decision and requested the payment of the endowment in cash, which was complied with by the company. You then called on the company for interest on the endowment from the due date to date of payment, to which the company demurred, seemingly on the ground that complying with your request it was prepared to make the conversion to a joint-annuity when you had paid the loan of $568, which you did about the middle of July. You ask my opinion on the justness of your claim for interest at four per cent for two months on $2500. There is this to be said on the company's side: it was ready and willing to settle with you on May 20, and its retention of the money was due to your action. But it did have the use of $1932 of your money, and I am of the opinion that, in equity, it owes you interest on that amount.

THE INDEPENDENT 119 West 40th Street New York

The GLEN SPRINGS

WATKINS GLEN ON SENECA LAKE, N. Y.
Wm. E. Leffingwell, Pres.
OPEN ALL THE YEAR

A Mineral Springs "Cure" and Hotel, known as THE AMERICAN NAUHEIM, from having first introduced into this country the Schott treatment for heart disease. The treatment methods, and equipment embrace the best that advanced medical science has approved. Treatments are given under the direction of physicians.

THE BATHS

THE BATHING SPRINGS are similar to the waters of Bad Nauheim, but about five times as strong.

THE RADIUM EMANATION FROM BRINE SPRING NO. 2 AVERAGES 64.8 MACHE UNITS PER LITER OF WATER, or nearly three times as much as any other American Spring known.

For the treatment of RHEUMATISM, GOUT, DIABETES, OBESITY, NEURITIS, NEURALGIA, ANAEMIA, DISEASES OF THE DIGESTIVE SYSTEM AND LIVER, HEART AND CIRCULATORY SYSTEM, KIDNEY DISEASE, AND DISORDERS OF THE NERVOUS SYSTEM, we offer advantages unsurpassed in this country or Europe.

THE GLEN SPRINGS is situated in a large private park with miles of well built and graded walks for Oertel hill climbing exercises. Automobiling, Boating, Fishing, Music, Dancing. Well-kept Golf Course, Tennis Courts, Miniature and Clock Golf.

Our illustrated booklets and latest reports on our mineral springs will be mailed on request.

MOHAWK & Cottages 4th Lake. Capacity 125. Latest equipment, electricity, running water every room. Garage. C. S. Longstaff, Old Forge, N. Y.

THE SPA SANATORIUM

A. I. THAYER, M.D., Ballston Spa, N. Y., near Saratoga Springs. Refined, homelike, well equipped. New bath house, swimming pool. Electric and Nauheim baths. Booklets.

OPEN ALL THE YEAR

POCONO MANOR INN

Pocono Manor Pennsylvania
Pocono Summit Station, D. L. & W. RR.

A summer vacation among streams and mountains, in cultured, Quaker environment, and on an 800 acre tract, with large Hotel and Cottage Colony. Golf, Tennis and Garage; no bar or dancing. Every accessory for comfort.

EFFICIENCY QUESTION BOX

CONDUCTED BY EDWARD EARLE PURINTON, DIRECTOR OF THE INDEPENDENT EFFICIENCY SERVICE

125. Mr. J. A. R., New Jersey. "I am a graduate of a high school in Eastern New Jersey, but have not decided upon my life work. My parents desire me to study for a professional career, but I do not know which one to choose. Can you tell me how I can find myself?"

Obtain from The Independent all issues of the Question Box from the first number. Study carefully the answers to all inquirers. You will find several applying to your case. Why do your parents want you to study for a professional career, without knowing whether you are fitted for a professional career? Ask them. Your best plan is to come to New York and consult personally a number of the best character analysts and vocational psychologists.

---

126. Dr. F. G. J., Ohio. "Will you kindly inform me where I can secure publications or other aids in Domestic Art, particularly in regard to sewing? We want something scientific that will be a help to girls in teaching them to do their own sewing."

Write the Needlecraft School, 19 East Thirty-first street, New York, for particulars of their work; also the Greist Manufacturing Company, New Haven, Connecticut, for details of their publications on Sewing Efficiency. One of the objects of the Camp Fire Girls of America, 461 Fourth avenue, New York, is to create the desire and develop the capacity of girls to do their own needlework from standpoints of economy, efficiency, beauty and individuality. Ask for literature.

---

127. Prof. P. N. D., Illinois. "The water in our city pipes is notoriously impure. Doctor advises bottled water for drinking, but I have been told that many so-called spring waters on the market never saw a spring, and are bottled in a most unhygienic way. Is there a book available, furnishing analyses and descriptions of bottled waters?"

The U. S. Department of Agriculture has prepared a book on Mineral Waters in the United States, giving probably the information you desire. Write the Department, at Washington, D. C., for details of any such publications.

---

128. Miss M. D., Ohio. "I should like information on efficiency in church work, particularly in connection with the enlisting of interest and money in missionary enterprises, and the application of business-like methods to the administration and execution of such undertakings in churches or missionary organizations."

Consult first the mission board of your own church. Every denomination has methods of its own, and few mission boards will brook interference, even by an efficiency expert. See answers to church problems in former issues of the Question Box. Investigate the work of the Missionary Education Movement, 156 Fifth avenue, New York, also of the Laymen's Missionary Movement, 1 Madison avenue, New York. A magazine aiming at general efficiency in the church is *The Biblical World*, Chicago. Ask the secretary of your local Y. M. C. A. or Y. W. C. A. to tell you how the vast sums are raised for the extension and administration of their work. And to introduce the human, practical side of your undertaking, read the literature of the American Institute for Social Service, Bible House, New York.

---

129. Miss A. T. E., Wisconsin. "What is the most efficient method of teaching the addition and multiplication tables to a child in the home?"

The most efficient method of teaching anything is to engage as many functions and faculties of the child's personality as the study may be made to include. Thus in teaching numbers, the memorizing of a series of tables from a book reaches only the eye; but the use of a modern frame with rods and sliding balls and bright beads appeals to the sense of touch, weight, color, etc., by which also the numerals are fixed more securely in the memory. We suggest that, for modern ways of teaching arithmetic and other elementary subjects, you apply to the Froebel League, 112 East Seventy-first street, New York; also to the Publication Department of Teachers College, West 120th street, New York.

---

130. Professor R. A., Texas. "I have been greatly interested in and helped by your Efficiency articles. I think you are rendering immeasurable service to your readers. I want help and guidance in my efforts to solve the problem of cigaret smoking in my school for boys. What are the *facts* about the results of the cigaret habit? And what are the right *methods* of dealing with the matter? If half of what the preachers, reformers and Y. M. C. A. workers say of the effects of cigaret smoking is true, it is a matter worth more than a passing word from you."

Do not take the unsupported word of reformers in combating any evil. They are sincere, but often vague and hysterical, and apt to generalize from insufficient data. Secure your *facts* from scientists.

The cigaret is decidedly bad. Mental, moral, physical deterioration must follow its use among boys. Write the Non-Smokers' Protective League, at 101 West Seventy-second street, New York, and state your problem.

A most informing book is that by Stidswell on *The Tobacco Habit, History and Pathology*. Another, Slocum's *Tobacco and Its Deleterious Effects*. A smaller publication, Fink's *The Tobacco Habit*.

Never preach at boys. Stir their ambition, pride, honor. Get them to read the life of Jess Willard, world champion pugilist, recently published in the New York *American*. Jess hates tobacco and tells why. Form a branch of the Boy Scouts in your school—Boy Scouts hate everything unclean. Avoid negation, substitute cooperation.

---

131. Mr. A. E. H., New York. "What are the two or three best books I can read on personal efficiency, scientific management, social efficiency? Is there a bibliography on works concerning self-analysis? What have you written on the subject? Where can I obtain copies of your personal efficiency test?"

During the past few years several hundred books have been written covering the many and varied phases of personal and vocational efficiency. We are now engaged in reviewing the best of these and classifying them for convenient reference. Announcement will be made when the approved list is complete.

There is no satisfactory bibliography, to our knowledge, covering books on self-analysis. The way to group these would be to go to a large city library and ask for books under the different headings of the subject—vocational guidance, experimental psychology, and so forth.

I have written a good deal on the subject. Very little, however, has appeared in book form. Several books are now in course of preparation, due notice of which will be mailed you.

The Personal Efficiency test may be had from The Independent, price ten cents.

---

132. Mr. E. L. O., ——. "I am a senior at college. The next two years' graduates will largely determine my future career. My preference for a life work seems to be in business, preferably economics, or business. I have thought of taking such a course in the Harvard School of Business Administration, also in banking and finance. Would the be advisable? Would a series of interviews with eminently successful men be helpful? How can I plan definitely and wisely? Could a personal conference be arranged with you?"

A year of experience is worth five years of theory. If you get a job as head messenger, or clerk in a business house, then attend the principal of your work at night school or by correspondence, you should save time and money.

By all means, talk with any leading man who will let you into his office. The experience of trying to get in will be good for you. I have not found time to arrange personal conferences with readers of The Independent, but shall endeavor to do so if the present demand continues. You might spend a month in New York to advantage, in pursuit of the answer to your problem.

---

133. Prof. J. N. C., Massachusetts. "Our family is greatly interested in food science, and would like to be informed on the following matters, about which there seem to be conflicting theories. (a) Should water be taken with meals? (b) Should dinner come at noon or night? (c) Is uncooked food most digestible and nutritious?"

(a) Drink when thirsty. A glass of pure, soft water, not iced, usually aids digestion if sipped slowly during the meal. Injury is wrought only by very hot or very cold liquids at meal time, or by large quantities of water swallowed fast.

(b) Usually in the evening, between 6 and 7:30. But in cases of sleeplessness, or excessive brain work required at night, or lack of time in the evening to dine and digest properly (1½ hours), then the noon dinner may be more hygienic.

(c) One's dietary should include generous amounts of salads and fresh fruits. But cooked food is apt to be more digestible if less nutritious—and we have something more important to do than spend all our energy turning cattle-fodder into human structure. In addition to meats, all cereals and most fibrous vegetables should be thoroly, scientifically, cooked.

---

134. Prof. W. L. J., Illinois. "What is to be done with extravagance in American wives and daughters? I know a number of husbands and fathers who are simply animated bank-books, with no voice in the family except the voice of their salary. As a growing evil, this seems to me worthy of your attention. Whose fault is it, and how corrected?"

If you were a woman, I should call it the fault of women; but as you are a man, I call it the fault of men. Greater than any fault is the fault of shifting it; and anybody's fault that hurts us merely reflects a fault in us.

American husbands and fathers do not train their wives and daughters in the science of economy. Further, a woman—or a man—who has never been a self-supporting wage-earner is a child always in money matters. Putting your women-folks on an "allowance," holding them to it, and teaching them how to spend it, is one way of curing their extravagance. A better way is to give them a job, in or out of the home, and thus increase the sense of responsibility, regularity and earning that is developed only in the person who earns money before spending it.

---

135. Mr. H. J. S., ——. "What is the best time of day to memorize? I am a business man, have been speaking [illegible] articles, with an [illegible] audience, and I read in a [illegible] magazine that one can memorize at [illegible] of day and secure best results."

Stop calling yourself a [illegible]. Aren't you ashamed to call yourself bad names? And stop talking anything you happen to read in a physical culture [illegible]—what is true for the psychology of a pet theory may not be true for you at all. Work out [illegible] problems, belong to a scientific [illegible]. Your health will improve from the [illegible] you start to have a will of your own.

For a brain-worker, the best time to memorize seems to be on rising. Half [illegible] minutes in the long run [illegible]. Take the right kind of [illegible] assignments with [illegible] breathing—and five minutes will be enough. Avoid [illegible] "psychology."

INDIAN RELICS

Bone or shell beads, the so-called wampum or aboriginal money of the early Indians, are attractive when they are properly displayed.

Many fish-hooks of shell, some of stone, were produced by the Indians whose habitat included the extensive coastline and islands of Southern California.

Large effigy pipes have been found in the Middle South. They are supposed to have been smoked at councils and during ceremonies. Warren K. Moorehead considers them to have been tribal (or clan) possessions.

Axes, discs, drills, perforated stones, throwing sticks, knives, spears, arrow points, objects used in connection with phallic worship, and other ceremonial implements and ornaments, have been found in the Southwest.

Much pottery is found in New Mexico. Of this an interesting form is the coiled ware. This was made by coiling long thin strips of suitable clay around some plain jar, basket, stone or other object of the desired shape.

The pottery forms that have been found in Arizona and Nevada in the cliff houses are highly decorative. The designs used are often elemental, but exceedingly effective if not altogether artistic. They often record Indian tradition and folklore.

Effigies, or ceremonials, are frequently found in southern Arizona, California and New Mexico. These are commonly of malpi, tufa or other volcanic or lava stones. Owls, Gila monsters, turtles, bears, lizards, wolves and unknown grotesques are often met with.

The various objects that enter into collections, which were made by the Indians and which have been obtained by mound excavation, the accidental uncovering by plowing and in other ways, exceed 3000 in number. The use of many of these relics is now only conjectural.

In Montana, implements of obsidian or volcanic glass are frequently found. The Horse Indians, who lived on either side of the Missouri River, produced many arrow points, small spear points and stone knives. Grooved axes were more sparingly made, but celts or polished stone hatchets, as made by these Horse Indians, are fairly common. Hematite was sometimes used in making these objects. Pipes were largely made of catlinite. Some copper objects have been found near the headwaters of the Missouri, but these are rare and when found are indicative of inter-tribal barter.

PEBBLES

Blood will tell. We have a dachshund who is always looking for a place in the sun.—*Chicago Tribune.*

The constitutional convention has voted for a restriction of citizenship to persons who can read and write English. Henry James knew when to beat it.—*New York Mail.*

Scornful Spouse—It needn't make you so grumpy because you swallowed an ant and spilt jam on your trousers and sat on a bumblebee. Good heavens, a picnic's a picnic, you know!—*Life.*

Jones—I don't see your husband at the club of late, Mrs. Brown!

Mrs. Brown—No, he stays at home now and enjoys life in his own way as I want him to.—*Houston Chronicle.*

"Johnny, how did you hurt your hand? I hope you haven't been fighting again."

"Willie Jones called me a liar, mother, an' then he hit me on the fist with his teeth."—*Life.*

Papa—Why, hang it, girl, that fellow only earns nine dollars a week!

Pleading Daughter—Yes; but, daddy, dear, a week passes so quickly when you're fond of one another.—*Judge.*

Southerner—Why are you Northerners always harping on the children employed in Southern factories?

Northerner—Well, for one thing, it detracts people's attention from the children employed in ours.—*Life.*

"Oh, mother," cried Edith, "I found a little flea on kitty, and I caught it!"

"What did you do with it?" asked her mother.

"Why, I put it back on kitty again, of course. It was her flea."—*Lippincott's Magazine.*

The following interesting notice appeared in the columns of an enterprising Minnesota newspaper:

"I have been instructed by the Village Council to enforce the ordinance against chickens running at large and riding bicycles on the sidewalk.—Harry Shells, Village Marshal."—*New York Tribune.*

Cholly (to shopman)—I say—aw—could you take that yellow tie with the pink spots out of the show-window for me?

Shopman—Certainly, sir. Pleased to take anything out of the window any time, sir.

Cholly—Thanks, awf'ly. The beastly thing bothaws me every time I pass. Good mawning.—*Christian Register.*

"I wonder what we're here in the world for?" asked the little boy, who seemed to be suffering from some childish grievance.

"We are put here to help others, of course," answered the little girl, with an air of superior wisdom.

"Um!" exclaimed the boy, disdainfully; "then what are the others put here for?"—*Tidbits.*

Mr. Bryan says his next statement will be divided into three parts. Instinctively we recall the announcement of a mountaineer preacher who said to his flock:

"Brethren, I hev decided t' divide my sermon in three parts. Th' fust part I'll understand an' you won't. Th' second part you'll understand an' I won't. Th' third part nobody'll understand."—*Montgomery Advertiser.*

Monsieur wanted the picture hung to the right; madame wanted it on the left. But monsieur insisted that the servant should hang the picture according to his orders. Consequently Joseph stuck a nail in the wall on the right, but this done, he also went and stuck another in on the left.

"What is that second nail for?" his master inquired in astonishment.

"It's to save me the trouble of fetching the ladder tomorrow when monsieur will have come round to the views of madame."—*Argonaut.*

THE THUNDERING WATER

FROM A NEW PHOTOGRAPH OF STATUARY BY KARL BITTER NEW YORK

The Independent

VOLUME 83 SEPTEMBER 6, 1915 NUMBER 3483

OUR PUNISHMENT FOR NEGLECT OF DUTY

WHAT bad luck, some folks are saying, that just now, when we need our hands free and our heads clear to deal with Germany, we should be bothered with this Mexican muddle and this Haytian affair. It is bad, but it is not luck. It is the natural consequence of putting off things as long as possible. It is what happens to the business man who stuffs disagreeable letters in the pigeon hole instead of answering them on the spot. It is what happens to the housewife who neglects the adage "a stitch in time saves nine."

Political and financial disorder are nothing new in Mexico and Hayti. They are chronic diseases and as such demand radical remedies, sooner or later. The condition of both countries has been growing rapidly worse in recent years. We all realized that some time we should have to do something about it. But we did not know just what to do and we did not want to do anything, so we put it off and put it off as a man does a visit to a dentist, tho knowing that each day's delay would cause him more pain in the end.

THE Monroe Doctrine is not a mere dog-in-the-manger policy, as our European critics say. It imposes duties as well as confers privileges. The long succession of our presidents has continuously recognized and reaffirmed the national obligation to look after our neighbors to the south of us whenever they get into trouble. We have repeatedly warned off European powers which attempted to take advantage of their weakness and intervene in their affairs.

Owing to our consistent maintenance of this policy thru all changes of administration and party it has become tacitly, even explicitly, recognized by European powers. Originally the Monroe Doctrine was merely a national policy of our own, but it has gradually become almost a part of international law, and European powers have applied to us, as a matter of course, for the protection of their national and the enforcement of their financial claims.

But unfortunately while Europe has become increasingly willing to accept the principle of our responsibility for these neighbors of our, we have become more inclined to shirk that responsibility. When Great Britain, a couple of years ago, notified us that British subjects were being killed and British property destroyed in Mexico and appealed to us to protect them we paid no attention, altho we should have hotly resented it if she had intervened for their protection as she would have done in any similar country of the other hemisphere.

Now we are directly responsible for present conditions in Mexico. It is long too late to talk about not intervening. We intervened most forcibly when a French army was trying to put upon the Mexican throne an Austrian Emperor and a Belgian Empress. It is owing to the fact that General Grant was ready to march across the Rio Grande with a combined force of Federals and Confederates in 1865 that the Mexicans are now casting bullets for president instead of being ruled by Emperor Maximilian II. We did it because we believed that the Mexicans would be better off under a republic than under an empire. But are they? It devolves upon us to prove that we are right by making our belief true.

IT appears that in the opinion of our Government, the time has come for intervention in Mexico. But the best time for intervention in Mexico has past. That time was in the later days of Diaz when the old man's grasp was weakening and it became evident that he was to leave his country as Alexander bequeathed his empire "to the strongest." If we had been awake to our responsibilities and taken action five years ago the employment of a little diplomacy, a little determination and a little money would have checked the coming chaos and saved thousands of men, women and children from a violent death and millions of dollars worth of property from destruction.

The present terrible condition in the island of Santo Domingo is quite as clearly the consequence of our neglect. In 1870 the Dominican Republic asked for annexation to the United States. A treaty to that effect was signed by President Grant and President Baez, but the Senate refused to ratify. If the treaty had past Santo Domingo, the Spanish part of the island, might now have been as prosperous as Arizona and New Mexico and like them setting the eastern states examples of political reforms. Hayti, the French and negro part of the island, would by this time either have likewise come under our flag or at least would have been materially improved by the close association with an orderly and enterprising American community. Instead of this Hayti has since had seventeen presidents, all of them except one overthrown by revolution and five of them killed. No American administration could be worse than that.

If the punishment for our neglect of duty to our weaker neighbors fell wholly upon us we could stand it and we would have deserved it. But the losses and sufferings of our people thru the disorders in Mexico and Hayti are light compared with those of the helpless natives. Serious problems are not solved by procrastination. Every year that riot is allowed to run intervention becomes less easy, more expensive, less effective and more necessary.

THE SKY CLEARING

THERE are now excellent prospects that a break with Germany may be avoided without any sacrifice of honor. The dispatches, however vague in detail, are definitely reassuring in tenor. The anxiety and distress that seized upon the hearts of all Americans, including the most courageous and the most belligerent, at the thought of our country becoming involved in the Great War have been decidedly relieved by what has transpired from the diplomatic conversations held in Washington and Berlin. It appears that the German Government proposes to abandon its cruel and unwarranted mode of warfare on the sea, or, indeed, has already issued orders to that effect. If so, the sinking of the "Arabic" was more than a crime. It was a blunder on the part of the submarine commander or of some man higher up.

To bring the submarine within the bounds of civilized warfare would be enough to earn for President Wilson the gratitude of his country and the plaudits of other nations, but there is now a prospect that his policy may lead to even greater things. He has been firm and fair in his protests against both Germany and Great Britain for their infraction of the rights of neutral commerce on the high seas. He has also managed to keep on friendly terms with both and to retain their confidence and respect. He has constantly exprest his willingness to act as intermediary in the transmission of any representations which either may wish to make to the other, but at the same time he has cautiously avoided making any bargains which would hamper his freedom of action or place him in the attitude of a partizan. This policy has put him in a position where he may be able to be of the greatest possible service to the world in the day, which must some time come, when the warring nations shall pause to consider what they can gain by further bloodshed. We look to the coming of "The Day," and may it come speedily.

RUSSIA'S WAY

THE unfortunate alignment into which the nations of Europe have been forced is strikingly recalled by Russia's severe treatment of Madame Breshkovsky, the most noted of the Slavic radical leaders in the struggle for political and industrial freedom. It must be humiliating to democratic England and progressive, enlightened France, that while they are proclaiming a holy war against a military despotism, which is, nevertheless, supported by an enthusiastic and highly developed industrial population, their great, blundering ally should go to such foolish and unnecessary extremes in punishing an old woman, now almost blind, whose crime has been the promulgation of those principles and teachings which are the pride of the western nations. We cannot approve of the violent methods of the revolutionists, but we respect their ideals.

Not content with condemning the aged revolutionist to Siberian exile, the government of the Czar has sought to make her exclusion from Russian liberal forces doubly sure by sending her to the most northern and isolated point possible. There amid the snows and ice of almost perpetual winter, 750 miles north of Yakutsk, at Bulun, the least desirable of the exile settlements, "The grandmother of the Russian Revolution" is destined by her persecutors to pass the few remaining years that are left to her. Madame Breshkovsky made many friends in the United States when she came to get aid for the revolution and not long ago a large number of American authors and publicists, with Mr. Howells at their head, petitioned the Russian Government for her pardon.

Loss of sight forbids that she should look upon the symbols of Czardom that surround her: "a hamlet of fifteen Indian huts, a post of Cossacks, and a Russian church." But the great outside world can never forget that there in the frozen north barbarism and militarism under the egis of religion are doing their utmost, in a typical and characteristically brutal fashion, to quench the flame of spiritual, political, and industrial freedom.

England and France may win Russia's fight against the Teutonic domination of the Balkans, but a greater struggle awaits them in Russia itself, a struggle not for territory or industrial supremacy, but one for the extension of enlightenment, liberty and democracy. Fortunate will the western allies be if they are able to wage this larger warfare with moral and intellectual weapons only.

SELLING DEATH

TWO remarkable arguments have just been issued. They deal with perhaps the greatest moral question now before the American people—the exportation of arms to the Allies.

The one is a protest against such exportation. It appears in a late issue of the *Baptist Standard* and is signed by the Rev. Charles F. Aked and Professor Walter Rauschenbusch, two of the most eminent of living American clergymen, one formerly a British subject, the other of German descent.

The other is our Government's official rejoinder to the recent Austro-Hungarian note. It is signed by Secretary of State Lansing and is understood to have been written by him and not by the President.

Both the official note and the private protest are examples of the highest type of dialectics. They state the case with admirable clearness, yet they come to diametrically opposite conclusions.

The argument that the exportation of munitions to the Allies should be stopped may be reduced to the following propositions:

1. It makes our country a workshop of death
2. It is for profits, not patriotism.
3. It compromizes us in the eyes of humanity.
4. It makes us an ally of the Allies.
5. It fosters an industry whose interest will be to extend militarism in the United States.
6. It theoretically enables a small state to buy arms when attacked, but practically this right is of little value, as the small state is likely to be completely invested by its greater and more warlike antagonist.

The official justification by the Secretary of State of the exportation of arms can be epitomized as follows:

1. It is the accepted rule of international law, which no nation should break.
2. It is and has been the universal practise of nations—Germany and Austria included.
3. It is unneutral in that it would deprive England of her superiority on sea and not Germany of her superiority on land.

4. It enables the United States to keep a small military establishment in time of peace.

5. It enables all nations to go without storing up vast reservoirs of military supplies.

6. It thus tends to the peaceful method of settling international disputes.

This is the issue. Which are right, the preachers or the statesman? For our part, we believe that each one of the six points made by either side is well taken. Then it comes to a question of which is the most right.

Dr. Aked and Professor Rauschenbusch are unassailable when they argue that the selling of the implements of death makes us a party to homicide. Secretary Lansing is equally unassailable when he argues that the policy of exportation of arms is as good international morality as it is good international law, for its prohibition would inevitably "result in every nation becoming an armed camp, ready to resist aggression and tempted to employ force in asserting its rights rather than appeal to reason and justice in the settlement of international disputes."

It may be, in the distant future when that "most finished and most artificial production of political ingenuity"—the world state—arrives, that there will be no need for nations to arm themselves except for the purposes of international police. But in the present lack of world organization, where each nation is the sole guardian of its own independence and sovereignty, the prohibition of the exportation of arms from one nation to another would probably foist upon the world a militarism more dire and calamitous than anything that humanity has ever seen or contemplated.

Selling death is an undoubted evil. Refusing to sell death, when the alternative is what it is, is likely to result in even greater evil.

Is not the statesman the better moralist?

ASKING FOR PROTECTION

BEFORE the Great War, our supply of dyestuffs came from Germany, where $400,000,000 had been invested in the carefully organized industry that produced them. This supply has been excluded, and the quantities on hand here have practically been exhausted. Those who ought to know say that such dyestuffs as we have been accustomed to use in the textile mills and elsewhere can be manufactured in this country. There have been attempts to make them, and there is evidence of progress in the work of trying to meet the demand by establishing a dyestuffs industry here.

But the investment of American capital to the extent required is restrained by fear of what may take place after the close of the war. Manufacturers of chemicals and others familiar with the trade in such products say that the Germans after the war will be forced by the needs of an impoverished nation to sell abroad at low prices. It is pointed out that what is sometimes called dumping—the sale of goods to foreign buyers at prices lower than those demanded and paid at home—has in the past, and in peaceful times, been approved and encouraged by the German Government. There is abundant proof of this, and there was no attempt to withhold the proof from the public. The practise will be resumed after the war, it is predicted, and those who invest capital here now in the manufacture of dyestuffs will suffer. Sharp competition and underselling by the Germans will drive them out of business.

It is not unreasonable for those who say these things to suggest that the desired investment of capital should be encouraged and promoted by an assurance of legislative protection. The whole tariff question is not necessarily involved. The conditions are exceptional, and the adequate tariff guard might be a temporary one. Those who ask for it should have a hearing. Unfortunately, they cannot have one in Congress before December next. Then, however, their pleas and arguments should be carefully considered.

RECOGNIZING REALITIES

EVENTS move so swiftly nowadays that our minds cannot keep up with them. A large proportion of the books and many of the magazine articles purporting to discuss live issues are really dealing with questions of historical or academic interest. There should be more facing of the facts and less speculation about whether what was said or thought or done by one and another was right or wrong. Questions of former intentions and past opinions lose their interest and fade away when we turn to things as they are.

For instance, the Germans tell us that France and England intended to invade the neutrality of Belgium. Maybe they did. Maybe they did not. Anyhow it was Germany who did it and that is what counts. We may surmise that there were many Confederate sympathizers who wished Lincoln dead. But it was Booth who killed him after all and it is Booth who justly bears the odium.

Then again the Germans told us at the beginning of the war that they were fighting on the defensive, that it was a struggle for national existence. Perhaps that was true. Perhaps it wasn't. But it is true now. With eight countries against her, and perhaps next week twelve, she stands undeniably with her back against the wall fighting for dear life.

We have heard a great deal about how France and England were pledged to protect Belgium against invasion. Well, it does not matter much about that now, for they did not do it. No doubt they would have liked to. No doubt they hope to rescue her. But poor Belgium is more concerned with actualities than with the good intentions of past or future. It is just as hard to have your town bombarded by your friends as by your enemies.

The Germans said before the war that the British fleet would destroy their commerce if they did not have a bigger navy. The English said that this was a lie. Quite possibly. But it is true now. German commerce has been destroyed because they did not have a big enough navy.

It was charged by the Austrians that Serbia was trying to take Bosnia and Herzegovina away from them. It was charged by the Germans that France was trying to take Alsace and Lorraine away from them. Both these accusations were indignantly denied by friends of Serbia and France. But the war has cleared away that old question. Both Serbia and France are obviously trying their hardest to get these provinces now.

Chancellor von Bethmann-Hollweg called the Belgian treaty "a scrap of paper." Well, it is by this time, even if it was not then. The status of Belgium depends not in the least upon the treaty of 1831 or 1839 or 1870,

but solely upon the Treaty of Somewhere-in-Europe (or Washington), dated, let us hope, Sometime in 1915.

The Germans claimed that their policy of terrorism in Belgium was necessary and that such severity at the start would put a stop to attacks by civilians in the future. The first part of this statement we do not believe; the second part has proved true. The soldiers of other nations, for instance our Yankees in the South, have maintained order among a conquered and revengeful population without resorting to such measures as the wholesale shooting of hostages and the deliberate destruction of towns. But much as we may abhor the German policy we must admit that it has accomplished what it was designed to do. Since the destruction of Louvain and Dinant we have read no more tales of brave Belgian boys who went out hunting Germans every morning and the English papers publish no more pictures of Belgian women shooting thru the panels of their broken doors at the invaders. For a year now the Germans have been as safe in Belgium as in Bavaria.

The pacificists said before the war that the accumulation of big armaments would be followed by a war. So it was.

The militarists said that wars were not over and that big armaments would be more needed than ever in the future. They were right.

The discussion of the question of who was right and what was true some time in the past is unprofitable and uninteresting compared with the question of what is right now and what we are going to make true in the future.

ADAM AND NOAH

ADAM and Noah are somewhat serious characters, and Philadelphia is not a flippant town, but absurd stories have occasionally appeared in the press purporting to come from Philadelphia that the English Professor Langdon has found in the Museum of the University of Pennsylvania an ancient Babylonian tablet from Nippur which proves that it was not Adam who ate the forbidden fruit, but that the guilty party was Noah. It may be well to give the facts on which this amusing report is built.

Several years ago the university engaged a young German scholar, Dr. Poebel, since reported killed in the war, to copy some of the tablets brought from Nippur, and among them he found one of the two broken tablets on the Creation and Flood. It tells us that Ana, god of the heavens; Enlil, god of the earth; Ea, god of the sea, and the goddess Nin-Khurshag, created the race of men and the four-footed beasts. Then the gods created the insignia of royalty and gave names to Eridu and four other cities and made the irrigation canals. The three chief gods and the goddess now decided to destroy mankind by a flood, and the goddess Nintud wailed with grief. Ziusuddu, the Babylonian Noah, was told of the approaching disaster and humbly prayed the gods for relief, and was told to make a big boat. The following lines of the fragment are preserved:

All the powerful wind storms as one rushed forth,
A water flood raged over the enemies.
Then for seven days and seven nights
The water-flood raged over the land.
The mighty boat was borne along by the wind storms on the swollen waters.
Then the Sun-god came forth again, in heaven and earth making day
Ziusuddu opened a window in the mighty boat,
And the Sun-god made the light to enter the mighty boat.
Ziusuddu prostrated himself before the Sun-god.
He sacrificed an ox, he slaughtered a sheep.

After a break we are told that Ziusuddu again prostrated himself before the god of heaven and the god of earth, and was given the boon of immortality like the gods. The story of the Flood is not as complete as that discovered by George Smith, which tells of the three birds sent out from the boat. The text is of a date nearly two thousand years before Christ, before the dominance of Babylon.

The other tablet is edited by Professor Langdon, of the University of Oxford, and has been commented on by Dr. Pinches and Professor Sayce. It begins with praise of Tilmun, an island in the Persian Gulf, a sort of Eden, pure, glorious, where the god Ea and his spouse take rest, where no raven croaks nor lion slays, where no wolf plunders the lambs nor dogs affright the sleeping kids, nor boars devour the grain, where no one says "I am sore-eyed," or "I am sick-headed," where no one says "I am an old woman" or "I am an old man," where no maiden is shamed in the city, where no deceiver deceives, and no prince withholds his wisdom, where no man diverts the water-way, and no ruler of the city is a despot. Now Ninella, daughter of the water-god Ea, beseeches him for blessings on her city in Tilmun, and they are granted, pure water, the healing of the bitter water, and sunshine. But the scene changes, and the marred tablet seems to refer to a flood, perhaps with corpses floating on the water. The details of the Deluge, if Deluge it is, are missing, but after it the Babylonian leader, called Tagtug, appears as a gardener cultivating the soil. The god Ea confers with Tagtug, and here begins the account of what appears to be the fall of man. The god presents to him the various fruits of the ground. Then a herald of the gods seems to be talking to a woman, or goddess, and he gives a list of trees and plants which may be cut or eaten. The text here is broken, but it would seem that of one plant they could not eat, for Professor Langdon thus translates the next lines:

The cassia plant he approached. He plucked, he ate.
Ninkhursag in the name of Ea uttered a curse,
"The face of life shall he not see till he dies."
The Annunaki (good spirits) sat down in the dust and wept.

The tablet concludes with the gift by the mother-goddess to man of eight divine patrons of civilization to help man in his hard lot.

Now this tablet, older than Abraham, does not at all tell us, as the learned penny-a-liners have reported to the press, that it is a slander to charge the temptation and fall to Adam, and that Noah was the guilty party. Our three authorities, Langdon, Sayce and Pinches, agree in doubting whether there is any real reference here to the biblical or Babylonian Noah. Tagtug seems to have eaten the forbidden fruit like Adam, and was curst, but so far from being punished we know that the Babylonian Noah received the blessing of immortality. This seems to be a story by itself, not to be confused with the Babylonian stories of the Flood, but rather a story of creation and the blessedness of Eden, and probably the disobedience of man in eating the forbidden cassia plant. The reference to the Flood in this story may be a confused myth, or an imperfect translation.

THE STORY OF THE WEEK

THE GREAT WAR

August 23 British advance from Suvla Bay checked by Turks. Austro-German forces take Kovel, Poland.

August 24 Germans take Polish fortress of Osowiec. Monarchical rebellion in northern Portugal.

August 25 Germans take Polish fortress of Brest-Litovsk. Montenegrins renew attacks on Austrians.

August 26 Germans take Polish fortress of Olita. British aviator sinks German submarine off Ostend by dropping bombs.

August 27 Austrians drive Russians back from Zlota Lipa River, Galicia. French aviators bombard Muelheim, Dornach and Dilligen.

August 28 25,000 Welsh coal miners strike. Indecisive fighting between Austrians and Italians near Monfalcone.

August 29—French report gains in Vosges. Austrians break Russian lines in Galicia and take 10,000 prisoners.

The Arabic Case

It is believed that the danger of serious difficulty between Germany and the United States growing out of the sinking of the White Star liner "Arabic" has been removed. The German Government has shown a disposition to make reparation for this and also acceptable concessions in regard to submarine warfare in general. On August 24 Ambassador von Bernstorff, in accordance with instructions from the German Government, requested the United States not to take a definite stand on the question until "a chance has been given to Germany to be heard equally." He added:

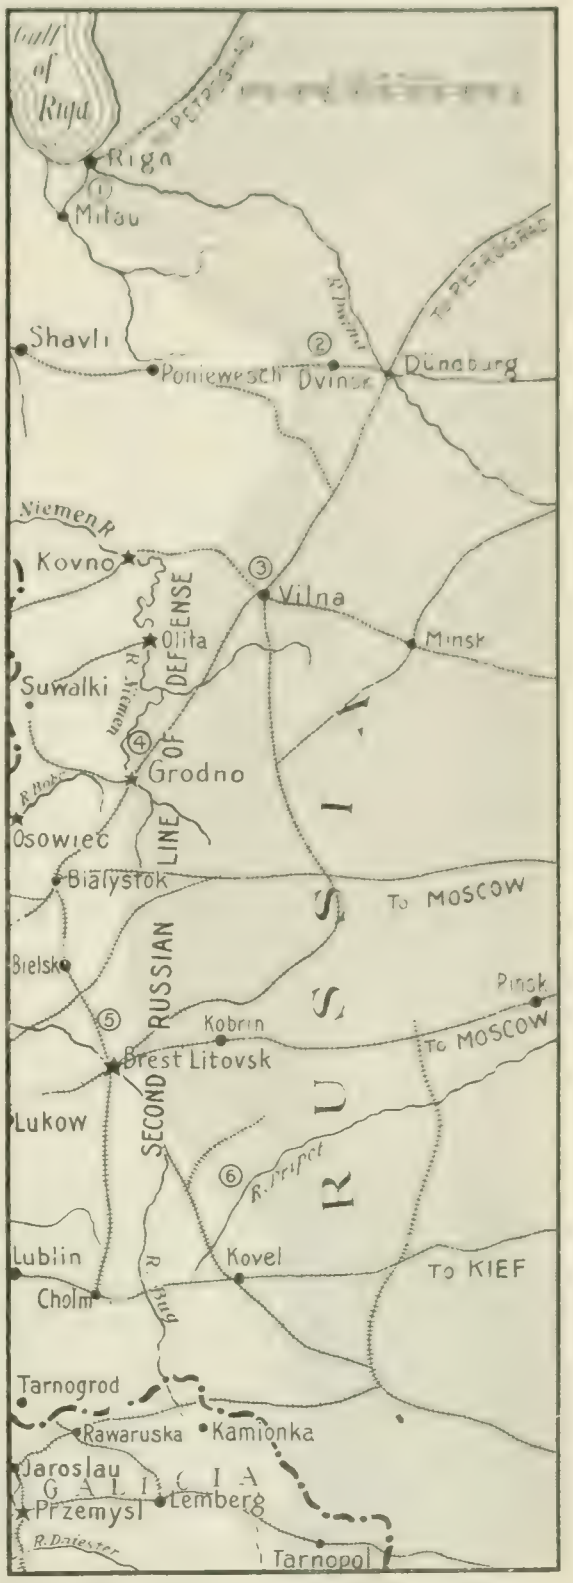
Altho the Imperial Government does not doubt the good faith of the witnesses whose statements are reported by the newspapers in Europe, it should be borne in mind that these statements are naturally made under excitement which might easily produce wrong impressions.

If Americans should actually have lost their lives, this would naturally be contrary to our intentions. The German Government would deeply regret the fact, and begs to tender sincerest sympathies to the American Government.

This was followed by conversations between the German Ambassador and the American Secretary of State, in which there was a frank discussion not only of the "Arabic" and "Lusitania" cases, but also of other questions of the right of neutrals on high seas. Count von Bernstorff gave formal assurance that his Government would give "compiete satisfaction" to the United States if it developed that the commander of the German submarine exceeded his instructions. It is understood that the German Government is willing to agree that passenger vessels shall not be torpedoed without warning or without providing for the safety of passengers. In fact it is intimated that instructions to this effect had already been given to the commanders of German submarines but that the matter had been kept secret because the German Government did not care to have the amelioration of its policy known either to the British or to the German public. The Chancellor has already been made the target of furious attacks from the belligerent press of Germany for his disapproval of the ruthless methods of warfare adopted by Admiral von Tirpitz. The Chancellor and the Admiral went together to Poland to consult with the Kaiser on the case.

The submarine concerned has not yet returned to its base and the German Government is awaiting the report of the commander. The only excuses brought forward by the German press, apart from its general justification of the policy, are that the "Arabic" may have been sunk by a British mine and that Dr. Woods and Mrs. Bruguière are not to be regarded as *bona fide* Americans. Dr. Woods was born in England and is said to have been serving as a surgeon in the British army. But he came to America a child and became a citizen in Wisconsin. Mrs. Bruguière is the wife of a Frenchman and has lived abroad for some years.

The total number of lives lost thru the sinking of the "Arabic" is forty-four. Eighteen of the passengers and twenty-five of the crew are unaccounted for, and one of the crew died in the Queenstown hospital.



The "Cymric," sister ship to the "Arabic," sailed from New York on August 26 with 14,000 tons of cargo, most of it war supplies. There were 185 passengers, including a number of Americans.

The Fall of Brest-Litovsk

On August 27, just a year after General von Hindenburg had by his victory at Tannenberg freed East Prussia from the invaders, he had the honor to report to his Emperor that practically all Russian Poland was in his possession. The second Russian line of defense has been broken to pieces and the scattered troops are seeking shelter in the marshes and forests of the interior. All along the front from the Gulf of Riga to the Dniester River the Russians are in retreat. The only Teutonic territory still held by the Russians is a corner of Galicia, and here they are being dislodged.

Brest-Litovsk, the last fortress of the historic "Polish Quadrilateral," fell into the hands of the troops under Field Marshal von Mackensen on August 25. This was the strongest of the fortresses constituting the second line of defense along the boundary between ancient Poland and Russia. London military experts believed that it would hold out for several weeks at least, but it was taken in three days after the Teutonic forces reached it. We quote the account given out by the Austro-Hungarian headquarters, for it is rare nowadays that we get any details of these remarkable operations:

The Russians had during the [illegible] erected a new line of works beyond the [illegible] encircling the fortress, three to four kilometers outside the permanent fort girdle.

THE RUSSIAN COLLAPSE

The Russians have been driven back from their second line of defense at all points. Riga (1) they still hold, but to the southeast the Germans are making steady gains. On the railroad to Dünaburg they have almost reached Dvinsk (2). Vilna (3), the most important railroad center of the region, is already being evacuated by the Russians. The fortresses of Olita and Osowiec have fallen during the week and Grodno (4) is the only one of the Niemen fortresses which is held by the Russians. Brest-Litovsk (5), the strongest of the fortresses in the second line, has surrendered and the garrison is retreating along the railroad toward Pinsk. This line of retreat is threatened by forces from the north and the south, moving toward Kobrin. One comes from Bialystok and Bielsk. The other is advancing northward from Kovel, but must cross the swampy region about the Pripet River. In Galicia the Austrians have assumed the offensive and have driven the Russians from the Zlota Lipa River, which runs between Lemberg and Tarnopol into the Dniester. The shaded portion of the map indicates the area held by the Russians

"TRUST IN GOD AND KEEP YOUR POWDER DRY"

A service at sea—on an unnamed British war vessel in the North Sea—on "Intercession Day," August 4, the anniversary of England's declaration of war. Special services of prayer were held generally in England

and had fortified it strongly and provided it with ten series of barbed-wire entanglements, as well as a broad field of buried mines. The storming began late in the afternoon of August 25.

The infantry of Field Marshal von Arz advanced on both sides of the Biala turnpike. They hewed their way with intrenching tools and gun butts thru the entanglements under heavy rifle and machine-gun fire and charged the forts with the bayonet. The charge was irresistible. The cheering infantry, in the gathering darkness, charged fort after fort, advancing recklessly over hidden mine fields, and, springing into the works, they engaged in a desperate hand-to-hand struggle with the stubbornly resisting Russians. The last fort was taken by eleven o'clock at night.

The Russian survivors across the Bug River were destroying the bridges behind them. The Austro-Hungarian forces pursued them vigorously. The Teutonic troops reached the river at three o'clock in the morning, where they were obliged to await the arrival of pontoons. The Germans in the meantime, attacking from the north, carried this sector of the fort girdle, and, unhampered by the river, stormed the citadel and forced a way into the town.

The Russians fired the city in their retreat. Most of the 53,000 inhabitants evacuated before the siege and only a few remain.

The Russian Retreat

The Russian line of retreat from Brest-Litovsk lies along the railroad leading to Pinsk, 120 miles east. An effort is being made to intercept the retiring Russians by cutting the railroad at Kobrin by a force moving north from Kovel, but this involves crossing the Pripet River, which is lined with swamps on both sides. On the north side the Russian line of retreat is protected by the imperial forest preserves of Bialowies (Bialowicza), thirty miles wide. These forests are famous for containing a herd of a few hundred aurochs, the last remnant of the European bison, which have lived in this region ever since the Pleistocene era. The central army group, under Prince Leopold of Bavaria, striking west from Warsaw has reached the forest north of Brest-Litovsk, but it remains to be seen whether he will be able to go thru it with sufficient speed to catch the Russians. It will be remembered that the Russian army in the north was twice saved from destruction by entering the forest of Augustowo.

The fortress of Osowiec (Ossowetz), which held out for months against the German attacks, was evacuated on the 22d and the fortress of Olita, on the Niemen, five days later, this making the ninth fortress taken by the Teutonic forces within three weeks. The only Polish stronghold of the first or second line of defense which remains in the hands of the Russians is Grodno on the Niemen, and this may soon share the fate of the others. As to the cause and circumstance of these captures there are various accounts. One Russian report of the evacuation of Osowiec says that "the German losses surpass imagination," that they stormed the fortress almost daily, expended more than two million shells, and sacrificed five times as many men as the garrison contained. On the other hand, the official Russian report says that Osowiec as well as Brest-Litovsk was voluntarily evacuated by the garrison, which withdrew in good order after destroying the munitions and defenses. It will be best to quote the official explanation of the operations of the past month:

The War Office in discussing the Russian retreat asserts that everywhere it has been conducted exactly in accordance with the Russian staff's plan, without pressure from the Germans, without haste and without serious loss. Rear guard actions and occasional sudden bursts of Russian offensive have served to guide the German advance along channels and according to a time table dictated by the Russian staff.

As to this, we may doubt whether the Polish fortresses held back the enemy as long as was hoped and whether the time table was so closely followed as is implied in the statement, but it is evident that the Russian object was to preserve their armies by timely retirement rather than to allow them to be cut off in the field or left behind in besieged fortresses, and this object they have attained. Even Novo-Georgievsk was, it is said, not intended to stand a siege, but the garrison apparently did

NEW-MADE RUSSIAN GRAVES NEAR WARSAW

over 20,000, was caught because of the breaking down of the bridge by the heavy guns that they were trying to take away with them. This policy is doubtless a wise one under the circumstances, as it is agreed that the Austrians made a mistake in leaving behind 180,000 men in the fortress of Przemysl and that Joffre saved France by retreating to the Marne instead of attempting to defend the frontier to the utmost.

But while it may be more essential to preserve armies than to protect territory, the Polish people have to suffer for it. The retreating Russians have, so far as they were able, destroyed the crops and granaries in the country and the machinery of the shops in the towns. It is said that 4,500,000 refugees have fled from Poland into Russia proper. Many of these are Jews, since the population of the Polish cities is from a third to a half Jewish. It is against the law for the Jews to go beyond the pale, but under the circumstances the Government has consented temporarily to permit them to live in any Russian cities except Moscow and Petrograd. This does not, however, imply, as it has been interpreted, that all or any of the legal disabilities resting upon the Jews are to be permanently removed.

The Deadlock in the West

The contrast between the eastern and western theater is more striking than ever. On the Russian frontier the battle line has recently shifted two hundred miles and is still on the move. On the French frontier it remains practically stationary. In an automobile one could reach the German lines in an hour and a half from Paris and the fighting of almost a year has neither lessened nor increased the distance. Week after week the official communiqués are filled with a wearying repetition of artillery activity, of trenches taken and retaken, of mining and countermining. The names of the localities fought over remain so much the same that if the cablegrams of six months ago reappeared in tomorrow's paper, only the most constant and careful readers would be puzzled by them.

Our fathers felt the same way as we do when the newspapers continued to report "all's quiet along the Potomac" for months at a stretch. But this is a very different thing. Then it was "only a prowling vidette" who was shot, but in one day now more shells may be fired and more men killed than in the whole Spanish-American war.

General Joffre calls his policy "nibbling," but it is an undetermined question which side is losing the more by the nibbling process or which can stand it the longer. Casualty lists are published at intervals by the German and British Governments, but not by the French. A recent French estimate submitted to the French Senate gives the number of killed as follows: French, 460,000; English, 180,000; Russians, 1,250,000; Germans, 1,630,000; Austrians, 1,610,000; Turks, 100,000; Belgians, 40,000; a total of 5,089,000. But the German lists up to the end of June report only 311,931 killed or died from disease, and according to an authoritative English estimate, the German death losses amounted at the end of the year from 400,000 to 450,000, or less than a third of the French statement. The same English source puts the number of Germans now on the western front at 1,800,000 and on the eastern front at 1,400,000, together with 1,120,000 Austrians.

The Allies outnumber the Teutonic forces on both frontiers. According to the estimates of the British general staff the ratio is 27 to 15 on the western front and 35 to 28 on the eastern front in favor of the Allies. The official German lists to the middle of August add up to 2,277,952 for all casualities, killed, wounded and missing. This includes of course many of the wounded who have since returned to the front.

The Russians are grumbling because the French and English do not attack the German lines in France and Flanders with sufficient energy to draw away some of the German forces from Poland. The French, too, are finding fault with the English for not doing

WORKING AGAIN IN BELGIUM

The Germans are reorganizing the embroidery workers of Brussels after the demoralization caused by the war

more than hold thirty miles of the line, and occasionally calling on their French and Belgian neighbors to help them at that. If Kitchener has an army of three million men it is a mystery where they are and what they are doing. If they are on the Continent they certainly have not made themselves felt at the front. The British troops in Gallipoli are largely colonials. The British troops in France are in part Indians.

The Anzac Zone

When the British made their new landing on the Gallipoli peninsula at Suvla Bay on the night of August 6, it was reported to the London papers that they had cut the lines of communication with Constantinople and that the hundred thousand Turks on the peninsula would be obliged to surrender. It now appears that their success was not so great as was claimed at first and that they paid more dearly for it than was supposed. According to Turkish estimates the landing party lost five thousand men. The official British reports state that their loss was heavy, but that of the enemy heavier.

Suvla or Anafarta Bay is just inside the cape which forms the extreme western point of Gallipoli where the peninsula is thickest, about ten miles across. Just inland is a salt lake, about a mile in diameter but now dry, It was the plan of the expedition to land at Suvla Bay, get as far across the peninsula as possible and also make connections with the northern end of the Anzac Zone at Ari Burnu, about four miles down the coast to the south. The Anzac Zone is so called because it is the position occupied by the Australian-New Zealand Army Corps for the last four months.

Previous landings had been effected under cover of a heavy bombardment by the fleet, but this time new tactics were employed. The expedition was convoyed to Suvla Bay at night and was safely ashore before the Turks knew that danger th eatened from this quarter. But the advance line had not got more than two and a half miles inland when it was brought to a standstill. The British troops had to be content with the ground they had gained by the surprise and so they dug in on a narrow semi-circle around Salt Lake, with the Turkish trenches only forty yards in front.

That part of the Suvla Bay force which set out to make connections in the interior with the Anzac troops also failed of its object. If it had been two hours earlier it might have accomplished it, as there was only one hill separating the two forces when the Turks came in between them.

In order to effect this junction the Anzac troops had made a series of desperate assaults upon the hills in front of them and succeeded in gaining the summits of the Sari Bahr and Chanak Bahr ridges, but not being supported on the left by the Suvla Bay contingent, they had to relinquish their advance positions. The only connection between the two forces now is along the shore, where the British now hold a line of twelve miles. After being reinforced. an attempt was made on the 21st to advance the center of this line and by this effort the Australasian troops secured knolls and ridges about three-quarters of a mile inland. They are, however. still far from reaching the Turkish lines of communications and even if the Turks are cut off from Constantinople by land, they can still use the Dardanelles. tho at some risk from British submarines.

Industrial Commission Reports

The nine members of the Commission on Industrial Relations were unable to make recommendations supported by a majority, but many reports have been written and submitted. Some are signed by four members, some by three and others by two. Those which have excited the most comment were signed by Chairman Walsh and the three representatives of employees or workingmen. One of their many recommendations is that no one shall take more than $1,000,000 by inheritance, the excess to go into a public fund which shall be used for education, social service, roads, irrigation, rural credits and other things. Congress is asked to provide a constitutional amendment forbidding the courts to declare legislative acts unconstitutional. The Rockefeller and Carnegie Foundations are attacked as a menace to the national welfare. Congress is urged to subject them to investigation and regulation. Mr. Rockefeller and his son are held responsible for the Colorado labor war, and the conviction of John R. Lawson is called the crowning infamy of Colorado's bad record. Woman suffrage is supported, and a Federal inquiry concerning wages and labor conditions, with annual reports, is desired. Unrest, the four say, is due to an unjust distribution of wealth, unemployment, denial of opportunity, low wages, and denial of justice in the making and the administration of law.

A report signed by Prof. Commons and Mrs. Harriman finds causes of unrest in the failure of the administration of labor laws and in popular distrust of municipal, state and national Government. It is recommended that a Federal fund for social service be created by a high tax on large inheritances. This tax, it is said, would yield $200,000,000 a year, and the money should be expended by a Federal commission, with the aid of an advisory council, for unemployment insurance, old age pensions, hospitals, industrial education, rural credits, homes for workingmen, etc. The reports, exceeding 200,000 words, are appearing in instalments. They contain hundreds of recommendations, with discussions of many questions.

The Kodak Trust Case

A little more than two years ago the Government brought suit against the Eastman Kodak Company of Rochester, New York, alleging that it existed and carried on its business in violation of the Sherman Anti-Trust law. It asked for a dissolution of the corporation, saying that it had created what was virtually a monopoly by acquiring competing plants, obtaining control of the output of photographic paper, forbidding retailers to sell similar products of other manufacturers, and in other ways. The company's offer to make certain changes in its selling policy and business methods was not satisfactory. The case went to trial in the Federal District Court at Buffalo, and the decision was announced last week by Judge Hazel.

He finds that the company is an illegal monopoly in restraint of trade and gives it two months for the presentation of a plan for meeting the requirements of the law. It controls, he says, from 75 to 80 per cent of the entire trade, and has obtained this control by wrongful acts. Its profits in 1912, he adds, were $[illegible] on

CELEBRATING THE FALL OF WARSAW IN VIENNA

sales amounting to $24,763,407. Competing plants, it is asserted, were acquired and dismantled, the sellers agreeing not to re-enter the business. The company had denied that it sought to suppress competition, saying that its growth had been gradual and due largely to the purchase of patents and the absorption of corporations that had owned them.

General Wood Reprimanded Major General Leonard Wood has been reprimanded by the Secretary of War for giving ex-President Roosevelt an opportunity to make, at the Plattsburg Camp, an address in which the policy and attitude of the Government and of President Wilson (Commander-in-Chief of the Army) were subjected to hostile criticism. Mr. Roosevelt visited the camp at General Wood's invitation, and his address was made on the parade ground. In the course of it he remarked that for thirteen months the United States had played an ignoble part among the nations, had tamely submitted to seeing the weak, whom we had covenanted to protect, wronged; had seen our men, women and children murdered on the high seas "without action on our part," and had used elocution as a substitute for action. "Reliance upon high-sounding words unbacked by "deeds," said he, "is proof of a mind that dwells only in the realm of shadow and of sham." Under the Hague convention it was our duty to prevent, and, if not to prevent, then to undo, the hideous wrong that was done to Belgium, but we had shirked this duty. He denounced hyphenated Americans, professional pacifists, and those who would substitute arbitration treaties for an army, or the platitudes of peace congresses for military preparedness.

In his telegram of disapproval, Secretary Garrison said it was difficult to conceive of anything which could have a more detrimental effect than such an incident. The camp, held under Government auspices, was conveying its own impressive lesson in its practical and successful operation and results. "No opportunity should have been furnished to any one to present to the men any matter except that which was essential to the necessary training they were there to receive. Anything else could only have the effect of distracting attention from the real nature of the experiment, diverting consideration to issues which excite controversy, antagonism and ill-feeling, and thereby impairing, if not destroying, what otherwise would have been so effective." General Wood replied as follows: "Your telegram received, and the policy laid down will be rigidly adhered to."

The Mexican Problem No reply to the appeal sent from the conference at Washington has been received from Carranza at the end of the week, but it is well understood that he will oppose the suggested meeting of leaders and will demand recognition of his so-called Government. He has addrest to Secretary Lansing a formal inquiry, asking whether the seven men who signed the appeal were acting in a private capacity or had authority from their governments. In this way he seeks delay, for he knows that each signature was accompanied by words showing the official position of the signer. He desires delay because he is about to move the offices of his Government to the Mexican capital and also for the reason that the growing losses of Villa will increase his power. The ten days specified in the appeal expired on August 21. All the answers expected have been received, except Carranza's, and another conference of the seven nations will soon be held in Washington. Our Government has published a brief statement saying that it has not had under consideration "any particular man" as a candidate for the provisional Presidency. This was due to reports favoring the candidacy of Vasquez Tagle, formerly of Madero's cabinet

There have been conflicting reports about the fighting in the vicinity of Torreon, where Villa sought to check the northward movement of Carranza's army, commanded by Obregon. Probably Villa has been defeated. It is admitted that one of his generals, Pereya, was killed at Torreon, and that another, Hernandez, was mortally wounded. Some reports assert that Villa's army is breaking up for lack of money.

A conservative estimate made by the resident Red Cross agent, is that about twenty-five persons die every day of starvation at the capital. Carranza says that there are no deaths there from that cause, but his denial leads the agent to persist in his assertions. There is great destitution in other cities. American ranchmen near the boundary in Texas and New Mexico still suffer from the attacks of bands of Mexican outlaws.

WAITING TO BE FED IN MEXICO CITY

The soup-line of hungry women and children waiting for the food distributed by the American Red Cross

Hayti to Be Controlled Our Government has decided to assume control of the financial affairs of Hayti for ten years. It is proposed that all of the ten custom houses shall be in American hands, and that there shall be a constabulary, both rural and municipal, commanded by American officers. This fiscal protectorate will be more comprehensive than the one in Santo Domingo, where about half of the customs revenue is turned over to the Government and is expended without American supervision. In Hayti a part will be set aside (as in Santo Domingo) for payments on the foreign debt, but use of the remainder will be under American supervision, to which in fact, all of Hayti's receipts and expenditures will be subjected. Secretary Lansing has issued this statement:

> We have only one purpose—to help the Haytian people and prevent them from being exploited by irresponsible revolutionists. The movements in which these are engaged are not properly revolutions: they are unorganized enterprises which involve no question of principle, and they are ruining the country. While they are in progress, people are starving in the streets of Port au Prince [the capital] because they cannot secure the supplies of food which abound in the country. Things have been going from bad to worse, and something must be done. The United States Government has no purpose of aggression and is entirely disinterested in promoting this protectorate. We have not even asked for Mole St. Nicholas.

It is understood, however, that the Haytian Government has offered Mole St. Nicholas to the United States and that President Wilson declined to take the port.

The treaty or convention providing for the protectorate has been laid before Hayti's Congress. At first it was reported that a majority of the members opposed it, but now it is said that approval will be granted before September 17, the limit fixed by our Government. It is understood that rejection of the treaty will be followed by an enforcement of its provisions. We have 2200 marines in the country and the number is speedily to be increased. Immediately after the expected approval, our Government will make the plan effective without waiting for ratification of the agreement by the Senate at Washington. It is expected that this ratification will be granted, partly because the protectorate will provide for payments on the foreign debt, thus, probably, preventing any attempt by European powers, after the end of the Great War, to collect these debts by force.

THE CONQUEST OF COMMERCE

HOW THE TRADE MARK "MADE IN GERMANY" WENT AROUND THE WORLD

BY EDWIN E. SLOSSON

We do not hear quite so much as we did a few months ago in England and America about "capturing German trade." It is obviously not so easy as it seemed at first even with Germany out of the way. The unparalleled development of German industry and commerce has been accomplished by scientific methods and organization and it is only by similar study that any country can hope to maintain its economic independence and secure its fair share of international trade. Before the war it was common for British writers to hold that German prosperity was fictitious and unstable because it was built up by methods contrary to the laws of sound economics, such as the maintenance of a high tariff and the practise of selling in foreign markets at less than cost. But the commercial advance of Germany in the last forty years is not so surprizing as the endurance she has shown in the past year. Certainly no other country in Europe could have stood for so long such a strain with its commerce practically cut off and most of its able-bodied men withdrawn from productive industry. The British nation, tho unexcelled in courage and wealth, would have been starved into submission within a few months under like conditions. The following article is intended to show some of the reasons for the energy and stability manifested by the German industrial system.—THE EDITOR.

IT was at our centennial in 1876 that German manufactures were first brought to our notice. The impression they made was not favorable and the Germans themselves acknowledged that there was a reason, for the articles in general were *schlecht und billig*. The British translated this into their own vernacular as "cheap and nasty," and they assumed, quite too hastily, that these adjectives would always be applicable to German products. They still complain of the low prices charged by their German rivals, but they no longer decry their appearance. Quite the contrary; in one of the numerous "War on German Trade" articles now appearing in the British press the explanation given of the crowding of British machinery out of the market is the superior finish of the German make. The British machine is really better, says one writer, but it is sent out with a rough coat of paint, while its German rival is tricked out with colors and gilt lines and has neat letters and arrows showing the points of attachment and how the wheels go round, all of which extraneous adornment deceives the inexpert purchaser into a belief in the superiority of the German make.

But while they were laboring under their original delusion that German goods were necessarily inferior and that nobody would knowingly buy them, the British manufacturers got Parliament to pass a law requiring all German products to be so branded. This legislation proved a boomerang. The British public showed an unpatriotic preference for the foreign product, and the label, "Made in Germany," came to be a distinction rather than a reproach. As the crowning insult there steamed into Southampton one fine day an ocean liner, larger, faster and handsomer than anything the British shipyards had turned out, and strung along its side hung a banner with the strange device, "Made in Germany." Then there was a clamor for the repeal of the act, even for the prohibition instead of the compulsory use of the label, and, if we may believe their commercial rivals, certain unscrupulous firms of Manchester or Birmingham took to branding their own goods "Made in Germany" in order to make them more saleable to Englishmen at home and over seas.

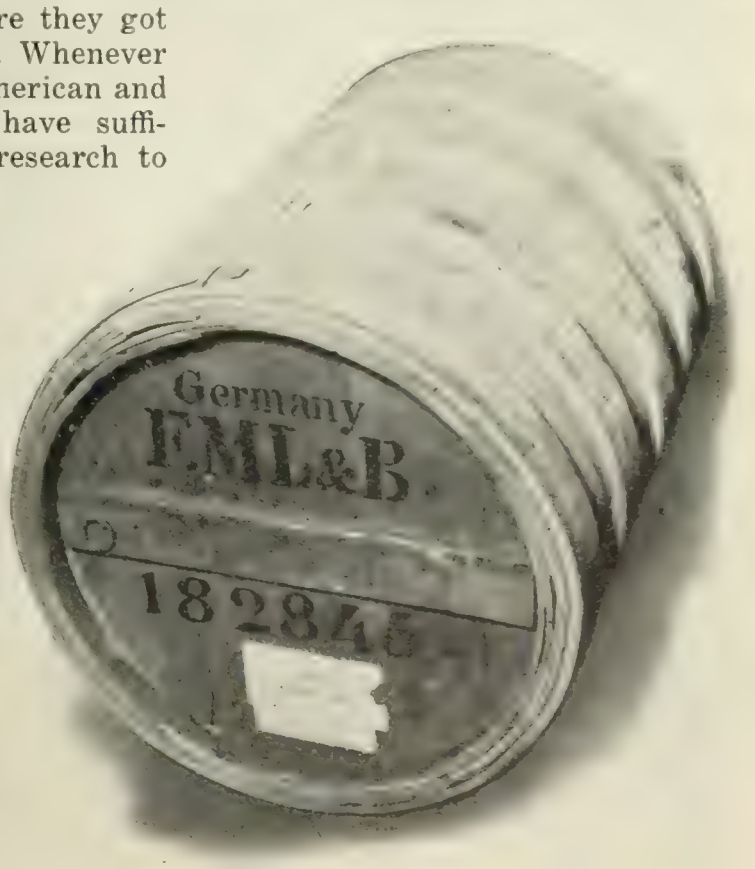
ON THIS WARE
[illegible]

The war has revealed to the public in America and England what the scientific press of both countries has for years urged in vain, that Germany had obtained a monopoly in the manufacture of the complex organic compounds used for dyeing, medicine and photography which placed the rest of the world in a humiliating and dangerous state of dependence. The Government commission appointed since the war began to investigate the situation in Great Britain reported that industries which employed a million and a half men and produced annually goods worth a billion dollars were dependent upon aniline dyes, nine-tenths of which were imported, mostly from Germany.

In 1906 England celebrated a melancholy anniversary, a discovery made fifty years before by an Englishman, which had added hundreds of millions of dollars to the world's wealth but of which Germany had reaped most of the profit. W. H. Perkin, working in the London laboratory of the German chemist, Hoffmann, happened, while endeavoring to make quinine artificially, to hit upon the first aniline dye. The English at that time led the world in the chemical products and might easily have exploited this new field, but to do so required an application of science to industry which the English were then incapable of making. The English universities frowned upon scientific research, and the English manufacturers turned a cold shoulder toward the man from the laboratory. The German universities, on the contrary, graduated trained chemists, and the German manufacturers established research laboratories for them. There are now about two thousand artificial dyestuffs known, and most of them bear the label "Made in Germany." We have seen during the past year the cotton mills of the United States closing down for lack of aniline just when they might be most busy, and great is the rejoicing here whenever a ship from Holland is allowed to pass thru the line of British warships with a million dollars' worth of German dyes. The English textile works are unable to take advantage of their opportunity because they are dependent on Germany for their dyes. They have no scruples about taking over the German patents, but it will be some time before they can train chemists and establish factories capable of supplying their needs, even with the aid of Government subsidies. It is amusing to see that the British Government, while putting an embargo upon all commerce to and from Germany, direct or indirect, including even foodstuffs, is obliged to make an exception in favor of synthetic dyes and these are still allowed to be imported from Germany to England.

Another curious result of the situation is that the bright red trousers which have made the French a

conspicuous target for German bullets have had to assume a more somber hue, not from motives of safety, for the French disdain to adopt protective coloration, but because the alizarin to dye them is pretty nearly a German monopoly. In 1868, when two German chemists discovered the chemical constitution of alizarin, it was made from madder root chiefly grown in France and exported by that country to the value of $600,000 a year. The French Government, in order to protect the native industry, passed a law prohibiting the use of the artificial product in dyeing the army uniforms, but the effort was in vain and madder raising became a thing of the past. Not only is the French soldier likely to lose his red legs, but the Highlander, genuine or imitation, must discard the kilts of which he has been equally proud. There is a shortage of tartan plaid since the colors of this, too, have been "made in Germany." It is also amusing to see that the most British of institutions, the *Encyclopedia Britannica,* is held up for lack of the "India paper" which came from Germany.



TOYS, TOO

The loss of German toys would seriously interfere with an American Christmas, and American storekeepers are pleased at the announcement recently made in London that $600,000 worth, held at Rotterdam by the British Orders in Council, would be allowed to come to this country for the holiday season of 1915

In this perpetual warfare between the farmers and the chemists which is now being waged in the fields of medicines, dyes, textiles, flavors, perfumes and foods, the chemists are bound to win in the long run, in spite of the fact that the farmers, by their command of more votes, are usually able to invoke the arm of the law in their behalf. How greatly the world gains by the triumph of chemistry over agriculture may be seen by the example of that most favored of flavors, the extract of vanilla. In 1876 its essential principle, vanillin, cost $1800 a pound. Now it is sold for $8. Coal tar, which when I was a boy was mostly used for roofing barns and celebrating election returns, has since added hundreds of millions of dollars to the world's wealth.

The progress of industrial chemistry has been so rapid that its importance is not generally realized, yet it is one of the great prizes at stake in the present war. In 1913 Germany exported dyes to the value of $170,000,000 and other chemicals to the value of $70,000,000. The reader who wants to know how this industry has been built up and what we might do to emulate it may be referred to the series of articles on German invention published in the *Scientific American* in 1912. We have space here for only one instance. In 1897, Germany *imported* $3,200,000 worth of indigo. Ten years later she *exported* $2,000,000 worth of indigo. The product was substantially the same, but in the first case it came from the farm and in the second from the laboratory. The change of the current of trade in Germany's favor was due solely to invention of the method of making indigo artificially. I say invention, not discovery, because there was nothing accidental about it. The Badische Anilin und Soda Fabrik kept their large corps of chemists at work on the problem year after year until they had worked it out. It cost the company four million dollars before they got any returns, but it paid. Whenever —and not before—the American and English manufacturers have sufficient faith in scientific research to plan and support a systematic campaign on this scale, they may win a similar success in some of the many fields, equally profitable, still awaiting development. In 1897, the indigo crop brought in twenty million dollars a year, largely going to British India. It is now only a sixth of that because of the competition of the synthetic product, which is cheaper and purer, and it seems likely that the indigo plant will eventually join the madder plant in the limbo of forgotten things.

We have heard a great deal about the marvelous efficiency of the German spies in collecting information about the countries likely to be invaded by German armies. But the German trade strategy is based upon an intelligence service quite as efficient, and this we can imitate with a clear conscience. Here again we find that close cooperation between government, education and industry which is so characteristic of Germany and so strange to us. It is no exaggeration to say that German commercial leaders have more accurate information about the natural resources and trade possibilities of many a country than its own rulers. The representatives of Germany abroad are on the lookout for new openings for German products. If a big contract is awarded in any part of the world and no German bids are in, the manufacturers of that line are likely to get a telegram calling them to Berlin to explain to the Kaiser why they did not try for it. Every German consul is a university man and has had besides four years of special training in international law, languages and business. Several of our universities have undertaken to educate men for the consular and diplomatic service, but have found it useless, for these positions are still regarded as party spoils, and training and experience count for nothing. It is merely by luck that we occasionally get a good man into the service, and he is not likely to survive a change of administration. In the proceedings of the National Conference on Universities and Public Service, published at Madison last

A KEG OF DYE-STUFFS

The mark "Germany" appears on such material, shipped in bulk. The warehouses of American importers are fast emptying and manufacturers are turning to Central America, the Philippines, Java and India for what little natural indigo can be obtained to replace the German synthetic product

IMPORTED BRITISH PATRIOTISM

This brave booklet, decked out in the colors of the Union Jack and published by "Ernest Nister, London," is evidently designed to inculcate appropriate sentiments in the minds of young Britons. An inconspicuous line on the last page reads, *Printed in Bavaria*

December, the statement is made that there is at the present time "not the slightest outlook" for educated men in the consular service. The *Commerce Reports*, issued daily by the Department of Commerce at Washington, indicate what might be done in extending our trade opportunities in this way if we had a corps of thoroly competent and well-trained representatives abroad.

It is the German theory that their foreign trade can only succeed if it is carried largely by German ships. Accordingly they have developed within a few years a mercantile marine that has astonished the world tho still far outstripped by the increase in the British. We, on the other hand, have never recovered from the destruction of our shipping during the Civil War by cruisers "made in England." Great Britain paid us $15,000,000, in accordance with the decision of the Geneva tribunal, for the direct losses due to the "Alabama," but she declined to compensate for the indirect injuries to our commerce. We could not fairly expect that she should, for these are inestimable and continuous. The tonnage of American vessels engaged in over-sea commerce in 1910 was less than a hundred years before.

One other factor in the German industrial system must be mentioned, because it is one of the most important, altho there is no space here to discuss it, that is, the protection of the workingman. The system of state or municipal insurance against accident, old age, disability and even unemployment and the constant effort to prevent men being thrown out of their jobs by the extinction of an industry gives a sense of security that greatly increases industrial efficiency. The evils of unemployment and vagrancy, which are serious in Great Britain and are becoming so here, have been alleviated, if not moved, in Germany.

As the result of scientific management, applied to manufacture, salesmanship and administration, Germany has made greater proportionate gains in wealth than any other country except the United States. But while the wealth of the United States has come largely from the exploitation of natural resources, such as the mines, oil deposits and the fertility of the virgin soil, the Germans have made their gains largely by the importation of raw material and exportation of finished products. In other words, the chief commodity they have been exporting is the intangible and inexhaustible output of their brains. The Germans are still a poor people compared with the English, French, Americans or Belgians, but they were rapidly catching up. Fifteen years ago the aggregate savings, the increase in total wealth, in Germany was a little over a billion dollars a year. For the year 1913 it was over two billions,* which is probably not far below the annual increment of surplus wealth in Great Britain.

The electrical industry has, like the chemical, been from the start under the control of scientific men, so here again the Germans have had the advantage and made the most of it. In 1913, the German exports of dynamos, motors, lamps and other electrical appliances amounted to $40,000,000, while the exports of Great Britain in this line were only $10,000,000. That the English cities are dark now is not altogether for fear of Zeppelins, but partly because they have been dependent upon Germany for their arc light carbons.

The London *Times* estimates that the prize of German trade, which it is striving to capture, amounts to a hundred million dollars a year for machinery alone, and reminds its readers that Great Britain owes in large part her economic supremacy of the world to taking advantage of two similar opportunities, one in 1814, when Europe was ravaged by the Napoleonic war, and again in 1870, when France was crushed and the United States was slowly recovering from the effects of the Civil War.

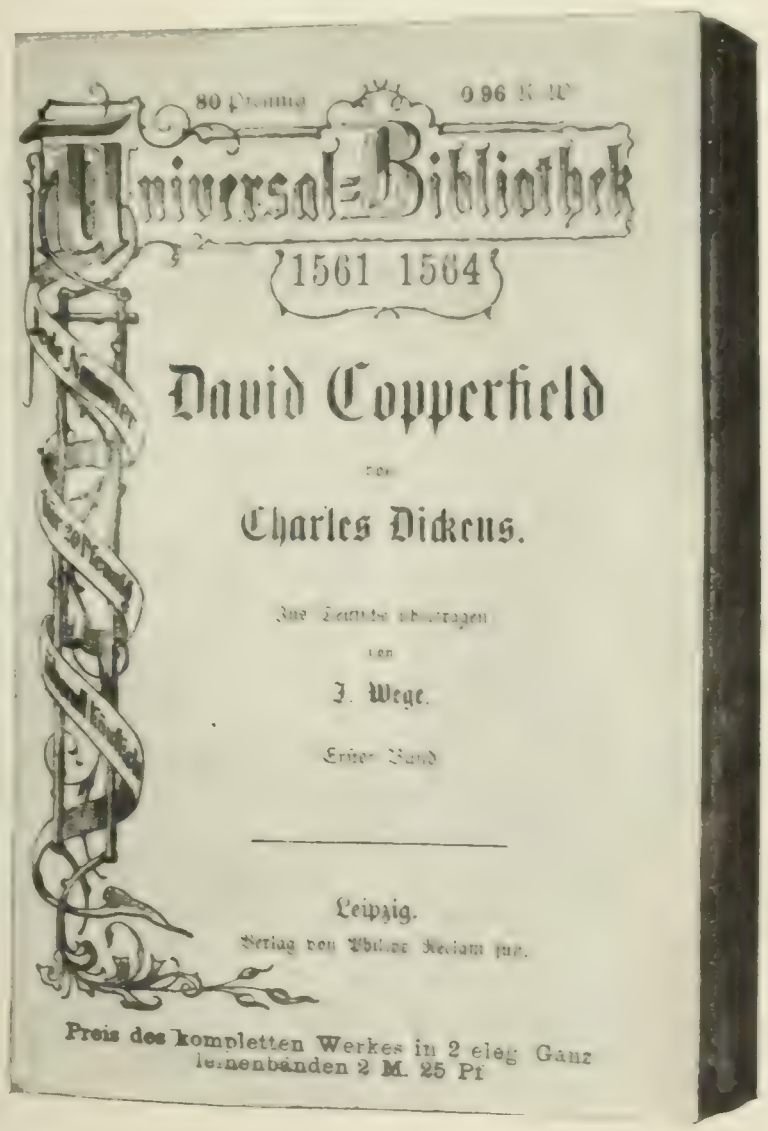
It will be seen that the Germans have made their greatest gains in those industries where knowledge and skill count for most. If this proved the possession of superior brain power there would be nothing for us to do except to become resigned to our permanent state of congenital inferiority. But there is no reason to think that the modern Germans are superior in natural ability to other nations or to their ancestors of the days when Germany counted for little in the commercial world. Their advantage lies in the fact that they are better educated. This is true whichever end of the educational system we consider. More of them can read and write. More of them have received the highest technical training, fitting them for the advancement of science or commerce. The percentage of illiteracy among the young men entering the army is 0.2 per cent. Among the corresponding class in the United Kingdom the percentage of illiteracy is 70 times as great, in France 165 times, in the United States 190, in Belgium 425 and in Russia 5000 times as great as in Germany. This handicap of ignorance becomes in-

APPLIED SCIENCE

This photograph from [illegible] is the point at which all [illegible]

*There are many estimates of national wealth. I am using the figures of Dr. Helfferich as quoted in the December *Annals*.

creasingly burdensome to a nation as it enters the more technical field of modern industry. More new books are published in Germany every year than in Great Britain, France and the United States all three together. And if we go by substance instead of by numbers the Germans are much farther in the lead. I am not here venturing an opinion on the vext question of relative literary merit or frequency of original genius. But if we cut out from the book lists fiction and all literature of a frivolous character and consider only those books which contribute directly to national efficiency by giving information about the past and present of the world we live in, we shall find that the German has a much better chance to get such knowledge than the reader of any other language.



WHERE GERMANY LEADS
No other nation has shown such enterprise in exploiting the results of chemical research. Dyestuffs worth $170,000,000 and other chemicals worth $70,000,000 were exported in 1913

In fact, it was easier to obtain German books in this country than American because of our lack of means of getting publisher and reader together. For instance, when I was in the University of Wyoming I would receive every little while a package of books from Germany without my asking for them, all new, attractive, real contributions to the subjects I was interested in, and cheap. I could not bear to send them all back, so I bought many more German books than I had money to afford or time to read. But to buy an American book I should have first to hear of it, then to guess whether it was good for anything from the advertisement or the review, neither of which is altogether dependable. Then I had to hunt up the publisher and his address and the price in case these were not mentioned in the review, and finally—perhaps—would order and pay two to five times as much as for a German book of equivalent character. Nowadays it would be still harder, since our Government, by putting books in the parcel post, has made the people in the western half of the United States pay two or three times as much for getting their books, since these are mostly published in New York. In Germany one can usually buy a book quicker than he can get it from a public library. Consequently one buys books.

The German Government also aids in the circulation of periodicals by making every postmaster a subscription agency. Anybody can walk into any post office any time and lay down his money for any paper or magazine for any number of months. That's all. The Government does the rest. In the United States one has to hunt up the address of the publisher, write him a letter and make out a money order; afterward, perhaps, he finds he could have got it cheaper by clubbing it with some periodical he did not want.

So much has been said about the superior efficiency of the German school system that it is not necessary to consider it here. The American school year contains about 180 days. The German boy goes to school 240 days in the year and, counting in time saved in other ways, he gains from two to three years in his school life. These may be spent in the numerous technical and commercial schools, of which we have few counterparts. The adoption in Germany of the metric system and simplified spelling also means a saving of time and mental tissue comparable to throwing out the spelling book and compound numbers from our schools and a gain in efficiency thruout life. It is lucky for the rest of the world that the Germans still stick to their cumbrous grammatical forms and Gothic type.

Bearing more directly upon the matter of trade expansion is the German system of foreign schools, which numbered 1200, with 60,000 pupils in China, South America, Asia Minor and at strategic points elsewhere. These schools have proved so valuable in extending German influence in foreign lands that a plan had been prepared before the war for the establishment of a number of German schools in China for the education of native youth in commerce and industry. In 1912 a university was opened in Hong Kong for the purpose of promoting British interests in China by similar methods. The University of Chicago a few years ago had under consideration a magnificent project for the educational development of China on American lines, but nothing seems to have come of it. Our mission schools, tho founded primarily for another purpose, have done splendid work in spreading Americanism in China, as they have in Turkey, Hawaii and elsewhere, but their resources are limited, since they are supported by the voluntary contributions of American churches. If associations of American manufacturers would provide the mission schools with American machinery and aid their commercial departments, it would pay them well in the long run, and not very long, either, for we are already finding that the Chinese and Hindus and South Americans who have learned how to use our plows and engines in our colleges will demand them after they get back home. When our Gov-

CHEAP BOOKS
Uncopyrighted literature and translations are published at five cents a number in paper and fifteen cents bound by Reclam's *Universal-Bibliothek*, which now contains five thousand numbers. The Tauchnitz reprints of British and American authors are the delight of our tourists. Recent illustrated and scientific works are also much cheaper than in the United States. Dickens is reported to be the favorite reading in the German trenches

ernment remitted the Boxer indemnity with the understanding that it be spent in educating Chinese in the United States, it was not only a generous act but a very shrewd piece of commercial strategy.

The establishment of schools in foreign parts and the education of foreign students in home universities constitute a form of national expansion to which nobody can object and one which is especially suited to the genius of the American people. There is now being matured in private conferences a very comprehensive plan for the educational invasion of Mexico and South America by the united efforts of educational, missionary and philanthropic agencies, and in this movement our commercial interests and even our Government might profitably coöperate.

When we come to the question of whether we can adopt German methods to advantage we are struck by the curious fact that the prosperity of Germany has been built up on principles in many respects quite the opposite of those generally held with us. For instance, the American Government intervenes in business to prevent combination and restore competition. The German Government intervenes to prevent competition and restore combination. Even the labor men and socialists of Germany favor the formation of syndicates because it makes the conditions of employment more stable and increases wages and number of men employed thru expanding the industry. The industries which have made most progress in Germany have been those most completely syndicated, like the steel, potash, dyes and glass business. But the form of combination favored in Germany is not the American trust, but the cartel, which is essentially a marketing syndicate, regulating prices, output and share of production. The cartel does not destroy or absorb small producers, but, on the contrary, enables them to survive by protecting them from the competition of the big ones. But the cartel is just what the Sherman act was designed to prohibit. In America protective duties are attacked on the ground that they favor the formation of trusts. In Germany they are advocated for that same reason. Our Government prohibits railroad rebates in behalf of special industries. The German Government grants rebates or manipulates freight rates on the State railroads to help industries that are endangered or are ambitious of foreign expansion. In this country it is regarded as an unanswerable argument against the tariff if it is discovered that a protected article is sold cheaper abroad. In Germany duties are imposed with the express purpose of enabling the manufacturer to sell cheaper abroad. In this country it is considered an absurdity, if not a crime, to maintain a duty on a product, especially agricultural, which can never hope to be produced as cheaply as it can be imported. In Germany it is regarded as the duty of the Government to permanently protect an industry like agriculture, which is necessary for the economic independence of the state. In America it is thought desirable that the different branches of an industry be kept in separate hands. In Germany it is thought desirable that each industry should control all its sources of raw material and turn out a completely finished product; for instance, that a steel plant should own its own iron mines, coal mines, railroads and ships.

"PERFECTLY NEUTRAL"

A soap label that shows how the legend, *Made in Germany*, is added with a rubber stamp in order to comply with our customs regulations when the original label lacks it

Our cities are ruled strictly and in detail by the state; the German cities are self-managed and branch out into many enterprises considered improper in America. In Germany office-holding is a life job for which a man receives professional training; we regard administration as an occupation for amateurs and believe in rotation in office.

Americans think it wrong for any department of the government to make a profit. The German Empire gets over thirty per cent of its income from its remunerative enterprises, and the annual gross receipts of the Empire and states from such sources is $700,000,000. In America the combination of railroads and steamship lines is forbidden; in Germany it is encouraged. The German Government is the partner and promoter of German business; the American Government aims rather to regulate, to correct and to chastise. In short, the German strives for organization; the American for disorganization. The German ideal is coöperation; the American is competition. The Germans believe that competition is a sort of industrial warfare, and as such should give place to a permanent peace. The Americans hold that competition is "the life of trade," a normal state of affairs. Germans virtually say, "strife with other countries but peace at home." Americans say, "peace with other countries but strife at home."

Because Germany has, by acting upon these principles, become one of the foremost commercial nations of the world it does not of course follow that we should repudiate such American views as I have crudely sketched in the paragraphs above. But it seems that our traditional views and practises cannot have the universal validity we customarily ascribe to them when we find success achieved by pursuing courses quite the opposite.

AS SUMMER WANES

BY CLINTON SCOLLARD

The chaliced rose and lily-tower
Have had their brief and fragrant hour;
No more within the poppy-urn
The drowsy orient embers burn;
Denser the dews the dawns distill;
  In loitering wise the rillets flow,
And plaintively behind the hill
  The dying flutes of Summer blow.

The thrush is pensive, day-long broods
Within the cloister of the woods
And only with the twilight flings
Upon the air her rapturings;
The cricket chirrs; the locust chides,
  High-hidden on some drooping spray;
And like a barque down amber tides
  In dreams the Summer drifts away.

THE CHAUTAUQUA IDEA

CONDUCTED BY FRANK CHAPIN BRAY

CONTINUOUS education is the phrase now used by educational specialists to indicate the development suggested by the belief that it is never too late to learn, or, as the Chautauqua motto has it "education ends only with life." Professor Earl Barnes recalls that our state educational systems were originally narrow in scope and designed to teach but seventeen per cent of boys of school age. Then they broadened to include girls; kindergarten for the earlier and high schools for the later years came in; and now state institutions reach approximately one-half of all the people, in many ways serving adults formerly considered beyond school age. Behind all this educational machinery the important development has been a change of belief which we call genetic or evolutionary. We realize that life is progressive. Each stage is important, and each one must be lived vigorously and well if the succeeding one is to be worthy. The desired culmination is an honorable old age intelligently related to life.

The most remarkable man in education in this country resigned from the presidency of Harvard University when he had reached that age to which the Bible refers as the allotted span, to accomplish, as he said, some important work; and since that time he has astonished the world. Leaders may be found everywhere who are old men. The movement to use the school house as the community center is a sign of the democratic educational times. Says Professor Barnes:

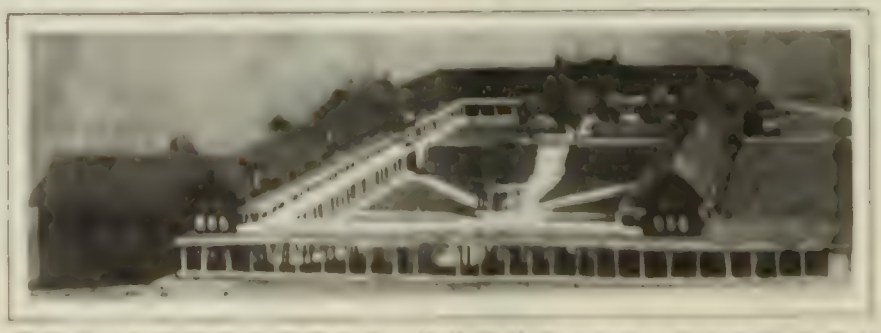
> The psychology of the matter is simple. If we have a vital nervous system we organize our nerve cells into groups in relation to theories and philosophies. They have to be organized and shaped up, for when the impressions have lain dormant for a while they become stale, and when your nerve cells get stale it is time to freshen them up or you grow old, really old. . . . Chautauqua exists today, because it offers intellectual stimulus to old people. A human being who neglects his nervous system has at the basis of his earthly life which should be the center of interest, dull weariness and sheer monotony, and life loses its savor. Desire fails, and to prevent this failure the man must have continuous education. And so we must develop in every center of community life continuous lines of education for the benefit of the old people.

The need of combining both the written and spoken word in adult education is also emphasized. Neither can stand alone. By itself the spoken word is frothy and passive; the written word needs the striking contact of personality. Today all education is suffering from neglect of the book. The problem is how to restore the book and how to provide a system of continuous education for adults which shall combine the book and the personal appeal.

Gifts exceeding $9000, nearly all in amounts of less than $100 each, were made to Chautauqua Institution on "Old First Night," the forty-second anniversary of the opening exercizes of the first Chautauqua Assembly. This popular form of endowment is to be applied to Summer School scholarships and improvements to various buildings. In recent years a new type of inexpensive but artistic summer school classroom has been devised by the arts and crafts department for Chautauqua, and the extension of these units to make a unique quadrangle group was one of the special objects of "Old First Night" gifts this season.

"Beginning with Wisconsin, four years ago, eleven states have passed laws looking toward the full use of the school machinery not only as that use affects the school children, but as it affects parents and the older youth of the community as well. As a practical result of right legislation in Wisconsin we have gone on to a total of more than twenty-five thousand community meetings in the school houses of the state during the past season, and there has not been a single case of disorder or of irritation.

"Such a law, to be right, must be based on President Wilson's wonderful definition of democracy: 'Citizens going to school to one another in the common school to understand and answer public questions as hitherto only representatives of the citizens have gone to school to one another in the buildings provided for them.' The beginning of that is the establishment of an all-inclusive citizen organization. It can be done by putting the instrument of answering public questions—the ballot box—in the school house, shifting it from the livery stable and from other unworthy places, and placing it in the public school. The installation of the voting instrument in the school house implies the organization of the citizens into a mutual education class for the discussion of those problems on which they will have to vote.



"By installing the school principal in office as clerk of the community, we will ultimately simplify the whole system of American government. 'Boss' control of American politics is the knowledge of secrets of shame. The only person who can beat that control is the community secretary, the guardian of our other secrets, our ideals, aspirations, the noble things in our character. He is now in charge of our dearest possessions, our children; put him also in charge of our larger aspirations."—*Chautauqua address by E. J. Ward, State Adviser of Civic and Social Center Work, University of Wisconsin.*

"We do not claim that we shall be able to reform all of those who come into prison. But we do believe that we shall demonstrate two things, first, that all our penal institutions must be educational for all capable of reform, and second, all institutions for those who are not educatable and who cannot safely be restored to society must be custodial in character and must take permanent care of the social waste in a kindly way but in such a way as to prevent its propagation."—*Katherine B. Davis, Commissioner of Corrections, New York City.*

The Jewish Chautauqua Society has been sponsor for successful lecture courses in Indiana in summer school sessions at Knoxville, Tennessee, and the universities of Virginia, Minnesota and Michigan.

THE COMPLETED GROUP AS PLANNED
A model of inexpensive and artistic summer architecture. It will cost about $50,000 to complete the quadrangle, with added dormitory schools, a College court, pergola, and dormitories for scholarship holders

THE BUDGET AND HOME BUILDING

BY HELEN LOUISE JOHNSON

STATISTICS regarding budgets are dry reading and worse hearing. To those who become interested in the economic principles involved, the figures assume a different aspect, but it is only when it is *your* budget, or *my* budget, that we begin to see something in it and deem budget-making worth while.

The budget must be shown to people as the only life preserver which will keep them afloat in the sea of hard times. It has to be presented in such a way as to prove the old saying, "If we had more sense we could have more fun."

In my first article on the budget, published in The Independent of March 29, it was stated that prosperity could be increased only in one of three ways: by producing more efficiently, choosing more wisely, or consuming more intelligently, and that of these three the last was the most important.

The importance of consumption is not difficult to prove. It is easy to see that it furnishes the motive to production, but the part that intelligent consumption plays in increasing prosperity is not so obvious; and that choice actually precedes production seems unbelievable.

In the former article it was stated that a budget is but a prearranged scheme of expenditure, with the purpose in view of getting the most out of one's resources, whether these be money, strength or time. And it was indicated that in many cases failure to make both ends meet, with that margin of safety which will hold them together, comes from a lack of plan, failure to ask the definite question, "What will this income buy?"

WHERE SHOULD THE BUDGET BEGIN?

The statements made in that article have brought many letters in reply, most of them with questions concerning the apportionment of different incomes in relation to stated needs. One of the questions raised was: "What sums shall be *deducted* from the income before a division into groups of expenditures is made?" The answer to this is, "ordinarily none."

Budget makers make different divisions in accordance to their ideas or the conditions under study. The simplest classification is usually the best, because it is the easiest to handle. A budget is merely a plan of procedure based on certain known facts and accepted economic principles. Like all wise plans, it is subject to charge and adjustment to fit modifying conditions.

In The Independent for March 29, 1919, Miss Johnson's article on "Living on the Budget Plan" explained just what the budget is and why it should be adopted in every American household. Here she considers a question raised by the earlier article and goes on to discuss the problem of renting or owning a home.—THE EDITOR

It is usual to classify the income in the five divisions of rent, operating expenses (this including heat, light, service of all kinds, laundry and incidental running expenses), food, clothing, and higher life, as the following actual income and stated expenses are grouped:

Income $1800. Five in family, two adults, three children under twelve

Rent—		
Interest on mortgage, Taxes, Repairs	$216	12%
Operating expenses—		
Service, Fuel, Lights, Household supplies	$270	15%
Food	$450	25%
Clothes	$360	20%
Higher life—		
Life insurance	$136	
Personal items	126	
Charity, etc.	180	
Books, magazines, etc.	63	
	$504	28%
	$1800	100%

Rent is that paid to the owner of house or flat for the use of the premises, or it is the amount we pay out to care for those we own, as indicated in insurance, taxes, repairs, and so forth. One of the items counted in rent is carfare for trolley service or steam cars taking the wage earner to and from his daily work. It belongs to rent because the spot in which one chooses to locate entails this expenditure.

It is a frequent mistake of young people hunting for their first home to locate in an inaccessible spot because the $25 monthly rent is less than the $30 in the city. They figure on their large expenses and forget the little foxes like carfare. Ten cents a day for six days a week and fifty weeks in the year makes $30, and this takes nothing into account but one daily journey of the wage earner. The minimum weekly amount would probably be eighty cents, and this aggregates $41.60 in a year of fifty-two weeks. Yet twelve months at $30 equals $360 yearly rent; twelve at $25 is $300, and plus $41.60 equals $341.60, a possible saving of $18.40. And this is worth saving, if eighty cents will encompass the carfare, and fresh air, quiet and comfort can be found in a more remote spot. But one should figure carefully before choosing.

The use of the budget is based on plain common sense; certain indisputable facts remain, and confront the home maker and wage earner daily. We must be housed and fed, and conditions do control the kind of house we may choose to live in. Often physicians, if they are to build up or retain a practise, must locate themselves in portions of a city where rental values are actually beyond their present means. Ministers have houses thrust upon them. They are rarely in the position to live in inherited or even acquired homes, because they do not locate where they were born, and their salaries infrequently admit of the happiness of building a house adapted to their needs. I wonder if a parsonage was ever selected or built with a view to making the household work easy for the minister's wife.

In such cases the amount which has to be paid for rent is a fixed sum, and this will influence the adjustment of the remainder. In a case where those making the budget determine that the amounts they must put aside for church and charity, for the education of the children, for the possible accidents of sickness and trouble, come first, and are to be definitely set aside, then the budget has to be adjusted from that point of view.

THE RIGHT ATTITUDE ESSENTIAL

Personally—and some things must be stated in that way—this seems to me the only wise, proper and eventually successful mode of procedure, where the income permits. If young people beginning housekeeping, or older ones beginning budget making, can be induced to assume a certain mental attitude toward the income, there would be great gain in family happiness and eventual prosperity. To begin by actually living on less than one earns, means that the division called higher life is protected from all too easy encroachments.

This, I take it, was the meaning of the question asked by our correspondent. His assumption was that the budget should be made after the one-tenth which he devotes to the church, the interest on borrowed funds and life insurance, and a sum which must be devoted to another's care, had been deducted, when for the most part these belong in that

great division called higher life. But this mental attitude toward it is right, and when we can induce people to live on what is left after the greatest demands are arranged for, then we will have taken a great step forward in the moral and ethical progress of the race.

In former days not to save was a social misdeed. The man who lived beyond the limit of his means lost the respect of his fellows, or was pitied because of his misfortunes. The young people of today have far too generally missed that training which develops a knowledge of values or a sense of responsibility in such matters. And the increased cost of living, bearing so hard upon so many men and women, may be seen in years to come as a blessing in disguise, if it compels them to take thought for the morrow and learn to live more simple, healthy lives.

INVESTING IN A HOME

A frequent query concerning income and rent relates to the money invested in a home. Suppose we pay $10,000 for a house in which to live. If we had that $10,000 at interest, it would bring us in, say, $500 a year. Should we then not count out rent as $500 plus the taxes, insurance and repairs? It would seem the proper thing to do, as preparing a statement of assets and liabilities would list the house at a certain sum. But it is not the practical thing to do and disturbs the budget. To begin with, we should budget actual income, or that money which comes in and is paid out for needs and wants. We do not budget what we might, or may have, were the circumstances different in any way.

We had $10,000 and paid it out. We have not that money any more than we have the amounts paid for the overcoat, dress or beefsteak. Food is consumed quickly, clothing more slowly, and houses wear out only after the lapse of years. Yet we are consuming or using the house just as certainly as we are using the things which have to be replaced more quickly. The money paid out for taxes, insurance and repairs on the house actually represents the rent, and if we had not built our home and had the $500 added to our income, our budget would show the increase, nothing more. Let us put it in figures.

We have $3500 income, and we desire to build a $10,000 house. This is our Big Thing, and we adjust our budget accordingly, for we must save that amount of money as quickly as possible. So we choose a house for rent at the lowest price to fill our need. We choose to operate it as reasonably as we can. We choose to save on food and clothes, and put all we can scrape together in the building fund. We succeed, and, having saved part and borrowed part of the $10,000, we build. If we saved all, then our rent is now going to be less. If we only saved $5000 and borrowed $5000, our rent will be taxes, insurance and $300 interest on the $5000, only until that $5000 is paid.

After the house is once secured and wholly paid for, it is usually cheaper to own than to rent. Twelve per cent is a low percentage for rent, and our family of five would find it difficult to secure a house in the region where they now live for $18 a month, which pays interest on the mortgage as well as taxes and insurance. Another family living in a $16,000 house pays $350 for taxes, insurance and so forth, but in the town where they live there is not a house within fifteen blocks of any of their acquaintances renting less than $35 a month. And they choose to live in this neighborhood.

The French and English rule is that one-fifth or twenty per cent of the income should be paid for rent, but it varies all over this country from ten to thirty and forty per cent. If, however, a certain number of families in a given place can find adequate rent for twenty per cent, then it is safe to assume that the rest of the population could do so if they would. The three factors governing the amount paid for rent are sanitary demands, social requirements and standards of living. And of all the factors in the cost of living, the most neglected in study is probably this one of the cost of shelter.

RENT OR OWN?

The question of owning or renting involves many factors requiring discussion. The average family today has an income of from $1500 to $3000, approximately. It is in this average class that we find the most unsatisfied decires. A frequent one is a home of one's own.

Once upon a time, to own one's home was a mark of respectability. Only the shiftless part of the population rented. Now conditions have so changed that we find in the last Statistical Abstract of the United States that over half of our $20,255,555 families rent their homes, while 473,949 are classified as "of unknown tenure." Only some 5,000,000 families own their homes free from mortgage or incumbrance, the largest number of free-owned homes being in Pennsylvania, the next in Illinois, and the fewest in the District of Columbia.

The desire to possess a home of one's own has been a potent factor in the development of all countries, and in none has it been more marked than in this New World. The spirit which drove our pioneers westward and ever westward was not mere adventure, nor by any means the restlessness which marks the present age, but the desire for possession, for land, for opportunity, for space and a hearthstone of one's own.

The desire for a permanent home is still inborn, but there is a great army of renters forced into the nomadic life of the "folding Bedouins" by the shifting conditions of industrial life, the rapid changing of land values and the growth of big business. How can a man become sufficiently interested to desire to add his contribution toward improving a city, or even preserving the house he lives in, if he has no feeling of permanence? Responsibility is not engendered by never being responsible for anything, and few can acquire the feeling of ownership thru the use of another man's property.

To own or to rent, therefore, today presents itself as one of our most difficult problems. The monthly paying out, for rent, of money which a man desires to see devoted to buying or building a home of his own, often delays the assumption of family responsibilities.

Mrs. Ellen Richards said that young people are not justified, under present day conditions, in owning a house on an income of $2000 a year, *unless*

(1) They have money to put into it which it will not cripple them for life to lose;

(2) They care so much for the idea of ownership that they are willing to take the risk of losing one-half the investment should they be compelled to move;

(3) They possess the fortitude to give it up at the call of duty after all they have lavished on it;

(4) They care enough for the real education and the real fun they will get out of it to save in other ways what the running and repairs will cost *over and above the amount estimated*. This saving will be largely by doing many things with their own hands.

To be bound hand and foot either by unsalable real estate or by sentiment is an uncomfortable condition for the young family which may find itself in uncongenial surroundings, in an unhealthful situation, or which may need to retrench temporarily.

And all this is true. On the other hand, some influence must be exerted to induce our young people to feel they *belong*, and are a part of the community's well being. This is a social problem as vitally affecting the future of this country as the more spectacular search for gold and precious metals influenced its past.

Watertown, New York

WILLIAM HOOKER BRADLEY

BY DONALD WILHELM

THERE is hardly any person, married or single, who cooks; there is hardly any person who eats or reads in any civilized big town or little town anywhere under the sun who is not indebted to William Hooker Bradley, Chief Engineer of the Consolidated Gas Company of New York.

William Hooker Bradley — "the Grand Old Gas Man," the gas profession calls him — made water gas possible, and nine-tenths of all gas made nowadays is carburized water gas. Incidentally, gas men say for him — because the Grand Old Gas Man hates interviewers and says nothing for himself—he helped to make the commercialization of petroleum products possible. Gasoline is one such product and nearly everyone — every one who has an automobile or a launch or an aeroplane or a jitney—uses, or would like to use, gasoline. He has been a very busy man.

By his own self-made efforts he has climbed every inch of the way to his place high up in the Consolidated Gas Building. He climbed out of New Haven, Connecticut, without going to Yale College because he had to go to work instead. He climbed out of Brooklyn, after having helped, in the yards of the Continental Iron Works, to build the famous "Monitors." He went to the Pennsylvania oil fields and started a boiler shop beside Oil Creek and nearly every American newspaper hailed him as a second Fulton when he launched on that distinguished stream a better boat than Fulton built—a steamboat that could run while it whistled and could whistle while it ran. And still he is very young for a man of seventy-seven, perhaps because he has been so active, perhaps because he has not eaten a lunch for forty years.

All his life he has been fighting gas. All over the world in the gas profession he is known as Edison is known in the electrical profession. He is known for the only reason any man is ever widely known—for his achievement. He is known for having done something greater even than building the Astoria plant, whose holders and retort houses are the largest in the world. It was he who brought about the manufacture of water gas. Nearly all gas is now made the Bradley way. There are now ten thousand patents covering elaborations of the original principle that he perfected. He came back from the Pennsylvania oil fields to continue building gas holders and plants for the Continental Iron Works. He erected and as engineer in charge operated New York's old Forty-fourth street plant, which stood where the city's greatest ocean piers now are building. That plant is a historic one in the annals of gas. In it Mr. Bradley for the first time successfully used naphtha to get the candle power of his water gas up to a practicable standard. He took from the Standard Oil Company its oil refuse and used it. In doing so he discovered a new use for naphtha and for its first cousin, gasoline, both of which, like the refuse, were by the Standard Oil Company up to that time considered a drug on the market. He kept on using naphtha, it is said, until another pioneer came to make the gas engine popular, and then the Standard realized its value and took to processes of its own manufacture that selfsame product.

© *International News*
THE GRAND OLD GAS MAN

It was no more than natural that he should have been made engineer of the Municipal Gas Company; it was but natural that Chief Bradley of the Municipal Gas Company should have been made chief engineer of the Consolidated Gas Company when all the gas plants on Manhattan Island were united in 1884. It was his suggestion that may be credited with the building of the Astoria plant. And he put the Bronx on the world map when he achieved a tunnel from the Bronx to Astoria to carry gas mains. The plant is a huge one, the tunnel one of the most difficult in existence. Only two years ago with President Cortelyou he stood a little back from three feet of rock that separated the Bronx from Astoria, prest a button and blasted the rock away.

One would think that with that roaring salute Mr. Bradley would have been willing to retire to a life that is less like that of a fireman —forever subject to interruption. But he is still regularly at work. He does not golf. He does not eat lunches. At seventy-seven his hobby is work.

THE WORLD OVER

Diminutive Policemen

"Gimme some handcuffs!"

That is the cry of the small boy before whose dazzled eyes is held the opportunity of becoming a policeman, a boy policeman, to be sure, but a sure-'nough policeman with a badge and captains and lieutenants and everything. He does not get the handcuffs. But he does take a pledge to be honest, trustworthy, loyal, helpful, polite, obedient and brave, and to perform a number of duties which tend to make the streets of New York—where the system takes several forms—safer, cleaner and as nearly righteous as boy nature permits.

"It's not so much what they keep other kids from doing as what they keep themselves from doing," says Captain Sweeney of the Fifteenth Precinct, New York Police. To specify, crap games, bonfires, chalk-marks, smoking, scattering of rubbish, breaking of windows, profanity and general rowdyism are under the ban for these three hundred boys—who will be a thousand before the summer is over. They take their work with tremendous earnestness. "The captains couldn't sleep if they didn't report to me every day," Captain Sweeney says, "and the inspector —he's twelve years old—he just about lives here."

The work is not all a matter of repression. Two days a week a teacher from the New York schools comes to instruct them in swimming and life-saving and other things good for small boys to know.

Beside this Junior Police Force there are the Juvenile Police, an organization under the joint auspices of the East Side Protective Association and the *Evening Mail*, and there are numerous Sanitary Squads attached to the school-cities organized in New York public schools. Under the direction of Dr. C. Ward Crampton, who supervises the physical education of the schools, these squads are to be systematically introduced thruout the city next fall. These boys and girls have especial oversight of fly-breeding rubbish piles and such nuisances, and the health officer in each school class can even send the boys out to get their shoes blacked when they need it.

These young guardians of the law have no official status in the New York police force, but they act as a thoroly effective reinforcement of the bluecoats. "You've got to keep the boys under the eye of the police," says Captain Sweeney, and if the East Side youngster can be persuaded to keep an eye on himself at the same time New York is much better off.

When We Save

Thrift is, with most people, an acquired taste. Spending is altogether pleasanter than saving and in times of prosperity we are inclined to consider the fair weather permanent and ignore the possible need of a bank account.

But the uncertain conditions of the past year, with its unusual demands for charity and its increase in the cost of living have brought home to us the thought of economy. "The less we have the more we save" seems to be our policy, for the New York Superintendent of Banks reports saving deposits on January 1, 1915, about $30,000,000 in excess of those of a year previous.

The Northwestern National Bank of Minneapolis puts the same conclusion in different terms by announcing that the average balance to the credit of its several thousands of depositors is $20 higher than a year ago. This is not the first time that it has been demonstrated that savings bank deposits grow larger and capital accumulates faster during periods of depression than during the flush times, when employment is abundant and wages are high.

Organizing the Labor Market

The peddler still comes to your door or stops you on the street to sell pencils or shoestrings, but no one ever buys cotton, wheat, stocks or bonds in this way. The produce market and the security market are organized. It is the remarkable mechanism of the modern 'change that adjusts supply and demand and makes business possible.

Unfortunately this is not so in the case of labor. Labor is still in the peddling stage. The jobless man must search for employment by going from door to door. The demand and supply of labor are not adjusted by any organization of the labor market.

England recognized the evil in 1909 and established free public employment exchanges where applications of workmen for jobs and applications of employers for workmen are recorded. By 1913 there were in telephonic communication 430 labor exchanges, forming a network which covered the country so thoroly that there was an office within five miles of every large group of workmen. In 1912, out of 2,425,218 applicants for work and 1,286,295 applicants for workmen, 1,051,861 positions were filled.

In the United States, 19 states and 15 municipalities have public employment exchanges. Massachusetts has four free employment offices maintained by the state. During the eight years of their operation 170,282 positions have been filled.

In the absence of any central bureau possessing information about the labor market, like the employment office, every manufacturing plant tends to keep around its gates the reserve of workmen that it will need during its busiest season. As a matter of fact different establishments experience their

Paul Thompson

THE ARM OF THE LAW—NEW YORK'S JUVENILE POLICE

FIRE!
Duluth uses this novel method of answering the alarm

maximum demand for labor at different times. A central employment office could reduce the reserve of unemployed workmen by supplying the same workers to different employers at different times. In this way each individual establishment would be able to meet its actual demand without having to keep on hand a large reserve labor force to meet the possible demand.

Aeroplane R. F. D.

From mail coach to aeroplane is a chasm of time nearly a century wide; but a bit of Missouri's Ozark land may soon take that leap with a single effort. According to an Associated Press dispatch "Aeroplane mail service for a part of the Ozark region where the railroad never has penetrated may be established as a result of an investigation by Alfred Bond Lambert, ranging captain of the United States Aviation Reserve Corps, and Frank McFarland, superintendent of mails out of St. Louis."

Nowhere else in America, except in the Rockies, could aeroplane service be used to better advantage. Every channel of travel in the Missouri and Arkansas uplands wriggles on the horizontal plane and writhes on the vertical. While the crow is winging three miles, the hill billy must cover a toilsome ten by road or trail—or fifteen by river.

The old Ozark ferryman in Harold Bell Wright's *Shepherd of the Hills* rejoiced in this ruggedness of the region's contour, remarking that if you take ten acres of flat, it's just ten acres, but if you take ten acres of this hill country and roll it out, the Lord only knows *how* much you have.

All very well from the property owner's point of view! But a bit less pleasing, sometimes, for the traveler, who, once he leaves the railroad behind, finds that the mail hacks regard forty miles a day as rather good going. An aeroplane could cut down the mail schedule in the more remote districts from a ten-hour haul to a forty-five-minute glide.

The old-fashioned biplane will prove itself more "practical" in the Ozarks than the hydro, for the watercourses sometimes wind a distance of 125 miles in a single county. A favorite excursion in summer in southern Missouri is a five-day float trip in a toothpick skiff from Galena down the James River and the White by Branson—a distance of more than a hundred miles. At the end of the voyage the traveler boards a train back to Galena and is amazed to find that the return trip by rail is a distance of less than twenty miles.

Fire Fighting by Trolley

Duluth, Minnesota, has what is probably the only fire-fighting trolley car in the world. It is a part of the city's regular fire department and has rendered excellent service in a section where ordinary fire apparatus cannot penetrate except at a great loss of time.

A strip of land from four to six hundred feet wide and seven miles long forms the harbor of Duluth. This strip is now built up for a distance of several miles with handsome residences and is known as Park Point. The land is so narrow, however, that only one street could be run thru it. The car tracks are laid in this street, but on each side of the tracks the surface is loose and shifting sand beach thru which team traffic can make only very slow progress. A fire-tug was out of the question owing to the shallowness of the water along the shore.

The problem of adequate fire protection was finally solved by the fire-fighting trolley car, which is operated by the city in coöperation with the street railway company. The car is equipped with all necessary apparatus, such as hose, axes, picks, fire-extinguishers, etc. When an alarm comes in from Park Point the car is immediately started down the tracks, with absolute right of way over everything else.

An Organ Out-of-Doors

Band concerts in the park in the summertime are for most American cities the last word in municipal music. Portland, Maine, has, to be sure, a city organ and city organist, both indoors like any other organ and organist. Springfield, Massachusetts, has its municipal chimes, which send tones tuned and secular floating over the Connecticut at sundown. But San Diego has a municipal organ which is played *out-of-doors* and all the year round.

Balboa Park covers a broad mesa back of the principal part of the city and overlooking San Diego Harbor. Here are the fine Exposition buildings, many of them permanent. At one end of the *Plaza de Panama* about which these Spanish-American halls are grouped stands the great organ—a gift representing $100,000 made by John D. Spreckels and Adolph B. Spreckels.

The mechanism, which is controlled entirely by electricity, is protected by a steel frame and concrete housing and a metal curtain which is lowered in front of the pipes when the organ is not in use. But the four manuals are out in the open air and the organist and his audience have neither a roof over their heads nor walls to shut them in. Chairs are placed on the pavement of the *Plaza*, but the music is audible from so wide an area that it is impossible to say just how many hearers can be provided for.

During the Exposition year Mr. Humphrey J. Stewart, of San Francisco, is playing the great organ frequently for San Diego's guests.

A Dry Treasury

To replace the loss of revenue due to the abolition of vodka, Russia is submitting to large taxes. Ninety million dollars a year is the sum that must be raised, and a fifty per cent increase on letter postage and as much more on telegrams is one of the hardships it necessitates. There is to be a kerosene tax, too, and an increase in direct taxation. But the people seem to indicate by their cheerful assumption of this burden their approval of its substitution for the long suffering entailed by drink.

THE NEW BOOKS

LABOR AND OWNERSHIP

Dr. Scott Nearing, whose recent summary dismissal from the University of Pennsylvania is deemed by many an unworthy attack on free speech, gives in his study of *Income* an analysis of the present-day distribution of the annual wealth increment. He cuts thru all the trimmings and technicalities to the raw issue between income based on service and income based on ownership of property, and places the problem squarely before us not in terms of historical justification or in terms of individual efficiency, but in terms of fundamental facts.

The study is essentially statistical; but it is profoundly interesting to every person who has an income or hopes for one. While the author has taken pains to gather all the available data on income distribution, the reader is left with the conviction that the exact proportions are after all not significant. The significant thing is that it is possible to separate sharply the share of the total product assigned to those who render service of various kinds from the share deducted by the owners of various kinds of property, as a first lien on all production. It is significant that property income has become more stable and permanent, whereas service income has become more precarious; that the laws take cognizance of the claims of property to a "reasonable return," whereas they refuse to take cognizance of the claims of the human individual to a "reasonable return" for services rendered. Bonds are protected by courts and bailiffs; but my job or yours carries with it all the risks and uncertainties of industrial mismanagement. The worst feature of the situation is that we are all taught to accept the "rights" of property as ultimate, while the misery and exploitation of workers are interpreted as the necessary consequences of their own folly or inefficiency, a crying injustice to which employers as well as workers are awaking, but all too slowly.

Income. An examination of the returns for service rendered and from property owned in the United States, by Scott Nearing. New York: The Macmillan Co. $1.25.

THE LEGAL TECHNIC OF WAR

For the authorship of *War, Its Conduct and Legal Results*, good fortune allied the scholarly Dr. Baty, who has for years been one of the honorary secretaries of the International Law Association, and Mr. Morgan, professor of constitutional law at University College. They write with deep loyalty to law, historically, morally and practically. With constant consultation, tho the work of each is defined, they have produced a very valuable treatise on the methods from the legal standpoint by which Great Britain acts in war.

The great principles here thrown in their development and action, that regulate the sovereign power at war in its relation to citizens, to aliens, to neutrals and to enemies, are too broad to be confined to one country. These principles are a part of the fiber of civilization, necessary to its health and self-defense. On that account, and because the authors probe many of the legal questions raised during the present war, the book is of value to American publicists and students.

Militia, Martial Law, Laws of War on Sea and Land, The "Goeben" and "Breslau," Spies, Areas of War, the Moratorium, Internment, the German War Book—these topics may indicate the detail character of the book. The vigor and clearness of the authors' English deserve remark, and there is at times a burst of the fine rhetoric that one finds in the great legal classics.

War: Its Conduct and Legal Results, by T. Baty and J. H. Morgan. New York: E. P. Dutton & Co. $3.50.

RECENT VERSE

Collections of verse along a stated line are seldom satisfactory either because they retain so much that is not worth while or because they omit so much that seems valuable. *Pro Patria*, compiled by Wilfrid J. Halliday, suffers for the most part thru its sins of omission. There is included some verse written during the present war, but none of it is of sufficiently high standard to warrant its insertion. Different but having all the vitality of poems of war, are *Songs of the Outlands*, by Henry Herbert Knibbs. Vagabonds, cow punchers and soldiers are among the songsters. The author has a very keen metrical sense, and with this he combines beauty of thought and clarity of expression. The poems are none of them very great in theme or in technique, but of their kind they are distinctly good.

As far apart from these as from pole to pole are the *Sonnets of a Portrait-Painter*, by Arthur Davison Ficke. Perhaps the worst thing one could say about these poems is that they are acutely intensive, lacking universality, tho they are of a distinct excellence and a delicate beauty. Indeed, some of them are on a plane with Sonnets from the Portuguese and are not unlike them. That quality of making every word count its full value is in both these sonnet sequences. To lose the thought in a sea of metaphor is a phase of modernism borne out in a little book of verse coming from England, *The Path Flower*, by Olive T. Dargan. Several of the poems have a dainty loveliness, but what a pity that really good work should often be spoiled by useless verbiage! Poetry seems to be reestablishing itself on a more or less spiritual basis and turning from the erotic field. In this connection such a book as *Lichens from the Temple*, by Robert Restalrig Logan, comes at once to hand. Mr. Logan is a classicist. His work is so sane and his construction is so deft that one reads it with a sigh of relief—even tho wishing that one might be a classicist and yet partake of a little of the vitality and intimacy that are so often debauched in less careful hands.

Our Gleaming Days is more accurately named than little books of verse are apt to be. Daniel Sargent's imagery is mostly that of light and darkness, and his thought, like the traditional fitful gleam, is not always very clear or very illuminating. In "The Blindness of the Day" his philosophy shines most impressively, and a number of the poems have the distinction of youthful idealism in spirited phrasing. In "Rain—October 1914," Mr. Sargent touches the war in a delicate and individual fashion.

Pro Patria, by Wilfrid J. Halliday, M.A. (compiled). E. P. Dutton & Co. $1. *Songs of the Outlands*, by Henry Herbert Knibbs. Houghton Mifflin Co. $1.25. *Sonnets of a Portrait-Painter*, by Arthur Davison Ficke. Mitchell Kennerley. $1. *Path Flower*, by Olive T. Dargan. Charles Scribner's Sons. *Lichens from the Temple*, by Robert Restalrig Logan. G. P. Putnam's Sons. $1. *Our Gleaming Days*, by Daniel Sargent. Badger. $1.

THE RUSSIAN SOUL

The mighty people who inhabit half Europe and half Asia are no longer so distant or isolated that their peculiar culture can be ignored by English and American writers, nor so familiar that it can be taken for granted. As a nation no longer ununderstandable and yet not thoroly understood, Russia has been studied from many points of view, sometimes hostile, sometimes favorable. *An Interpretation of the Russian People*, by Professor Leo Wiener of Harvard University, is a very good sample of the sympathetic appreciations of the country and people which have been especially numerous since the opening of the Great War. The author, altho pro-Russian, is distinctly fair-minded and does not deny any of the evils so glaringly evident in Russian life—the dense ignorance and superstition of the masses; the coarseness, intemperance and sodden conservatism which are their result, and, above all, the constant intermeddling of a benighted Government with every movement toward better things. But he insists that these faults are only superficial and are evidence rather of cramping conditions of life than of the spirit of the race. Even the faults of the Government and of the clergy have at least this good result, that the intelligent portion of the people are awake to revolution instead of being, as in Germany, the retainers of absolutism. Even the peasantry is becoming more and more alive to the faults of the ruling class and will soon demand, thinks Professor Wiener, that the Government be either weeded or ended.

The true Russian spirit, our author insists, is to be read not in political or economic institutions but in the art and literature and philosophy which Russian genius have produced. In every

expression of the national soul he finds two main characteristics. The first is an early Christian spirit of forgiveness and charity, a pity that knows no limits. This is incarnate in such a figure as that of the late Count Tolstoy. The other chief element is pragmatism. "Art for art's sake" is not understood in Russia; there every great thinker has also been a propagandist. A philosophy, to the Russian, is something to be lived. "Hegel, Schelling, Nietzsche have far more affected the daily conduct of Russians than they have that of Germans." Even music and painting must always have their moral in order to please the Russians. Vereschchagin, the great national painter, turning aside from academic instruction and classical subjects to depict the horrors of war, is lovingly portrayed as the truest representative of his fellow countrymen to the western world.

An Interpretation of the Russian People, by Leo Wiener. New York: McBride, Nast & Co. $1.25.

UNCLE SAM, THINKER

American Thought from Puritanism to Pragmatism, by Professor Woodbridge Riley of Vassar College, is a history of philosophy by a writer who does not regard the philosophers of the United States as mere dependents and copyists of the European schools. In the current of American speculation from the first modifications of New England Calvinism to the latest works of the New Realists he finds much that is original and creative. Like all other histories of philosophy the book contains a good deal that will be obscure to the reader who is not familiar with the issues and problems of metaphysics, but the pages are enlivened by many happy analogies and metaphors, such as the "absentee landlord" theory of the Deists, the "glacial age" when the Scotch philosophy dominated American schools, and the "practical working treaty" between British and American pragmatists to shut out German idealism. The book contains a bibliography and an index.

American Thought from Puritanism to Pragmatism, by Woodbridge Riley. Henry Holt & Co. $1.50.

JOHN MILTON

An addition to the Home Library Series comes with *Milton* by John Bailey. This study of Milton's life, character and work fulfills its purpose adequately, this purpose being to give briefly and easily enough data to permit a more intelligent appreciation of the poet's work than would otherwise be possible. The book is unfortunately a trifle cut and dried in tone as tho the writer were slightly lacking in enthusiasm.

Holt. 50 cents.

OLD BATTLES ON MODERN BATTLEFIELDS

The first two books of *Caesar's Gallic War* are published in Latin in so interesting a form as to lure, rather than repel the schoolboy. The text is illustrated with pictures, maps and diagrams; there are copious notes, reading exercizes and vocabulary, so that the student will find all necessary aids to the full understanding of the text in this one book. It is prepared by Harry F. Towle and Paul R. Jenks.

Heath. 85 cents.

A ROLLING STONE

As vagabond he is clever enough to be forgiven his cynicism and flippancy, this hero of Holman Day's new novel, *The Landloper*, but forsaking the byways for

NEW MACMILLAN PUBLICATIONS

H. G. Wells' New Novel

"A novel with the whole world for background"

The Research Magnificent
By H. G. Wells

Author of "The Wife of Sir Isaac Harman," etc.

Mr. Wells' new novel will rank as one of the very best stories this foremost English novelist has written.

"The Research Magnificent" is, in essence, the story of a man who sets out to live the "noble" life. His adventures, his love for a free and beautiful woman and his wanderings make a new type of novel: "a book that has the whole world for background." *Ready September 15. $1.35*

Owen Wister's New Book

The Pentecost of Calamity
By the author of "The Virginian."

"Owen Wister has depicted the tragedy of Germany and has hinted at the possible tragedy of the United States. We wish it could be read in full by every American." —*The Outlook.* *Bds. Fifty cents.*

Katrina Trask's New Book

The Mighty and the Lowly
By the author of "In the Vanguard," etc.

"Mrs. Trask analyses the demand for a new social order. . . . It is an impassioned sermon on the message of Jesus, written with brilliance and power." —*New York Times.* *Cloth, $1.00*

Lincoln Colcord's New Book

Vision of War
By the author of "The Game of Life and Death," etc.

A remarkable war poem describing vividly the life of the trenches and the new brotherhood of man that will come after the war.

Ready in September. $1.25

A. B. Hepburn's New Book

A History of Currency in the United States
By the author of "Artificial Waterways of the World," etc.

Presents the essential facts of currency, coinage and banking as well as the political history connected therewith, from the adoption of the Constitution to the present day.

Ready in September.

A New Book for Boys

Deal Woods
By Latta Griswold

Author of "Deering at Princeton," etc.

This is the fourth of Mr. Griswold's famous "Deal" stories and one which will certainly meet the approbation of many boy readers, for it is full of vigor and the wholesome excitement of school life.

Illustrated. Ready September 7.

A New Book for Girls

A Maid of '76
By Alden A. Knipe and Emile B. Knipe

A most entertaining story of a girl of Revolutionary times, a patriot through and through, but whose family is loyal to the King. Out of this situation the authors have made a most interesting story for boys and girls.

Illustrated. Ready in September.

Col. Robert McCormick's New Book

With the Russian Army
By Robert McCormick

Col. McCormick has had opportunities such as have been given to no other man during the present engagements. He has been at the various headquarters with the Czar and the royal family, as well as in the trenches during actual battle. The story of his travels and adventures make highly interesting reading while, from the military side of the war, the book is perhaps the most authoritative so far published. *Illustrated. Ready in September*

THE MACMILLAN COMPANY, Publishers, NEW YORK

John Galsworthy has written a new novel, THE FREELANDS, a large and vivid presentation of English life under the stress of modern conflict, centring upon a romance of young love—that theme in which he is always at his best.

$1.35 net; postage extra.

Robert Grant in THE HIGH PRIESTESS has written an arresting story of the married life of the modern woman of the present generation whose consciousness of the importance of her own personality and aspirations causes domestic difficulties.

$1.35 net; postage extra.

Richard Harding Davis in "SOMEWHERE IN FRANCE," has gathered together some of the most fascinating stories he has ever written, including "The Card Sharp," "The Frame-up," "The Boy Scout," etc. The title story is of the present war.

Illustrated. $1.00 net; postage extra.

Francis Lynde has written a thrilling novel in THE REAL MAN, the story of a bank cashier in a middle western town who develops from a mere social butterfly into a man of enormous power, energy and resource. Full of ingenious situations.

Illustrated. $1.35 net; postage extra.

Louise Shelton in CONTINUOUS BLOOM IN AMERICA, tells "when, where, and what to plant" in order to keep the garden flowering from early spring to late fall. A thoroughly practical book.

Illustrated. $2.00 net; postage extra.

Jaqueline Overton has written A LIFE OF ROBERT LOUIS STEVENSON FOR BOYS AND GIRLS, bringing out the wonderful romance of his life with its enthusiasms and high spirit of adventure.

Illustrated. $1.00 net; postage extra.

COMING IN SEPTEMBER

FELIX O'DAY

By F. Hopkinson Smith

The Greatest Work of a Master Hand

CHARLES SCRIBNER'S SONS

the beaten track of romance, he lapses into preternatural goodness. Yet even under cover of the necessary sociological problem or two, the author continues to give his best to those oddities of character such as Old Etienne and the Home-made Knight Errant, and mere problems pale in contrast.

Harpers. $1.35.

"THE QUEEN'S NONCE"

With the utmost frankness, "Bartimeus" turns the coat of the British navy inside out and shows the seams as well as the gold braid. Some of the *Naval Occasions* are jolly, some of them sad, but the yarns are spun in true navy-wise fashion and embellished with those nautical phrases which every landlubber, however puzzled he may be, recognizes as essential to the briny flavor.

Houghton. $1.25.

THE SPIRIT OF PLAY

Since the New England lad was advised by his minister to avoid the vain society of young persons our whole view of *Popular Amusements* has changed. Now we seek only to safeguard them and eliminate their bad features. Richard Henry Edwards has prepared a guide to the study of the various forms of amusement which with its bibliographies deals with the complex subject in the sane, scientific, practical fashion that marks the Y. M. C. A. worker.

Association Press. $1.

THE LOEB CLASSICS

Fifty volumes have already appeared in the admirable Loeb series of Greek and Latin authors. The series, for which a New York banker is responsible, is planned to embrace all Greek and Latin writers, requiring we do not know how many of these handy little volumes, in good type, on thin paper, having the original text facing the translation. The new issues include volumes of Plutarch's "Lives," Xenophon's "Cyclopedia," Dio's "Roman History," Ovid's "Heroides" and "Amores," Cæsar's "Civil Wars."

Macmillan. $1.50.

MISSIONS TODAY

A courageous and earnest book springing from study and experience is John R. Mott's *The Present World Situation*. He has seen hundreds of students among the great eastern peoples change from distrust of Christianity to a knowledge and welcome of its truths. Fully realizing twentieth century conditions, he applies to them the unflinching faith in prayer in which our forefathers wrought. Students of world movements, some of them anxious today, will gain confidence from these thoughtful and stirring pages.

Students' Volunteer Movement for Foreign Missions. $1.

SOLID FACTS AND FIGURES

The Statesman's Year Book, always a useful reference work, comes now being indispensable now when we so frequently need information as to the government, commerce, area, navy and population of foreign countries. The new volume for 1915, just received, already shows some of the changes of the war, for instance the cession of Egypt from the Turkish to the British section. There are maps showing the expansion of Prussia, the partition of Poland and the World Colonial Powers Concerned in the War; the way the latter should include Holland and yet exclude Portugal and Japan is a mystery.

Macmillan. $3.50.

IMPORTANT FOR THE CROWD

After reading in the Oct address on *Human Nature and the Economic Mr. Lee* I Lee's contemptuous estimate of the intelligence of the crowd one reads on with suspicion. It is rather disgusting to be told that we have no right to expect absolute honesty of the railroad managers, these managers being about as honest and efficient as the rest of the population. Apparently, the great problem of American prosperity is to encourage the workers to give more service for their money while the railroads get more money and much

the Government to avoid meddling with private enterprises.

Philadelphia. Nash. $1.

HE WHO RUNS MAY READ

The Wayfarer's Library, of which forty volumes are just issued, with more to follow, is a postscript of modern writers to "Everyman's Library." In as attractive and handy form as that successful series, it offers some of the best of fiction and essays for leisurely and untroubled reading. The authors range from Anstey to Walpole alphabetically, and from Shaw to Sienkiewicz in variety.

Dutton. 40 cents each

POLICE EFFICIENCY

Inspector Cornelius F. Cahalane, in charge of the Training School of the New York Police Department, has gathered in his *Police Practice and Procedure* a great deal of general and technical information and general principles for the guidance of policemen. While written primarily for New York conditions, the book will be of use to public officers everywhere, and even to the ordinary citizen desirous to coöperate with his government.

Dutton. $1.50.

A NEW LIFE OF CERVANTES

The author of Don Quixote makes admirers and friends of his biographers and critics, and such is Robinson Smith. His brief biography of *Cervantes* is no stranger to the results of the last quarter century's scholarship. A fuller consideration of the place of Don Quixote in the history of fiction would have been welcome. But the book is a trustworthy and eminently readable volume, vividly written, picturesque, and aglow with restrained enthusiasm.

Dutton. $1.

THE COAST THRU SAVANTS' EYES

A guide-book ranging from physiographic geography to trolley excursions, prepared entirely by experts, as is *Nature and Science on the Pacific Coast*, is worth imitating in other parts of the country. Most of the thirty-two chapters are interesting to any educated traveler; others assume so much technical knowledge on the reader's part that they will be useful only to scientists. Sufficient data to identify the common birds, beasts and flowers could well be added.

San Francisco: Elder. $1.50.

EVERYDAY SCIENCE

The Chemistry of Common Things, by Messrs. Brownlee, Fuller, Hancock and Whitsit of New York high schools, is primarily designed for a textbook, but has an interest for anyone who wants to know what things are made of and how they are made. It is thoroly modern both in topics and treatment. The pictures, both line and halftone, are new and really illustrative. We fear that the complex chemical formulas will not be intelligible, but the text is admirably clear and concise.

Boston: Allyn & Bacon. $1.50.

PUBLICITY

About ten years ago, Ernest Elmo Calkins and Ralph Holden wrote a book entitled *Modern Advertising*. They set forth therein the principles of this business, which can make or break a merchant, and their book was immediately recognized as standard. Many changes in advertising practise have, however, taken place during the interval, and Mr. Calkins now issues *The Business of Advertising*, to bring the earlier volume up to date. The new book is both informative and authoritative.

Appleton. $2.

AMERICAN TRIPARTITE GOVERNMENT

The Political Science of John Adams, by Correa Moylan Walsh, is a comprehensive and critical study of the theory of separated powers. President Adams, "to whom no romance was more interesting than the study of government," was the foremost advocate of a political doctrine of checks and balances, of executive veto, of three distinct branches of the government, and of

Paint serves two ends: it protects the house and improves its looks. The appeal is to your pocketbook and to your pride. One ingredient added to paint will serve both these purposes. That ingredient is

283 Temple Street, Springfield, Mass.

The School and Society

By John Dewey
Professor of Philosophy, Columbia University

Second Edition, Revised and Enlarged

Teachers and others concerned with education will be interested to know that *The School and Society* has been revised and much enlarged. The position of authority on educational subjects which the author holds and the popularity which the former edition enjoyed are indications of the value of this work. About seventy-five pages of educational contributions from the pen of Dr. Dewey have been added, making a book which consists of eight chapters, as follows:

THE SCHOOL AND SOCIAL PROGRESS.
THE SCHOOL AND THE LIFE OF THE CHILD
WASTE IN EDUCATION
THE PSYCHOLOGY OF ELEMENTARY EDUCATION
FROEBEL'S EDUCATIONAL PRINCIPLES
THE PSYCHOLOGY OF OCCUPATIONS
THE DEVELOPMENT OF ATTENTION
THE AIM OF HISTORY IN ELEMENTARY EDUCATION

bicameral legislatures. This book analyzes the theory, traces its rise and fall, and points out some modern lessons to be learned from it.

Putnam. $2.25.

BIRD SALVAGE

Ernest Harold Baynes' book, *Wild Bird Guests*, gives much information not only on the economic and esthetic value of our feathered friends, but also on methods of protecting and encouraging them. The author has shown his enthusiasm in the organization of bird clubs, the workings of which he describes, and thru which he expects to bring about a general interest in the fostering of these important animals.

Dutton. $2.

FOLK WHO WRITE

Mr. Henry James has given up his American citizenship and become a naturalized Englishman. Well, it is a number of years since he ceased to be, as Henry Harland exprest it, a "practising" American.

Once in a while good news comes from England. Here are two items which will comfort those who converse on the present English writers: Oliver Onions's name is pronounced to rime with lions, and Shaw pronounces Bernard as we do instead of Barnard.

Eden Phillpott's twenty stories of Dartmore have in truth grown out of the soil. He selects his setting first. Plot and characters follow. Before beginning *Brunel's Tower* he lived three months with the potters, learning their life and even to shape the earthenware with his own hands.

No better description of our eastern climate was ever given than Mark Twain's reply when asked how long it would take him to prepare a treatise on weather. "Twenty-four hours. I'll go up to New Haven, and in a day and a night there I'll get all the kinds of weather possible."

The other day Mrs. Helen Woodruff's *Lady of the Light-House* as a film play earned enough to build a contagious ward for the Birmingham Alabama Babies' Hospital. Before that the book had been busy, ever since its publication, bringing in funds to the Settlement for the Blind, in New York. It does not need a literary critic to tell the value of some books.

Among the many war charities that have sprung up in Paris is one that for nearly a year has been doing fine work mothering soldiers and refugees, the Pierre de Coulevain Foundation at the Seminaire de St. Sulpice. It is carried on by Miss Hallard, the translator of Pierre de Coulevain's *On the Branch*, and its funds come in response to an appeal in the name of the dead author.

Mr. Louis Untermeyer, whose own poems in his volume *Challenge* spring from the live problems of today, is up in Maine "entirely surrounded by Mr. Longfellow's (or was it Whittier's?) stern and rock-bound coast." We know something would happen when the schools discarded the old fashioned readers! Won't some one tell Mr. Untermeyer who really did mention that style of coast?

Goodly checks have often materialized into nothing half as worth while as the few packets of seeds that were enclosed for a poem published in some dead magazine by L. M. Montgomery long before *Anne of Green Gables* and now *Anne of the Island* were getting her fat on the printers. That payment could be wrapped up in the grass of pottage. A summer ghost of crimson gold and blue it would be of nothing.

Some of the true stories of publishing houses are as happy as any fairy tales told over the counter. While the Macmillan Company were looking for the right person to do a life of Nathan Hale such a manuscript as they planned under Dr. Wilson's supervision of the late called to the unknown writer to tell some of the strangers he found Mrs. Jane Clemmer Reed an eager, wide-awake, kind lady of eighty-one!

EFFICIENCY QUESTION BOX

CONDUCTED BY

EDWARD EARLE PURINTON

DIRECTOR OF THE

INDEPENDENT EFFICIENCY SERVICE

136. Mr. F. K., Missouri. "I am vitally interested in your efficiency articles. For some time my controlling ideal of life has been efficiency in my profession, that of the ministry, for which I am preparing as a student. I already have the best books on natural living. What I desire especially is information leading to success as a social organizer and leader, a strong speaker and wise pastor."

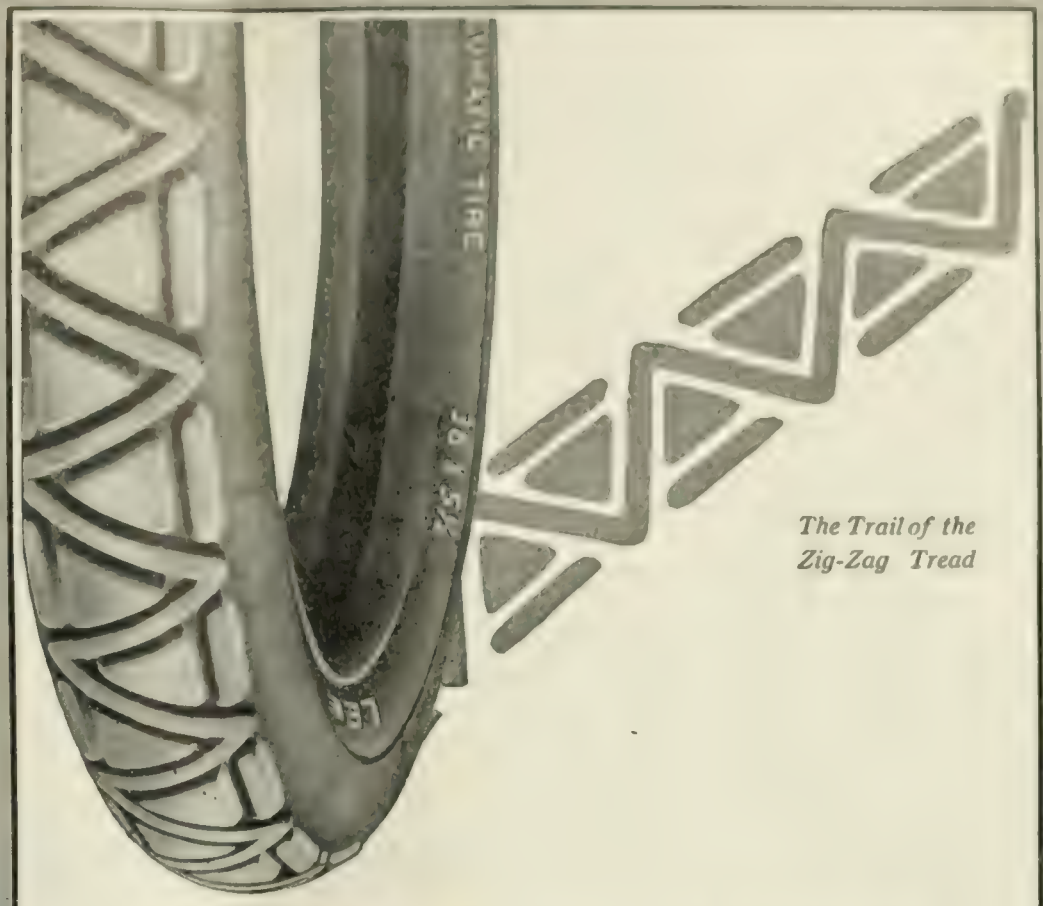
You have made an excellent beginning—a healthy body is fundamental to a healthy soul, and books on naturism are as instructive for a clergyman as books on evangelism. Among the few organizations likely to help solve your problem are the Seabury Society and the Laymen's Efficiency League, both of 49 East Twenty-fifth street, New York. One of the new books of interest to you is Professor Shailer Mathew's *Scientific Management in the Church*. Another is Professor Butterfield's *The Country Church and the Rural Problem*. References previously given to other inquirers may assist you—consult your back files of the Efficiency Question Box.

---

137. Prof. I. N., Colorado. "You are sure efficiency is the right thing. In my case it avails nothing—either money reward or prestige. I can teach one subject better than my fellows—yet some are paid 25 per cent more. My principal and superintendent say I can never be promoted, *merit* will not win promotion. My health is good, but my life miserable. I am thirty-five, engaged to marry, but hesitate because there seems to be no future for me. Should I begin all over again?"

Brace up, man—pluck and perseverance are as much factors in efficiency as are training and experience. You may have disagreeable personal traits or habits that make you unpopular; ask your superior officers *why* you "can never be promoted." Your chances of gaining a better position might be increased if you mastered more than one subject—few high schools or colleges can afford to pay a large salary to a one-subject teacher. Have you enrolled with several teachers' agencies covering your district? Have you studied a good book on business letter-writing, so as to present your case powerfully, when applying for a better position? You might even consult a mail-order expert or advertising writer, on this matter of psychological appeal. Talk things over fully with the woman you love—her intuition may suggest ways of promotion that your man's reason would never dream of. And polish up your courage every morning—you need more grit.

---



138. Mr. M. L. W., North Carolina. "I have been reading with great interest the Efficiency Question Box. I understand that there are so-called efficiency experts who can take hold of any business and by introducing systems put it on a paying basis. Are there instances where such experts were successful in overhauling a farm and putting it on a paying basis?"

A farm is one of the hardest kinds of business in the world to overhaul and make largely profitable. We understand, however, that the feat has been accomplished. Get Rider Haggard's book describing the new Denmark system of coöperative farming, and learn how tracts of waste land were made the most highly fruitful.

In solving your problem, the work of Professor L. H. Bailey of Ithaca, New York, would probably serve you well. Ask your state university for bulletins and reports of its agricultural experiment station. Get particulars of the methods of the Farmers Bureau, 156 Nassau street, New

KATHRYN MURRAY
Dept. 149, 109 N. Wabash Ave. Chicago

York. See former issues of the Question Box for answers to similar queries. And look up the best farm journals, one of the standard being *Rural New Yorker*, 333 West Thirtieth street, New York.

---

139. Prof. A. Y., Oklahoma. "I have read your Efficiency articles with great interest, and applaud very much the undertaking. Here is where I am deficient. Tho a teacher, I lack the power of speaking well before large groups. I have practised debating, with only slight benefit. How can I banish the fear-thought, and do justice to my audience, my theme and myself?"

Write out your public addresses, and read from manuscript until you gain poise; then gradually substitute notes, with complete sentences or paragraphs at beginning only; but always have a book or paper in your hand or on the desk, to absorb surplus attention. Speak from behind a desk until you get the courage to come out—a desk hides the tremble in your knees. Find a way to use a chart or blackboard, and get your audience focused on that, early in the speech. Talk only on a subject with which you are wholly familiar—master of it—and in which you are deeply interested. Announce that you will answer questions at the close, and distribute paper and pencils in the seats, for submission of queries (this breaks up the formality of the meeting and rivets the minds of your audience on your subject, instead of on you). Look over previous issues of the Question Box, for references on will power books and public speaking courses. The psychological and spiritual cure for "stage-fright" is to be so full of your theme that you overflow with it spontaneously as a bird does with song—and forget yourself!

---

140. Miss D. W. B., Ohio. "I would like to take up department store efficiency work, such as is taught in the School of Salesmanship and Social Welfare at Boston. Is it possible for me to analyze my characteristics and abilities so as to tell whether I am suited for such a position? I have had a college education, and am now a private secretary. Such work as I contemplate seems to be of ever increasing importance, and holds possibilities for doing real service among girls who have had little chance or training. What do you advise?"

Your object is a splendid one, the field of humanitarian work for girls is unlimited and hardly touched as yet. If you can afford to give up your position, why not get a place as clerk, saleswoman, or other ordinary helper in a large store, live as thousands of other girls have to live—on next to nothing for their minds and bodies, and nothing at all for their hearts, and base your future mission wholly on facts of your personal experience? Try to arrange a consultation with the social secretary or welfare superintendent of a big department store like Filene's of Boston, where methods appealing to you have been tried out. Expert counselors, such as Miss J. A. Fowler and Dr. Katherine Blackford, should give you valuable suggestions on your fitness for this work. You might also inquire of the Woman's Department of the National Civic Federation, Metropolitan Tower, Twenty-third street, New York.

---

141. Mr. I. E. M., Pennsylvania. I know that will be the true foundation of character, true worth and value are put in the course of the will. Yes I have personal authority in applying this test. Can you suggest literature that may help me to advise you how to gain perfect control of my will?

You must first know yourself, and the cultivation of your will to stop thoughts, emotions, instincts, habits, hopes, desires. Any large library should have books on psychology and human nature by such authors as Hegel, Kant, Nietzsche, Ladd, Jordan, James, Dewey, Starring, Cabot, Eucken, Helen Allen, Starr, Fowler, Dubois, Dewey, Weed, Madden, Bergson, Haeckel, Trine. Read some of these authors at least, who and what you are.

Napoleon is the world's greatest example of human will power. Study his life and what made his will supply the lessons to yourself.

A [illegible] solution of [illegible] lies in [illegible] the motive in a deadline. Re-

less will. Affection is the power, will merely the engine. What is your supreme devotion? Make your will the machine to serve that.

Do something every day you don't like. Practise concentration. Eat less. Bathe and exercize more. Study scientific management. Learn efficiency methods by mail.

142. Prof S. F. M., Massachusetts. "I am a high school teacher, married and have a child. Seven years ago, I had a severe nervous breakdown, from the effects of which I have not fully recovered. I have taught three years, had a hard struggle to stand the pace. Am to change my position soon. Would you advise continuing with teaching or changing my occupation? What line of business might be open, and profitable? I have not saved much money."

Books on household management, previously mentioned in the Question Box, would help you and your wife to save money. And books on health, also previously mentioned, would show you how to regain your strength.

We do not know of any profitable, salaried position that would be open to you in business, your experience and lack of health both being considered. What you need is outdoor life. Have you the gift of salesmanship, and do you live in a populous region? Then perhaps the Curtis Publishing Company, Philadelphia, or the Crowell Publishing Company, New York, would teach you how to manage their subscription business in your locality.

Raising poultry, mushrooms, or special garden products has been found remunerative—done scientifically. Could not you and your wife start such a business while you still hold your position? But first get advice from an expert in these lines.

143. Miss E. D. M., Iowa. "Please tell me how to make some money in travelling, especially during the summer?"

We gladly suggest a number of possibilities, but your own experiences, aptitudes and inclinations must guide you in forming your plans. With a little special training you might serve as companion to aged invalid, or children painfully healthy; reader of character, at summer resorts; demonstrator and lecturer on women's dress in department stores; agent for a book on care of children, household management, or other subject appealing to women; organizer for a woman's mutual insurance society; accompanist or other helper to theatrical people; magazine or newspaper interviewer to prominent men or unique institutions; agent for a popular periodical; collector of names and addresses for some large mail-order house.

Cynthia Westover Alden wrote a book that might interest you. So did Anna Steese Richardson.

144. Mr. H. W. G., Montana. "Will you enumerate some of the best and quickest professions to learn, for a man past thirty, able to spare a few hours every day? I speak and write French better than English, and also speak Italian. I am a moderate drinker and smoker. I also wish to know a reliable character analyst."

The answer to your question mostly depends on your previous experience, natural tastes and talents, ultimate object, immediate facilities. Not knowing these, we can hardly offer specific advice. Your skill in foreign languages would suggest a position in an export or import house, where those languages are in constant use.

Obtain catalogs from Alexander Hamilton Institute, Astor Place, New York; Pace and Pace, 30 Church street, New York; International Correspondence Schools, Scranton, Pennsylvania; University of Chicago Extension Courses, Chicago; Sprague Correspondence Schools, Detroit, Michigan. Select the subjects most appealing, write the schools for personal advice and full particulars.

Your being a "moderate drinker" stands in the way of your getting a first-class position in any worthy trade or profession. We hope your ambition will prove stronger than your bad habit.

See back files of Question Box for names of character analysts.

STEINWAY

THE purchase of a Steinway for the home means the selection of the ideal piano, tone and workmanship being of first importance.

It is the price of the Steinway which makes possible its supreme musical qualities, but you will find that the Steinway costs only a trifle more than many so-called "good" pianos.

Style V, the new Upright, and Style M, the smallest Steinway Grand, offer a special advantage in price. They embody all the distinct Steinway features, but, being of reduced size to meet the requirements of the modern home or apartment, are offered at very moderate prices.

We shall be glad to send you, free, illustrated literature, with the name of the Steinway dealer nearest you.

FREDK. I. WARBURTON, Treasurer

THE NATIONAL SUGAR REFINING COMPANY OF NEW JERSEY

New York, September 11th, 1915.

The Board of Directors of this Company have this day declared a dividend of ONE AND ONE-HALF PER CENT. (1½%) on the Capital Stock of the Company, payable October 1st, 1915, to stockholders of record at the close of business September 20th 1915.

H. F. MOLLENHAUER, Treasurer.

The Market Place

HIGHER PRICES FOR STOCKS

At the beginning of last week the New York market for securities was still deprest by the sinking of the "Arabic." Current reports that the President might dismiss the German Ambassador, call a special session of Congress and ask for a large appropriation to be used in preparing for hostilities, caused sharp declines. But there was recovery before the close on Monday, and the course of prices was an indication of strength at the base. The war order shares began to regain their losses. Monday was the only gloomy day. On Tuesday the attitude of Germany, shown by the request for delay, caused a buying movement. There was a prevailing belief that a crisis had been averted. New high records were made by two or three of the war order stocks. Nearly one-third of the day's business was done in Steel Corporation shares, for which there was a net gain of 3 points. Among the additions were 13 for New York Air Brake, 5 for Lackawanna Steel, and 9½ for Bethlehem Steel. On Wednesday, more evidence that Germany desired to conciliate and satisfy our Government caused great activity on the Stock Exchange, with a rapid advance of prices. Several stocks opened with large additions to the closing prices of the preceding day. Gains were reduced by the taking of profits, but at the close there was a substantial increase thruout the list. There were large transactions in Steel Corporation shares, which, altho paying no dividend, sold above 76. This was a million-share day.

The advance continued on Thursday, owing partly to the statement given by the German Chancellor to the Associated Press Better prices for copper affected favorably the copper mining shares For Tennessee Copper stock there was a net addition of 11 points The rise of these shares from the neighborhood of 25 to 70 has been due, however, to the company's orders for acids A gain of 10 points raised the price of General Chemical stock to 300 It was 137 not long ago On Friday there were further gains, because of the favorable news from Germany.

At the end of the five full days the leading railroad shares showed increases ranging from 1½ to 4 points. The sensational gains were, of course, those made by the war order companies. Automobile share additions were as follows: General Motor, 16⅝; Willys Overland, 14½; Studebaker, 10⅝. The

C. G. CLEMINSHAW, 171 River St., Troy, N. Y.

addition of 16 points to the price of Lackawanna Steel was generally ascribed to the company's contracts for acids, altho it has new foreign orders for rails. Bethlehem Steel, paying no dividend, scored an advance of 15½ and sold at 290. To the price of New York Air Brake stock 23 points were added. Among the other net increases were the following: Westinghouse, 5¼; Tennessee Copper, 9½; Crucible Steel, 6¾; American Locomotive, 5⅝; Baldwin Locomotive, 2; National Lead, 4¾; United States Steel, 6¼. In the steel trade there is a persistent and strong demand for the bars and large round shapes used in making ammunition for cannon. France recently bought 100,000 tons and is in the market for 200,000 tons more. Prices of other products are rising, and premiums are paid for early delivery.

WHEAT AND COTTON

The price of wheat is declining. At Chicago the price for September delivery was 104¾ on the 21st. Six days later it had fallen to 97½. The greatest crop ever known in this country is being harvested. This fact tends to reduce the price. Canada has a very great surplus, and her wheat is offered in the Manitoba market at prices 8 or 9 cents below those in Chicago. The Allies desire to favor their colonies. Demand from abroad has been affected by an expectation that the Dardanelles will soon be opened. Russia has an immense surplus from this year's crop and that of last year. If those gates are opened it will be released, and the price of it will be low. Our great surplus will be sold, but for several reasons the prices paid for it will probably not be higher than those now ruling in the Chicago market.

At the beginning of last week dullness prevailed in the New York Cotton Exchange, but there was a revival of activity and in three days a little more than half a cent a pound was added to the price. The declaration making cotton absolute contraband had no depressing effect, partly because Secretary McAdoo gave notice on the 23d that he would, if necessary, deposit in the reserve banks of the South $30,000,000 to be loaned, at a rate probably not exceeding six per cent, for the relief of the growers.

A further decline of sterling exchange last week to 4.63⅛ emphasized the need of a large foreign credit here. It is now expected that France, and possibly Russia, will join Great Britain in making the arrangements, which may involve an American loan.

The following dividends are announced:

Brooklyn Rapid Transit Company, quarterly, 1½ per cent, payable October 1.

American Chicle Company, common, 1 per cent, payable September 20.

National Sugar Refining Company, 1½ per cent, payable October 2.

Liggett & Myers Tobacco Company, common quarterly, 3 per cent, payable September 1.

Southern Pacific Railroad Co., regular semi-annual, preferred; regular quarterly common; payable Friday, October 1.

Union Pacific Co., quarterly, payable October 1.

Mergenthaler Linotype Company, quarterly, 2½ per cent, payable September 30.

The Truth About Poultry

Get the Facts by Reading The One-Man Poultry Plant

Successful Methods of Men on Farms or Small Acreage. Complete in twelve parts; printed in one volume.

By DR. N. W. SANBORN

REAL work, with real poultry, on a real New England Farm. This is a simple story of what has been done by a man, at forty-five years of age, town bred and city educated, getting out of practice of medicine, buying a small farm in the hill country, and making a success of the venture. Not only is the rearing of chicks and the management of adult fowl completely covered, but the interesting side issues of fruit growing, grain raising and the production of milk, that cannot be escaped on a real farm. You get rugged facts—rarely found in print. The truth about poultry as found in actual life on a one-man poultry farm.

You Can Do the Same, Book Tells How

OUR SPECIAL OFFER—The One-Man Poultry Plant, in twelve parts (book form), and the American Poultry Advocate, one year for only 50 cts., book and Advocate, three years, for only $1.00, if order is sent at once.

Our paper is handsomely illustrated, practical, progressive, and up-to-date on poultry matters. Established 1892. 44 to 132 pages monthly. 50 cts. a year. 3 months' trial 10 cts. Sample copy free. Catalogue of poultry literature free. Address

AMERICAN POULTRY ADVOCATE

1915

Atlantic Mutual Insurance Co.

Atlantic Building, 51 Wall St., New York

Insures Against Marine and Inland Transportation Risk and Will Issue Policies Making Loss Payable in Europe and Oriental Countries

Chartered by the State of New York in 1842, was preceded by a stock company of a similar name. The latter company was liquidated and part of its capital, to the extent of $100,000, was used with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with a bonus and interest at the expiration of two years.

During its existence the company has insured property to the value of	$27,964,578,109.00
Received premiums thereon to the extent of	287,324,890.99
Paid losses during that period	143,820,874.99
Issued certificates of profits to dealers	90,801,110.00
Of which there have been redeemed	83,811,450.00
Leaving outstanding at present time	6,989,660.00
Interest paid on certificates amounts to	23,020,223.85
On December 31, 1914, the assets of the company amounted to	14,101,674.46

The profits of the company revert to the assured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such dividends, certificates are issued subject to dividends of interest until ordered to be redeemed, in accordance with the charter.

Insurance

Conducted by

W. E. UNDERWOOD

A TAX BASED ON AGE

The subject of taxation is one which should interest every citizen for, directly or indirectly, every citizen is a payer of taxes. He does, or should, accept his equitable share of the public burden willingly and cheerfully. But right there is where the dissension over this ages-long question begins—it seldom seems to be equitable. Personally, I have studied the matter in its relation to but one of its objects—insurance. I am convinced that in this connection the system is almost entirely wrong; in fact, so much wrong as to amount to an iniquity.

To begin with, insurance is an expense. It is not a thing out of which its purchasers, taken as a whole, can make a profit on the money paid into it. They pay all the claims for losses incurred and all the expense incident to carrying on the business. All of the money is an accumulated fund for the relief of human misfortune. To tax that fund only accentuates the misfortune.

On this occasion I shall confine myself to the practise prevalent in nearly all of our states of taxing premiums—especially those paid for life insurance, a form of coöperation which, viewed in its elemental aspect, is a collection taken up among the friends of a dead comrade to succor his widow and orphans. The taxing power steps in on every such occasion and takes from these helpless ones about $1.50 of every $100 contributed for that purpose. How can any just mind defend such a system?

But what are we to think of that system when we find it discriminating between its victims on the score of age. Upon investigating the matter, we discover that the tax rate is a flat one, say 1½ per cent—which I think is about the average. Remember, it is laid on premiums paid by policyholders. Let us see how it works out. A, aged 25; B aged 35; and C aged 50, have each a policy for $5000 taken at those ages. The premiums are, respectively: A's, $107.45; B's, $140.55; C's, $212.50. If the tax rate is 1½ per cent, A will pay $1.60; B, $2.11; C, $3.64. Each is paying taxes on precisely the same amount of insurance, but B pays 33 per cent more than A, while C pays 127 per cent more than A and 63 per cent more than B. All hold the same property, to the same amount and derive identical benefits from it, yet the tribute exacted from the older men is from 33 pet cent to 127 per cent greater.

Do any of my readers who insured at age 50 know why they should pay a tax on their life insurance policies

The Key To Success

Stop Forgetting

Increase Your Efficiency

Prof. Henry Dickson, Principal

Dickson School of Memory, 404 Heaton Bldg., Chicago, Ill.

that is two and a quarter times the amount paid by men half that age?

At some future time I shall discuss another phase of this subject, following premiums paid from their source to their destination, for the purpose of showing that in all fairness they are not as fitting an object of taxation as —say the money which an express company transmits for its customers.

RICH WITH PROMISE

I often wonder why some of the people I meet in the course of the day's work are content with the restricted opportunities permitted them by the positions they occupy. I know of a dozen men who are serving employers at comparatively small salaries in an inferior capacity who, by reason of their obvious natural endowments, should be their own men and earning two or three times the money they do. Occasionally I have said to some man who in the course of a business transaction with me has demonstrated the possession of the peculiar ability essential to success: "Look here, why don't you write life insurance? You are wasting your time and losing money."

Once in a while, at long intervals, my mail brings me an inquiry from some one who has had the idea under serious consideration. I like to encourage it because, take it all in all, it is one of the best callings a man or woman can follow. There is no gush or sentimentality in the assertion that it is a noble occupation. Nothing but good can come of persuading our fellows to take life insurance. If every insurable man, woman and child in the United States were covered by a proper amount of life insurance, it would not be many years before poverty disappeared; for it is a redistribution of values—slow, natural and equitable in effect.

This is not saying that every person who feels an inclination to enter the business is fitted by training and temperament to achieve success in it. Many hear the call who are not chosen. The number is not small of those who are now wasting time at it. And yet the needed qualifications are very simple. Of course, we must have honesty for a foundation. That includes sincerity to one's self and others; truthfulness, earnestness. There must be intelligence of a high order, indefatigable industry, unflagging courage, geniality.

There are hundreds of men and women who will read this who are earning nominal salaries, who should be selling life insurance and making from $2000 to $5000 a year.

C. A. M., South Shaftsbury, Vt.—There is little to be found in the reference books about the association you name and nothing to indicate that their plan provides for the accumulation of a reserve. As it has assets of $452,000 and liabilities of but $18,000, I assume the absence of reserves. The rates you quote are also confirmatory. I do not consider the plan sound, and it is evident on the face of the resolution adopted authorizing the employment of an actuary that the leaders are preparing for a readjustment of rates.

SCHOOLS AND COLLEGES

THE METROPOLITAN TRAINING SCHOOL FOR NURSES

offers a **three years' course, FREE**, and pays besides maintenance, $10 a month for the first year, $12 a month for the second and $15 a month the last year.

Classes are formed every month

The Nurses' Home is located on one of the finest sites in New York City. The rooms are all single with spacious entrance hall, library and sitting rooms. The hospital is registered and connected with a hospital of over 1500 beds.

Applicants must be over 18 and under 35 years of age, and have had one year in high school or its equivalent.

THE HOME CORRESPONDENCE SCHOOL
Department 103, Springfield, Mass.

FROM STATE TO STATE

ARKANSAS: Mr. George R. Brown, secretary of the Little Rock Board of Trade, says Arkansas stands ready to supply willow rods enough to meet the demands of American manufacturers of baskets and willow ware. Until the Great War practically put a stop to importation most of the rods used in the United States came from European countries. Mr. Brown recently procured from the forest service of the United States Department of Agriculture a list of about 200 manufacturers of basket willow ware in this country and is putting them into touch with Arkansans who have willow rods for sale.

CALIFORNIA: The sixty-fifth anniversary of the admission of California to the Union will be celebrated September 9 at the San Diego exposition by pageantry and festivity on a large scale. The historic pageant, in three sections, will depict the periods of Spanish rule, Mexican rule and American rule at the time of admission to statehood. The present era will be represented by military, civil and fraternal organizations with floats and flower-decked automobiles, and it is expected that it will be the longest and most attractive parade ever formed even in California. After passing thru the city streets the procession will enter the exposition grounds, where historical scenes will be enacted thruout the remainder of the day. At night an open-air ball will be held on the Plaza de Panama, where 1000 couples can be accommodated.

CONNECTICUT: Among the many remarkable things accomplished by Mr. J. G. Brock, superintendent of Mr. E. T. Bedford's wonderful gardens at Green's Farms in this state, are enormous strawberries which ripen in September and October, oranges as large and palatable as those of Florida, English peaches as sweet as any ever produced in the old country and pears which grow on stems that climb the walls and look like grapevines. All this, and much more, is accomplished without use of hothouses or any of the devices which are ordinarily supposed to be necessary to the cultivation of southern fruits in this northern climate. Mr. Bedford himself says he does not know how his superintendent does it, but he has noticed that the water tank on the place, with a capacity of 60,000 gallons, is often filled and emptied twice a day.

DELAWARE: The new Third street bridge at Wilmington is now so far along that the resident engineer promises to turn the completed structure over to the county by October. It is said to be one of the finest bridges in the country. A remarkable feat was accomplished when the huge lifts of the east bascule, each weighing thirty-two tons, were erected. They were brought to their place on a scow, and altho many men who understood the nature of the work to be done predicted that traffic on the stream would be delayed several hours, the work was accomplished in exactly ten minutes, said to be record time for such a task.

DISTRICT OF COLUMBIA: The United States Treasury Department recently received an anonymous special-delivery letter from New York containing $10,000 in currency. The sender wrote that he had already paid double the amount he had stolen from the United States, yet his conscience was not satisfied. This is next to the largest contribution ever made to the conscience fund, the largest one, $18,679.60, having been sent to the New York Collector of Customs in 1901. This fund was begun in President Madison's time with a contribution of $5. Since then an annual average of $2300 has been contributed. The smallest amount ever sent in was two cents. The fund now totals $453,922.03.

LOUISIANA: It is believed that Congress will this winter present to the city of New Orleans the historic edifice which has housed the United States mint in that city since 1838. In the last four years there has been no coinage in New Orleans, and Treasury officials say there is no reason for maintaining a mint there. In 1835 the site was donated by the city, and three years later the building, 282 by 108 feet, was completed. The original cost of the structure was $182,000, and improvements from time to time since have cost $263,000. If the city gets the edifice it may use it as a hospital.

MAINE: A tract of land comprizing about 38,000 acres in Washington County is to be used for cattle grazing after the manner of the large ranches of the West. Those interested in the enterprise plan to put about 5000 head of western cattle upon this tract, and announce, it is said, that this is to be only the beginning of cattle raising on a large scale in New England. Experts declare the soil to be as good as that of the blue-grass region in Kentucky, and this tract will be sown with that seed. It is argued that New England should not only produce its own supply of beef, but because of its proximity to Atlantic ports should have an advantage over the West in supplying the European market.

MARYLAND: This summer the Consolidated Gas Company of Baltimore inaugurated a policy of selling its stock to consumers on easy terms, limiting the subscription to twenty shares to a person and reserving the right to increase the sale price every thirty days to conform to the market value, prices being governed by sales on the Stock Exchange. As a result of these subscriptions the number of Baltimore shareholders in the company has been approximately doubled. In view of the threatened invasion of Baltimore by the proposed pipe line from the West Virginia natural gas fields, the nationalizing of interest of the consumers and the Baltimore company is regarded as shrewd business foresight.

MICHIGAN: A campaign is to be started in October among the 35,000 alumni of the University of Michigan to raise $1,000,000 for erecting, furnishing and endowing a building for the Michigan Union, a student organization the purpose of which is "to democratize the undergraduates, to give them chances for self-education by mingling with one another and to develop the community spirit among the students." The building, as planned, is to be a large one, with 100 rooms for alumni, swimming pool, billiard parlors, dining rooms, lounging rooms and every convenience of a modern club. Committees are forming in nearly 200 cities, and in October at least 2000 former students will canvass their fellow alumni. It is believed the $1,000,000 will be subscribed before November 1.

MINNESOTA: More than 7000 boys and girls between the ages of ten and eighteen are to take an important part in the Minnesota State Fair, to be held September 6 to 12 this year. They are all members of boys' and girls' clubs organized thruout the state for the study and practise of improved methods of farming and gardening and for increasing the pleasures as well as the profits of farm and community life. In addition to exhibits of the various clubs, showing results produced by the organizations, there will be many demonstrations of those arts and handicrafts which add to the comfort of and increase the interest in rural home life.

MISSOURI: The Kansas City Ad Club has undertaken to make the new advertising law of its state effective by appointing a secret body of eight members to act as a vigilance committee against dishonest advertisers. The law makes it a misdemeanor for anybody, "with intent to sell or in any way dispose of" anything, to publish, or in any other way give out an advertisement containing "any assertion, representation or statement of fact which is untrue, deceptive or misleading." So when anybody in Kansas City finds that the $5 article marked down to $1.98 is worth only $1.25 he has only to address a complaint to the Ad Club and the advertiser, if the complaint proves to be true, will be prosecuted.

MONTANA: Definite steps have been taken for the organization of what is to be known as the Montana Development Association, modeled after the State Bankers Association. A constitution has been drafted and presented to the several commercial clubs and chambers of commerce of the state, of which the proposed association is to be composed. The plan is to divide the state into fifteen districts, each to be under a general manager to be appointed by a board of fifteen directors. Each club in the organization is to have one vote, but every member of such club is to have a voice in meetings. The object of the association is to develop the state as a whole and to promote coöperation of different communities in advertising the state's resources.

NEVADA: At a recent meeting of the Merchants' Association of Reno it was pointed out that because there was no place in the city where tourists might camp for the night, the Truckee River was lined with machines for a distance of six or eight miles on either side of Reno with automobile parties who preferred to remain out rather than sleep in hotels or lodging houses. In order that these hundreds of people might be kept in the city and their money put into circulation there, the association voted to procure suitable camping accommodations near the business center of the city.

NORTH CAROLINA: An organized effort will be made by the people of North Carolina, especially those of the western part of the state, to have what is known as the Weeks act extended by Congress for five years. This law, which has permitted the United States to make large purchases of timber tracts in the southern states for the preservation of forests and streams, has expired and no more purchases can be made. Secretary Ayres of the New Hampshire Forestry Commission, an acknowledged expert, recently visited western North Carolina. He is reported as saying that everybody interested in the preservation of the timber lands in the southern Appalachian Mountains should join in the effort to have this law extended.

TENNESSEE: Prof. Charles E. Ferris, dean of the engineering department of the University of Tennessee, and Charles C. Gilbert, secretary of the Tennessee Manufacturers' Association, have arranged a program for the educational extension work to be conducted this fall under the joint auspices of the university and the association. It includes practical engineering, electrical engineering and reinforced concrete work. The Manufacturers' Association will try to prevail upon at least twenty employed men in the manufacturing towns of the state to give a few hours each week to this educational work.

UTAH: The J. G. McDonald Chocolate Company has created a remarkable roof garden on its factory for recreation of its employees. In addition to the usual equipment of roof gardens this one has a zoo with East Indian monkeys and other interesting animals, an aviary with many beautiful imported and domestic birds, and an aquarium with several species of fish, including goldfish from Utah's wonderful "hot pots" near Helper City. Mr. McDonald recently bought a couple tyrannosaurus rex eggs for the collection, but it died soon after its arrival.

PLAYING CARDS

The sword and money figure as marks on Hindustani cards.

The earliest province of playing cards was for divination.

A pack of humorous or harlequin playing cards was designed by Thackeray.

The joker made its appearance in the United States about the middle of the nineteenth century.

About 1660 a pack of Cavalier playing cards was issued, forming a complete political satire of the Commonwealth.

A beautiful pack of cards was engraved by Jost Ammon, who was born in Zurich in 1539. He used books, winepots, cups and printers' balls as pips.

The Asiatics attach far more importance to cards than we do. With them they are highly academic in significance and not merely amusing and recreative.

The Persian playing cards are altogether lacking in what are termed "pip cards." Only the emblematic or picture part of the pack, called by the Italians Atouts, is used.

The designs on the cards representing the numbers are technically termed pips or peeps, perhaps from the seeds of apples, pears and oranges, which are so called in England. They are also called spots.

"Squeezers," or "indexed cards," originated in America. They are very useful in playing poker, where the players keep the cards squeezed together as closely as possible to prevent other players looking into their hands.

In Germany the cards bear marks that are quite distinct from those which figure on the cards used in bridge as played in this country today. The German cards are marked with bells, hearts, leaves and acorns, to distinguish their suits.

No authentic specimens of the earliest cards have come down to us, but the so-called Tarots, containing seventy-eight cards to a pack, which are still extant in Switzerland and Germany, and in some parts of Alsace and Franche Compte, are survivals of the lost originals of the gipsies.

Playing cards of various nationalities differ widely as to the symbols used, the decoration, the size and even the shape. Indian cards, for example, are round and introduce the folklore of India, while the Chinese cards are long and very narrow. They bear typical Mongolian figures drawn after the Chinese schools of art.

The original French Court cards were probably likenesses of the kings of France of the day, as well as their consorts and mistresses; while in England they were copies of well-known portraits of Henry VIII and his beautiful mother, Queen Elizabeth of York, so that they were rulers of the card kingdom as well as of their respective countries. The cards were therefore called "of the court," or "court cards."

Originally what we call the suits or pip cards were probably simply rods inherited from Moses and Aaron, or perhaps only a quiver full of arrows, or a bundle of straws, which we know were used at the Delphic Oracle, and out of these primitive articles the cards were evolved. On them were placed the four heraldic emblems of Mercury, viz., swords, money, rods and cups, by which any statue or painting of him may readily be recognized. These emblems are convincing proof that cards were part of the worship of Mercury.

REMARKABLE REMARKS

SECRETARY GARRISON—Tut, tut, Colonel.

HENRY FORD—Preparedness is the seed of all war.

JOHN KENDRICK BANGS—Has not all humor left us?

BRANDER MATTHEWS—Negro minstrelsy is on the verge of extinction.

JOHN MITCHELL—Tear down a tenement and upon its ruins will arise a factory.

JULIA MARLOWE—I am hungry for the real world. I want to live life, not act it.

JESS WILLARD—If I have a savage instinct in me it has never come to the surface.

ED HOWE—People speak of the Day of Judgment. There are thousands of such days.

CARDINAL O'CONNELL—The truths of heaven offer no ground for scientific inquiry.

THOMAS A. EDISON—Nearly every nation except the United States is more or less predatory.

SIR GILBERT PARKER—The almighty heart is stronger in the United States than the almighty dollar.

LAURA JEAN LIBBEY—Most people consider ten p. m. late enough for calling, but circumstances alter cases.

G. K. CHESTERTON—I dare not conjecture what will happen when the very worst criminal really meets the best criminologist.

ELIHU ROOT—I have not changed my opposition to woman's suffrage in the least. My views are those I held twenty years ago.

EX-GOVERNOR EUGENE N. FOSS—Business men should accept public office. We have all the lawyers that the situation seems to demand.

A. J. REA, M.D.—The ideal woman of the eugenic age will be tall, plump, well rounded, but not fat. Her complexion will be ruddy or brown.

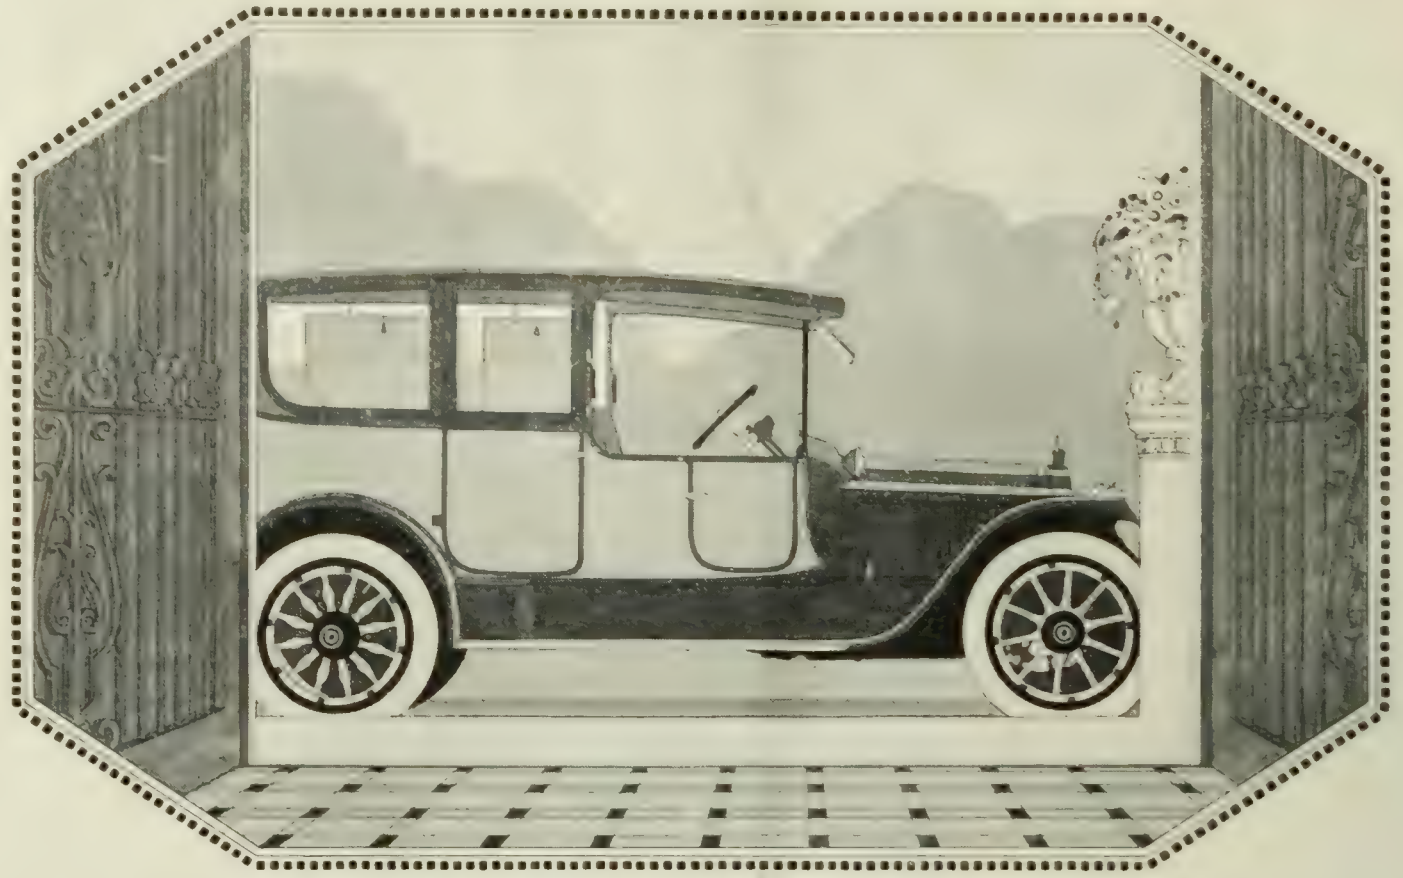
VISCOUNT HALDANE, LORD CHANCELLOR OF ENGLAND—We shall all be made simpler by this war. We shall be made more frugal, more serious, less cynical, greater.

GEO. W. GOETHALS—The best results are secured thru the coöperation of men who are contented and who have respect for and confidence in their leader.

FREDERIC F. ROCKWELL—There has been much land literature in which the inspirational side of the subject is overworked and the perspirational side is overlooked.

CORRA HARRIS—There's just one person you can fool all the time. You can't fool the public, nor God, nor your family, nor the children, but you can fool yourself every day in the week.

JEAN FINOT—Altho no decision has been reached, it is quite likely that the Allies will put the Kaiser and other German war lords on trial for the wanton murder of noncombatants.



PRESIDENT HADLEY—Among the qualities needed to make a democracy successful I should agree with Aristotle in laying great emphasis upon the readiness to value experts as they deserved to be valued.

LORD NORTHBOURNE—It would give me great pleasure to meet the Kaiser in single combat. "Pistols for two and coffee for one" is the formula, I believe; and I do not doubt that I should have the coffee.

JACQUES LOEB—Since one gramion carries the charge of 96.550 coulombs, the elementary charge must have the value

$$e = \frac{13}{29 \times 10^{-\frac{}{N}}} \text{ electrostatic units.}$$

MARION CRAIG WENTWORTH—The sex strike of a million women would make war by the United States or any other country absolutely impossible. Women hold the gift of life in their hands and they have the right to refuse the gift if life is to be desecrated by war.

PUBLIC INTEREST

has assumed a new intensity wherever the

Packard

TWIN-SIX

has been shown

MORE than 18,000 persons gave it their personal attention the first four days the car was exhibited in New York City, and its reception in other cities has been correspondingly notable.

It is the absorbing topic wherever engineers gather, and experts, skeptics and enthusiasts are alike in making it the current feature of motor car progress.

It is the logical development of the perfectly balanced "Six" into a lighter, more compact "Twelve" having a uniformity of torque and a smoothness of action hitherto unknown.

In every way it is representative of the company that has been awarded the ONLY GRAND PRIZE for both motor cars and trucks and the FIRST MEDAL OF HONOR at the *Panama-Pacific International Exposition*. Packard maximum service qualities are embodied also in the new type chainless Packard trucks.

PACKARD MOTOR CAR COMPANY, DETROIT, MICHIGAN

The Independent

VOLUME 83 SEPTEMBER 13, 1915 NUMBER 3424

FOR THE FREEDOM OF THE SEAS

THE hope which we exprest last week, that at the insistence of our Government Germany would ameliorate her methods of submarine warfare, has been confirmed in a way to rejoice every one. Without any further demands or any threats from the President, the German Government has hastened to proffer the explicit assurance that its submarines will not destroy liners without warning or without securing the safety of passengers. This apparently removes, so far as the future is concerned, the most serious of the grievances which we have against Germany. The question may now be referred to The Hague and Germany will doubtless make such amends as are possible for the sinking of the "Lusitania" and the "Arabic," tho nothing she can now do will compensate for the loss of life or remove from Germany the odium she has incurred by her reckless disregard of human rights.

President Wilson would have a perfect right to regard this as a personal triumph and a vindication of his policy against the critics who have attacked it on the one side as being too weak and on the other as being too dangerous. But we have no doubt that he takes a nobler view and regards it rather as the reëstablishment of an historic American principle and as clearing the way to securing its more complete acceptance. He can now turn his attention to Great Britain, whose infractions of the rights of neutral commerce have been more numerous and onerous tho infinitely less brutal and offensive than those of Germany.

If President Wilson had expected gratitude from England at the removal of the chief danger to her shipping he would have been disappointed. Some of the English papers are disposed to give due recognition to his achievement, but the tendency of others is to minimize it. They say that it is not much of a concession anyhow, that putting off passengers in open boats is still jeopardizing their lives, that Count von Bernstorff's letter is a mere "scrap of paper," and "misleading" since it apparently restricts the concession to "liners," and that the Germans were going to abandon their attacks on British commerce anyway because it had been a failure and because most of their submarines have been sunk. On this last point it is sufficient to say that Germany looks at it in a different light. From the resentment and disappointment shown by the Tirpitz party it is evident that the Germans regard the submarine as their most powerful weapon directed against the most vulnerable point of their most dreaded enemy, and they would not willingly relinquish it or render it less fatal.

But the same policy of quiet persistence seems likely to gain its object with England as with Germany. Already England by declaring cotton contraband of war has put an end to her unwarranted seizures of that product. This does not help out our cotton growers, but it legalizes for the future the cotton blockade. England has also consented to allow us to receive the goods of German manufacture worth $150,000,000, it is claimed, which had been bought by Americans and stored in neutral ports previous to March 1, when the issuance of the British Orders in Council put a stop to the transportation of all German-made goods regardless of where they are or who owns them. We have reason to hope, then, that the British may gradually be brought to see the justice of our contentions and to realize that our insistence upon them is not inspired by enmity or avarice.

The American position relative to the European Powers is in fact much the same today as it was a hundred years ago and what we fought for in 1812-1814 is substantially what we are striving by diplomatic means to gain now. The war was made against England, but this was almost a matter of chance, for France had treated us about as badly, and it was long a matter of hot dispute which we should consider our enemy. Napoleon was trying to destroy British commerce and isolate the islands as the Kaiser is now. The British Government retaliated by like measures as it is doing today. And between the decrees of Napoleon and the British Orders in Council practically all the ports of Europe were closed to American commerce. We tried embargoes, but the belligerent powers did not mind the tying up of our shipping as much as did our shipowners. New England threatened to secede, so the Jeffersonian or pro-French party was forced to give way and the embargo was raised.

Since the embargo proved so unsatisfactory a weapon a century ago it is not likely to be resorted to in our present dilemma. The only form of embargo that is advocated now is that on munitions and this more on moral than on political or economic grounds. The disposition to resort to arms is still less evident. So, altho there are among us some who urge one and some the other of the two weapons which we tried in the last century, the Administration is not likely to yield to either influence. The position of the Administration has been immensely strengthened by its success in obtaining from both the belligerents concessions which go far toward a recognition of the American principle of the freedom of the seas and the rights of neutral nations.

THE INDUSTRIAL COMMISSION REPORTS

THE Industrial Commission has not deserved all the objurgation and ridicule that have been visited upon it, but from first to last it has been a disappointment. Mr. Wilson's appointments to positions calling for scientific ability and training have been peculiarly unhappy. The immeasurably important work of the Census Bureau has been discredited by its unpardonable degradation to political ends. The creation of the Industrial Commission was an extraordinary opportunity. It could have been made to enlighten the public mind upon grave and troublesome problems. Whatever his motives, reasons or excuses may have been, the President did not make the right use of it. With two or three exceptions the members of the commission have been unequal to their large task. Their proceedings have been sensational, their public activity has been undignified, and after horseraking the industrial field they have been unable to organize their gatherings into a report upon which a majority of them could agree.

Besides minor or supplementary reports on specific matters, three major reports are offered. One of these, drawn up by Mr. Basil M. Manly, director of research investigation for the commission, is signed by Mr. Frank P. Walsh, chairman of the commission, and by Messrs. Lennon, O'Connell and Garretson, members of the commission representing employees. Another is signed by Commissioners Weinstock, Aishton and Ballard, representing employers. A third report is signed by Professor John R. Commons and Mrs. J. Borden Harriman, representing the general public, and with exceptions taken, is concurred in by Messrs. Weinstock, Aishton and Ballard.

In none of these reports do we find a novel suggestion, a new idea, or much new information. The reports signed respectively by employees and employers have, however, one merit. They are obviously the reactions of men who in practical life have been up against realities, and who frankly talk about them with evident sincerity and with a measure of knowledge. The other report is curiously amateurish and not at all the sort of thing that we should probably have had from Professor Commons if he had been well, and able to put his strong and clear mind on the job.

From time to time recently we have discussed one and another of the propositions which these reports now set forth; and particularly the question of the value and the alleged menace of the great philanthropic foundtions. More than one article would be required for discriminating comment upon other faultfindings and recommendations that the reports embody. We limit ourselves to a word upon two or three of the more important ones.

"There is an abundance of available testimony in our record," the employers say, "to show that many employers are frightened off from recognizing or dealing with organized labor for fear that to do so means to put their heads in the noose and to invite the probability of seriously injuring if not ruining their business." There is truth in this assertion, and a comprehensive report upon this one condition, well backed up by substantial evidence, should have solid value. Whether, as the employers contend, the source of trouble is the sympathetic strike, or is rather to be found in jurisdictional disputes and a disregard of trade agreements, to which also they call attention, is a question that ought to be answered, and the commission should have answered it.

The Commons-Harriman report attributes industrial unrest to a breakdown in the administration of labor laws, and to popular distrust of our municipal, state and national governments. They do not prove the proposition, and we do not believe that they could prove it. Governments are competent to ameliorate economic conditions or to make them worse, but they do not create them. The commissioners are on safe ground, however, and they speak with wisdom when they say that

> recommendations for additional legislation would be futile until methods are provided for making enforceable the laws now on the statute books thru the creation of administrative machinery that will be entirely removed from political influences.

Naturally these reports will receive less public attention than the one signed by the employees, which charges our troubles to an unjust distribution of wealth and income, with resulting denial of opportunity, denial of justice, and unemployment. A one million dollar limit to individual private fortunes is recommended in one report, and the creation, by inheritance tax, of a social service fund to be administered by the Federal Government in the extension of education, reforestation and other public works and services of first class importance. This is thorogoing radicalism, but some of the newspapers that are denouncing it would do well to remember that the man who first "stood for it" before the American public was not Mr. Frank P. Walsh, or any labor leader, but the eminently respectable Mr. Andrew Carnegie. Neither Mr. Carnegie nor Mr. Walsh will persuade the American public to adopt it immediately. The public should, however, give serious thought to one indictment: "In effect the American law of inheritance is as efficient for the establishment and maintenance of families as the English law which has bulwarked the British aristocracy thru the centuries. Every year, indeed, sees this tendency increase as the creation of estates in trust secures the ends which might be more simply reached if there were no prohibition of entail."

This is not new, but it is disquietingly true.

NINE GOVERNORS OF NINE STATES

THE meeting at Boston of the Governors of several states of the Union was useful and memorable in various ways, but in no way more so than in the public testimony given by nine Governors as to the success and value of woman suffrage in their several states. They spoke at a dinner given by the Men's League for Woman Suffrage of Massachusetts, and most enthusiastically they presented their experience and their hope that Massachusetts would adopt the measure at the next election.

Such testimony is conclusive. Reason favors the ballot for women as well as for men, and now experience supports it. Governor Lister, of Washington, said there is no indication that suffrage has made women less womanly, but that it has given the very best of satisfaction. Nobody wants to go back to limited suffrage. Governor Capper said that Kansas has had woman suffrage for twenty seven years and he thanked Boston for having brought the wisdom of it to his people in the shape of a letter from Lucy Stone to the War Gov-

ernor of the State, a letter which is one of the treasures of the State Historical Society. Governor Spry, of Utah, found women more careful, reliable and courteous in public office than men, and Governor Alexander, of Idaho, said that he would rather appoint a woman than a man to an office in which money is to be handled in small or large sums. In Wyoming woman suffrage has been in force for thirty-five years, and Governor Carey does not believe five per cent of the people would vote to change the law.

Argument and experience are all one-sided. What can the opponents say? Will they say that these Governors tell a rosy story because they are afraid of the women's votes? That is a confession that the women believe in it and want it, and what the women want they ought to have. Of all the progressive Western States that have adopted woman suffrage, not one has ever gone back. We strongly advise the opponents in Massachusetts to do their best—or worst—against it, for when it comes, as it will, there will be no reversal.

LOCO

A CURIOUS because persistent difference of opinion between the "practical man" and the scientist is the question of the loco-weed. It has been the subject of heated controversy and scientific study for the last thirty years. Millions of dollars are involved in it and thousands have been spent on investigation, but it still remains unsolved. It has given two new words to the language, or at least to that limbo of the language where dwell words on probation. One of them is the Spanish word *loco*, "crazy," and the Westerner is likely to say that an eccentric man is "locoed" where the Easterner would call him "cranky." Another slang synonym is "rattled," which comes from the same source, for the ranchman who settled on the northern ranges, away from the Spanish belt, called the plant the "rattle-weed" from its pods and the cattle who went crazy by it were naturally said to be "rattled."

It is the unconquerable conviction of almost all Western stockmen that the weed, which is some species of Astragalus or other leguminous plant, makes the animals that eat of it nervous, irritable and finally crazy. Cattle, horses and sheep that acquire the habit refuse all other food and even water; like lotos-eaters or opium-eaters they search for it, pine for it and die without it. This points toward an alkaloid as the poisonous constituent, but it has never been found altho premature announcements of the discovery of "locaine" are scattered thru the literature. Various other hypotheses have been advanced to account for the disease. Some have laid it to indigestion; others to barium salts.

One Western professor prepared the "fluid extract of locaine" from a ton or so of the weed and like a true scientist tried it on himself. But after taking a dose before meals for several weeks without any perceptible effect upon his mentality he concluded it was harmless. In the experiment stations animals were stabled and fed upon loco-weed in increasing proportions, but they grew disappointingly fat under the treatment. On the other hand the national Bureau of Animal Industry a few years ago came to the conclusion that the stockmen were right in believing the loco plant poisonous. But this is apparently upset again by H. T. Marshall in a recent bulletin of the Johns Hopkins Hospital.

So doctors disagree and meantime the cattle keep on dying just the same, not knowing that there is nothing the matter with them. Efforts to eradicate the weed have been failures. The legislature of Colorado put a bounty of a cent or so a pound on loco but took it off when they found people were raising it as their most profitable crop. Perhaps if sign boards were stuck up in the patches of loco-weed reading "Passed as Pure Food by Johns Hopkins" the stock would drop young crazy over it.

THE EDUCATIONAL RESERVES

WE have in this country a system of compulsory education which may be compared in many respects to the system of compulsory military training in most European countries. But there is one striking difference and that is to the disadvantage of the educational system. The military men realize that if the nation is to maintain a body of competent soldiers it is not enough to train them once. They must be called back to the colors at intervals thruout their active life to keep up their practise and to be taught the new things that have been developed in the art of war. The school men on the contrary proceed upon the assumption that if a person has been educated in his youth he will remain educated all his life regardless of the fact that mental skill is as soon lost by disuse as manual skill and that the advance of science is so rapid that the best learning soon becomes obsolete. If the state has a right to require any person to devote eight years to schooling it surely has the right to require that he devote a few weeks at intervals to keeping up what has been given him at such pains and expense. In fact the teacher might be willing to dispense with a year or more of the early schooling if he knew he could get other chances at the pupil later in life.

When France and Germany called out the men of forty-five years they were ready for service. But what a ridiculous figure they would have cut if they had known nothing of the weapons and the drill introduced since the eighties—just as ridiculous as the men of forty-five we see in this country when called upon to solve the problems of the day by the lessons they learned twenty-five years before. It is more than absurd, it is pathetic to hear men of prominence and ability in their chosen profession express their childish and antiquated opinions on economic, scientific or theological subjects which they had not studied since their schooldays.

In countries having a trained soldiery every young man serves two or three years in the army. This corresponds to a college course. But he does not stop with that like the college graduate. He passes instead into the reserves or *Landwehr* and must come back to the casern or camp for a week or a fortnight's further drill and instruction every year till he is past the age of service.

Why should not the college have the same right to recall its alumni say for a summer course of six weeks every five years? As it is now a college degree is a fraud upon the public. The world would be gravely deceived if it took the diploma at its face value and assumed that the graduate could now do what it certifies he once could do. He is in most cases entitled to no more of a degree than "ex-Latinist" or "Triginometrician emeritus." In China, where scholarship is taken

seriously, a man forfeits his degree if in after life he is found not to have kept up his studies or to have forgotten what he had learned. If our colleges do not adopt the reserve system and recall their alumni to their colors once in a while it would be only fair to insist that the diplomas be printed in iodine-starch ink so that they would fade out gradually as the knowledge so certificated was forgotten. The use of India ink and parchment for this purpose is manifestly inappropriate.

THE ALL-STAR CABINET

IN our issue of June 28 we suggested that since France, Great Britain and Belgium have found that a government composed of the strong men of all parties makes for efficiency, it would be interesting to consider what an American coalition cabinet might be. From the letters we have received it appears that almost any Independent reader is competent to be President, since picking a good cabinet is a President's hardest job and the slates submitted to our inspection are generally admirable. Combining the returns we get the following as a nomination from our readers' primary:

Secretary of State,	Elihu Root
Secretary of the Treasury,	W. G. McAdoo
Secretary of War,	G. W. Goethals
Secretary of the Navy,	Theodore Roosevelt
Secretary of the Interior,	F. K. Lane
Secretary of Agriculture,	D. F. Houston
Secretary of Commerce,	W. C. Redfield
Secretary of Labor,	John Mitchell
Attorney General,	Louis D. Brandeis
Postmaster General,	A. S. Burleson

Naturally in this free-for-all referendum the votes are scattering. Each office has a long list of names and the same man is often nominated for several chairs. In such cases we have transferred all the votes to the position where he had the clearest lead. For instance Mr. Roosevelt received more votes than any other candidate, but as they were divided mostly between War and Navy we have put him in the Navy Department, where he once served as Assistant Secretary, and that leaves the War to Colonel Goethals, who is also named for the non-existent but much needed Department of Irrigation and Public Works. Mr. Root is evidently wanted for Secretary of State as he has almost as many votes as all the others combined. Mr. Taft is only one vote behind Mr. Root in the total, but they are distributed among so many departments that he gets none of them.

Evidently the Wilson cabinet is on the whole considered competent, for five of them retain their seats and most of the others stand high. But Luther Burbank came near getting Agriculture, and John Wanamaker the Post Office. Gifford Pinchot stands high in the Navy list and G. W. Perkins in the Commerce.

Many interesting suggestions are made as to new departments. If they were all adopted we should have a cabinet of twenty-two, which is the same as the present British ministry, and would doubtless lead to the same condition, that is, the formation of an "inner cabinet," that dominates the rest. The new departments most in demand are Health, with Colonel Gorgas at the head of it; Research, under Thomas A. Edison; Peace, with Mr. Bryan or Miss Addams; and Negro Affairs, a sort of Freedmen's Bureau, under Booker T. Washington

WHY MOSQUITOS?

THE old theological question, "Why does not God kill the devil?" seems to have vanished from the forum, tho whether it was finally answered or merely laid upon the table we do not seem to remember. Instead we hear discussions of the question: "What use are mosquitos?" which appears to be the same old problem in a form suited to a pragmatic age.

It is an irrepressible question. It has been forced upon our attention frequently of late, even when we were deeply absorbed in other matters. We have lain awake nights thinking about it and arisen in the morning sleepless and sore without having found a satisfactory answer.

Obviously the question as stated is incomplete. Supplying the unconscious ellipsis it reads, "What use are mosquitos to men?" If, however, we reverse the question, a brain the millionth part the size of ours is adequate to answer it. Ask the mosquito when she comes around, "What use are men to mosquitos?" and she buzzes back, "They are good to eat." It is a true answer and if it is not satisfactory to us, this is because we look at the matter from a selfish point of view.

We do not deny the right of existence to a fish, that is, one of the edible species. Yet the fish devours mosquitos by the million in their infancy, the innocent and unarmed wrigglers. The more enterprizing fish may even leap into the air and so capture the adult mosquitos in their element. That suggests the possibility of further developing their enterprize in this direction. A flock of flying fish kept in a bowl by day and released in the bedroom by night might afford some relief. But setting aside this project as chimerical—and perhaps it is—we see that after all mosquitos are of use to us in the same way that we are to them. Still we would prefer to dispense with mosquitos and feed the fish on bread crumbs.

We should remember in justice to the mosquito that only one sex is guilty. "The female of the species is more deadly than the male." The male mosquito seems to be a quiet, inoffensive stay-at-home body who carries none of the weapons of the militant sex, not even the mandolin.

It is the unnecessary cruelty of the mosquito that aggravates and puzzles us. We would not so much mind the loss of a little blood. Our ancestors thought it good for them. But when the mosquito, after drilling and boring and sawing and pumping to her heart's content, poisons the well with disease germs on departing, we feel that she has gone too far. But here again we must try to look at it thru the eyes of the mosquito. "Where," she might with justice inquire, "did I get those germs if not from some other person's blood? If you humans would only keep your blood free from disease there would be no trouble about our spreading it. What we mosquitos want is a pure food law."

It is obvious that we must acquit the mosquito of intentionally inoculating us with yellow fever and the like. The germs they carry are forced upon them and doubtless they suffer from them too. Think of a mosquito shaking with fever and ague and no quinine at hand. Or worse a mosquito with elephantiasis lumbering around on her six boggy legs! Evidently this world was not made to suit the mosquito. Perhaps it was not made to suit us.

THE STORY OF THE WEEK

THE GREAT WAR

August 30 British advance into Gallipoli from Suvla Bay. Italians take Cima Casta in Trentino.

August 31 Austrians take Russian fortress of Lutsk. French make gains in Vosges Mountains.

September 1 Ambassador Bernstorff conveys promise that German submarines will not sink liners without warning. Austrians regain Brody, last town in Galicia.

September 2 Cardinal Gibbons gives the President a note from the Pope. Four Turkish transports sunk by British submarine at Dardanelles.

September 3 Germans take Grodno, last of Polish fortresses. Italians take Rovereto.

September 4 German advance in Courland reaches Dwina River. British report sinking fifty four German submarines during the war.

The German Concession

On the morning of the first of September, Count von Bernstorff, the German Ambassador, called on Secretary of State Lansing and informed him that the German Government had already given orders to its submarine commanders not to sink liners without warning and without safety of the lives of non-combatants. At the request of Mr. Lansing he sent a memorandum to that effect for the Secretary to use as he pleased. This is regarded as conceding the main points insisted upon in the American notes in regard to the safety of neutral passengers, tho until further notes are received from Berlin it cannot be known in how far Germany intends to modify her methods. It is uncertain, for instance, whether the word "liner" which was the only English word in the German note covers only passenger vessels and if so what protection there would be for American sailors on British vessels. It is suggested that the determination of the amount of pecuniary damages to be paid by Germany for the destruction of the lives and property of Americans on the "Lusitania," "Arabic," "Gulflight," "Falaba" and "Frye" will be referred to The Hague tribunal. Germany's change of policy is a severe blow to Admiral von Tirpitz, who is regarded as chiefly responsible for the submarine raids on British commerce. The Admiral is reported as broken down in health and as likely to resign the position he has held as head of the navy for a quarter of a century.

There is good reason to believe that Germany is willing to make known the terms on which she will consent to make peace. England, however, is reported to be unwilling to consider the question of peace at the present time. President Wilson is not likely to take any active steps toward opening negotiations so long as there is danger that either party would regard it as an unfriendly act.

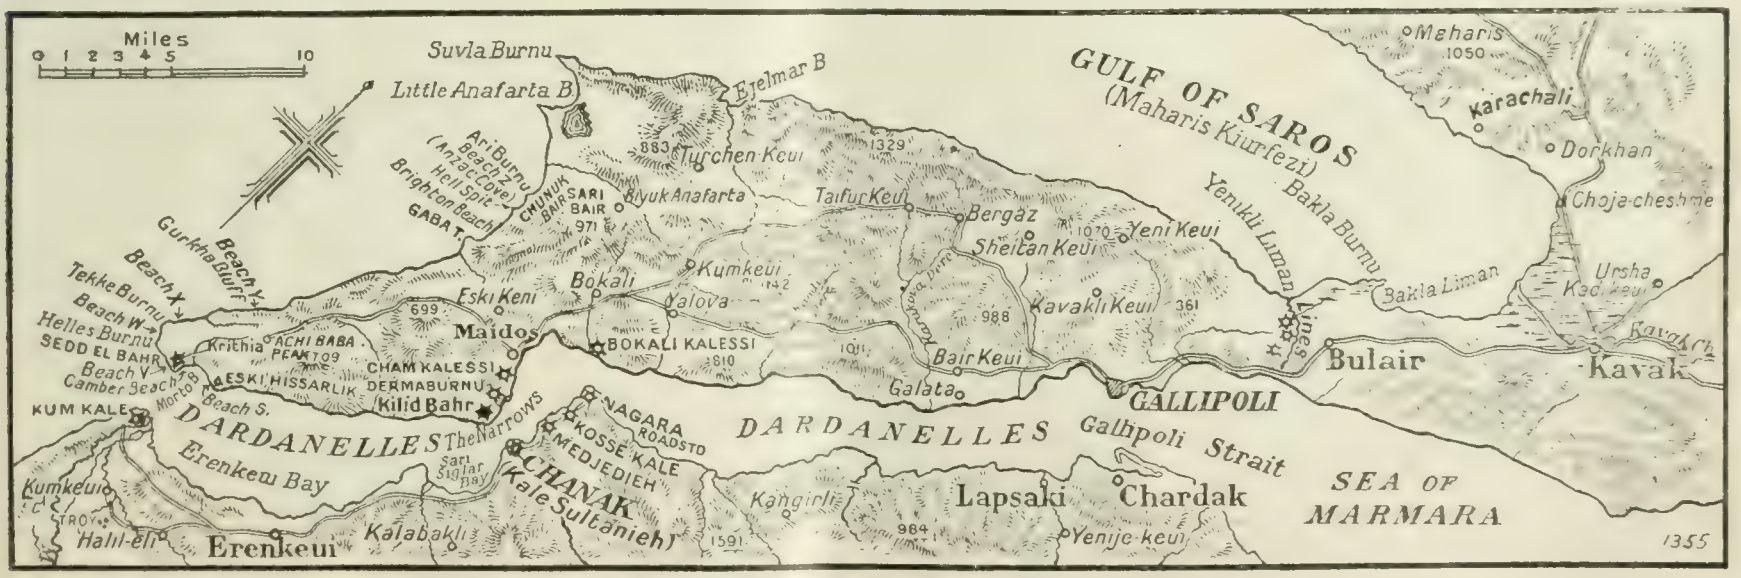
COUNT JOHANN BERNSTORFF

German ambassador to the United States. To his earnest efforts to avoid a diplomatic break and the emphatic representations which he is believed to have made to his government the successful solution of the submarine controversy must in part be credited

GERMANY'S REPLY

FROM THE GERMAN AMBASSADOR TO THE AMERICAN SECRETARY OF STATE

WASHINGTON, D. C., September 1



I beg to inform you that my instructions concerning our answer to your last "Lusitania" note contains the following passage:

"Liners will not be sunk by our submarines without warning and without safety of the lives of non-combatants, provided that the liners do not try to escape or offer resistance."

Altho I know that you do not wish to discuss the "Lusitania" question till the "Arabic" incident has been definitely and satisfactorily settled, I desire to inform you of the above because this policy of my Government was decided on before the "Arabic" incident occurred. J. BERNSTORFF.

British Labor Troubles

The outbreak of a second strike in the Welsh coal fields within a month after the questions at issue were supposed to have been permanently settled by arbitration has caused great uneasiness in England and great delight in Germany. More than 25,000 miners stopped work and were with difficulty induced to return. If the output of coal should be considerably reduced it would seriously interfere with the operations of the fleet, the production of munitions and the manufactures on which the income of England largely depends. It will also

THE GALLIPOLI CAMPAIGN

The reports from the Dardanelles have been so brief and obscure and the maps available in most homes have been so lacking in detail that it has hitherto been impossible to follow intelligently the operations on the peninsula. But now we are getting more complete information and with the aid of this map from the London *Times* the situation can be readily understood. The Australian and New Zealand Army Corps occupy the coast about the "Anzac" Cove. The recent landing of new troops was made at Little Anafarta Bay, near which is a Salt Lake. The figures give the hight of the principal hills. See page 354

NOTHING TO DO BUT TALK ABOUT IT

There is something poignant in this little knot of homeless Polish Jews who are seeking sympathy from each other by telling their woes. The town of Jozefow on the Weichsel River, with a wrecked military bridge, in the background

affect the allied countries that have been dependent in part upon the British coal supply. In 1913 the United Kingdom exported to France 13,000,000 tons, to Italy 10,000,000, to Russia 6,000,000 and to Belgium 2,000,000, as well as 9,000,000 to Germany. But now it is impossible to export to Russia and Belgium and expensive to export to Italy. The French coal supply is short because the territory now occupied by the German armies ordinarily furnished three-fourths of the French coal output.

The first strike of the coal miners was settled on July 20 by David Lloyd George, now Minister of Munitions, who went to Wales and won over the strikers by appeals to their patriotism and promises of increased wages. But according to the miners the President of the Board of Trade, Walter Runciman, has failed to carry out the promises made by Mr. George. The labor men indignantly repudiate the charge of lack of patriotism. They assert that they have for a year been working unendurably long hours for low wages while the cost of living has gone up twenty-five per cent and the manufacturers and mine owners are making enormous profits out of the war.

Acting under the authority conferred upon him by the new Munitions Act, Mr. Lloyd George has assumed control of 535 manufacturing plants. These will run under government direction so as to insure a steady supply of such arms, explosives and projectiles as are needed at the front and profits of the owners are limited to a moderate increase over those obtained before the war.

The Union of Democratic Control

It is now admitted that the system of voluntary enlistment, even under the pressure of wholesale advertising and activity of the feminine "white feather" brigades has failed to furnish Earl Kitchener with the army he wants. The next step is conscription, either universal or partial. This is being earnestly advocated and is likely soon to be adopted in some form by the Government.

But it will be difficult to put thru, for a large proportion of the labor men are opposed to any kind of compulsory military service. The Independent Labor Party, which is the radical or socialistic wing, has been outspoken in its criticism of Sir Edward Grey for dragging the country into war by means of secret agreements which virtually pledged Great Britain to the support of France, Belgium and Russia long before the question was brought before Parliament. The Independent Labor Party is represented in Parliament by four able men, J. Ramsay MacDonald, James Keir Hardie, Philip Snowdon and W. C. Anderson.

Closely associated with the Independent Labor Party is the Union of Democratic Control, organized by E. D. Morel, who as leader of the Congo Reform Association some ten years ago exposed the Belgian atrocities in Africa. The Union has been very active during the war in addressing meetings wherever it could get a hearing and in circulating literature against secret diplomacy. Its four fundamental principles are the following:

1 No province shall be transferred from one government to another without the consent by plebiscite or otherwise, of the population of such province.

2 No treaty arrangement or undertaking shall be entered upon in the name of Great Britain without the sanction of Parliament. Adequate machinery for ensuring democratic control of foreign policy shall be created.

3 The foreign policy of Great Britain shall not be aimed at creating alliances for the purpose of maintaining the balance of power, but shall be directed to concerted action between the powers, and the setting up of an International Council whose deliberations and decisions shall be public.

THE GRIM PURSUIT IN POLAND

Austrian infantrymen, close on the heels of the retreating Russians, passing thru a village, still burning, which had been fired by the enemy before he abandoned it

© *Brown & Dawson*

THE MODERATE CHANCELLOR

Chancellor von Bethmann-Hollweg has always opposed the violent methods of the military and naval party, and the decision of the Kaiser to heed the American protest is interpreted as a victory for the Chancellor's view

with such machinery for securing international agreement as shall be the guarantee of an abiding peace.

4. Great Britain shall propose as part of the peace settlement a plan for the drastic reduction, by consent, of the armaments of all the belligerent powers, and to facilitate that policy shall attempt to secure the general nationalization of the manufacture of armaments, and the control of the export of armaments by one country to another.

The pamphlet from which this is quoted was confiscated and burned by the Government as dangerous to the security of the realm and subversive of patriotism. The offices of the Independent Labor Party and of the *Labour Leader* in London were raided by the police and 7,700 copies of the pamphlets issued by the Union of Democratic Control destroyed.

A Dozen Fortresses in a Month

Grodno, which was captured at the beginning of September, made the twelfth fortress to fall in the hands of the Germans within a month, an achievement unique in the annals of war since they were opposed by troops numbering about a million and a half, and four of the fortresses were large and modern. According to the Berlin statement the Germans took prisoners during August more than 2000 officers and 269,839 men and captured 2300 cannon and 560 machine guns. More than a million Russian prisoners have been taken since May, when the Austro-German advance began. With the fortress of Novo Georgievsk alone about 90,000 Russians surrendered, and a partial computation of the booty gives 1200 cannon and 150 machine guns. The fortresses of Grodno, Kovno and Brest Litovsk, taken since, must also have yielded many guns, but these have not yet been reported.

Grodno was the chief point on the railroad connecting Petrograd on the north with Warsaw and Brest Litovsk on the south. It occupies a strong natural position in the angle of the Niemen River near where the Bobr River runs into it. But Field Marshal von Hindenburg effected an unexpected quick crossing of the Niemen and engaged the Russians in the city streets. As in the case of Novo Georgievsk the reduction of the forts was left to the *Landwehr* or reserves, the younger men being employed in the pursuit of the Russian armies.

In the north the Germans are also making progress and have reached the Dwina River to the east of Riga. We are still in the dark about what occurred in the Gulf of Riga last month when the Germans attempted a landing there. The German superdreadnought "Moltke," which was reported sunk by a British submarine, is said to be safe in Kiel Canal. Later Petrograd despatches fail to substantiate the statement made to the Duma as to the destruction of three German cruisers and the sinking of boatloads of German soldiers.

In the south the Russians are being rapidly expelled from the northeastern corner of Galicia, which they have occupied for more than a year. Brody, which was taken by the Austrians during the week, is the last town inside the Galician frontier. Russian territory is defended in this direction by a triangular group of three fortresses, Lutsk, Dubno and Kovno. The first of these, Lutsk, about twenty miles inside the Russian frontier, was carried by a bayonet attack of the Austrian Fifty-ninth Infantry.

By keeping up the attack on all parts of the five hundred mile line the Germans have put the Russians at a loss to determine the main objective. This gives scope for all sorts of speculations. Whenever the Germans push their Courland movement it is rumored that they are aiming at Petrograd. Their eager pursuit of the armies re-

WELCOMING THE WARDEN

When "Tom" Osborne came back to Sing-Sing Prison on August 31 the Mutual Welfare League, which he established among the prisoners, gave him a great welcome—with a parade and band music and cheers. These prisoners are confident, as their sign indicates, that they've "got the System's goat." Osborne is still in charge in spite of the rumors that Governor Whitman would displace him

treating eastward from Brest Litovsk caused the surmise that they were bound for Moscow. And now their renewed activity in Bessarabia has led to the theory that they intend to advance toward Kiev and during the winter work their way down to Odessa, where they may coöperate with the Turks on the Black Sea.

What Happened in Gallipoli

The British authorities have been very reticent in regard to the land operations for the capture of the Dardanelles, and what little information has been given out was kept so vague that no one could follow the progress of the campaign. Now, however, the British policy has changed and from the fuller accounts now given out it is possible to form a clear idea of the situation. The details of the first landings on the peninsula, made on April 24-25, have just been published, and we are able to appreciate, as we could not before, the difficulties confronting the British troops and the bravery with which they were encountered, if not surmounted.

The first landings were effected on two separate strips of the coast. The Australian and New Zealand Army Corps was transported to the beach now called on that account "Anzac" Cove. This lies just beyond the cape of Gaba Tepe, and was designated on the plan of attack as "Beach Z." The other landings were attempted simultaneously at the tip of the peninsula at the beaches marked "V," "W," "X" and "Y." Here the greatest dangers were met and it now appears that the Turkish reports of the heavy losses suffered by the invaders were not so grossly exaggerated as they were said to be at the time. In regard to the operations at V beach the official report of Admiral von Robeck says:

> A landing on the flanks here was impossible and practically all the first trip were either killed or wounded, a few managing to find some slight shelter under a bank on the beach; in several boats all were either killed or wounded; one boat entirely disappeared, and in another there were only two survivors.

The V beach was flanked by perpendicular cliffs on the west and by the old castle of Sedd el Bahr on the east. Barbed wire entanglements covered the shore and extended down under the sea. As soon as the boats carrying the troops had left the transports a murderous fire was opened upon them by rifle, pom-poms and machine guns concealed on the hights. No wonder the effort to land here had to be abandoned.

At the W and X beaches, where conditions were not quite so bad, landings were effected, tho at heavy cost. This part of the shore is still held by the British but they have not been able to capture the fort of Sedd el Bahr or the hill of Achi Baba, which overlooks the Dardanelles.

The troops in the Anzac zone have had a similar experience. They likewise have stuck to their hold on the coast but have failed to take the hills behind them, altho millions of rounds of ammunition and thousands of shells have been expended in the attack. On August 10 the New Zealanders and Gurkhas succeeded in reaching the crest of Chunuk Bair, the nearest of these hills, but they were driven back before a terrific onslaught of the Turks. Beyond this ridge stands the hill of Sari Bair, 971 feet high, and once this point is gained the guns of the British can be trained upon the rear of the forts along the narrows of the Dardanelles.

A third landing was made on August 6 at Suvla on Anafarta Bay, but the attempt at that time to make connections across the hills with the Anzac troops on the south was not successful. The Turks claim that the British sacrificed fifty thousand men during August in the effort to gain the hights dominating the peninsula at this point.

Italians Take Rovereto
